It has been very plain for some days past that although Cronje managed to escape from his compromised position at Maggersfontein, he did not contrive to elude the British pursuit. So far as we can judge, the programme adopted by the Boer leader was this:—Loading his heavy artillery and ammunition with all possible speed on ox-wagons, and taking with him a portion of his stores and provisions, he selected eight or nine thousand of the best men under his command, and organizing them as an escort for his train, ordered the remainder of his toops to disperse, effect their escape individually, and rejoin him at a point 50 or 60 miles nearer Bloemfontein, his plan being to reorganise his army there, augmenting it with the main part of the troops engaged on the south of the Orange River and with re-inforcements from Ladysmith and the Transvaal, so as to cover Bloemfontein. It is not a lengthy operation to dismount guns weighing less than two tons and to load them on wagons, if proper appliances are at hand. Still Cronje must have made excellent use of his time. His natural route would have been to travel due south by the road from Kimberley to Jacobsdal, and strike the Bloemfontein road at the latter place. But that route would have certainly brought him into collision with Roberts. He therefore headed due east, hoping to cross the Modder River at a point some 26 miles from Kimberley. In the beginning he was tolerably successful. Indeed, it was inevitable that he should be. The passage of the Modder River at Klipsdrift by the mounted brigades under French took place on the 13th instant, and within two hours, or three at the latest, Cronje had news of the event. He saw at once that his communications with Bloemfontein were severed, and without a moment's delay orders were issued in the sense indicated above. His only difficulty was to evade French, whose intention to outflank him and reach Kimberley he must have immediately divined. The evasion was cleverly accomplished, and it was, we venture to think, the only clever part of Cronje's manœuvering. His really wise plan would have been to abandon his heavy guns altogether, and to strike rapidly eastward, taking only his field artillery and a modicum of ammunition. Had he done so, there can be little doubt that he would have escaped, for his whole force is mounted, and the British infantry could never have come up with him. Indeed, the unwisdom of attempting to transport guns of position under such circumstances should have been so evident that their absolute necessity for the defence of Bloemfontein is the only conjecture suggested by his obstinacy in clinging to them. Setting out on Wednesday, the 14th, he reached the Modder River unmolested on the morning of the 16th, and having detached a strong rearguard, commenced the passage of the river, accomplishing it without serious difficulty. Meanwhile the Seventh Division of the British troops had occupied Jacobsdal on the preceding day (15th), and on the 14th, the Highland Brigade and the Sixth Division had moved northward, following French. Kelly-Kenny, who commanded the Sixth Division, soon found evidences that Cronje had crossed his front travelling eastward, and he at once turned in pursuit, moving so rapidly that by the evening of the 16th he had captured over 100 of the Boers' wagons and got into touch with Cronje's rear-guard. There was still time for Cronje to abandon his train and ride direct for Bloemfontein, but he clung to his remaining wagons, the golden opportunity was lost, and on Saturday, the 17th, he was forced to form laager at a point on the Modder River. Three-and-a-half miles distant, on the Bloemfontein side of the River, is an eminence named Paardeberg. The telegrams do not say whether Cronje occupied it originally and was driven from it. But the probability is that he remained on the river, access to water being essential. From Maggersfontein to Bloemfontein is 110 miles. Cronje had traversed only 26 miles of the distance when he was overtaken and forced into laager. On Sunday, the 18th, an attempt was made to storm the laager. We know the result—146 men killed, probably from 500 to 600 wounded, and an experience similar to that of the Highland Brigade at Maggersfontein, namely, that the men were obliged to remain lying down for many hours until darkness enabled them to retire. Cronje, as we have said, doubtless had his best troops with him, and an attempt to rush a laager defended by such marksmen was doubtless inspired by a sense of the desirability of capturing it before succour could arrive from the south or from the Transvaal. On Monday, Roberts arrived, and with him, in all probability, came the Seventh Division, which was then sent out to support French's covering operations. Roberts decided to resort to artillery. Throughout Monday, he bombarded the laager with 50 guns, and on Tuesday morning Cronje asked for an armistice. That very singular request is difficult to understand. An armistice for the purpose of burying the dead and collecting the wounded is a usual incident, but such a proposal should have come from the British side under the circumstances. The telegram makes it clear that Cronje had some proposition to make, but what it can have been we are at a loss to conjecture. Perhaps he asked to be allowed to march away, leaving his arms and ammunition, but even that it scarcely credible. Looking at the affair from this distance, one is disposed to conclude that his sole object was to gain time, since every hour improved his chances of succour. He did succeed in obtaining a respite of half a day, but in the afternoon the bombardment was renewed. The range, according to the telegram, was only 1,000 yards, but we doubt the accuracy of that statement, for nothing could live in the face of a bombardment of only 1,000 yards with 50 guns, and at that range the artillery would be needlessly exposed, the Boers' rifles being effective up to 1,500 yards at least. It is the most terrible drama of the war, and we can not choose but admire the grand courage shown by Cronje and his tough, psalm-singing Boers. It is a miserable thing that such men should have to be slaughtered, but they have done their own work of killing ruthlessly.

More than one account indicates that attempts have been made to succour Cronje. It is probable that they were the work of Boers from beyond the Orange River, as well as of the men who had been ordered to escape from Maggersfontein independently, and re-assemble at a point 50 or 60 miles further east. With the aid of the railway the former could reach the neighbourhood of Paardeberg in 3 or 4 days, and the latter's presence is easily understood. Reinforcements from the Transvaal, or even from Ladysmith, may possibly have reached the scene, but it would have been quick work. At all events Roberts had every reason to push his attack vigorously.

It is worth remembering that to continue the bombardment with 50 guns would require from 50 to 60 tons of ammunition daily, supposing that the guns used are field artillery, and that to keep up such a supply without any railway for purposes of transport at a position like that now occupied by Robert must be exceedingly difficult.

General Buller evidently has his work cut out for him still. He appears to be fighting now—or to have been fighting at the date of our latest advices—in the space between the Klip and the Tugela. The Klip enters Ladysmith from the direction of the Brakenburg; winds southward, along the east side of the railway, through a distance of some 5 miles; then trends eastward, and ultimately joins its waters with those of the Tugela at a point six miles from the railway. Thus the railway, the Tugela, and the Klip form, roughly speaking, an acute-angled triangle, having for its base a six-mile section of the railway and for its apex the junction of the two rivers. Nelthorpe, where the Boers are now in position, is 7½ miles north of Colenso, and 6½ miles from Ladysmith. But it is only 4½ miles from Cæsar's Camp, the most southerly portion of Sir George White's entrenchments. There runs through it a little tributary of the Klip, called Davals Spruit, and it is probably along the northern banks of the stream that the Boers have taken up a position. But we can only conjecture. Two miles south of Nelthorpe is Pieters station, near which also there are some eminences; but since Pieter's station is not mentioned in the telegram, it may be presumed that the ridges in question are beyond Nethorpe on the north. If that be so, Buller has forced his way to a point very close to Ladysmith, and one more success ought to effect the relief of the garrison. On this occasion, too, he need not be in any hurry, nor should a failure entail retreat to the south of the Tugela. He can probably keep the ground he has gained. The Boers are taking a great risk, it would seem, in allowing themselves to be pushed back so near to Ladysmith. Defeat in their present position may mean disaster. But it is nof improboble that they have detached a considerable force to succour Cronje in the Free State, and that the circle of the Ladysmith defences *vis-à vis* Buller has been correspondingly narrowed. Even if ten or twelve thousand have thus been withdrawn, Buller has still a strong body to displace, and it seems that the remainder are fighting desperately to cover the retreat.

Wednesday, Feb. 28.

The telegrams have been very perplexing during the past few days. On the 25th our news was that Buller found himself opposed by the Boers occupying high ridges near Nelthorpe; on the 26th,

Digitized by Google Original from CORNELL UNIVERSITY

we learned that the British troops had fought their way to within a few hundred yards of the Boers' first entrenchments on Grobler's Kloof; and on the 27th the telegram says that they are within 2 miles of being in touch with Ladysmith. These accounts cannot be reconciled, unless we suppose that Buller's right wing has pushed on some miles in advance of his left, and that the former has reached the vicinity of Nelthorpe, while the latter has not surmounted Grobler's Kloof. Our readers remember that the occupation of Fort Wylie was announced a few days ago. Looking at the map it will be seen that, at a point about 1½ miles east of the railway bridge opposite Colenso, the Tugela, whose general course is from west to east, heads sharply to the north, and after running for a distance of some 3 miles approximately parallel to the railway, it turns again to the east. Fort Wylie is within the elbow of the river opposite to Colenso and on the east of the railway. But Fort Wylie was not the *point d'appui* of the Boers' left wing. They had pushed their left wing across the Tugela, so as to occupy a hill called Hlangwane, which lies on the east of the northern stretch of the Tugela at a distance of a little more than 2 miles from Fort Wylie. In fact, Fort Wylie being within the salient angle formed by the river's head, Hlangwane hill lies outside that angle. After the capture of Hlangwane Hill, Buller had free access to the Tugela throughout it northerly stretch as well as along its eastlerly course. We know that he crossed at Colenso, but it is possible that he effected another crossing at a more northerly point along the river's eastern stream, in which case his right wing may have been pushing on towards Pieters and Nelthorpe, while his centre and left advanced direct from Colenso. We see no other way of accounting for the telegraphic statements. After crossing at Colenso and capturing Fort Wylie, Buller had to negotiate a line of steep kopjes which rise abruptly from the north of the river (on the west of Fort Wylie), their length being about 1½ miles and their depth the same. These kopjes rise in steps which culminate in a range of hills forming the two salient positions of Grobler's Kloof and Red Hill. We take it that Grobler's Kloof and Red Hill are the keys of the Boers' position opposite Colenso and that their capture would be almost decisive. Grobler's Kloof is 9 miles from Cæsar's Camp, but there are still some difficult places to be traversed between the two. If, however, Buller's right wing had really reached the neighbourhood of Nelthorpe on the 23rd, he had not only out-flanked the Boers on Grobler's Kloof but also placed himself in their rear. Everything seems to favour the supposition that Buller is fighting against a portion only of Joubert's troops —nine or ten thousand out of twenty-eight thousand—, whose object will be to stay his advance as long as possible without losing their own chance of recovering touch with the main body.

Thursday, March 1.

Cronje held out just nine days. He formed his laager on the night of Saturday, the 17th of February, and he surrendered on Tuesday, the 26th. Doubtless comparisons will be drawn between his brief resistance and the protracted siege that Ladysmith has endured. But there is no room for comparison. Reuter used a correct expression when he said that Cronje was in a "death trap." A hole, 50 feet deep, 150 feet wide, and 10,560 feet long was the refuge into which he was driven. Such a place, occupied by some 4,000 to 5,000 men and as many animals in the heat of a South African summer, must have been a perfect hell. It is true that there was probably considerable protection from artillery. There does not appear to have been in the vicinity any high ground from which a plunging fire could be delivered, and to pitch shells from field-guns into a slit in the plain only 50 yards wide would be a difficult task, while fair protection against enfilade fire could have been obtained by building a few strong traverses. But if Roberts brought up two or three howitzers and used lyddite shells, the place would have become unendurable in a few hours. We shall not be surprised to learn that something of that kind happened. At any rate it is obvious that food must have quickly become a crucial question. Cronje had a river running through his camp, and he had probably about a thousand oxen, to say nothing of horses. Beef and water were therefore plentiful. But how to feed the oxen that were to feed his men? It is not likely that there was pasturage in such a place, and it is certain that Cronje did not carry fodder with him. We can not imagine how things have fared at Ladysmith in that respect. Shut up in the Ladysmith camp are the 5th Dragoon Guards, the 5th Lancers, the 18th Hussars, the 19th Hussars, the 13th, 21st, 42nd, 53rd, 67th, and 69th Batteries of Field Artillery—four regiments of cavalry and six batteries of Artillery—, and on what all the horses of these corps have subsisted since the end of October, four long months, we can form no idea. Sir George White had laid in an immense stock of forage. That we know. But forage for about 2,000 horses during four months would make a respectable mountain. Cronje, however, had no forage at all, and some of his beasts must have perished of starvation before he surrendered. It may be assumed that his fault was clinging tenaciously to his heavy artillery. Yet certainly the service hitherto rendered by the Boers' guns has not been of such a nature as to warrant Cronje in sacrificing lives rather than lose these weapons. Well served artillery should have dug up Ladysmith in a month and destroyed Kimberley in a still shorter time. Had either place been armed with siege guns, the case would have been different. But Kimberley had no weapons of the kind, and Ladysmith has virtually been obliged to depend on field pieces only, for we may be quite sure that the few rounds of ammunition available for the two naval 4.7 inch guns were exhausted at a very early date. The Boers, therefore, had a virtually unresisting target for their siege-guns both at Ladysmith and at Kimberley, and they nevertheless effected so little that we could imagine them discarding their "Long Toms" in disgust rather than clinging to them at the risk of their lives. Cronje, of course, could not use his artillery at all: guns can not be fired with effect out of a hole 50 feet deep. Everything was against him. The marvel is that he ever went into such a place. Presumably the moral effect of this disaster to the Boers' arms will be great, especially if it is followed by news of the relief of Ladysmith. There is nothing now to prevent Roberts from moving on Ladysmith. He may deem it wise, however, to first account for the Boers operating on the south of the Orange River. They are in a highly dangerous plight, for, unless they have already retired, they can scarcely hope to reach Bloemfontein, or to effect an union with the Transvaal forces in the north, unless, indeed, they take warning by Cronje's fate, and, abandoning all *impedimenta*, escape as light horsemen. In the early stages of the war, our forces were at a great disadvantage, since they had to be broken into fragments, and led to the attack of an enemy having all the advantages of position and entrenchments. But, as we have often stated, that advantage could easily be converted into disadvantage unless the Boers chose their time wisely for retiring and concentrating their scattered divisions. They seem to have missed the "psychological moment." If they succeed in re-uniting now, it will be at some serious loss.

Friday, March 2.

The occupation of Jamestown by Brabant and capture of the Boers' horses are movements that we must connect with a renewed attempt against Stormberg on the part of Gatacre. Jamestown is about 25 miles east of Stormberg and as many south of Aliwal North. It is not on the railway, nor does its position suggest any reason why there should be a number of Boers' horses there, unless they are remounts. But one thing is pretty certain, namely, that if these horses are not remounts, the Boers to which they belong are in a bad way, for the Boer separated from his horse is at an immense disadvantage.

It appears to us that there is a tendency to over-rate the success won by Roberts. In fact we are surprised that the Field-Marshal should have telegraphed a despatch in the terms said to have been used by him. Whether Cronje had 3,000 men, as the French telegram says, or 4,000, as Reuter reports, makes very little difference. He was hopelessly outnumbered, and we are disposed rather to admire his courage in holding out for 9 days than to be elated at his capture. The incident means very little from a military point of view. We may assume that Cronje had fully a thousand men killed and wounded, and if to these we add 500 prisoners captured in the operations to the east of Paardeberg, the final result is that the Boers have been weakened to the extent of from 5,000 to 6,000 men. But there is nothing signal about that, especially in view of the fact that Cronje's capture cost us about a thousand casualties. It is plain that the first report was correct, namely, that the Boer general took 5,000 men with him in his retreat and ordered the rest to disband, and escape as best they could. They have escaped, probably six or seven thousands of them, and the fact that our men caught Cronje, surrounded him, and compelled him to surrender is not nearly so striking as a signal victory gained over his whole force would have been. The mystery is why he allowed himself to be caught. We imagined that it was because of his heavy guns. But he had no heavy guns with him—only 9 pounders and Maxims, which are as mobile as cavalry. Undoubtedly, had he ridden straight away with his field artillery and his men, he could have escaped with ease. A day's start would

Digitized by Google Original from CORNELL UNIVERSITY

have made pursuit hopeless. It is inexplicable. And then comes the question, what did he do with his siege-guns? He certainly had some at Kimberley. One is almost disposed to think that he buried them in the ground, incredible as such a hypothesis seems. At all events his capture can not be regarded as an event of of capital importance, and we can not doubt that when the Authorities in London thought it worth their while to telegraph the news to the Far East, they imagined that the Boer prisoners would number fully eight or nine thousand. As it is, if the six or seven thousand that escaped from Kimberley effect a junction with the Natal Army, and if the Boers operating to the south of the Orange River can make good their retreat, the forces of the two Republics will still number fully fifty thousand. The main advantage of Cronje's capture is that the organization of the Free State for resistance is more or less dislocated for the moment, although the dimensions of that advantage also have been diminished by the length of time that was required before the "Lion of the Transvaal" capitulated.

VIEWS OF JAPANESE STATESMEN.

Speaking at a meeting organized to celebrate the largely extended representation secured to urban populations by the amended Law of Election, Marquis Ito and Viscount Aoki concurred in stating that Japan's future must be commercial and industrial, and that she must cease to devote her attention mainly to agriculture. That is a point upon which we have been insisting for the past twenty years. There is no occasion to insist on it now, for Japan has begun to shape her course in the right direction. Viscount Aoki, however, made some further remarks which call for comment. He traversed the idea that the privilege of land ownership would be of much value in bringing foreign capital to Japan. We must note that there is some uncertainty about the Viscount's precise words. None of the vernacular newspapers gives an exact reproduction of his speech. The most accurate appears to be that of the *Kokumin Shimbun*, and from it we gather Viscount Aoki's opinion to be that foreigners do not like to fix their capital as they would have to do if they invested it in land in Japan. In Europe and America the banks make no difficulty about lending money on the security of land, but Japanese banks will not advance on such security, and a land-owner's money is consequently locked up unless he sells. The Occidental capitalist does not care for that kind of investment. He prefers some "going" enterprise, commercial or industrial.

Such are the views attributed to Viscount Aoki, and we think it a pity that they should have been expressed for they will have the effect of checking the tendency that now begins to prevail in favour of allowing foreigners to own land. As to the question of foreign investments, it may be partially true that there would not be any strong disposition to put money into land. But nothing can be certainly predicted on that subject. Rural land in Japan does not, perhaps, invite investments, but the land in some of the cities is assuredly far below the value that it will have one of these days, and we are by no means sure that it would not find foreign purchasers were the present restrictions withdrawn. Besides, the objection that Japanese banks do not lend money on the security of land does not appear to have much weight. If foreigners were legally entitled to own land in Japan, the operation of any machinery that exists in Europe or America for making advances against real property would be speedily extended to this country. However, it is not for the purposes of investments in land that foreign capital would be attracted if the privilege of ownership were conceded. It is for the purpose of conducting industries which require the tenure of land. Superficies is a very excellent device, but say what we may, it is not ownership. A superficiary is not the master of the property he holds; there is always somebody to whom he must look; somebody whose title is superior to his. Grant that this is partly a matter of sentiment, it is nevertheless a sentiment which weighs strongly with many people. "You can't start an industry in Japan for they don't allow you to own the land on which your factories and warehouses stand." That bald statement, whatever marginal notes be appended about superficiaries, or juridical persons, is quite sufficent to deter ninety-nine European or American capitalists out of every hundred.

PUBLIC SPIRIT.

It is satisfactory to see that the spirit of public benevolence is beginning to be effective among the wealthy men of Japan. For a long time it seemed as though the example set by Mr. Fukuzawa and Count Okuma would remain without followers. Mr. Fukuzawa, indeed, might object to be classed among "wealthy men," and might justly claim that his excellent and flourishing school and college at Takanawa have grown to their present dimensions independently of special pecuniary aid, and mainly by their innate capacity for development. But it is beyond question that Mr. Fukuzawa made large efforts and sacrifices for the sake of the school in its early days, and that he deserves to rank, in that respect, among the national benefactors of the *Meiji* era. Count Okuma's Technical School at Waseda, also, though now self-supporting, must have been at one time a heavy drain upon his resources. We have heard it stated that his outlays on account of the institution aggregate as much as a quarter of a million *yen*. Many people have been wont to regard the Waseda Semmon Gakko as, in some respects, a nursery of politicians, and the example set by its founder may thus have lost much of its value. At all events, as we have said, neither Count Okuma not Mr. Fukuzawa found imitators until Mr. Okura Kihachiro entered the field and signified his intention of devoting the sum of half a million *yen* to build and endow a commercial school, which is now approaching completion and will probably be open at the end of the year. Mr. Hiranuma Senzo, also, has erected and endowed a school for the education of poor children, appropriating a large sum for the purpose, and we now learn that the Sumitomo family of Osaka has undertaken to build a public library at a cost of 150,000 *yen*, and to place in it 50,000 *yen* worth of books. These evidences of benevolent endeavour are most welcome. There is no denying that the Japanese moneyed classes have hitherto been wanting in the discharge of this particular duty.

JOINT ENTERPISE.

We have often expressed the belief that one of the first results of the operation of the Revised Treaties would be the organization of cöoperative enterprises between Japanese and foreigners. Time will be needed to overcome the great obstacles, namely, distrust on the foreign side and apprehension of the Occidental's masterful methods on the side of the Japanese. But time may be relied on in that matter. Already, as the *Kokumin* points out, there are indications of a strong disposition among Japanese and Chinese to combine, and on a more restricted scale a similar disposition begins to be apparent among Americans, Englishmen and Japanese. China-Japan banks and China-Japan trading associations are evidently on the verge of practical inception, while prominent British and American firms, like Messrs. Samuel, Samuel & Company and the American Trading Company, are seemingly inclined to undertake cöoperative schemes. Our contemporary predicts that China and Korea will be the great fields of exploitation during the twentieth century, and congratulates Japan on being favourably situated for taking advantage of the movement.

There is talk of a new bank; or, to speak more accurately, the talk so long heard about a bank of China and Japan seems likely to lead to the organization of an institution called the *Ashia Tsusho Ginko* (Asiatic Tradal Bank), which will have a mixed establishment of Chinese and Japanese. A capital of at least 10 million *yen* is spoken of. The promoters are said to be experiencing much opposition from the Russo-Chinese Bank.

It is stated that a joint stock company is about to be formed for the purpose of bringing Chili and Japan into commercial contact. The promoters are said to be the Representative of Chili in Japan; Mr. J. R. Morse, Mr. Ed. Dun, Mr. Toyama, President of the Naniwa Ginko, and Mr. Fujishima, ex-Vice-President of the Industrial Bank. The capital is put at 500,000 *yen*, one-fourth of which is subscribed by the Chilian Minister. The chief import from Chili will be nitrates, and it is expected that the company will be able to transport Japanese exports to places on the Western Pacific coast.

THE SPECIAL SETTLEMENTS IN CHINA.

In conformity with legislative action taken in the Diet, the Japanese Government announces in the *Official Gazette* that a sum of a million *yen* will be devoted to preparing for residential purposes the sites obtained from China as special settlements. These sites have hitherto remained unutilized, and one of the reasons assigned is that private individuals can not be expected to incur the heavy expense of road-making and drainage. The Government, therefore, has been induced to undertake the work.

THE LAND QUESTION.

It really does seem that the persons who have undertaken to journalistically represent the foreign land-holders are determined to be dissatisfied, whatever may be done to satisfy them. Hitherto, their main, indeed we may say their only, ground of complaint has been that in the registration of their titles the term "superficies" is used—not "superficies," pure and simple, but "superficies" with the words "perpetual lease" in brackets, these words being added for the purpose of distinguishing the titles as treaty rights to which the provisions of the Civil Code do not apply. Nevertheless, the foreign land-holders objected to the term "superficies" being employed in connexion with their leases. They claimed that the form of tenure known as superficies is subjected by the laws of Japan to certain limitations which do not apply to the "perpetual leases" contemplated by the treaties. That, we say, was the whole objection. It is clearly set forth in the first resolution passed by the public meeting of January 19th, which says that "the laws of Japan appear to contemplate the compulsory conversion of the perpetual leases into a new and different kind of right which is called superficies." Clear proof has been furnished that the above resolution was framed under a misapprehension, since the land titles held by foreigners under the treaties are explicitly exempted from the provisions of the Civil Code, and since those titles are not to be changed in any way, the addition of the term "superficies" being merely for convenience of registration. To make assurance doubly sure, the French Representative obtained from the Japanese Minister of State for Foreign Affairs an official declaration that the limitations which the Civil Code attaches to "superficies" do not apply to the perpetual leases held by foreigners, and further, that the same is true of "all provisions of the Code implying conditions other than the conditions inscribed on the title deed of the perpetual leases." What is the reply made by the newspaper claiming to represent the land-holders? It is this:—

> Certainly it was never understood by anyone, that regulations applicable to superficies only, could have any reference or bearing whatsoever on foreigners' perpetual leases. Since the treaties recognise and confirm the right of foreigners to possess them, whatever are the laws relating to superficies, they are altogether separate and apart from these perpetual leases, and the Minister's declaration regarding the limitation of the rights of the holders of superficies, appears to be wholly unnecessary and uncalled for, since no confusion exists.

If it was "never understood by any one that regulations applicable to superficies only could have any reference or bearing whatever on foreigners' perpetual leases," what was meant by the resolution passed at the meeting on January 19th that "the laws of Japan appear to contemplate the compulsory conversion of the perpetual leases into a new and different kind of right which is called 'superficies'"?

A correspondent of the newspaper from which we have quoted writes:—

> Sir,—Referring to the paragraph in the *Japan Mail* of this morning, with extracts of a communication from the Minister of State for Foreign Affairs to the French Minister, would it not be more dignified on the part of the Japanese Government to issue a notification to the effect that *Perpetual Leases* are recognised in accordance with Treaty rights, instead of a personal opinion of a Government Minister to a Foreign Representative, which I think will be recognised as carrying no authority on behalf of the Japanese Government.
>
> Yours, PERPETUAL LEASE.

This letter seems to illustrate the strange perplexity that prevails on the subject of leases. The writer asks whether it would not be "more dignified on the part of the Japanese Government to issue a notification to the effect that *Perpetual Leases* are recognised in accordance with Treaty rights." Surely that is a curious conception of "dignity!" Why should the Japanese Government notify the world that it intends to respect its treaty obligation? Such an intention goes without saying. If a merchant makes a contract, does he advertise in the newspapers, "Know all men, that I intend to implement my contract?" Were the faithful observance of a promise a great novelty, such an announcement would be in order, but in that case "dignity" would scarcely come into the question. The Japanese Government assumes that its faithful observance of its treaty engagements is taken as a matter of course. It finds that the method of registration provided by it is regarded by foreigners as tending to a possible violation of those engagements. It then explains, through its Minister of Foreign Affairs and at the request of the French Representative, that no grounds whatever exist for such an apprehension, and the explanation, though officially made, is at once declared by a foreign lease-holder to be merely "a personal opinion of a Government Minister to a Foreign Representative," which carries "no authority on behalf of the Japanese Government." Our readers will agree with us that this discussion has assumed a farcical character.

PRINCE WALDEMAR.

The Danish warship *Valkyrien*, with Prince Waldemar of Denmark on board, arrived at Yokohama on Saturday morning about eleven, and anchored inside the breakwater. She fired a salute of 21 guns, which was answered by the *Fuji*, and then saluted the Admiral's flag with 13 guns. Rear-Admiral Mori, the Harbour Master, accompanied by the Marquis Nembrini de Gonzaga, went on board; and afterwards a visit was paid by Rear-Admiral Matsunaga, Captain Serata, and staff from the *Fuji*, and the Captain of the *Hiyei Kan*. Chevalier de Testa, the Netherlands representative, in charge of Danish diplomatic interests, Secretary Van der Polder, and the Danish Consul and Vice-Consul afterwards went on board, and the Minister presented to the Prince Captain Sakamoto, I.J.M., and Mr. Inaba, of the Board of Ceremonies. The Prince did not land. Mr. Ikariyama, Chief of the Settlement Police, and Mr. Iwasa, of the Harbour Police, have been appointed as the Prince's escort while in this Prefecture. Prince Waldemar is 42 years of age, and is the sixth son of the King of Denmark.

Prince Waldemar proceeds to Tokyo by the 10.50 a.m. train on Monday next (5th instant). He lunches on that day in the Shiba Detached Palace, and at half-past five in the evening repairs to the Emperor's Palace, where he will be received in audience by His Majesty and will afterwards dine with the Emperor, the Imperial Princes, and several of the Ministers of State.

THE TIMES.

Mr. Miyake Setsurei writes a long but interesting article in the *Nippon*. His design is to show that a reaction may shortly be expected in the sense of establishing a higher standard of integrity than that now existing in Japan. He divides the modern history of his country into three periods, the period of *Sonno* (loyalty) the period of *Kokka* (patriotism) and the period of *Sekai* (society). During the days that saw the fall of feudalism and the establishment of a bureaucratic form of government, that is to say, the time from 1862 to 1881, everything was done in the name of loyalty to the Throne. Undoubtedly the country profited greatly, but behind the scenes what took place was that a small coterie of clever men secured for themselves riches and honour. Then ensued the time when "the State" was in everybody's mouth—the time of political parties. The political agitator stood forth, proclaiming himself the champion of genuinely patriotic views, and he and his followers endeavoured, with a certain measure of success, to persuade the public that they were actuated by the loftiest motives. But the difference between this era and the preceding was simply one of extent. The circle of self-interest had been widened, and a much larger number of persons were included within its area. We are now in the era of "society;" that is to say, the era when a still larger view is taken of national affairs, and applicants for State aid and promoters of all sorts of enterprises, appeal to the dictates of a larger and correspondingly vaguer responsibility. But again the difference is quantitative only. The leaven of unprincipled selfishness has permeated the lump more thoroughly: that is all. Corruption is everywhere. From the bureaucrats it spread to the politicians and then to society at large, from the Diet downwards. The next stage will be that of reaction. "Miyake Setsurei" thinks that Occidental nations have passed through exactly the same phases, and that in Western countries where we find great value attached to commercial and individual probity, it is because the failure of competition where all are corrupt showed the advantages attending integrity. There is, therefore, no reason to despair of Japan's present condition. The evil has reached a stage when it may be expected to begin to work its own cure.

DR. KITASATO AND THE PEST.

It is stated that Dr. Kitasato's researches have resulted in the discovery that there is a second bacillus of Pest; that is to say, a bacillus different from that found by Yersin. This discovery may have much importance, for the partial character of the success achieved by using Yersin's serum would thus be explained, and there would be a reasonable hope that by means of another serum the dread disease may be effectually combated.

THE LAW OF ELECTIONS.

Great satisfaction is evidently felt in connexion with the passing of the amended Law of Elections. Up to the eleventh hour it had seemed that the Bill was destined to meet the fate of its predecessors, namely to fail in consequence of the two Houses' being unable to compromise their differences of opinion. There was, indeed, special reason for despondency on this occasion, since the Peers had introduced into the measure changes so sweeping that the Representatives could scarcely be expected to pay favourable attention to the suggested alterations. Apart from the property qualification for electors, which all parties agree in desiring to lower, there are some large defects in the present system. Most prominent is the inadequate representation of the urban population. In the Lower House as now constituted, only 17 out of 300 members are returned by the urban population; that is to say, 6 per cent. Marquis Ito's calculation is that 24 per cent. would be the just ratio, and the Bill submitted by the Yamagata Cabinet this session adopted the ratio of 21 per cent. But the Lower House, which consists chiefly of members from rural constituencies, has always refused to make any sufficient modification of existing arrangements. On the present occasion, it altered the Government's proposals in the sense of reducing the urban representation to 16 per cent., and this fresh exhibition of an obstinate determination not to recognise the claims of the urban population seemed to indicate that the Bill would again fail to become law. The Upper House, too, pursued its usual tactics: it struck out the Lower House's changes and reverted, in effect, to the Cabinet's ratio of 21 per cent. There were other vital points of disagreement, but the case will be more easy to comprehend if we treat each separately. It seemed, then, tolerably certain that no basis of compromise could be found. But at this stage Marquis Ito appeared upon the scene, and exerted his great influence with the prominent members of the two branches of the Legislature. The Cabinet Ministers also spared no pains to soften the mood of the obdurates. Mr. Hoshi Toru took up the matter vigorously, and succeeded in having it made a party question, so that any Liberal voting against a compromise would be expelled from the *Kensei-to*, and Baron Suyematsu rose from his sick bed to aid the movement. The upshot was that the Lower House finally came into a conciliatory mood; its managers at the conference showed themselves pliant, accepted the figures of the Peers and embodied them in a report which the Lower House endorsed by a vote of 151 to 126. It will be interesting to set forth the result in a comparative table:—

	Total M.'s	U.	Rural.	Ratio %
Composition of present House	300	17	283	6
Composition of House proposed by Cabinet.	426	91	335	21
Composition of House as proposed by House of Representatives ...	478	77	401	16
Composition of House as agreed by the Diet.	369	61	308	20

The urban population is not yet quite adequately represented, but its grounds of complaint have been almost removed. It will further be observed that the total membership is greatly reduced, a point of some importance financially speaking. The emoluments of the House, as proposed by the Cabinet, would have been 852,000 *yen* annually, and the emoluments as proposed by the Representatives, 956,000 *yen*; whereas the emoluments, according to the newly determined establishment will be 738,000 *yen*. As to the question of representation, the programme is that an urban population of 30,000 will be enfranchised, the corresponding figure for the rural population being 130,000. Each will return a second member for every increment of 130,000, or for every fraction of that increment not less than 50,000.

The second important point relates to the manner of voting. The Government insisted upon uninominal ballots, unsigned. The Lower House was strongly disposed to have multinominal ballots, signed, but finally amended the Government's Bill in the sense of accepting the uninominal system, but requiring signatures. The Peers reverted to the Government's proposal, pure and simple, and the Lower House accepted the change.

The third point was the size of an electorate. The present electoral divisions are small, the division being generally made on the basis of one member for each district. Plainly such a method greatly facilitates corruption. It was therefore proposed by the Government that the limits of an electoral district should be extended so as to embrace the whole prefecture, and to that the two Houses have agreed.

Finally, the property qualification for voters is reduced from 15 *yen* per annum of direct taxes to 10 *yen*. The Government was willing to reduce it to 5 *yen*, and the Lower House endorsed that figure; but the Peers, more conservative, stopped at the mid-way point, namely 10 *yen*, and the Representatives did not object. In the case of candidates for election, the property qualification is abolished altogether. To have attained the full age of 30 is sufficient.

It is certainly a matter for congratulation that this important question has been settled. We must also compliment Japan upon the continuity of her record. Her constitutional reforms are still effected without any unpleasant features of popular disturbance and without any recourse to agitations or demonstrations. The property qualification is still high, but that, if an error, is an error on the right side.

DOMESTIC POLITICS.

The usual fête in honour of the conclusion of the Diet's labours was given by the Minister President of State in the Imperial Hotel on the 24th instant. About two hundred members of the Lower House and a hundred and thirty of the Upper were present. Marquis Ito also attended, and congratulated the Houses and the Cabinet on the passing of the Bill for amending the Law of Election. There was a stand-up dinner, and the arrangements are said to have been so complete that the confusion generally witnessed on these occasions was happily avoided.

Now that the Diet has risen, rumours of Cabinet changes begin to be circulated. Two Tokyo journals lend their columns to the ventilation of a story the gist of which is that the Liberals and Progressists, or, at any rate, considerable sections of each, are likely to re-unite, with the intention of thrusting aside Counts Okuma and Itagaki, organizing an administration from the ranks of the younger statesmen, and completing the downfall of that ancient bogey, clan government. The leaders in the movement are said to be Messrs. Inukai and Oishi, and they propose to form a new association under the name of *Min-to*, or the "people's party." We strongly suspect that this rumour has not a more solid foundation than the wishes of those circulating it.

Mr. Ozaki Yukio, who now seems to be the acknowledged leader of the Progressists, delivered a stirring speech at the Party's last *dai-konshin-kai* (great friendly meeting). He frankly admitted that defeat had sat upon their banners for a long while; that they had fought again and again during the course of the Diet's present session, and they had always been on the losing side. But he claimed, with justice, that disaster had not daunted them; that they still presented an unbroken front, and that unlike any other political party in Japan, they could claim to have stood united and never to have lost any of their number through the storm and stress of unsuccessful campaigns. He predicted that their steadfastness would have its reward, and we agree with him. The unflinching uniformity with which the Progressists have managed to muster their 120 followers for every contest suggests a force of cohesion and homogeniety that could not be derived from mere organization. There is a backbone of moral conviction in the Progressist Party, and it will have its effect sooner or later.

KANG YU-WEI.

The implacable vengeance of the Empress Dowager pursues Kang Yu-wei and his accomplices. Kang, who had fled to Singapore, deemed it wise to make his way once more to Europe when he learned that a reward of ten thousand taels had been set upon his apprehension. He doubted whether the Chinese in Singapore could resist such a temptation. And well he might doubt, for not only is ten thousand taels a fortune to the average Chinaman, but also there must be among the residents of Singapore not a few persons who, sympathising with the powers that be, would deem it a praiseworthy act to bring Kang within reach of justice, or rather of what goes by the name of justice in China. Meanwhile it is reported that Kang's family sepulchre has been broken open by order of Li Hung-chang, and that the bones of his ancestors have been scattered to the four winds of heaven. That is a terrible disgrace in the eyes of a Chinaman, and the first impulse of foreigners will be to conclude that no small part of the disgrace falls upon the Viceroy Li for issuing such an order. But the tomb of the Mahdi in the Soudan was similarly treated by a British General in very recent times. We are living in glass houses. Meanwhile, one of Kang's accomplices has been apprehended in Macao. The telegraph has mutilated his name so as to be unidentifiable, but we fear that the mutilation of his name is a trifle to the things in store for him.

THE SAGHALIEN QUESTION.

The House of Peers passed the Bill sent up from the Representatives for imposing an almost prohibitive import duty upon certain marine products coming from Russian territorial waters. Viscount Tani was chairman of the Special Committee entrusted with the duty of reporting on the measure, and those who have watched Viscount Tani's career could not be under any delusion as to the course he would recommend. Another important fact is that, during the course of the questioning process which usually accompanies the first reading of a Bill, the Government Delegate in the Upper House is reported to have said that the Government approved of the Bill. It will therefore become law, and will have the honour of marking Japan's entry into the field of tariff war-fare and retaliatory legislation. We can not for a moment think that the course adopted by the Russian Authorities is justifiable. No Government is entitled to suddenly disturb the vested rights of foreigners who, for nearly half a century, have been allowed to reside and carry on a legitimate industry within its territories. The Governor of the Amur appears to have ignored that elementary principle of international justice, and Japan could scarcely have been expected to submit tamely. In the interests of peace and good-fellowship such incidents are regrettable. One of the Tokyo newspapers alleges that Mr. Saito Katsusabùro, who is engaged in the fishing industry in conjunction with some Russian subjects, worked very hard to procure the rejection of the Bill in the Upper House, but was unable to obtain a favourable hearing from any of the members. The same journal alleged, two days ago, that several of the members had accepted bribes and were pledged to vote against the Bill. The two stories are difficult to reconcile.

When the Bill for imposing heavy duties on fish imported from Russian waters was before the House of Peers, the Government Delegate, in reply to a question, said that while not disapproving of the measure, the Government might not see the expediency of putting it into immediate operation. That means, we presume, that efforts will first be made to induce Russia to modify her very illiberal policy. If the facts of the Saghalien affair have been truly stated by Japanese newspapers—and we see no reason to doubt it—the Governor of the Amur District has ignored an elementary principle of international intercourse, and has discriminated in an unreasonable and unjust manner against Japanese subjects. It is not as though there was question of the opening of new territory or the starting of a new enterprise. For some 40 years the Japanese had been allowed to take an undisturbed share in the fishing industry in Saghalien waters, and had gradually invested a large sum of money on establishments which owed their inception entirely to a warrantable belief that the Russian Government would extend due protection to vested interests acquired under its own ægis. If a Government has to weigh the claims of its own subjects against those of foreigners, other things being equal, one can not complain of a display of partiality. England's experience has proved that equal rights for all, irrespective of race or creed, is the wisest plan in the end, and in practice she obeys the teachings of experience. But it does not follow that what suits England should suit every one else, and therefore we say that were the Saghalien fisheries now about to be exploited for the first time, Russia's discrimination in favour of her own subjects would find many supporters. But the commonest dictates of justice and international good faith require that, if she desires to shut out the Japanese who have been engaged in the fishing industry for such a long time with her tacit consent, she ought to give them a reasonable term of years to wind up their affairs, and to retire without disastrous loss. After all, the friendship of a nation counts for something, even if good faith be relegated to a secondary place, and it is surely oversanguine to expect that incidents like those of the Saghalien fisheries will produce no injurious effect on Japan's feelings towards Russia. We do not believe in retaliatory tariffs. They have never been successful. Neither do we believe that Russia will be persuaded to change her Saghalien policy in deference to a law like that just passed by the Japanese Diet. But it remains to be seen whether the Home Government had cognisance of the regulations issued by the Governor of the Amur, or whether, even if it had cognisance of them, it will refuse to give renewed attention to the just protests of the Japanese.

It is stated that the Russian Government has consented to postpone for one year the operation of the new regulations depriving Japanese subjects of fishing privileges in the waters of Saghalien. That will greatly lessen the hardship, but it will not by any means remove it altogether.

It is pointed out by Tokyo journals that although the Russian Government has partially recognised the justice of Japan's protests with reference to the closing of the Saghalien fisheries, the recognition is of a very unsatisfactory nature. Japanese subjects who have been engaged in the fishing industry for nearly half a century and who have sunk large sums of capital in it, are required to wind up their affairs, close 269 stations, and clear out within a space of a twelvemonth. It is a hard case. The present Russian Representative in Tokyo is said to have done everything in his power to mitigate the hardship. That might have been expected from Baron Rosen. But though his representations have achieved something, their success has been very partial.

A VEHEMENT ATTACK.

It is related, on what nature of authority we do not undertake to assert, that on the occasion of a recent meeting between Messrs. Hoshi Toru and Shimada Saburo in the lobby of the House of Representatives, the former observed to the latter that the *Mainichi Shimbun*, of which Mr. Shimada is editor, had lately become very abusive of him (Mr. Hoshi). "Yes," replied Mr. Shimada, "I am the writer of the articles." Thereupon a bystander observed:—"Why, Hoshi, you must be losing your spirit if you are beginning to trouble yourself about the contents of newspapers." "Bah!" answered the Liberal leader, "that's not the question. The fact is that I am going to institute proceedings against the *Mainichi* and I wanted to obtain evidence as to the authorship of the libellous articles. I have it now." If such a conversation passed, it certainly has not deterred Mr. Shimada. His last article is the worst of all. In it he declares that the politicians headed by Mr. Hoshi are forming a Japanese Tammany Hall, and he compares Mr. Hoshi to some corrupt Irish agitator whose name we can not identify. The basis of the last charge is an incredible allegation that a scheme is on foot to induce the Tokyo Municipality to sell its riverside lands for a sum of six million *yen* to a company in whose interests Mr. Hoshi is working. The lands in question measure 170,266 *tsubo*, and the *Mainichi* alleges that they are worth at least ten million *yen*, so that a company obtaining them for 6 millions would reap an immense profit, out of which Mr. Hoshi is promised a sum of 400,000 *yen*, or 10 per cent. In the face of these figures, the *Mainichi* calls upon the public to expel Mr. Hoshi from respectable society. As outsiders we do not pretend to have any knowledge of the back-stairs history of these matters. We believe Mr. Shimada Saburo to be a sincere and earnest reformer, but we have no reason to doubt Mr. Hoshi Toru's rectitude as a politician. The arithmetic of the matter, however, is open to comment even by outsiders. The *Mainichi* estimates these river-side lands to be worth about 60 *yen* a *tsubo* all round, and denounces as political robbers any one and every one advocating their sale *en bloc* at an average of 40 *yen*. Are the river lots worth 60 *yen* a *tsubo*? We greatly doubt it. But even supposing them to have that market value if sold piecemeal, it surely is not a reasonable supposition that any capitalist would give such a sum for them *en bloc*. Why should he, in the name of all common sense? Where would be his margin of possible profit? If he has to recover his money by selling the lots *tsubo* by *tsubo*, he may be obliged to remain out of pocket for an indefinite time. If, on the other hand, he buys with the object of letting the land, then he must always reckon on having considerable areas of it unlet and therefore unproductive. Is he to take that risk without any compensatory advantage? We should say that a large area of land saleable piecemeal at 60 *yen* a *tsubo* would be well disposed of wholesale at an average price of 40 *yen*. At any rate the Tokyo Municipality may be presumed to have its eyes open. It knows exactly what income it now derives from the lands, taking one year with another, and it can tell to a *sen* what the capitalized value of that income is. Why should there be such fear of the Municipal Authorities being victimized? Are we to assume that the Tokyo Municipality is in the plot? If so, Mr. Hoshi Toru is not the chief sinner; and if not, there do not appear to be any grounds for apprehension. It is a pity, we think, that respectable Japanese journals should lend their columns to the ventilation of wholesale charges of corruption which will not bear intelligent examination. The impression produced upon foreign opinion is exceedingly injurious to Japan's reputation.

MR. HOUSE ON THE ROMAJI.

It is related of two astronomers who flourished about a hundred years ago, that in the sequel of an argument about the parallax of a fixed star, they fell to saying very unkind things of each other. We do not wish to take part in a comedy of that kind, and will therefore leave the stage to Mr. House. But one or two matters of fact merit a word.

Mr. House still writes very indignantly about having been represented as "calling" stenography a syllabary. We grant frankly that from the point of view of strict verbal accuracy, he did not "call" stenography a syllabary. He only said that "the same definition might stand for both in comparing them with ordinary long hand." If a friend asserts that the same definition may stands for us and for a fool in comparing us with a wise man, he does not literally "call" us a fool but —well, we need not pursue the subject.

Mr. House twists our assertion of a "natural supposition" into "you keep on averring that I must have meant to speak of spelling." He occupies himself very industriously with both interpretations of our words. As to the "natural supposition," he juggles with it in quite an artistic manner; inflates it into a large balloon of impertinent audacity, and then pricks it mercilessly so that it shrivels up into something quite mean and contemptible. As to the pretence that we "keep on averring that he must have meant to speak of spelling," he is less demonstrative but apparently not less indignant. Mr. House is a stickler for accuracy. His standards are so high in that respect that he is considerate enough not to insist upon their universaal application. But it appears to us, who are hopelessly his inferior, that there is a radical difference between advancing a "supposition" and "keeping on averring." To "keep on averring" that a man must have meant something which he denies that he meant, is to accuse him of falsehood. We have not done anything of the kind. We have merely explained that we "supposed" Mr. House's meaning to be so and so. He must take his choice between the two versions. Both can not possibly be true. A man can not be ridiculed for "supposing" a thing and at the same time, denounced for "averring" it.

Mr. House is vehement in his insistence that he referred to the sounds of the separate letters of the alphabet only. We appear to have committed an unpardonable sin in transgressing that limitation. Mr. House originally attacked our thesis, not we his. We fail, therefore, to see what right he possesses to impose such a limitation. But let that pass. Considering that he spoke of the English "pronouncing the letters of the alphabet in all conceivable and many inconceivable ways, giving to most of the vowels at least half a dozen different sounds, making some of the consonants responsible for double or treble service and relieving others from vocal duty altogether," it was not within the power of our narrow intelligence to conceive that he intended to refer to the pronunciation of the separate letters only of the Roman alphabet, and that he did not intend to speak of their uses for word-forming purposes. It entirely passes our comprehension to understand how an Englishman, in pronouncing the separate letters of the Roman alphabet, can do so "in all conceivable and many inconceivable ways," can "give to most of the vowels at least half a dozen different sounds, making some of them consonants responsible for double or treble service and relieving others from vocal duty altogether." Such manœuvring with the separate letters of the alphabet must be an interesting feat. But we now assure Mr. House that had we understood his intention, we should have left the matter entirely undiscussed; for what concerns us is the ability of the Roman letters, when duly combined, to represent Japanese sounds, not the comparatively trivial and unpractical question of their sounds as separate members of an alphabet.

Mr. House makes us say that "the Japanese find no difficulty in pronouncing 'r.'" He is very ruthless in his treatment of that assertion; talks about the knowledge furnished by experience; about the confusion that Japanese students of English make between "l" and "r"; about "a thoroughly accurate ear" and about "the faculty of close observation." He becomes almost compassionate towards our combined ignorance and physical defects. It is very prettity done, but a discussion of the average number of quills on a porcupine's back, or the normal length of a kite's tail would have been quite as relevant. We never said anything about the ability or inability of the Japanese to pronounce the letter "r." We never approached that subject however remotely. We never had the slightest notion of approaching it. It did not occur to us that the use of the Roman alphabet to represent Japanese sounds involved any change in the pronounciation of the Japanese language, or was in any way dependent upon the Japanese acquiring ability to produce English sounds. What we said was:—"A Japanese can not have any difficulty in giving to *ro* the sound that he associates with the symbol ロ." Is that the same as saying that when a Japanese, for the purposes of his own language, uses *ro* instead of ロ, he must necessarily give to the former precisely the sound that an Englishman gives it for the purposes of the English language? Is there the remotest resemblance between the two statements? We have a wholesome respect for Mr. House's standard of accuracy, yet we venture to analyse his manner of arriving at the statement he attributes to us. What we said was:—"A Japanese can not have any difficulty in giving to *ro* the sound that he associates with the symbol ロ." What Mr. House makes us say is:—"The Japanese find no difficulty in pronouncing 'r.'" His method is to take three of the words used by us—the words "the," "Japanese" and "difficulty,"—and to add to them five words of his own, the result being the sentence "the Japanese find no difficulty in pronouncing "r," which assertion he calmly attributes to us. He even adds marks of quotation to the three words "find no difficulty," though only the last of the three is ours, and though, even if they were all ours, they do not constitute the remotest justification for the statement he tacks on to them. He might just as well have made us say "that the Japanese find no difficulty in climbling to the moon." Either assertion would have been equally accurate. And while doing these things, he takes care to assure us that he is "extremely anxious to avoid misinterpreting our meaning"!

We are glad to be able to agree with Mr. House in one point, namely, that this discussion is fruitless. It is impossible to foresee the propositions to which his method of controversial manufacture might not commit us, and we prefer to retire from the field. There is a happy consensus after all!

MINING IN KOREA.

Glowing accounts of the progress of mining enterprise in Korea are published by vernacular newspapers. They refer specially to the works carried on by American concessionaires. At the Unsan mine, near Pyöng-yang, 20 crushers are in operation, but it is intended to double the number at once. Mr. Leigh Hunt, the concessionaire, is said to be giving direct attention to the mine. He employs an American physician, 20 foreigners, 11 Japanese, and some 400 Koreans. The quantity of ore obtained each week is stated to be represented by a cube 3 inches thick, its sides 8 inches and 4 inches, its weight 20 *kwamme* (about 167 lbs), and its fineness $\frac{7}{10}$. The Korean Government is entitled to one-fourth of the net profits, and receives, under that agreement, 6,000 *yen* monthly, a figure difficult to reconcile with the alleged output, even when full allowance is made for expenses. Another mine in the same district, at a place called Tai-ön, is also worked by an American. The force of men employed there is still larger, namely, 23 foreigners, 8 Japanese, and from 500 to 600 Koreans; and the ore is stated to be $\frac{8}{10}$ fine, but nothing is reported about the output.

With reference to this subject, we find in the *Chiuo Shimbun* a paragraph to the effect that there is still in Korea a most promising mine which has hitherto entirely escaped the attention of Europeans or Americans. Japanese subjects are said to have put in an application for the concession.

TREATMENT OF SOLDIERS.

The treatment that Japanese soldiers receive from their superiors is beginning to be much discussed. The *Jiji Shimpo* has an article on the subject, from which we gather that the men are very harshly used. A suicide which recently occurred in the third company of the Fourteenth Division (Himeji), has accentuated public feeling. The victim left a soberly written letter, calm in tone and explicit in its statements. He explained that scarcely a day passed without his suffering some physical violence at the hands of a sergeant whom he named; that unless one has some money to buy delicacies for the first-class soldiers or non-commissioned officers, life in barracks is unendurable; that he, being without anything but his pay, could not possibly procure favour for himself in that way; that he had no objection whatever to being a soldier, but that the cruelty and injustice practised towards the men did not seem to be an essential part of soldiering, and that he had resolved to lay down his life since that appeared to be the best method of calling attention to these abuses. In the same journal a story is related of a soldier who was recently run over by an officer's *jinrikisha*, and who obtained for redress a volley of abuse for being in the way. It may be presumed that there is much truth in these rumours or the *Jiji Shimpo* would not take them up.

THE DIET.

The Diet's thirteenth session came to an end on the 23rd ultimo, so far as concerns the transaction of business. It assembled on the 19th of November, and had therefore been in session for three calendar months and four days. During that time the Lower House sat 33 times, and the Upper House, 32. Of course the various committees were at work in the interval, but, on the whole, it is quite a record of leisurely legislation. There was not so much as one really stirring debate, and the important measures passed were almost limited to those introduced by the Government.

The records of the various sessions of the Diet indicate that the Houses have distinguished themselves on the present occasion by an unprecedently small number of sittings :—

NUMBER OF DAYS ON WHICH THE HOUSES SAT IN VARIOUS SESSIONS.

	House of Peers.	House of Rep'tives.
I.—	49	62
II.—(Dissolved)	20	23
III.—(Extraordinary session)..	26	27
IV.—	41	46
V.—(Dissolved)	10	20
VI.—(Dissolved)	16	16
VII.—(Extraordinary session).	2	3
VIII.—	41	52
IX.—	45	48
X.—(Prorogued on account of death of Empress Dowager	26	32
XI. —(Dissolved)	2	2
XII.—(Dissolved)	17	16
XIII.—	44	45
XIV.—	31	33
Average of Ordinary Sessions (omitting dissolutions, &c.)	39 5	45 4

The business done by the 14th Diet has not, however, been insignificant on the whole, as the following table shows :—

	Submitted	Passed	Rejected	Not Debated	Withdrawn
Government Bills	47	43	2	2	—
Private Bills	76	39	15	13	9
Petitions to the Throne	2	1	1	—	—
Representations to the Government	78	52	8	16	2

Hence, out of 241 measures introduced, 178 were passed and 27 rejected, which shows that the Bills debated and passed or rejected by the House of Representatives, averaged nearly 6 per diem. That would mean very precipitate legislation, if we did not remember that these measures received investigation at the hands of committees when the House was not sitting. The various special and standing committees probably sat for fully 70 days out of the 95 comprising the session.

This record of few and brief sittings, coming in the sequel of the charges of bribery and corruption recently preferred against members of the House of Representatives, provokes some severe criticism of parliamentary institutions. The very expressive word *fuhai* is freely applied to the Lower House, and some writers seem to think that constitutional government has been tried in Japan and found wanting. But the *Jiji Shimpo* refuses to take that pessimistic view. It apparently thinks that a certain measure of corruption is inevitable, and that the members of the Diet are not below the general moral standard of their nationals. In support of that view, it points to the *Meiji* statesmen. One and all of them began their careers as poor men, but they are now in possession of ample fortunes, which certainly can not represent merely savings made from their official salaries. Nevertheless there can not be any doubt that they have served their country splendidly, or that she has progressed and prospered under their administration. But whatever element of self-interest was included in their motives, the public saw little of it, whereas the doings of the Diet are under constant examination with a magnifying glass. That indeed is one of the main differences between a bureaucratic and a constitutional form of government. The proceedings of bureaucrats can be enveloped in secrecy which is not possible in the case of parliamentary statesmen or party politicians. But it does not follow that corruption has really increased because we hear more of it now-a-days. The *Jiji* thinks that the so-called "corruption" of the Diet is greatly exaggerated. The House of Representatives, by its attitude towards the Railway Nationalization Bill, has just shown that in important matters its methods are pure. There has certainly been some bribery, but it was probably on a very small scale, and it left the great body of the members quite untouched. Our contemporary's conclusion is all in favour of the future of parliamentary institutions in Japan. It is reassuring to read such words in the columns of a journal which never hesitates to denounce an abuse if it sees one. Nor can there be any doubt that rumour largely exaggerates in this matter. Some journals attribute everything that happens to corrupt motives, and do not hesitate to frame charges which tend only to prove their own unscrupulousness. Were their writings credible, Japanese society and Japanese officialdom must be rotten from the sole of the foot to the crown of the head.

SIGNATURES AND SEALS.

Imperial sanction has been given to the law providing that in cases where signatures have hitherto been necessary, seals (*natsuin*) will in future be sufficient; and further, that the duty of affixing a seal may be entrusted to any one. The latter provision follows, indeed, as a matter of course, for so soon as the identity of the seal itself becomes the only point of importance, the person using it becomes a secondary consideration. We can not think that this is at all a desirable measure. It certainly saves time: one can stamp a mark upon a document in a small fraction of the time required for writing a signature. But there is a very palpable loss of security. Any skilled mechanic can manufacture a seal if its impression be placed before him, whereas to imitate a signature successfully is an operation of the greatest difficulty. Moreover, it is quite impossible to distinguish between the impressions produced with an original seal and a duplicate: no means of discrimination exist. It appears, then, that at a time when the building up of credit is one of the most imperative needs of the day, the Diet has deliberately abolished an important protection against fraud. The Japanese are very careful about their seals. They treat them much as an Occidental treats a precious article of jewelry, for the seal is manufactured out of jade, crystal, or agate, enclosed in a tiny gold case and suspended from the watch chain, or from a chain of its own. Yet there is in reality no serious occasion to treasure the seal so diligently, for an impression alone is needed by any one desiring to commit a fraud. From a single impression a facsimile seal can be made. We can not set forth the reasons that weigh with the advocates of the change from signatures to seals, for we have never been able to discover any intelligible reasons, except the saving of time, and, on the other side, there is an immense increase of risk.

VISCOUNT SHINAGAWA.

We learn with regret that Viscount Shinagawa breathed his last on the morning of the 28th instant. The Viscount, though undoubtedly a prominent Japanese statesman, had not acquired much fame outside his own country. Born in 1843, he was one of the "young bloods" of Choshiu in 1863, when that clan distinguished itself by its vehement opposition to the Tokugawa Shogun and its violent attempt to enforce an anti-foreign policy. He did not, however, engage in the military struggles of the time, but devoted himself chiefly to literature. His first official work of any importance was in connexion with the Franco-German war, which he was sent to observe, subsequently remaining for some years in Germany. He served as Japanese Minister in Berlin in 1885, and on his return to Japan the public heard little of him until 1893, when he suddenly attracted wide attention by organizing the National Unionist Party. It can not be said, however, that as a politician he was a great success. The spirit of the time did not inspire him, nor did parliamentary institutions commend themselves strongly to his ideas of government. Yet he certainly played a nationally useful part as one of the checks on the too-rapidly revolving wheel of Japanese progress. The Emperor conferred on him the Grand Cordon of the Rising Sun shortly before his death.

THE COTTON SPINNERS.

The cotton spinners of Japan seem to have completed arrangements for a "Trust" on a large scale. They include in their organization the spinners of Tokyo, Nagoya, Osaka, Okayama and Kiushiu. The head office is to be in Osaka, and there will be a branch in each of the five places just mentioned. It is explained by the promoters that their information as to the state of foreign markets, whether for the purpose of buying the raw material or for that of selling the manufactured, is now obtained at second hand, and that they experience much inconvenience in consequence. Moreover, the business has become so large and so important that combination and cöoperation are advisable in the general interests. The Trust will levy 25 *sen* per bale to cover expenses. It will obtain daily telegrams from New York and London as to prices, and the manufacturers in Japan will be required to furnish returns of actual and estimated stocks. A general profit of 7 *yen* per bale will be included in the selling price fixed by the Trust, such price being determined with regard to the prime cost of the raw material and the expense of manufacture, but a bounty of 2 *yen* per bale will be granted on yarns for export, money for that purpose being obtained by a corresponding deduction from the profits on yarns for domestic consumption.

DIPLOMATIC APPOINTMENTS.

Mr. Kato Takaaki retires from the post of Japanese Representative in London, and is to be succeeded by Baron Hayashi, hitherto Minister in St. Petersburg. Both of these officials were signally successful in the positions which they now vacate. Japan has probably no better men among her so-called "junior statesmen." Mr. Kato is not gazetted to any new position as yet: he remains *en disponibilité*. Mr. Komura, now representing Japan in Washington, is to replace Baron Hayashi at St. Petersburg. That also is an excellent appointment in one sense, but it seems regettable that Mr. Komura could not have been left for a longer time in Washington, as he has just finished special investigations which would certainly have added to his usefulness.

It appears that Mr. Takahira, now Vice-Minister of State for Foreign Affairs, is to succeed Mr. Komura as Japanese Representative in Washington, and that Mr. Kurino, now Minister in Paris, will probably become Vice-Minister of the Department *vice* Mr. Takahira. But as Mr. Kurino's duties in connexion with the Paris Exhibition require his presence in France for some months longer, it is probable that Mr. Uchida, now chief of the Political Bureau in the Foreign Office, will temporarily act as Vice-Minister.

Baron Nishi, Japanese Representative in Peking, is said to be suffering from inflammation of the lungs. His health has been very indifferent since he went to China; first, an attack of malaria, which laid him up for a long while, and now, just as he had become apparently convalescent and had resumed his duties, a fresh illness in the form of lung trouble. During his tenure of the portfolio of Foreign Affairs, also, the Baron was confined to his room for quite a long time.

GERMANY IN SHANTUNG.

It is not all surprising that Germany thinks of sending troops into Shantung to maintain good order. The "Red Fist Society" seem to be masters of the situation in that province, and although Mr. Yuan Shikai, of Korean fame, has reported that everything is quiet, there are the best possible reasons for knowing that his view is altogether too rosy. It would seem that the *mot d'ordre* under the Emperor Dowager's *regime* is to simulate a condition of tranquillity. Her Majesty is anxious to conceal all semblance of popular unrest, especially since the last *coup* in connexion with an heir apparent. But Shantung's affairs can not be hid under a bushel, seeing that Germany's railway operations bring her into direct touch with the interior. If Russia employs troops to secure the undisturbed prosecution of her railway schemes in Manchuria, there can be no valid argument against similar action on Germany's part in Shantung. Thus gradually China's fate is drawing closer. The links in the chain of destiny are very simple—railway concessions, troops to protect the works, military occupation, and finally complete alienation of the territory. In Germany's case the last link will be forged very quickly, if rumour speaks truly, for it is said that numbers of the people of Shantung are organizing a force to resist the German soldiers—the "red fists" against the "mailed fists." The Shantung folks will have a short shrift if they attempt anything of that kind, but the results of their resistance will rust very long.

RUSSIA AND KOREA.

A clever article in the *Nippon* discusses the question of Russia's loan to Korea. The amount is said to be 12 million dollars (gold), or 24 million *yen*, and five million dollars have already been paid to Korea. Considering that Korea's income is only 3½ million *yen*, and her expenditure 4½ millions, our contemporary regards her as an unsafe debtor, and concludes that the Russian loan is dictated by considerations other than financial. In fact, Russia is compared to the "following wolf" (*okuri okami*) of the Japanese fable, which waits to attack the traveller until some trouble interrupts the even progress of his journey. Just now, the great Northern Power is all smiles, like the benevolent deity Jizo, but when Korea fails to pay back the debt, she will find herself confronted by a frowning Minos. In borrowing from St. Petersburg, she may truly be said to have sought the loan of coins to pay for her own passage across the Styx. The *Nippon* very frankly admits that Japan would gladly pursue a similar policy towards Korea, and did indeed pursue it in the past. But when it comes to a competition of purses, Japan is not in the running with Russia.

BIG FIRE IN YOKOHAMA.

A fire broke out on Friday afternoon at 2.15 in Nigiwaicho Ni-chome, a spot quite near the place where the great conflagration of August last year originated. A fresh northerly wind was blowing at the time, and the flames spread rapidly, leaping from street to street, and levelling everything in their course. The outbreak was discovered about 2.15 and an hour or so later a broad track of charred embers stretched from the point where the fire originated to the creek side near the Yoshiwara where it burned itself out. The excitement was immense, almost as great in some parts as on the occasion of the last big fire, multitudes of people hurrying about with their household belongings, *tatami*, *futon*, *shoji*, etc. The district ravaged by the flames included Hisakatacho, Ashibikicho Nichome, Kumoicho Nichome, and Nagashimacho Nichome. There was great excitement in the Isezakicho theatres, some of which were quite close to the place where the fire originated; and at one theatre nearest the scene the audience made a rush for the doors in which several people suffered more or less severe injuries. The fire originated in a bath house. The police have traced the destruction of some 346 houses.

There is some uncertainty about the number of houses destroyed by the recent fire in Yokohama. All agree, however, that the great majority of the buildings were of the cheapest and flimsiest kind. Nevertheless, the experience of the big fire last year had induced many people to have recourse to the insurance offices, and policies to the amount of about seventy thousand *yen* were in existence. The companies chiefly affected are the Yokohama Insurance (15,000 *yen*); the Japan Brewery Insurance (10,000 *yen*); the Tokyo Fire (6,500 *yen*); the Tokyo House-fittings and Chattels (5,600 *yen*); the Property Insurance (6,000 *yen*), &c. Taking the number of houses destroyed as 400, it appears that the average insurance was 175 *yen*. No feature of the new civilization can have contributed so much to the happiness of the Japanese people as the introduction of the system of insurance. Formerly a fire involved the loss of everything except a few goods and chattels, and thousands of householders were reduced annually from comparative opulence to a state of penury.

NOTES ON CURRENT EVENTS.

A project is on foot to erect a large oil tank at Haneda, near Kawasaki, and build a line of railway thence to Yokohama. The oil on account of which these steps are to be taken is that obtained from Japanese wells.

Count Otani, whose illness was recently reported to be hopeless, has greatly improved, and is now said to be out of immediate danger. Drs. Baelz and Ikeda, who had been attending him assiduously, have returned to Tokyo.

A destructive conflagration took place in Chiba on the 26th instant. The fire broke out at 8 a.m. and was not extinguished until 11 a.m., by which time about 250 houses had been destroyed. It is an extraordinary record, nearly a house and a half per minute.

Mr. Kawakita has obtained his three-years' whale-fishing concession in Korean waters. He is to pay a license fee of 800 *yen* per boat. The Russian whale fishers pay 20 *yen* per fish, and as each boat is supposed to take 50 whales in the season, the rate of tax is pronounced to be in favour of the Japanese lessee. We do not think so. For our own part, we should prefer the Russian rate.

Japanese newspapers state that the adulterated *habutaye* which is now so much talked of has been traced to the Japanese *banto* of Messrs. Dubuffet & Company, No. 24, Yokohama. Charged with the offence, the *banto* is said to have pleaded that he merely obeyed the orders of his employers. This of course is only an excuse, for the foreign firm could not possibly have sanctioned the proceeding.

Asama-yama has again given evidence of much disturbance. At 8 a.m. on the 22nd, it emitted a sound like the discharge of a monster piece of artillery, and then belched forth a dense cloud of smoke and ashes, the former spreading a pall over the sky and the latter falling even in Nagano. It will be remembered that the mountain behaved similarly, though on a smaller scale, four days previously. Some very large smelting operations are evidently going on in its huge alembic.

The great cold prevailing in the north has not chilled political ardour. At a by-election just held in Iwate Prefecture, Viscount Seki, a friend of the Progressist candidate, encountered a party of the Liberal candidate's supporters, received a severe beating at their hands, and was half buried in the snow. The police did not arrive in time to arrest the offenders, and it goes without saying that they are the objects of fierce journalistic attack. Some pressmen seem to suppose that a constable should be omnipotent and omnipresent.

Another outrage is reported from Amoy. The news comes *viâ* Taipeh. On the 16th instant, a number of men, apparently

Digitized by Google Original from CORNELL UNIVERSITY

Chinese soldiers, are said to have waylaid some Japanese subjects who were peacefully traversing the streets, and wounded two of them severely and one slightly. Other Japanese attempted to assist the sufferers, but being attacked by a second body of soldiers, they had to fly. Finally, 30 marines and an officer were landed from a Japanese gunboat, and order was with difficulty restored. There has been much talk in Japan lately of effecting an arrangement for transferring to Japanese hands the duty of policing Amoy. The repeated outrages can not fail to strengthen the contention.

It is of course an exaggeration to allege that the facts of the Hawaiian coasting-trade problem are of a nature to warrant formal protest by the Japanese Government. America's policy with regard to her coastwise trade is her own, and no one can question her right to enforce it within her own territories. But a case may be based on the promise given by the United States Government to respect and continue the privileges of which Japan was already in enjoyment at the time of the annexation of Hawaii; and also on the fact that by excluding Japanese ships from the trade, American citizens themselves will suffer considerable inconvenience. Japan is certainly not in a position to assail the general policy of the United States in this respect, seeing that her own policy is similar.

We read in the *Chuo Shimbun* that the chief opponent of the Religions Bill, Mr. Ishikawa Shuntai, Vicar of the Eastern Hongwan-ji, finds himself in a difficult position. The various persons, especially members of the Diet, who assisted to procure the defeat of the measure are now clamouring for "recognition" of their services, and as they estimate their aid at a high figure, Mr. Ishikawa is required to furnish a sum of six hundred thousand *yen*. Deprived of the aid of the Kitahama Bank, which has now refused to grant any further accommodation to the temple, the Vicar can not possibly procure such a sum, or even one-tenth of it. On the other hand, if he fails to satisfy these importunate persons, he may reckon on their hostility in the future, and, after all, the Religions Bill is only deferred, not finally defeated. Such is the *Chuo's* story. We can not tell what may be the dimensions of its grain of truth.

KOREA AND THE POSTAL UNION.

We learn from the *Keisai Zasshi* that Korea has joined the International Postal Union, the system coming into operation on 1st January last. Postal rates between Japan and the Peninsula have been fixed as follows:—

	Rate in
Correspondence—For every 4 *momme* (15 *sen.* grams)	3
Ordinary postcard	1
Return post card	2
Business letters—Up to 70 *momme* (250 grams).	10
And for every 14 *momme* (50 grams) above that limit	2
Newspapers and periodicals, from publishers.	½
From individuals—14 *momme* (50 grams)...	2
(The International Postal Regulations are to be observed in regard to these last mentioned mail matters).	
Printed matter—For every 14 *momme* (50 grams)	2
Commercial samples (including seeds)—For every 14 *momme* (50 grams)	2
Registration fees—For each letter or note	6
Fees for delivery notes	4

THE BOOK-SHELF.

The Enchanter, by U. L. Silberrad, London: Messrs. Macmillan & Co.; Yokohama, Messrs. Kelly & Walsh, Ltd.

East Anglians should find this novel interesting, if only for the sake of the description it affords of the life that flows so tranquilly in the coast villages and small market towns of the north-east part of Norfolk—that corner of England which seems to have drifted, ages ago, into a back-water of its own, quite outside the influence of the broader and more strenuous streams of the national existence, and still is quite content to remain there. It is a delightful land, all the same, with its lonely sea-marshes, broad meres, and occasional cliffs—cliffs which the relentless ocean is undermining and gradually levelling, carrying in their fall villages, towns, towers, and lonely farmhouses, and all by piece-meal, so that the maps of one century are useless for the purposes of the next, save for the local historian or antiquarian. In some of these slowly disappearing hamlets are to be found descendants of families who have been "on the land," or have lived "by the land" for centuries, families who are as proud of their genealogical trees, despite their crushing poverty, as any descendants of "those who came over with the Conqueror" can be.

But to the story. In Grimshoe, some time in this century, was born a son to the house of Pycroft whom his parents preferred to call after his father, Nicholas: but whom the villagers at once dubbed Young Nick in contradistinction to Old Nick. Now Young Nick was descended on his mother's side from the famous Belshazzar Screed, who followed the dangerous calling of an alchemist and enchanter in the days before Bluff King Hal broke up the monastic brotherhoods of England. With such blood in his veins it is not to be expected that Young Nick would be an ordinary lad. And he wasn't. In after life, according to this chronicle, he became one of the world's most famous scientists; but of these achievements we find little in the book. As the hero of "The Enchanter," Young Nick has other work to do—to be, in fact, the Good Influence always at hand to turn aside the evil machinations of another descendant of Belshazzar, one Maledict Screed, on whom has fallen a very large portion of the old alchemist's mental cloak, which thereby develops in him a larger share of evil propensities than most men would care to have possessed, much less owned to. Maledict Screed is cursed with a malignant and mysterious disease, the cure for which is almost too dreadful to describe—(and we leave this to the reader of the book to discover) —and is also firmly convinced that the secret of the Elixir of Life is actually to be achieved if only certain M.S.S. known to old Belshazzar could be found. Now Young Nick has some books once belonging to Belshazzar which he can decipher in parts; the key to the rest lies in an ancient muniment chest belonging to the Lady of the Manor of Grimshoe, one Miss Ira Chauncey, a most beautiful and of course most wilful young lady. Maledict Screed first tries to rob Nicholas Pycroft of his M.S.S.—and in the end succeeds—and then endeavours to get the key from Ira. In this latter enterprise he was not so successful, the girl outwitting him. But she lets him know that she has found in Belshazzar's book a reference which hints that the precious secret is to be found in a dilapidated but once fortified city of Hunza, that mysterious hill country which lies around the unknown sources of the Indus. By this time we are half way through the book, and the scene consequently changes, the three principal characters being transported to Hunza. Here adventures of the most appalling description—some the work of Maledict Screed—befall Ira, but the Good Influence turns up in time and rescues the beauteous maiden. This rescue, by the way, is one of the best things in the book, with its description of the lonely mountain land.

The long desired M.S.S. is found, only to be lost again, and the scene shifts once more. Once again all three are back in England and the climax is gradually worked up. The Good Influence triumphs, Maledict Screed goes to his death in an awful manner—the sea carrying away the solitary tower in which he lived; and Ira and Young Nick, discovering that they were predestined for each other, plight their troth, their story closing with the grand old blessing pronounced by one of the minor, but well-drawn, characters in the book—"The Lord bless you and keep you, the Lord lift up the light of his countenance upon you and give you peace, now, henceforward, and for evermore."

"The Enchanter," despite its rather wearisome opening, is a book that will repay reading, for its capital descriptions of village life and character and also for the sake of the love-story which it tells. Some of the descriptive passages towards the end almost attain to eloquence, though nowhere can one say that the writer has indulged in "purple patches." The pathos of the country parson's hopeless struggles against inexorable fate, and his sad end; the quiet humour displayed in the drawing of the more quaint and homely characters, all so true to life; the description of a Nor'easter on the Norfolk coast—each and all tend to make the book a notable contribution to the novels of the year.

Donna Teresa, by Frances Mary Peard; London: MacMillan & Co. Yokohama: Messrs. Kelly and Walsh, Ltd.

This is a book for an idle half hour. It deals with an English woman, the widow of an Italian Marchese; her sister, her grand-mother, and a young barrister. The Marchesa accuses a Sicilian of robbing her of her purse, and the young barrister, in his anxiety to render her assistance, interviews the police and has the man arrested. The Sicilian thereupon determines upon revenging himself on Wilbraham Wilbraham meanwhile becomes engaged to the Marchesa's pretty but shallow-minded sister and then the whole party proceed to Sicily, where, just as Wilbraham breaks off his engagement in despair of the infantile character of the girl, the Sicilian turns up and attempts to shoot him, only to kill quite another person. This is the story, and, as we said above, it should serve the purpose of an idle half-hour.

PRESENTATION.

A few members of the Yokohama Cricket and Athletic Club met at the Pavilion on Friday morning to bid farewell to Mr. F. E. White, who is leaving for England and will afterwards proceed to Korea. Mr. E. Flint Kilby presided, and in a short speech remarked that Mr White had done more for cricket probably than any other person at present in the community. He had learned cricket at a public school which had turned out many excellent cricketers, good athletes, and good soldiers. In Yokohama he had sometimes made large scores, and also sometimes small scores, but whether successful or unsuccessful he had always played well, in good spirit and good temper, and he had always given the greatest encouragement to young players. Mr. White, as they knew, was the holder of the Kirin Cup, and he had also once won the cup presented by Mr. Clark. If he had won it again during the coming season he would have been able to take it away with him, but as it was he would have to leave it behind him. The members had thought it fitting to present Mr. White with some tangible token of their esteem, which would serve to remind him of his cricketing days at Yokohama. He would ask Mr. White's acceptance of a watch and chain which had been purchased by the willing subscriptions of members of that Club.

Mr. Kilby then handed Mr. White a very handsome gold watch and chain.

Mr. White expressed his thanks in an appropriate speech, and the gathering broke up amid cheers for the recipient.

LAND QUESTION IN YOKOHAMA.

HIS EXCELLENCY the French Representative has received from the Minister of State for Foreign Affairs the following communication, and kindly places it at our disposal for immediate publication in view of its great interest to the foreign community :—

The provisions of the Japanese Civil Code that might conflict with those of the Treaties evidently do not apply to the right of perpetual lease.

The provisions of Article 268 of the Civil Code, limiting the rights of holders of superficies, and, as a general rule, all provisions implying conditions other than the conditions inscribed on the title deeds of the perpetual leases, do not apply, as a matter of course, to those leases.

These very explicit declarations ought to remove all uneasiness from the minds of the foreign lease holders, if, indeed, any uneasiness still exists. The matter has been fully explained in these columns, and it really appears to us that only persons who are determined not to trust the good faith of the Japanese Government can continue to have any doubt. It is now placed on record, in an official communication of an international character, that the restrictions imposed by the Civil Code on the right of superficies have no application to the right of perpetual lease enjoyed by foreigners under the Treaties. We desire to thank M. HARMAND in the name of the foreign community for obtaining this explicit official declaration, and for bringing it without delay to public notice.

MIXED RESIDENCE.

A REPRESENTATIVE of an American firm is said to have arrived in Tokyo with the intention of establishing business in thedirect sale of electrical machinery and railway plant to the Japanese. There would be nothing worth recording in that fact, however. The interesting feature of the affair is that this gentleman is said to have rented a Japanese house in Tokyo and to have made arrangements for living in Japanese fashion, since he considers it expedient to become intimately acquainted with the manners and customs of the people before he attempts to do business with them. One of our Tokyo contemporaries calls attention to the fact as the first really tangible evidence that mixed residence has become a reality. We do no know whether the case is accurately stated, but the thought suggesting itself to us is that if the gentleman is as much in earnest as his procedure suggests, and if he really intends to familiarize himself with Japanese manners and customs, and to make practical acquaintance with the Japanese style of living before he commences his business operations, he will have a long time to wait, for the first and most essential point is to master the Japanese language. To eat with chopsticks, sit on mats, and wear big-sleeved coats do not bring a man any nearer to genuinely intimate intercourse with the Japanese people. The language also is needed. Yet, even when the language in added, something still remains to be achieved, and what that something is we have never been able to discover, though we have been considering the subject for 33 years. No foreigner has ever yet succeeded in being admitted to the inner circle of Japanese intercourse. That, we think, is a conceded fact. The converse is not true, namely, that no Japanese has ever been admitted to the inner circle of foreign intercourse. There have been instances of such admission, though they are few and far between. But the foreigner remains invariably outside. Why is it? The question stares us in the face, but which of us will undertake to answer it satisfactorily. Some may deny the fact ; may contend that foreigners have been able to establish perfectly intimate relations with Japanese. We grant that there have been cases of the kind, in appearance. But what class of foreigners were they, and how long did the intimacy last? Just long enough for the Japanese to discover that the foreigner was not qualified for intimacy with any respectable people.

TANKO COAL MINING & RAILWAY COMPANY.

Mr. Inouye, Manager of the Tanko Coal Mining and Railway Company, is said to have delivered a long speech at the general meeting recently held in Tokyo. The gist of his address may be given as follows:—The net profits of the Company for the latter half of last year, being only 708,000 *yen*, show a decrease of 46,000 *yen* as compared with the first term of 1899, and of 91 000 *yen* in compariron with the corresponding term of the year before last. Classified under coal mining and railway sections, the figures stand thus :—

	Railway section. Yen.	Coal Mining section. Yen.
Latter half of 1898..	279,164	629,588
First half of 1899...	384.060	452.636
Latter half of 1899 .	429,852	393,601

Thus, in spite of a considerable increment in the profits of the railway section, an equally serious decrease is noticeable in those of the coal mining section. The former phenomenon is attributable to the progress in the reclamation works undertaken by the Government in Hokkaido, and there can be little doubt about the possibility of realizing the forecast that the receipts of the Company would be doubled in three years, as was suggested at the ordinary meeting in August last. Traffic receipts for the first half of last year amounted to 20 *yen* per mile per day, those for the latter half being 22.25 *yen*; whereas the corresponding figures for the 29th year of *Meiji* were only 10.30 and 13.45 *yen* respectively. Although there have been more or less fluctuations in revenue in consequence of the outbreak of fire or serious inundations during past years, the rate of increase has been steady and progressive. Moreover, considerable improvements having been made in the management of the railway, a reduction in working expenses has been effected to a large extent. This might be seen from the following figures:—

year.	1st half per cent.	2nd half per cent.
1897.....	65 8	62.7
1898.....	68 7	63 6
1899.....	54.7	51.5

Notwithstanding that the utmost energies have been devoted to the improvement of the traffic, the constant increase of goods and passengers has virtually made it impossible to satisfy requirements. The aggregate tonnage of ordinary goods for the 1st half of 1899 (coal excepted) reached 209,000 tons, which amount, compared with the corresponding period of the previous year, shows an increase of 64,000 tons, or 45 per cent., while the figure for the latter half aggregated 238,000 tons, indicating an increase of 80.000 tons or 50 per cent. Agricultural products occupy a most conspicuous position in the latter half of the terms referred to, the figures being as follows :—1895. 17,000 tons ; 1896, 23,000 tons ; 1897, 27,000 tons ; 1898, 20.000 tons ; 1899. 52,000 tons. Not a single railway throughout the Empire can furnish such a striking instance of the growth of traffic in so short a period.

The diminution in the profits of the Coal Mining Section is chiefly attributable to reduction in the amount of sales. In the latter half of 1897 the figure stood at 357 000 tons, but in the corresponding period of 1898 it had decreased to 236,000, and by 1899 the amount had fallen to 221,000. The average net profit per ton (ship accounts being excepted) in the 2nd half of 1898 aggregated 2 53 *yen* ; in the 1st half of 1899. 2 24 *yen*, and in the 2nd half 1.65 *yen*. The working expenses of the Coal Mining Section reached the highest amount in the 1st half of 1898, since which time a reduction has been gradually effected. As to the ratio the net profits realized in the 2nd half of 1899 bear to the aggregate capital of the company, it may be noticed that the Railway Section has earned 11 per cent. and the Coal Mining Section 19 2 per cent.. so that a dividend of 12.5 per cent. on the total capital may be declared.

With regard to the prospect of the extension of the company's railways, Mr. Inouye remarked that the connection of the branches of the Yubari line with the Government railways on the boundaries of Tokatsu would considerably increase the facilities for the transport of coal from Kushiro and Nemuro to Sapporo, Otaru, and Muroran, the proposed new line from Kaneyama to Otaru via Asahigawa being 124 miles instead of 159 by the existing railway, and to Muroran only 115 miles, instead of 198 as hitherto. Since the districts along the proposed extension abound in coal, petroleum, and gold dust, the opening of traffic in these regions can hardly fail of success. The gross outlays for the work under contemplation are estimated at 2,700 000 *yen*, the rate per mile being 67,500 *yen*. These sums are to be disbursed in the following installments :—1900, 50,000 *yen* ; 1901, 800,000 ; 1902, 850,000 ; 1903. 500,000 ; 1904. 500,000. No profit can be anticipated from the new lines from the commencement of traffic, but they will be of advantage to the existing lines. In the 1st year of traffic, additional profits may be realized to the extent of 3.85 per cent. ; in the 2nd year to the extent of 4.18 per cent. ; in the 3rd to 6.63 per cent., and in the 4th to 7.94 per cent. This forecast warrants the raising of debentures. As to the mining districts in Omugawa now owned by the company it may be noticed that preliminary expenses amounting to 600,000 *yen* are necessary for working the mine, in addition to a floating capital of 200,000 *yen*. The amount of coal to be transported to the domestic market is estimated at 40,000 tons for 1903, at 60,000 tons for 1904, at 80,000 for 1905, and at 100,000 for 1906.

CORRESPONDENCE.

Readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom).

THE CENTURY.

To the Editor of the "Japan Mail."

Sir,—Your paper has given us several laborious proofs that the present year is the last of the nineteenth, not the first of the twentieth century, and most of us have thought we knew it before just as well. In fact, to some of us, and the writer is of them, some of these laborious arguments were rather bewildering than elucidating. To us an argument like that on the enclosed clipping appeals far more convincingly, and perhaps it may help some into the light who followed rather timidly the learned arguments of some of your correspondents. A little common sense may be of more help than a good deal of learned argument.

Yours respectfully, C. N. TURY.

End of the Century.—Teacher—First class in foolscap, stand up! If a man had, at the commencement of the Christian era, started to lay up one dollar per year, when would he have secured his first dollar?

Class—At the close of the year 1.

Teacher—Correct. When would he have laid up the last cent of his second dollar?

Class—At the end of the year 2.

Teacher—Correct. Now when would he have corralled the last cent of his 1900th dollar?

Class—At the end of the 1900th year.

Teacher—Correct. Now go to your seats and take off those caps. You know more than the folks who are smart.

(P.S.—There are as many cents in a dollar as there are years in a century.)—*Detroit Journal.*

THE RECENT BALL.

To the Editor of the "Japan Mail."

Sir,—The net proceeds of the Ball and Children's Fancy Dress Dance given in aid of the funds of Christ Church on the 13th and 14th inst amounted to *yen* 760.69; a cheque for this amount has been handed to me, which I beg, on behalf of the committee, to acknowledge with many thanks.

I am, yours truly,

KENNETH WILSON.
Hony. Treasurer.

Yokohama, 23rd February, 1900.

THE RELIGIONS BILL.

To the Editor of the "Japan Mail"

Sir,—You kindly promised some time ago to find room in your columns for a short Commentary on the "Bill on Religions," then before Parliament. I made the request in the name of a Committee appointed by the Conference of Missionaries held in Tokyo in January: and those who appointed us may wish to know why nothing has reached the public from this Committee. May I ask you to let it be known that the Committee met and worked, and the Commentary is prepared, and ready for press; but as it became less and less likely that the bill would be pressed forward there was less and less need of publishing; and now that the bill is dead and buried the Commentary lies in store in case it should be useful when the successor to this bill makes its appearance in some future Session of Parliament.

I am, Yours faithfully, WM. AWDRY,
Bishop.

Tokyo, February 28th, 1900.

THE TRAGEDY OF WAR.

To the Editor of the "Japan Mail."

Sir,—I notice one of your evening contemporaries publishes a letter from Johannesberg received by a resident in Yokohama. It is reproduced as "not destitute of interest." I would call your attention to one sensational paragraph:—

In normal times I keep two ledgers R. and S.—about 250 accounts. Now I have C. D. R. S. and T-Z, five big ledgers. It's all right for posting—only about 30 40 vouchers, but it is quite another thing to have to balance 5 ledgers before leaving on Saturday. Other days we get off not later than 1, and spend the afternoons playing tennis. We may not go beyond the 3 miles limit of the Town with a pass, so cannot cycle far. I bought a bicycle not long ago for £20 net, and had it just three weeks when it was stolen.

There is no picturesque word-painting, no gush, no turgid piling up of heart-rending adjectives. But does the pathos of the situation lose anything on that account? "In normal times I keep two ledgers R and S. Now I have C. D. R. S. and T. Z., five big ledgers." Oh, Chamberlain, this then is the fell work of your new diplomacy! Oh, Kruger, Cronje, Joubert, and Steyn, can you hear of the misery of this bank clerk without a guilty tremor? We could forgive the slaughter of the Tugela, Nicholson's Nek, Maggersfontein, and Modder River, we could even forget Majuba Hill, but that this poor fellow should have to do the Ledgers C. D. and T. Z., as well as R. and S.! Not till now did I realise the full tragedy of war.

Yours faithfully, POOH BAH.

Yokohama Feb. 24th.

JAPAN'S COASTAL TRADE.

To the Editor of the "Japan Mail."

Sir,—On the 22nd ult. you seem to rebuke what the *Chiuwo Shimbun* wrote on the subject of the coasting trade system of the United States, by saying that, "The obstacle is that Japan herself closes her coast-wise trade to vessels owned by foreigners."

It seems to us what you make is a sweeping statement, for Japan, in fact, does not close her coast-wise trade to foreign vessels, as you claim, and the fact that Nagasaki, Kobe, Yokohama, and Hakodate are open to all foreign vessels must be well known to you. As you are aware, a major portion of our coasting trade as well as foreign shipping is done in these ports, and so it must be clear to you that our coasting trade is not practically closed to foreign vessels, while the United States forbids all foreign vessels from carrying passengers and freight between any American ports under severe penalty.

Thus there exists a wide gulf between the coasting trade system of the United States and that of Japan, and we are sure you are well aware of this fact. If such a statement is made by a Journalist of no repute we care not a straw and make no remonstrance, but since your paper is widely read and has a great deal of weight with the public, we cannot allow it to pass without reminding you of the misrepresentation you make.

We are not seeking a quarrel with you, but what we wish is that the public might not be misguided by you and our coasting trade might not be misconstrued by foreign people.

Truly yours, HONESTY.

Tokyo, Feb. 24th, 1900.

[What our correspondent says is quite correct, of course. An important part of Japan's coast-wise trade is open to foreign-owned vessels. But it is nevertheless true that Japan's general policy is to exclude such vessels.—Ed. *J.M.*]

THE BOERS AND THEIR INDEPENDENCE.

To the Editor of the "Japan Mail."

Sir,—It seems to me the answer to your request for proof that the Boers are fighting for their independence is to be found in the same note which you append to Mrs. Jones' letter. You say:—"They are simply asked to grant British subjects in the Transvaal the privileges they themselves receive in British dominions." That is, the Transvaal having refused to grant certain privileges, the British nation is trying to compel it to do so at the point of the bayonet. Now the right to decide to what extent and to whom it will grant political privileges is essential to the sovereignty of any state. Without this power no State can be said to be independent. In fighting to preserve this right the Boers are fighting therefore for their independence.

For the British Government to step in and demand any special privileges would seem to have been quite gratuitous, but I observe that you say they only demanded "privileges that British subjects were entitled by convention to claim." If the British had "right" to "demand" political privileges then the Transvaal was not an independent State at all and they are now exercising a right always left to a people who feel themselves wronged, the right of revolution. In that case they are "fighting for their independence."

Again, you say the privileges demanded were the same as "the privileges that British subjects receive in the Orange Free State." In that case what in the world are the burghers of the Free State fighting for? They are sacrificing their lives, fortunes, and risking the independence of their own country in order to assist the Transvaal burghers in resisting a demand which they themselves thought right and fraught with no danger to their own independence. It is manifestly absurd. Such an explanation cannot satisfy any impartial reason. However our British friends may blind themselves to the facts, nothing can be plainer than that the Afrikander in the Transvaal and the Orange Free state believes with all his heart that he is fighting for the independence of his country. In order that he should feel this way it is only necessary for them to remember their own history for the past hundred years or to keep in mind the schemes of Rhodes, the raid of Jameson, and the "smart" diplomacy of Chamberlain.

The writer of these lines has always been friendly to the British. He didn't need the experience of the Spanish war to make him so. He was friendly when there was nothing but the English attitude toward us during our own civil war to justify him. In other words, his sympathy is not based on sentiment but on reason. The British are wrong. It is a pretty hard position for Americans (with apologies to "G." who assumed to know our feelings better that we do), for it is a war between two peoples both our blood kin. But if we cannot rejoice in the defeats of our English cousins still less can we rejoice in the defeat of our Dutch kin. But the writer at any rate feels that the latter are right and that the burgher is fighting with just provocation for his rights, and that the future historians of England will themselves do him justice and pillory Chamberlain—the immediate cause of this fratricidal war—as he deserves.

I hope you will grant space in your columns to these lines written in behalf of the gallant and brilliant little Dutch Republics who, though they may not win another victory in this war against the mightiest Empire in the world, have already done enough to make them immortal in history.

Yours truly, JUSTICE.

February 21st, 1900.

[Our correspondent evidently doubts that the Orange Free State grants to British subjects the privileges which the Transvaal prefers to fight rather than grant. Yet that is an absolute fact, and it shows quite clearly that the two Republics are fighting, not for their independence, which was never threatened, but to drive England out of Africa. Besides, has "Justice" asked himself why the Boers hastened to declare the annexation of every region of British territory invaded by them. Is that merely fighting for their independence? As to their bravery, all honour to it. We English applaud it heartily.—Ed. *J.M.*]

CHURCH SERVICES IN YOKOHAMA.

To the Editor of the "Japan Mail."

Sir,—May I ask you to let it be known that the American Episcopal Services at 221, Bluff, on Ash Wednesday and at 3 p.m., on the Fridays in Lent, were arranged after consultation with the English Chaplain, who made no objection, and did not then see his way to a suitable weekday service of his own. No one can be more glad than I am

Digitized by Google Original from CORNELL UNIVERSITY

that this difficulty has been overcome; but it is important to make it clear that there is no opposition between the two.

It should be known, also, that the American Services are arranged for this year only, lest the prospect of uniting in the new Church hereafter should be prejudiced.

I am, yours faithfully, WM. AWDRY,
Bishop.

P.S.—May I ask the attention of readers to the advertisement of a Service of Intercession in connexion with the war in South Africa?

THE SOUTH AFRICAN WAR.

To the Editor of the "Japan Mail."

Sir,—Having read the communication on "The Other Side" by Miss Mary Brokaw Jones in your issue of February 20th, and having heard from and of others for whom I have great respect and whose friendship and opinions I value, who are of like mind in regard to the war, I am led to beg space in your columns if you can grant it. I would ask those who think the present war but a scheme for the "'crushing' of one Christian nation that another may add to her power and possessions" not to be in haste to conclude that while the English "suffer needlessly" the Boers "suffer not only needlessly but unjustly." In view of the striking parallel between the present struggle and the U.S. Civil war forty years ago I would ask U.S. Citizens who appreciate "Liberty, Justice, and Equality," to pause awhile before they take sides with the Boers.

In the U.S. Civil War there were many personal and side issues which misled many able, honest men in England, so that at the outset English people were led to favour the South and throw their influence on that side. Even Mr. Gladstone warmly supported the Confederates and discounted the claims and arguments of the Abolitionists.

It was argued that the plea of abolition of slavery was a sham and a guise, and the early disasters which met the Federal forces were taken as indicating that God and Right were on the side of the South. At the present time, the gold and diamonds and Chartered Companies and Cecil Rhodes are but straws swept along by a strong, mighty current: but, being on the surface, it is easy to be misled by these things and conclude that they are the causes of the present war. They may be the occasion of the war. When the Rev. Henry Ward Beecher went to England, and, in words of eloquence such as few men have ever had the power to utter, pleaded with the English public not to be guided by sentiment, false issues, and selfish motives but to hear the facts of the case, then the better element of English public opinion asserted itself, and prominent men, including John Bright, Quaker though he was, and the middle classes, were led to stand for and support Lincoln and those who were giving their lives that all men might "be free and equal." The present struggle is much more like the U.S. War of the Rebellion than it is to the war for independence to which your correspondent compares it.

Let me quote briefly from a letter written after the war began by a son of the late Rev. H. H. Dugmore, a well-known Minister in South Africa. The writer is Manager of the Indwe Railway and Collieries Company, and is a man whose character is such that his words are worthy of attention and confidence. He writes from Indwe, which is 25 miles South-east of Stormberg:—"Can you wonder that even loyal Methodists, (the writer is himself a Methodist) born and reared in this colony, living and dealing with the Dutch, and thoroughly acquainted with their character and aims, should have viewed with consternation the action of the Nonconformists at home on the occasion of the last Boer war in 1881, and should dread that the hands of the Government in England should again be weakened by their taking up a similar attitude. We are now paying the penalty of the huge blunder of 1881. We earnestly hope that this time the eyes of our friends in England have been opened. . . . "I have lived all my life in this colony, and have many friends amongst the Colonial Dutch, many of whom have during the last few weeks come to me to ask for advice as to what they should do if commandeered by the Free State Commandos. I have been closely watching the course of events for years and I fully endorse the opinion expressed by Theo. Schreiner, that this war was *inevitable* and that the aims of Kruger, Reitz, Steyn, and others were to oust the British flag and establish an Afrikander nation which should absorb the other states and Colonies in South Africa." I have italicised one word in the extract to show that some who are suffering in the war do not regard the war as "needless."

One point to be explained by outsiders who sympathize with the Boers is the uprising of the British Colonies to help Britain in the struggle. To say that "blood is thicker than water" in no sense explains it. What blood relationship binds the semi-independent princes of India to offer to send out and maintain forces on behalf of the Empire of Great Britain? Three contingents have gone from Canada, and a friend of mine in Canada writes me in a recent letter that he believes that 20,000 volunteers would promptly respond to a general call for more men. Let no one think that this can be explained on the mere ground of blood relationship. Canadians of Irish ancestry exceed those of English ancestry in the proportion of 9 to 8, and those of French ancestry are fifty-one per cent. more numerous than those of English parentage. In my humble opinion the stirring and impressive appeal of Mrs. Lewis, sister of Olive Schreiner, reveals the power that moved the colonies and has stirred England so wondrously. This appeal was published in *The Methodist Times*, London, Eng., Jan. 4th, and is entitled, "A Message to the Christian People of Great Britain," I would like to see the entire article published in the columns of the *Japan Mail*, but, fearing that it might be too long I quote, omitting nothing that condemns the British. She says:—"If ever there was a war for truth and right, for the putting down of oppression and wrong, for the deliverance of a people powerless to deliver themselves, whose wrongs have cried up to heaven until the Lord has come down to deliver them, *this is that war*. It is not the grievances of the Uitlanders, though they have been very real; it is not what British subjects have had to suffer of indignities and wrongs, though these have been numerous under recent Transvaal Administration; it is not the insults to England's power and prestige shown by refusal to concede her moderate demands for justice to be done to her subjects; it is not these things, however they may stir the national heart, which call upon us as Christians to bring the united force of God's people, by the power of believing prayer, to bear upon this war question. These, indeed, are the apparent causes which have led the British nation to unite in this war; but behind that nation, and behind these causes, is the moving power of the Omnipotent.

"These more recent wrongs done to a small number of British subjects, the foolhardy blindness which prevented the Transvaal authorities from seeing that the safety, as well as the very existence of the Republics, depended on their granting the just concessions demanded of them—all these things, which have brought about the war, are the wrongs which the God of nations has overruled to bring to pass that uniting of all sections of the British nation in such a way that its vast resources—both the wealth of the nation and the flower of its army—are willingly yielded up to become in the hand of the Lord of Hosts. His great and strong sword, by which he will smite oppression and bring deliverance to those powerless to deliver themselves, thereby saving from tyranny and destruction whole nations of peoples now existing and yet to exist in the future history of this continent."

"Let no one think that the immediate events which have led up to this war are the chief cause why the blood of the British Empire is being poured out to-day. No! British soldiers are dying to-day to put an end to a condition of atrocious wrong—a wrong continued throughout generations, and which apparently nothing but this sacrifice of life could right.

"For 200 years the progenitors of the Transvaal Republic and their descendants have crushed, maltreated, and, as far as in their power, robbed of all rights belonging to them the coloured peoples of this land. Nor are the Cape Colonists, who will suffer almost equally with the Republicans before this war is over, free from blood guiltiness in this matter; though under the British flag their legislative wrongs of native oppression have perforce been far less heinous than those perpetrated in the Republics, who now, in their blindness and Pharaohlike hardness of heart, have thrown down the gauntlet of war before Great Britain. . .

". . . The crimes which have cried unredressed to heaven from the length and breadth of this land, but more particularly from that part known as the Transvaal, defy description. To justice-loving souls who have known of these wrongs it has been like some horrible nightmare that in the nineteenth century on every side individual brutalities were being committed on defenceless victims, and that not by Arab slave driver or Moslem oppressor but by a professedly Christian and highly religious people, who were practising barbarities in peace as well as war which put to shame the records of what the savages of this land have inflicted, even in war time, upon white races. Oh, it has been horrible beyond words—horrible! . .

"The Lord of Hosts has sent forth as His avenging instruments the British Army to right the wrongs that have cried up to him for over 200 years, to fight on behalf of the myriad lives of the nations with which the interior of Africa is teeming, and which only by the success of British arms can gain through all the future years opportunities to develop as God would have them develop and grow into free, enlightened peoples to His glory.

"Now, as in the case of Pharaoh of old, the oppressing power would accept no warning and has rushed on to this destruction. . . The whole future history of South Africa and of its countless tribes depends on the issues of this war.

"We willingly yield up our dear ones who may fall on either side (the writer's own family being divided); we willingly accept the sufferings and losses that are falling upon our homes in many bitter ways, because we know that the spread of Christ's Kingdom, the future moral and national emancipation of whole races of human beings, is at stake."

".....to know that there are Christians in England who doubt the righteousness of this war, to know that there are many who are not pleading as we dare not but plead in spite of our pain, for blessing on the arms of Great Britain, oh! that is the hardest to bear." I have abridged some of the sentences in the above for the sake of brevity, not changing the meaning, however.

The more we hear from both sides and all sources the more deeply do we feel that, while we pity the deluded, misguided Boers and sympathize with their families who are the victims of the folly of an oligarchical clique, we more than sympathize with our Empire, of whom just now we have no cause to be ashamed.

I am, Sir, yours very sincerely,

CANADIAN.

Tokyo, Feb. 26th, 1900.

ROMA-JI.

To the Editor of the "Japan Mail."

Sir,—For reasons of which I submit a few examples in this final letter, I beg to withdraw from the discussion of the Roma-ji question.

At the beginning of your article published February 15th, you assert that Mr. House, in a second letter, "explains what he did intend to say" in his first. When a writer explains what he intended to say, he admits that he has said something which he did not intend, and which he is under the necessity of correcting. I have

Digitized by Google Original from CORNELL UNIVERSITY

done nothing of that sort. On the contrary, I repeated and emphasized precisely what I had said, with sufficient plainness, in an earlier communication. You had declared, unequivocally, that I "called stenography a syllabary." That was the direct unqualified statement, without ambiguity or limitation. It was not in accordance with the fact, and it placed me in a ridiculously false position. Now you seek to justify your assertion by various rhetorical modifications which serve only to show that the original bare accusation could not be sustained. I am reminded of the arguments of two leaders of the Massachusetts bar, in a suit the tradition of which may be apocryphal, but certainly is *ben trovato*. Mr. Choate exhausted the resources of his ingenious eloquence in an attempt to prove that a wheel constructed by his opponents was identical with one invented by his clients. Mr. Webster's reply was brief. He caused the two wheels to be brought into court, and said,—"Gentlemen of the jury, there they are; look at them." That was all, and it was enough. As to the distinction between re-iterating a statement, (which I did), and explaining what I intended to say, and thereby virtually acknowledging an error (which I did not), you may declare that you think it does not amount to much. I cannot accept that view. To me it appears that such deviations from exactitude are wholly inconsistent with fair and upright discussion. This is not the only occasion on which I have encountered the same device in the editorial column of the *Mail*. Even in the article I am now criticising, it does not stand alone. Its usual object, apparently, is to convey the impression that the person aimed at does not know his own mind, or that he has been compelled by the irresistible logic of his adversary to abandon the position first occupied, and take up a new one. I do not employ such expedients, myself. I should not consider them legitimate. I do not say that everyone is bound to share my opinion. A great deal depends upon what a writer conscientiously believes he may do for purposes of controversy. But it is evident that a contest in which one party makes use of methods which the other does not recognise as permissible can have no profitable result. For a while I assumed that these irregularities must be accidental, and attributable merely to careless haste,—as when you failed to quote your own words with literal exactness. I now perceive that they may be repeated indefinitely, and it is laying a heavy burden on chance to account for all of them in that way. Whatever the cause, they make it impossible to give undivided attention to the main subject of consideration. More time would be wasted in clearing away the débris of misrepresentation than would be required for the matters properly under examination.

Not less objectionable is your persistent contention that I introduced the detail of irregular and contradictory spelling of English words. That, also, is an absolutely groundless assertion. I did not touch, or give a moment's thought to, the spelling "which uses different combinations of letters to convey identical sounds," until it became necessary to deny your allegation on this point. I had previously confined myself to the pronunciation of "the separate letters" of the Roman Alphabet, and to combinations invented by the Saxons, "the separate letters of which bore no relation to the sounds they were forced to indicate." Pronunciation,—not spelling,—was the theme of my first communication, throughout;—the pronunciation of letters and symbols. Even the word "spelling" can be found in it only once, and then in a wholly different connection. Yet you keep on averring that I must have meant to speak of spelling, because you "naturally supposed" I did. Why should you "naturally suppose" so? Why suppose that I meant what I did not say, instead of what I did say? When a man writes about the pronunciation of individual letters, the only natural supposition is that he means just that; and when he makes no allusion whatever to contradictory spelling, it cannot be naturally supposed that contradictory spelling is his text. Silence has remarkable properties, no doubt, but you invest it with a power which, I venture to say, was never before ascribed to it. The potentialities of Lord Burleigh's nod sink into insignificance in comparison. By your reasoning it would appear that a writer has only to be totally silent on a particular point, to make himself liable to the charge that he has talked about it to an extent that misleads an intelligent reader. You affirm that Mr. House "erects an unmistakeable finger-post, and then declares that to follow the route indicated by it is wholly irrelevant." The finger-post which I created pointed to the pronunciation of letters, and in no other direction;—least of all to the spelling of words. It bore no inscription suggestive of spelling. That idea was the product of your own imagination, and if in pursuing it you were plunged into a quagmire, I am not to blame. You jumped to an erroneous and unwarranted conclusion, and you seek to fasten the responsibility for the blunder upon me. More than this, you try to make it appear, that I acknowledge the unsoundness of my original position, and that I endeavour to rectify it. After a series of asseverations that I meant one thing when I distinctly spoke of another, you add that I "now"—in my second letter—"take the plain ground that the Roman alphabet is inherently unable to represent all the sounds of modern tongues,"—as if I had not taken that "plain ground" from the beginning, and consistently held to it. Almost at the outset of my first letter, I stated that the alphabet" does not represent the sounds of any modern tongue." The implication that I have been led to change or modify the proposition with which I started is without a fragment of foundation. Again I say that a discussion one participant in which thus distorts his opponent's attitude cannot wisely be prolonged.

The letter which you published on February 15th contained a reference to the statement, in a certain Dictionary, (under the heading of Transliteration) that "R is commonly pronounced as in English." The author of the Dictionary is the editor of the *Mail*, and if the statement had caught my eye before this correspondence was opened, I should not have addressed you at all upon the subject,—feeling that to discuss niceties of sound with a person capable of such a mistake would be of as little avail as to argue about the hues of the rainbow with one who is colour-blind. But I did not see it until after my first letter was sent. To produce the Japanese consonant in question, the tongue must be placed in a position quite different from that required for "r." The assertion that it is like "r" betrays a defective ear, or an imperfect power of observation. So, likewise, does the editorial assertion that the Japanese "find no difficulty" in pronouncing "r." I am exceedingly anxious to avoid misinterpreting your meaning, and I do not think there can here be any misconception. In the Dictionary the sentence is plain enough; and, while the editorial phraseology is a little obscure, there can scarcely be a doubt as to what it is intended to convey. The Japanese do, in fact, find great difficulty in pronouncing "r," as all who have watched their studies of foreign languages can testify. Even after years of practice in speaking English and reading English books, the majority of them are uncertain about its utterance. The uncertainty declares itself in their writing, as well as in their speech. They rarely—I might perhaps say never—get over the habit of occasionally writing "l" when "r" is needed, and *vice versa*. This is because neither "r" nor "l" has a precise equivalent in their own speech, and they have no familiar sound to guide them unerringly. It does not seem to me that any one can claim competence of authority on Japanese pronunciation who is ignorant of this and kindred facts. Of course I make no allusion to the language in its fuller and broader character,—as a vehicle for the transmission of thought. There the editor of the *Mail* is a recognized authority, and his judgment has weight; whereas I am not qualified to hazard the smallest opinion. But I have been dealing with sounds exclusively, and the ability to measure the sounds of a language does not demand profound study. It belongs to all who have a thoroughly accurate ear and the faculty of close observation. Between those who know what the Japanese consonant spoken of really is, and those who maintain that it is the same as "r" in English, no agreement would ever be possible.

On the grounds above detailed, and on others so similar that it would be unnecessarily tedious to specify them, I decide to retire from the field, realizing at last that your elastic theory of "natural supposition" is capable of indefinite expansion, and may be utilized not only to the perversion of a correspondent's clear meaning, but to the length of crediting him with propositions no trace of which can be found in his letters, and which a moment's serious reflection would show to be utterly foreign to his purpose. If you are satisfied to believe that the constructor of the *kana*, in preparing a phonetic syllabary for his own language went to another language (Sanscrit) for sounds only "as nearly as might be;"—that the *kana*, although used uninterruptedly for centuries, does not and never did properly represent Japanese sounds; that the defects of the Roman alphabet are "insignificant;" that the alphabet represents (not "produces," if you will pardon me for again objecting to your selection of the wrong word) Japanese sounds more successfully than the *kana*; finally, if you believe that the impression of carelessness and superficiality, which I originally deplored in the treatment of a subject of immeasurable national importance, has in any degree been diminished by your successive articles; I shall leave you in undisturbed enjoyment of those tenets of faith,—even at the risk of being told that my silence is "naturally supposed" to mean the avowal of any number of incredible things. And unless this form of misrepresentation runs to absolutely intolerable excess, I shall not deem it desirable to offer further corrections.

E. H. HOUSE.

February, 16, 1900.

* Brinkley's Dictionary thus describes the origin of the *kana*:—"As the phonetic representations of words and syllables became more important and necessary, the Chinese characters were found to be too cumbersome and inconvenient. To meet his difficulty, the *katakana* were invented." The editor of the *Mail* says that "the *kana* cannot truly be called 'a set of symbols expressly created by Japanese to stand as signs for the sounds of their speech,'" etc. The Dictionary defines *kana* as "a general name for the Japanese characters representing the forty-seven syllabic sounds." The editor of the *Mail* says that the *kana* is not an "accurate representation of Japanese sounds."

[These quotations from the Dictionary in question do not conflict in the smallest degree with our assertions about her *kana*.—ED *J.M.*]

DEATH OF MR. WERNER.

Mr. J. C. Werner died on Wednesday at his house at No. 1368, Jizozaka. Mr. Werner, who was born in Sweden in 1840, fought in the American Civil War on the side of the North and out of his reminiscences of that memorable struggle constructed many interesting stories and articles which appeared from time to time in this journal. Before leaving the States he became a naturalized citizen and arrived in Yokohama in the early seventies on the schooner *Myrtle*. He was engaged in seal-hunting in the Kuriles for several years, and many of the tales he used to tell of his experiences in that wild region would have been, in the hands of a master of the art of story-telling, worthy of a larger publicity than the *Japan Mail* could give. Mr. Werner, however, though a man of slight education, possessed considerable natural ability, and his productions were seldom without interest. We understand that at one time he rose to the position of chief mate in the Mitsu Bishi Steamship Company.

BOER AMENITIES.

The following letter from *The Times'* correspondent at Mafeking, dated January 3rd, is grim reading. We have been frank admirers of the Boers' courage. We must be equally frank denouncers of their savage, their almost incredible, barbarity, if the things told in this letter be true, and they are told in a calm, matter-of-fact fashion that commands credence :—

The enemy have received a New Year's gift from Pretoria in the shape of a new gun and three wagon loads of ammunition. The bombardment consequently has continued more vigorously since. The new gun fires shells charged with a chemical liquid, which ignites upon contact with the air. This weapon has effected no damage hitherto, with the exception of a few minor fires in the gardens of Mafeking.

The resistance of the garrison is goading the Boers to commit various atrocities. Despite innumerable warnings they have concentrated their fire during the last two days upon the women's laager and hospital. Children have been killed and women mutilated by the bursting of shells. These occurrences are fanning a spirit of revenge in the breasts of the townspeople. It is no longer possible to guarantee the safety of the women and children of Mafeking, despite every precaution. Colonel Baden Powell has stated that it is impossible to rely upon Boer honour. The scenes of terror and consternation among the women folk are pitiable in the extreme.

Colonel Baden-Powell and Major Goold Adams have deposed Wessels, chief of the tribe of the Baralongs, who had quarters at Mafeking. Wessels has lately been intractable. He spread false reports among the tribes that the military authorities were endeavouring to make the natives slaves. The government of the tribe has been given over to two chief councillors, and a better feeling is already being established.

Adverting to my telegram describing the Game Tree fight, there is no longer any doubt that the Boers used explosive bullets. The strictest and most impartial inquiry has been held among troopers and officers, the results of which have been embodied in a report.

I have interviewed Sergeon-Major Anderson, an Imperial Service officer sent out by the Director of Hospitals to Colonel Baden-Powell's force, who authorizes me to say that the wounds inflicted were altogether different to previous experience in Egypt and in India, and that it was impossible they could have been produced by Martini or Mauser bullets, though perhaps they might have been caused by Snider ones, but from a scrutiny of the wounds made while dressing them in hospital here he has no doubt in his own mind that bullets of an explosive character were used by the Boers.

PROGRAMME OF THE SOUL-FUSAN RAILWAY.

The promoters of this railway have addressed to the Government a number of petitions with regard to the organization of a company. A representation for the speedy completion of this particular railway was accordingly introduced in the Diet, and it is said that in case the Government should permit the organization of a corporation, the following conditions would be approved :—(1) The corporation to be called the Soul-Fusan Railway Company, with a capital of 25 million *yen*, of which 5 millions are to be secured first, and the remainder to be raised at different periods when occasion requires. (2) The company to obtain legal recognition when one-tenth of its capital for the first period is paid up. (3) The company to be empowered to issue debentures up to ten times the amount of its paid-up capital, provided that the amount of issue shall not exceed 20 million *yen*. (4) Government aid to be granted to the extent of 6 per cent. interest on the whole capital of 25 million *yen*, for a period of fifteen years from the month immediately following the raising of capital. (5) Such subsidy, however, not to exceed the deficiency in profits. (6) A similar bounty to be extended to the debentures issued by the company. (7) The government to guarantee annual interest at 6 per cent. and the redemption of the principal.

REGULATIONS FOR FOODS AND BEVERAGES.

The following is a translation from the *Official Gazette* of the Law for the Control of Foods and Beverages, as passed by the Diet and sanctioned by the Emperor :—

Art. I.—In case any food or beverage offered for sale, or any utensils used for holding or cooking the same, or any other articles exposed to sale or employed in connection with the trade, are considered prejudicial to public health, measures may be taken by the administrative authorities to prohibit the manufacture, sale, transfer, or use thereof, or to suppress or suspend the trade in the same.

In the foregoing cases the administrative authorities may cause the offensive articles to be thrown away by the owners or may take steps directly to that end, or enforce any other necessary measures. In case, however, the owners of such articles can show that they can dispose of the same by means not injurious to public health, such permission may be granted to them.

Art. II —The administrative authorities may despatch officials to inspect the aforesaid articles and authorise them to take such quantities of the same without compensation as are absolutely necessary for examination. The officials so despatched are empowered to enter, during ordinary business hours, the places where the above articles are collected, manufactured, stored, or transported.

Art. III.—Any person failing to comply with the order of the Government or public functionaries within the period specified for the enforcement of these regulations will be liable to a fine not exceeding 20 *yen*. Those opposing them shall be liable to a major imprisonment for a term of not more than one month and a fine not exceeding 10 *yen*.

Art. IV.—Any Government or public functionaries who, in discharging their duties under instructions from the administration, are found guilty of improper or dishonest conduct in connection with the enforcement of these regulations, shall be liable to major imprisonment for a term not exceeding one year, together with a fine not exceeding 40 *yen*. In case they accept, or consent to accept, bribes they shall be dealt with according to Article 284 of the Criminal Code.

The above regulations will come into operation from the 1st of April in the 33rd year of *Meiji* (1900).

YOKOHAMA LITERARY SOCIETY.

There was a very good attendance at the fortnightly meeting of the Yokohama Literary Society, held in Van Schaick Hall on Friday evening. The proceedings were opened very appropriately with some of the quaint but pleasing dances from *Henry VIII.*, by the Misses Page. Then the Rt. Rev. Bishop Awdry gave an address entitled "Did Shakespeare write with a moral purpose, or was it 'Art for Art's Sake,'" the two plays principally drawn upon for illustration and comment being *King Lear* and *The Tempest*. The essay proved a most interesting study of the great Elizabethan dramatist, the reasoning was clear and the argument conclusive. The rest of the evening was devoted to music, vocal and instrumental. The full programme was as follows :—

PART I.

Overture, Violin Trio...Dances from "Henry VIII."...Edward German
The Misses Page.

Paper..." Did Shakespeare write with a moral purpose, or was it 'Art for Art's sake?"
Rt. Rev. Bishop Awdry, D.D.

PART II.

Piano Solo..." Impromptu in A major"...Schubert
Miss A. Watt.

Song.. ....." Many a Mile away".....Pinsuti
Miss J. Watt.

Baritone Solo..."Love, the Pilgrim"...Blumenthal
Mr. F. W. Maitland.

Song....." Lovely Spring".....Cowen
Mrs. Champneys Irwine.

FOREIGN TRADE OF JAPAN.

According to the *Keizai Zasshi* the foreign trade of Japan for January amounted to 37,281,881 *yen*, indicating a decrease of over 6 million *yen* compared with the previous month. These figures, compared with the corresponding period of last year, show a diminution of about 2 millions in exports and an increase of 8 millions in imports, the latter exceeding the former by 7¼ millions approximately. The items may be tabulated as follows :—

	January, 1900. yen	January, 1899. yen.
Exports	15,038,983	17,420,182
Imports	22,242,898	13,810,919
Excess of imports	7,203,915	—
Excess of exports		3,609,264
Total of export and imports.	37,281,881	31,231,101

As to the value realized by the staples of imports and exports, the following table may be of some interest to the commercial community at large :—

Exports.	1900. yen.	1899. yen.
Raw silk	4,239,236	6,839,252
Coarse silk thread and waste silk	311,090	176,335
Habutaye	1,440,433	1,237,127
Kai silk	207,781	82,754
Silk handkerchiefs	127,862	125,953
Cotton yarns	1,683,742	1,282,005
Cotton fabrics	223,532	197,849
Coarse rugs	46,474	47,779
Matches	334,684	203,701
Matting	399,686	394,889
Porcelain and earthenwares	153,838	116,598
Lacquer wares	64,232	47,299
Straw braids	407,084	39,227
Umbrellas	49,840	39,227
Manufactured Tea	42,388	117,748
Rice	467,085	2,237,026
Edible seaweed	77,236	55,096
Fish oil	17,649	53,270
Shiitake	70,480	60,370
Camphor	231,531	57,588
Crude and wrought copper	781,001	781,466
Coal	1,811,197	1,350,366
Vegetable wax	49,526	50,268
Others	1,696,920	1,433,968
Total	14,571,898	15,183,056
Imports.		
Raw cotton	5,469,465	4,787,931
Cotton fabrics	690,110	179,944
Shirtings and chintzes	579,694	135,825
Cotton satin and cotton velvet	244,057	52,220
Wool	222,453	157,498
Mousseline de laine	464,970	99,391
Italian cloths	130,067	56,483
Flannel	17,726	13,298
Cloth	85,647	130,545
Watches	32,521	8,040
Machines	872,462	560,472
Railway locomotives and carriages	141,993	562,005
Iron, bar and rod	534,242	96,665
Rails	105,273	55,057
Iron nails	294,179	172,597
Iron and steel	789,453	185,201
Indigo	229,409	93,950
Paper	261,479	123,687
Sole leather	106,834	31,826
Sugar	2,676,661	1,014,079
Rice	929,327	189,641
Peas and beans	354,245	134,107
Kerosene oil	1,496,106	622,401
Oil cake	37,466	21,225
Miscellaneous	5,481,059	4,326,831
Total	22,242,898	13,810,919

JAPANESE TRADE.

The *Nichi Nichi* gives the following figures with reference to foreign trade for the 1st half of February this year, together with totals from the beginning of January :—

	1st half of Feb. yen.	Total from Jan. yen.
Exports	6,989,275	22,106,252
Imports	11,485,616	33,775,405
Total	18,474,891	55,881,657
Excess of imports	4,496,341	11,669,153
Export of specie.	1,654,075	5,664,690
Imports	56,262	229,394
Excess of exports.	1,597,813	5,435,295

SCHOOLS IN THE UNITED STATES.

By Will Pattillo.

The report of the United States Commissioner of Education for 1897 98 has been received, and contains a vast deal of valuable and interesting information, not only of schools in the United States, but in many other countries. Volume one of the report contains 1,272 pages and 24 chapters. To give an idea of the subjects that are discussed I will quote a few chapter headings:—History of the German School System, Education in Great Britain and Ireland, means for spreading hygienic knowledge among the people, Education in India, Physical Training, the Public School and the Public Library, Experimental Study of Children, etc.

The statistics for the United States are interesting and teach some important lessons. They ought to be especially interesting to those who are studying the Japanese school problems. There were enrolled in the schools and colleges, both public and private, during the year 1897-98, 16,687,643 pupils. In private schools of all grades there were 1,554,725 pupils, and in public institutions 15,132,918 pupils. There was an increase over the previous year of 2 8 per cent. for private schools and 2 7 per cent. for public schools. The Commissioner makes the interesting statement that in times of business prosperity the percentage of attendance in private schools increases more than in public schools. It shows that a great many people prefer private schools if they can afford he extra expense. A little over 9 per cent. of pupils are in private schools. Besides the above 16 mill on pupils in regular schools there were a number of special institutions such as evening schools, benevolent institutions, and miscellaneous schools containing 485,292 pupils, making a grand total of 17,172,935 pupils in all schools.

THE COMMON SCHOOLS.

The Commissioner says:—"The expression "common schools" is used in this office to include public schools of elementary grade—the first eight years of the course of study—and secondary grade — ninth to twelfth years of the course of study—but no other institutions of higher grade." I will quote a few interesting items from the table of statistics of these common schools as above defined.

Number of pupils	15 038,636
Per cent of population	20.68
Per cent of persons 5 to 10 years old	70 c8
Number of male teachers	131.750
Number of female teachers	277,443
Average monthly wages:—	
Male teachers	$45 16
Female teachers	$38 74
Number of school houses	242,300
Value of school property	$492 703,781
Total receipts	$199.317,597
Total expenditures	$194,020,470
Expenditure per capita of population	$2 67
Expenditure per pupil	$18.86

It will be interesting also to know the sources of receipts for the nearly 200 million dollars:—

From permanent funds	$9.213 323
From State taxes	35.600 643
From Local taxes	134,104.053
From other sources	20,399.578

It should be borne in mind that there are no national laws or taxes for schools, each State managing its own school affairs. Thirty two States have adopted compulsory laws, the majority making these laws apply during the period between 8 and 14 years, although the legal school age is from 6 to 21 in twenty-two States, and 5 to 21 in elevery States. It will be interesting to the Japanese especially to note that of the 409,000 teachers, over two-thirds of them are women. The percentage of male teachers is larger in the South than in any other section of the country. In Massachusetts they constitute only 8.9 per cent., in Georgia 47.5 per cent., in Iowa 20 4 per cent., and in California 18.9 per cent.

OSAKA RUG INDUSTRY.

The *Osaka Asahi* feels uneasy about the decline of trade in cotton rugs, commonly known as *Sakai dantsu*. While the record was extremely satisfactory up to the 28th year of *Meiji*, when the total export amounted to 1,800,000 *yen* in value, the figures have gradually fallen to such an extent as to involve the manufacturers in serious embarrassment. A representation on this subject was at last forwarded to the House of Representatives, where subsidies amounting to 56,060 *yen* were voted, a portion of the sum, 39,700 *yen*, to be appropriated for the establishment of inspection offices and the remainder for instituting a dyeing factory. Below are the comparative figures for the past five years:—

Year.	Amount of manufacture. Cho.	Value realized. Yen.
1895	1,170,477	1,887,276
1896	700.719.9	1,121,147
1897	712,507	1,140,014
1898	626,103	943,578
1899	665,756	1,006.294

Hempen rugs manufactured during 1899 are said to have aggregated 445,465 *cho*, valued at 534.558 *yen*, and cotton rugs 191,327 *cho*, valued at 344.389 *yen*, while woollen and other manufactures reached 29.964 *cho* in amount and 127.347 *yen* in value (1 *cho* is equal to the size of a floor mat).

NEWS OF THE WEEK.

The body of a still-born infant, wrapped in an old rag, was found under Benten-bashi on Wednesday morning, by a policeman making his rounds.

About 4 o'clock on Monday afternoon three Chinese were arrested by the Police, for gambling at the Chinese tailor's shop, 136, kept by Ning Kow. The gamblers are all tailors.

As Mr. Hagen, of the German Consulate, was riding along Honmura Road on Thursday he ran into a *jinrikisha*. The vehicle was somewhat damaged, but the bicyclist escaped unhurt.

Four sendoes employed on a lighter belonging to Messrs. Helm Bros., moored near the Hatoba, were arrested along with a woman on Wednesday night by the Water Police, and charged with gambling.

The case brought by Mochida Tanejiro, a contractor, against Mr. Dentici for enlarging an oven, was settled in Yokohama Chiho Saibansho on Thursday by Judge Fujise. Judgment was given for the defendant, the costs of the case to be borne by plaintiff.

The Earl of Ava, eldest son of the Marquess of Dufferin, who died from wounds received at Ladysmith, was not in the service, though serving in an unattached military capacity. He had, however, seen service previously, and first donned uniform in Methuen's Horse during the Warren expedition. Lord Ava was one of the most popular young men of the time, full of energy and of the cheeriest temperament. No victim whom the war has claimed will be more missed than he.

The amazing things which are believed about us in Paris are surpassed by what appears to be credited in Vienna. If we may trust the *Neue Freie Presse*, the inhabitants of the English metropolis are chiefly occupied in walking up and down Piccadilly gazing at the newspapers with an air of bewilderment, and beating their foreheads with their heads. Those who are not engaged in this exhilarating and eminently English performance are, it appears, riding about in hansoms and discussing the situation with the cabbies through the openings in the tops of the cabs.

The gunnery expert to the *Engineer* gives an idea of what can be practically done at sea, in some results of target practice which are given. The conditions of firing are that each gun's crew has three minutes to score what they can at chosen ranges, beginning at 2,200 yards, diminishing to 1,600, and finally increasing to 2,200 yards again. In H.M.S. *Blake* the best gun's crew fired 18 rounds, hitting the target 15 times, while the total number of the rounds fired by the 10 guns was 148, the target being hit 110 times. H.M.S. *Royal Arthur* did nearly as well, the best guns having fired 18 rounds, striking the target 14 times.

Early on Friday morning Mr. Rudolf von Mann, aged 34, a German subject, shot himself at his residence at Honmoku. The body was found by the maid servant about 8 a.m. There was a bullet wound in the head, and a revolver lay by deceased's side. The matter was reported to the Bluff Police, and Mr. Okada, Chief Inspector, the German Vice-Consul, Mr. Hagen, and Dr. Koch, of the German Hospital, visited the house and examined the body. They at once arrived at the conclusion that the case was one of suicide. Mr. Mann was up to October, 1898, Assistant Brewer of the Japan Brewery Co. and afterwards Chief Brewer of the Hodogaya Brewery Co. He had been unemployed for some months. Deceased had been six years in Japan.

Two bicycle thieves named Kitajima and Seki Otsuchiji were arrested in Tokyo on the night of the 25th inst. by a detective of the Bluff Police Station. It was found that they were the persons who stole a bicycle belonging to Mrs. W. N. Wright on the 9th inst. On the 14th, they stole a bicycle belonging to Mr. Melhuish, which was left in front of Messrs. Dodwell & Co's.; also a bicycle belonging to Mr. Ginn, which he left in front of the American Hospital on the 20th inst., and a bicycle belonging to a guide known as Matsuda on the 24th inst., which he left in front of the Guides' Association. When arrested one of the men was riding the bicycle belonging to the guide. The thieves sold the bicycles in Kakigaracho, Tokyo. All have been returned to their owners.

The Toyo Kisen Kaisha steamer *Nippon Maru* arrived in Yokohama harbour at 10.20 a.m. on Wednesday. Mr. Otani Kahei, Chairman of the Yokohama Japanese Chamber of Commerce, was among her passengers, and he received a splendid welcome at the hands of some 1,000 persons of Yokohama and Tokyo, who went on board to meet him. Fire-works were discharged in the harbour in his honour when the vessel was first sighted. Mr. Otani came ashore in the C.P.R. tug *Spindrift*, and proceeded to the Town Hall, where he delivered a short speech describing briefly his visit to the States, Canada, and England. He regretted that his trip had been but a short one, for he was afraid that the knowledge he had gained by his visit abroad was but meagre and he would not be able to afford very great service to the citizens of Yokohama on whose behalf he took the trip. He thanked all present for the splendid ovation given him.

A fire occurred on Thursday morning at 1 10 o'clock in Hagoromo-cho Ichome, near the Theatre Street, Yokohama. The premises were situate on the site of last year's conflagration, and some eight houses nearing completion were partially burned. It is said to be work of an incendiary. At 20 minutes past twelve on the 1st inst., kerosene oil was poured over the roof of a bath-house in Okina-cho Ichome, Yokohama, and then the place was set on fire. Fortunately the neighbours seeing flames, put them out before any damage was done. About 9 p.m. on Wednesday night a fire broke in a bath house called the Matsunoyu, Motomachi, Sanchome, but it was put out before any damage was done. A small blaze occurred on Wednesday night in a coal merchant's store in Miyoshi-cho, Gochome. The flames originated in a waste box outside the houses, and it is thought to be the work of an incendiary.

KILLED, WOUNDED, AND MISSING.

The following table of British casualties has been taken from the *Daily Graphic*, revised to Jan. 5th. This list of missing includes many wounded officers and men not otherwise indicated, but no account is taken of deaths from natural causes, which have been very considerable. The effect of several revised lists of casualties received by the War Office has been to reduce our total losses below 7,000.

The above totals represent only the regimental casualties so far as they have been identified. No official list of casualties sustained by General Gatacre's force at Stormberg has yet been published.

LANGFELDT & CO., LIMITED.

Report of Directors, and Statement of Accounts, to be submitted at the 18th semi-annual ordinary general meeting of shareholders, to be held at No. 73, Main Street, Yokohama, on Monday, the 5th day of March, 1900.

The statement of assets and liabilities, and the profit and loss account for the half year ended the 31st December, 1899, accompany this report.

The net profit for the half year, after providing for general expenses, directors' and auditor's fees, YEN.

and depreciations amounts to :.....7717.51

less balance at the debit of last account ...3564 61

leaving :.....4152.60

to be carried to the credit of uew account.

It will be noted that the gross profit for the half year under report amounts to *yen* 21.010.63, as against *yen* 9742.55, for the previous six months, and it is confidently expected that the present year will show a still further improvement.

As stated in the last report, a branch office in Manila was opened during last year, the prospects of which looked favourable at the beginning. But later on the business there did not develop as expected and in order to have a clear insight into the whole affair, the Manager was sent to Manila. According to his report, the Directors, finding that in order to successfully carry on the Manila Branch it would be necessary to maintain a stock largely beyond the resources of the company, and realizing also the impossibility of effectually controlling the business from Yokohama, decided to close the Agency, in respect of which there is an anticipated loss of about *yen* 12,000. An arrangement has been made with a responsible Manila firm for the disposal of the remaining unsold stock, which, however, is reduced to very small proportions.

The Registration of the Company has been effected since the date of the report.

Messrs. Read and Bull having retired, Messrs. Bernard and Grosser joined the Board of Directors.

Messrs. Weinberger and Bernard retire by rotation, but offer themselves for re-election.

Mr. Guinness has resumed his duties as Auditor, and the Directors have much pleasure in recommending his appointment to that office for the current year.

Yokohama, Febuary 21st, 1900.

J. F. LOWDER, C. WEINBERGER, C. B. BERNARD, F. GROSSER } Directors.

E & O. E.

J. F. LOWDER, C. WEINBERGER } Directors.

I have examined the foregoing accounts and compared them with the Books and vouchers of Company, and certify them to be correct.

C. GUINNESS, Auditor.

Yokohama, February 21st, 1900.

TELEGRAMS.

(SPECIAL TO THE "JAPAN MAIL.")

THE BOER WAR.

Shanghai, Feb. 23.

The casualties at Paardeberg were as follows :—

KILLED.

CORNWALLS.

Colonel Aldworth, Captains Wardland and Newbury.

SEAFORTHS.

Lieut. McClure.

ARGYLLS.

Lieut. Courtney.

WEST RIDINGS.

Lieut. Scorded (?).

YORKSHIRES.

Lieut. Neave.

OXFORDS.

Lieuts. Bright and Ball-Acton.

Fierce fighting was expected at Colenso, but the Boers' flank was completely turned. Our troops captured the hills and can see into Ladysmith.

Later.

General Kelly-Kenny attacked Cronje in a laager at Koodoosrand Drift, on the Modder river, at daylight on Sunday. The fighting continued throughout the day. Our losses were heavy. Fifty guns shelled the laager vigorously throughout Sunday and Monday. On Tuesday Cronje asked for an armistice. He admits that he lost over 800 men on Monday.

Shanghai, Feb. 24.

Kitchener refused the armistice applied for by Cronje, and said that the Boers must fight to the finish or surrender. The battle was then resumed.

Cronje's army is estimated at 8,000 men. They are enclosed in a death-trap near the bed of the Modder River. Nevertheless they are fighting with desperate courage. The Canadians attempted unsuccessfully to storm the laager. The Boer wagons took fire, and the bombardment was continued far into the night by the glare of the flames.

Shanghai, Feb. 24.

The British have occupied Fort Wylie, opposite Ladysmith. Buller's casualties on the 20th and 21st were in officers, Capt. S. L. V. Crealock, Lieut.-Col. Keith-Falconer and Lieut. Parr, of the Somersets, and Captain Holt of the Medical Corps, killed, and 5 wounded; and in men, 20 killed and 91 wounded.

The casualties at Paardeberg on Sunday were 146 men killed, when attempting to assault the Boer laager over level ground. The terrific fire compelled the troops to lie down, and they were powerless to move during the whole day. Roberts arrived on Monday, when the bombardment commenced. The cannonade was stopped for half a day on Tuesday during the parleying, which ended in Cronje's refusing to surrender. Then the whole force of artillery concentrated its fire at a thousand yards' range over a space of a mile. French, meanwhile, was engaged eastwards.

Shanghai, Feb. 25.

The Boers occupy some high ridges near Nelthorpe, and are opposing Buller with big guns and rifles. Our advance is slow.

The Navy estimates show an increase of about a million sterling.

Later.

Buller reports that three officers were killed and 14 wounded, including General Wynne, on the 22nd inst. He adds that as the fighting is continuous he is unable to send a statement of the casualties among the men.

Reuter's agent telegraphs from Paardeberg that the shelling was continued throughout the night of the 21st and was intermittent on the 22nd. He adds that it is reported that 2,000 Boers are operating to the north of the British.

French has captured 105 more prisoners.

Shanghai, Feb. 26.

Reuter's agent telegraphs from Colenso that after two days' severe fighting the troops at nightfall on the 23rd arrived within a few hundred yards of the Boers' first line of trenches on Groblers Kloof.

Reuter's agent telegraphs from Paardeberg on the 24th that the British are gradually drawing closer to Cronje's laager. The balloon disclosed new trenches, which were thereupon shelled. Altogether 540 prisoners have been taken.

Shanghai, Feb. 27.

The Times' correspondent telegraphs from Colenso, under date of the 24th inst., that Buller is within two miles of being in touch with Ladysmith, but that this is the hardest part, and he expects very severe fighting.

It is stated in Pretoria that President Steyn has wired to President Kruger that the Free-staters refuse to continue fighting. Steyn urges that immediate overtures be made for peace.

Later.

The casualties among the officers of Buller's force, from the 20th to the 24th, have been :—

KILLED.

INNISKILLINGS.—Major T. M. G. Thackeray, Major F. A. Sanders, and Capt. C. H. Stuart.

DUBLINS.—Lieut. Sitwell.

GORDONS.—Lieut. S. C. Maitland.

WELSH FUSILIERS.—Lieuts. Thorold (?) and Stebbing.

Thirty-four wounded ; one missing.

[NOTE.—We cannot identify the name queried above. The telegram says "Throld."—ED. *J.M.*]

Shanghai, Feb. 28.

It is officially stated that Cronje has surrendered with his whole force unconditionally.

Later.

A despatch from Roberts says that at three o'clock on the morning of the 27th a most dashing advance was made by the Canadians and the Engineers, supported by the Gordons and the Shropshires. It brought them within 60 yards of the enemy's trenches. This gallant deed apparently clinched matters, for daylight brought a letter of surrender.

Cronje arrived in the camp at seven o'clock. In the course of conversation he asked for kind treatment, and also that his wife, his grandson, his secretary, his aide de camp, and his servant should accompany him wherever he was sent. Roberts promised compliance.

Cronje starts forthwith for Capetown in charge of General Pretyman.

The prisoners number 4,000; 1,150 of them are Free Staters, the rest Transvaalers. There are 47 officers, including the leading Germans De Witz and Albrecht. A number of notable Boers also have been captured.

The Artillery captured consists of four 7.5 centimetre Krupp guns, 9 (?) pounders, and two Maxims.

Shanghai, March 1.

Lord Roberts' official despatch expresses a hope that the Government will consider his victory over Cronje as satisfactory, occurring as it did on the anniversary of Majuba Hill.

Her Majesty the Queen received the news with great joy and telegraphed her congratulations to Lord Roberts.

Messages received in London from all parts of the country testify to the general rejoicings.

The prisoners were all sent to the Modder river camp ; from thence they are sent off in batches to Capetown.

The casualties at Paardeberg on the 18th were 740 wounded.

Later.

Buller telegraphs under date of the 28th that Barton's Brigade assaulted and carried the top of Pieter's Hill, thus to a certain extent turning the enemy's left flank. The 4th and 11th Brigades, under the supreme command of Warren, assailed the enemy's main position, which was magnificently carried by the South Lancashires at sunset. Sixty prisoners were taken and the enemy was scattered in all directions. It seems that there is still a considerable number of the enemy left on Bulwana Mountain.

[NOTE.—It is evident from this telegram that the recently received intelligence indicating that Buller had reached Nelthorpe was erroneous. Pieter's Hill is six miles south of Cæsar's Camp. Bulwana Mountain lies due east of Cæsar's Camp at a distance of five miles, the railway running between them. Apparently it would not be necessary to dislodge the Boers on Bulwana Mountain in order to establish touch with White.—ED. *J.M.*]

Shanghai, March 1.

Severe fighting is continuing in Natal. The Inniskillings lost heavily in a night attack on Saturday, and there was an armistice on Sunday to bury the dead.

Brabant has occupied Jamestown and has captured the Boers' horses.

[Jamestown is due S. of Aliwal North, and east of Stormberg.—ED. *J.M.*]

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE IN TOKYO.)

Saigon, Feb. 23.

Buller telegraphs that the Fifth Division crossed the Tugela by a bridge of boats.

Roberts telegraphs from Paardeberg, 50 kilomètres to the east of the Modder River, that Generals Knox and Macdonald were wounded, and that he had nine officers killed and 39 wounded in the fights of the 17th and 18th instant. He does not give any details.

Saigon, Feb. 24.

A telegram from Paardeberg, dated the 21st February, says that Roberts on Monday and Tuesday bombarded the camp of Cronje. The English say that Cronje is surrounded. All the troops sent to succour him have been beaten.

Digitized by Google Original from CORNELL UNIVERSITY

Saigon, Feb. 25.

The War Office denies the rumour that Cronje has surrendered.

One hundred and fifty British soldiers were killed at Paardeberg on Saturday.

Marcel-Habert has been condemned to five years' banishment. He has set out for Belgium.

The French Chamber has adopted the project of a maximum tariff for productions of foreign colonies.

Saigon, Feb. 26.

The French Government has been questioned in the Chamber with reference to the despatch of reinforcements to Diego-Suarez, in Madagascar. The Minister, M. Waldeck-Rousseau, replied that an imperative and urgent necessity obliged the Government to take from the territorial army a first battery, which set out on the 10th, and another which will follow on March 6th. But the remainder of the reinforcements, 4,000 men, will be obtained from troops outside France. The Chamber passed a vote of confidence.

Buller advances slowly and with difficulty, suffering heavy losses.

Lord Roberts telegraphs from Paardeberg, at noon on the 24th, that the Boers from Natal attacked his outposts, suffering heavy losses.

Saigon, Feb. 27.

The Senate has adopted the maximum tariff for productions of foreign colonies. A decree provides that the minimum tariff will remain provisionally applicable up to the 31st of next August.

Fighting continues at Paardeberg and on the Tugela.

Saigon, Feb. 28.

Roberts telegraphs under date of the 27th February that Cronje capitulated in the morning with all his troops without conditions. Cronje is now a prisoner in Roberts' camp. The number of prisoners will be indicated later. There is intense joy in London, but people do not consider that the war is terminated.

Saigon, March 1.

Cronje had only 3,000 men and 6 guns. He was completely surrounded. The prisoners will be sent to Capetown. Sanguinary fights continue between Buller and the Boers.

(By special arrangement with the "Jiji Shimpo.")

KANG-YU-WEI AND THE EMPRESS DOWAGER.

Peking, March 1.

It is said that Kang Yu-wei sent from Singapore a warning to the Empress-Dowager of China that he had eight million taels of a war fund and millions of sympathisers in China, and that if any attempt was made to dethrone the Emperor the authors of the crime would be severely punished. This warning is believed to have been the real cause of the Empress Dowager's suddenly renewed activity against the Reform Party.

AN EDICT OF SILENCE.

Chinese officials in Peking have been forbidden to hold any intercourse with foreigners except on business.

GERMANY AND THE SHANTUNG RIOTERS.

The German troops having made definite preparations for advancing into the interior of Shantung, the Governor, Yuan Shikai, has requested them to desist, promising faithfully that he will discharge the duty of quelling the rioters against whom the Germans were about to move.

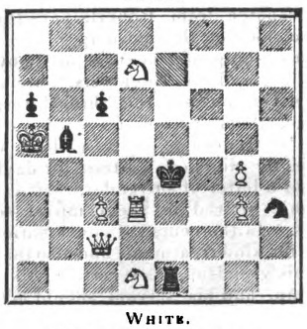
3—B or Kt mates accordingly.	

Correct solution received from "East Anglia." A very fine piece of work.—E.A.

PROBLEM No. 463.

By Max Karstedt.

Black.



White.

White mates in two moves.

Game No. 567.

As an instance of Morphy's marvellous Chess, the New Orleans *Times Democrat* gives the extraordinary exhibition of simultaneous play in the St. James Chess Club, London, April 26, 1859, against five master-players, nearly every one of the first rank—Arnous de Riviere, Barnes, Bird, Boden, and Löwenthal. Morphy won two games (de Riviere and Bird); two draws (Boden and Löwenthal); and lost one game (Barnes). "Imagine Lasker, for example, playing simultaneously Berger, Showalter, Bird, Schlechter, and Steinitz! We say without hesitation that we have always considered that memorable joust as perhaps the most unique contest in Morphy's career, if not, indeed, in the history of Chess master-play."

The following is the game with de Riviere :—

TWO KNIGHTS' DEFENSE.

White—De Riviere.		Black—Morphy.	
WHITE.	BLACK.	WHITE.	BLACK.

28 PxP	PxP		

NOTES.

(a) As Mr. Morphy much preferred attacking to defending, he choose this mode of play in order to obtain the Cozio Counter attack.

(b) This move has the recommendation of being much less hazardous than checking with K B, and subsequently moving Q—K B 4, as recommended in the books.

(c) Analysis has convinced us that this move, at the present juncture, only strengthens White's game.

(d) Had White moved 14-B Q B 4, Black could have played 14... P—Q B 4, and then 15., R—K sq, gaining time, and threatening to double the Pawns on White's Queen's side disadvantageously.

(e) Had Black captured Q P with B, White would have taken K Kt P with Kt, maintaining his Pawn and having a better game.

(f) Playing this Pawn one square appears to have some advantages; but the consequences of White's immediately advancing his P to Q B 5 were so various and complex that we do not wonder at Black's preferring a less perplexed line of play.

(g) Very well played, threatening, if Black capture Q and then Kt, to take Q and B in return, remaining with an attack on Black's Q R.

(h) All these moves are singularly beautiful and interesting.

(i) Much better than taking the Kt with B, for in that case Black would have taken R with R ch, and then moved B to Q Kt 4.

(j) These moves with the Kt are remarkably clever, and are replied to with equal tact by Mr. Morphy.

Game No. 568.

A Blackburne Brilliant.

One of eight games played simultaneously *sans voir*.

YOKOHAMA: SATURDAY, MARCH 10TH, 1900.

SUMMARY OF NEWS.

THE Queen will visit Ireland in April instead of going to Italy or the Riviera.

THE British Budget, with its great increases of taxation, has passed the House of Commons.

THERE is a rumour, at present unconfirmed, that the Empress Dowager of China is dead.

A CHINESE woman was burnt to death in a fire at Hongkong on the 22nd ult. Her husband escaped.

ON Feb. 26th, Hongkong's private contributions to the Soldiers' and Sailors' Families Fund stood at $97,579 09.

MR HENRY DALLAS, with a new theatrical company, is on his way to the farther East. He played in Singapore during February

THE P. and O. Steamship Company have placed orders with Clyde shipbuilders for four large steamers. Messrs. Caird and Co., Greenock, are to build two, and Messrs. Barclay, Curle, and Messrs. Stephen and Co., Glasgow, one each.

CAPTAIN SIMONDS, R.A., has been selected as the candidate from Hongkong for the appointment of Garrison Adjutant at Cape Town.

AN armed robber entered a Yokohama eating house kept by Tomitsuke Kin early on the morning of the 4th inst. and after threatening the proprietress, decamped with 9 *yen*.

AMONG the many rumours current in Manila regarding Aguinaldo's whereabouts, there is one to the effect that the Philippine leader has succeeded in reaching the island of Formosa.

SHIBUYA KYOZO, aged 60, a farmer living in Hatanomura Azawa, Tonaga, Kanagawa prefecture, committed suicide by throwing himself into a waterfall called the Amano Take on the 3rd inst.

THE School of Oriental Languages in the University of Berlin has had an unprecedented success this winter. There were twenty-seven students attending the Chinese classes and eight he Japanese.

SUCCESSFUL experiments, it is reported, have been made with wireless telegraphy between Calcutta and Rangoon, a distance of about 1,000 miles. The rate of speed reached was 100 words a minute.

THE *Straits Times* has received for the War Relief Fund the sum of $1 000 "from the Agent of the Messageries Maritimes, as a recognition of aid rendered to *La Seyne* by H B M.S. *Hermione*."

THE *Hongkong Maru*, which left Yokohama at noon on Tuesday, had on board 63 emigrants for Hawaii, and 246 for San Francisco. They were sent by the Kumamoto and Morioka Emigration Companies.

LORD BRASSEY was expected at Singapore in the *Sunbeam*, homeward-bound from Australia, on the 12th Feb. From Singapore the *Sunbeam* will be navigated by the Marquis of Graham, who is a professional seaman.

FIGHTING continues in South Africa. Ladysmith has been relieved by General Buller, the Boers retreating from Natal. In the Orange Free State a battle has taken place near Osfontein, in which the Boers were defeated.

A TELEGRAM to the representatives in Bombay of one of the German steamship lines states that the indemnity obtained from Great Britain for the seizure of the *Bundesrath* amounts to five million marks or £250 000 sterling

THE *Eclair* affirms, in spite of semi-official denials, that disagreements have arisen between M. Decrais, Minister for the Colonies, and M. Doumer, Governor-General of Indo-China. M. Doumer will, says the *Eclair*, be recalled after the Senatorial elections.

IN *The North American Review* the former U.S. Minister to Siam, Mr. John Barrett, dates the birth of the renaissance of American influence in China from the moment when Admiral Dewey made Hongkong the *rendezvous* of his squadron in March, 1898.

TRADE with Formosa grows year by year, remarks the *Osaka Asahi*. The recent revision of the Customs Tariff has contributed largely to increase the volume of trade with the island. During last year the staple imports and exports of Japan, Tamsui, and Keelung (Anping alone excepted) amounted to 5,279 631 *yen* and 2,079,547 *yen* respectively. Although these figures still cannot be regarded as considerable they indicate a marked improvement.

THE Canadian Government has offered to place 10,000 additional volunteer troops, fully equipped, at the disposal of the Imperial Government, in order to complete the conquest of the Boer Republics and assist in garrisoning the principal towns.

AT the annual meeting of the Kobe Cricket Club, held on the 5th inst., Mr. G. C. Murray was elected Captain with the following members on the Committee.—Messrs. Edwards, Wilkinson, Gillingham, Lightfoot and Abbott. Mr. Groom was re-elected President.

MR. SUZUKI, Assistant Inspector at the Settlement Police Station, who was sent up to Tokyo for a term of six months to attend the lectures of the three German police and prison officials, lately arrived in Japan, has graduated, and on Sunday returned to resume his duties.

THE *Daily Telegraph* of 25th January acknowledges receipt, through the Hongkong and Shanghai Banking Corporation, of Yokohama's subscription of £300 to the Widows and Orphans shilling fund. Up to that date the fund had reached a total of 2,185,776 shillings.

THE Paris correspondent of the *Times* wrote on the 16th ult. that M. Delcassé informed his colleagues at that day's Cabinet Council that the Chinese Government had just handed to him in Paris the 200 000f. asked for as an indemnity for the murder of the two officers of the *Descartes* at Kwan-chau-wan.

MR. W. A. HART, superintendent of the London district of the Great Western Railway, announced recently that he had the authority of the German Emperor to say that His Imperial Majesty had never travelled so comfortably and smoothly on a railway as he did on the Great Western system on the occasion of his recent visit to England.

AS touching the matter of the work done at the Shanghai Docks, a contemporary learns that 25 vessels, of 60 073 tons, were taken into the Cosmopolitan Dock between the 29th of June last and the 29th ult.; 30 vessels, of 31,583 tons, into the Old Dock between the 1st of May last and 24th ult.; and 12 vessels, of 18,888 tons, into the Tungadoo Dock between the 16th of June last and the 24th ult.; making a total for Messrs. S. C. Farnham & Co.'s three docks of 67 vessels, of 110,554 tons.

IT is reported from Nanking, says the *N-C. Daily News*, that Viceroy Liu proposes to go up to Peking after all, and that he is preparing to start for North *vid* Shanghai on the 15th instant. *Apropos* of the above, it is freely stated in mandarin circles that should Viceroy Liu actually go up to Peking the chances will be greatly in favour of his returning to Nanking, there being no longer any necessity for keeping him out of office since the failure of the *coup* to impose a new Emperor on the country. It is further reliably stated that H E has recently received numerous letters from supporters of the Emperor Kuang Hsü, urging H.E. to undertake the journey to the capital and secure his old post to himself, as it generally believed that so long as Viceroy Liu holds office there will be no fear of another attempt to depose Kuang Hsü from his Throne.

THE EMPEROR'S TELEGRAM TO THE QUEEN.

The despatch of a congratulatory telegram by the Emperor of Japan to the Queen of England, in connexion with the recent victories won by the British forces in South Africa, has evidently caused much satisfaction in Japan. The *Fiji Shimpo* and the *Jimmin* comment on the act in terms of high approval. Both journals allude to the great solicitude evidently felt by Her Majesty and to the measures she has adopted from time to time to show that her heart is with her soldiers, and both are of opinion that the successes now achieved are due in no small degree to Her Majesty's virtues. The *Fiji* says:—"We do not for a moment regard England as a foreign country. She has our true and full sympathy. Our Sovereign does not speak in the name of himself and the Empress only: he speaks in the name of the whole nation, and we do not doubt that the British people, appreciating our sentiments, will derive from this incident an access of friendship towards Japan." It need scarcely be added that the two journals express grateful approval of the wise tact shown by His Majesty, and of the attention uniformly directed by him to everything that concerns the interests of the State.

It is a noteworthy fact that the Emperor of Germany and the King of Italy have also telegraphed their congratulations to the Queen. A large section of the German people seem to be bitterly hostile to England, but the Emperor has shown himself uniformly friendly.

SOUTH AFRICA.

Monday, March 5.

The last stages of the fight at Ladysmith have not furnished the object lesson for which military men must have been looking with some anxiety and much curiosity. The question remains unanswered, could the Boers have held their ground had final defeat been the only alternative of retiring? Suppose that, instead of fighting in British territority with the constant resource of falling back to guard the mountain passes that give access to their own country, the Boers had been engaged in the task of holding the approaches to Pretoria against an invading army, could their positions have been rushed by the British brigades? We can not answer. The experiences gained between Colenso and Ladysmith tell us nothing definite, for we now see clearly that, before Buller delivered his last attacks on the 27th of February, the Boers had resolved to abandon the siege of Ladysmith and were even then putting their resolve into practical execution. Only a part of their force was engaged holding the entrenchments. They probably considered it a sufficiently large part, and did not expect that Buller would sweep it so rapidly out of his path. Otherwise they would not have left two guns, and a quantity of ammunition and cattle. Still the general result seems to suggest that their resistance lasted just as long as they wanted it to last, and that their own choice had nearly as much to do with their retreat as Buller's pertinacity and the fine courage of his troops. To these last two factors it is only fair, in all sobriety, to pay a high compliment. The disasters that attended Buller's three first attempts might well have deterred a General with less "grit" and would certainly have broken the heart of troops with less spirit. But Buller never flinched from his purpose, and his soldiers remained as ready to storm a position at the end of February as they had been at the beginning of December, before the commencement of the long series of deadly failures that fate had then in store for them. Whatever deductions the campaign warrants, it certainly justifies the confidence that England has always placed in the tenacity and fortitude of her soldiers. But it does not supply any sure measure of the Boers' powers of resistance. We have, indeed, one solid fact, namely that with, perhaps, one exception, the British troops succeeded in carrying every position against which they were launched. In this statement, the first failure at Colenso is not included. On that occasion the men on the left wing failed to cross the Tugela because it was impassable, and the men on the right wing were recalled in consequence of the artillery catastrophe. Thus it can not justly be said that an infantry attack was repulsed. The exception alluded to was that of the Inniskillings on the night of Saturday, the 24th of Feb. They failed, apparently, to dislodge the Boers. But for the rest, every assault seems to have succeeded, although in many cases the ground won had ultimately to be abandoned. Still, though this record of attacks is of a nature to inspire confidence, the general retrospect suggests that so long as the Boers occupied their entrenchments in full force, they could not be driven out, and the obvious deduction is that when they take up their last position in this war, a severe effort will be required to conquer them. We admit that this is the most pessimistic view, and that it may turn out to be entirely erroneous. The chief factor of uncertainty is the work done by the artillery. When Buller made his first attempt he had only 12 guns in action; when he made his fourth, he had 72. It is possible that to this great park of artillery, not to the reduced force of Boers in the trenches, the enemy's final defeat must be ascribed. We hope so, for, if that be the case, then obviously the future becomes much plainer sailing. England has sent out a magnificent array of guns—field guns, siege guns, howitzers, and quick firers. In that respect the Boers will be hopelessly out-classed, and it follows that the ultimate operations of the war may prove much easier than past experience justifies us in expecting. Still the sequel of the Ladysmith story should not be suffered to inspire too much confidence.

Apart from these considerations, however, there is much reason for congratulation. Certainly Buller's report of the Ladysmith garrison is not at all exaggerated. The men must have been in a very exhausted condition. We may assume that from the end of December, when trouble was taken to spread abroad a statement as to there being still an ample supply of food, short rations had begun to be the order of the day. As to amunition, it is exceedingly doubtful whether enough remained for a single day's fighting. White does not appear to have made the slightest attempt to assist Buller's last operations. When the Spion-Kop movement was undertaken, we heard of the Ladysmith garrison essaying to force a way to the Free-State Boers' laager, but on this last occasion, although there were plain evidences that the Boers had begun to retreat, White did not put out a hand to harrass or cut them off. We may be sure that he could not. His men were so exhausted and his ammunition had been so far reduced that he dared not take any risk. Could he have withstood another attack delivered in the middle of February? It is more than doubtful. The Boers lost a great chance. They will be perpetually losing such chances. Their inability or unwillingness to assume the tactical offensive is their weak point and will beat them in the end.

The campaign has now entered its second stage. The Boers have been driven out of British territory and will have to fight for the defence of their own. What will be the next steps of the British Generals? As to Roberts, we imagine that his first aim will be to destroy the Boers on his south. The telegraph speaks of a column of the enemy on the south-west of Paardeberg; this is to say, a column threatening Roberts' communications; and we now hear of a column operating on the north-west of Kimberley and shelling Barkley West, and of another column on the east. Evidently the Boers have inaugurated a system of guerilla warfare. They want to induce the Field-Marshal to divide his forces and continue the "campaign in spots," which method has hitherto proved so convenient for them, enabling them, as it does, to give full effect to their advantage of mobility. It is not likely that Roberts will go in pursuit of any will-of-the-wisps, or allow himself to be diverted from his main purpose by petty side-issues. But he can not afford to leave ten thousand Boers within striking distance of his communication between De Aar and the Modder River. If the enemy mass their forces from Stormberg and Colesberg, they will have fully ten thousand men operating on the northern bank of the Orange River, and it is quite within the chapter of a feasible attempt that they should throw themselves across Roberts' line of communications. His programme, therefore, will probably be to move up all the troops from the south of the Orange River, Gatacre, Clements, and Brabant, and either push the Boers northward, or try to catch them between his Paardeberg and his Colesberg columns. As to Buller, his men must be more or less exhausted after the hard fighting of the past ten days, but we may be sure that he will push on with all possible speed in pursuit of the retreating Boers. His role will doubtless be to try to obtain possession of Laings Nek, for although an invasion of the Transvaal from that point would be premature at present, it is important to keep the Boers occupied on the eastern frontier, so as to prevent them from combining to oppose Roberts in the Free State.

It is plain that the Home Government looks forward to at least six months' fighting still. Reinforcements to the number of 38,800 are to sail during the present month, and a further batch of 17,800 in April, or 56,600 in the two months. Thus, by the end of May, Roberts will have about 240,000 men under his command. England has never before put such an army into the field. The force of

Digitized by Google Original from CORNELL UNIVERSITY

cavalry and mounted infantry will be very large; certainly more than twenty-five thousand, if we include the Colonials. The successes that French has achieved have doubtless proved the supreme importance of mounted men for operating against the Boers. It may be taken for granted that the Australian Colonies will furnish an additional force of 2,500 men, as requested by Her Majesty's Government. The Australians have fought splendidly up to the present, and every trooper they can send should be welcomed.

Tuesday, March 6.

Prior to the recent operations in the Free State and Natal, the Boers' casualties during the war were estimated at 6,500, which figure was understood to be based on the lowest statements. If we put the Paardeberg casualties at 4,000, and those at Ladysmith during the recent attack by Buller at 500, we have a grand total of 11,000, against at least 13,000 on the British side. That is not a serious difference, in view of the fact that the British have been acting chiefly on the offensive. But it must be confessed that the question of the Boers' losses is exceedingly obscure. The telegram tells us with all assurance that 170 wounded men were found in Cronje's camp. A hundred and seventy wounded means that not more than forty were killed, and thus we reach a grand total of 210 casualties in Cronje's force, exclusive of prisoners, during the operations that ended in his unconditional surrender. But we had been previously assured that he himself admitted a loss of 800 on one day, namely, Monday, the 19th of February. We know, also, that on the morning of that day 50 British guns began to bombard his laager, and that they continued the bombardment, with slight intermissions, for a week. Apparently after Monday the 19th this terrific bombardment did not cause a single casualty in the laager, and, what is more, the 800 killed and wounded of Monday the 19th, to say nothing of the casualties during the assault on the 18th, when our troops lost nearly 900, and the casualties in Cronje's rear guard while it defended the passage of the Modder on the 17th, dwindled down to a total of 210. How are these discrepancies to be explained? If Cronje's casualties did not really exceed 210, whereas ours were at least 850, the ratio in this particular instance is terribly unfavourable. It seems very hard to get at the truth.

Wednesday, March 7.

The Boers had 24 guns in position for bombarding Ladysmith. Those on the north, east, and west were planted at points from three to four miles distant, but on the south there were five field guns which were only 2 miles from Cæsar's camp. The heaviest artillery employed by the Boers were 4·7-inch howitzers, of which they had five, and 15-centimetre Creusots, of which they had two. The remaining 17 guns seem to have been field pieces—12-pounders—, with which the artillery of the besieged should have been able to cope. White had six batteries; that is to say, thirty-six 15-pounder field guns—not including the mountain battery lost at Nicholson's Nek—, and he had also two naval 4·7-inch guns. Numerically, therefore, he was much stronger than the Boers, but they out-classed him in heavy artillery, having seven pieces against his two. It may be taken for granted, also, that the ammunition of the naval guns was exhausted at an early period of the siege. There was evidently ample opportunity to estimate the relative efficiency of the British and the Boer field artillery, and it is scarcely possible to hope that *The Times'* correspondent made the mistake of comparing the enemy's guns of position with our field pieces. More surprising to us than the trifling nature of the casualties suffered by a garrison of nearly ten thousand men bombarded by 17 field guns and 7 guns of position during four months, is the fact that the Boers could not mass a larger force of artillery for the attack. Considering the cardinal importance they evidently attached to the capture of Ladysmith, and the great efforts they otherwise put forth to get possession of the place, we can only infer that, in spite of the magnitude of the preparations said to have been made by the two Republics, they are ill supplied with artillery. Buller had 54 field-guns, 6 howitzers, and 4 mountain guns—64 in all—when he made his last attack. He doubtless had some naval guns also, but as to that we have no certain intelligence. Now, therefore, since he has effected a junction with the Ladysmith garrison, he has 90 field-pieces, 6 howitzers, and 4 mountain guns; a formidable park.

Thursday, March 8.

It appears that not only the British field gun, but also the service rifle are declared to be inferior to the weapons used by the Boers. Mr. W. A. Ballie-Grohman, writing in The *Times*, says:—"Confining myself in my comparison of the two opposed rifles to our service arm and to the ·276 Mauser (Spanish), which, I believe, forms the bulk of the enemy's armament, I assert that the defects of the former are greater weight (9·25lb. *versus* 8·60lb.); inferior muzzle velocity, and worse trajectory (2,000 v. 2,280ft.-sec.); much inferior rigidity, caused by the woodwork, instead of being in one piece, consisting of two separate parts, a defect which is accentuated by exposure to a variable climate; a very much weaker bolt, hence increased risks from "blow backs," constituting a serious danger with our inferior, because in hot climates uncertain, cordite; a very inferior trigger-pull (straight v. drag) and, lastly, but most important, a magazine arrangement which is simply not in it with any other magazine rifle of the Great Powers. To make myself plain about this, the most serious of all drawbacks, it must be remembered that when Tommy has once fired off the contents of his magazine he can recharge it only by placing the cartridges singly into the receiving slot, while his foe reloads his his magazine by a single movement of his hand, for the five cartridges are held together in a clip, and, being a larger object to handle than is a single cartridge, it is obvious that there is less fumbling of unsteady hands when replacing at one move five cartridges than there is in placing a single one in the magazine. In the present war there have been at least three occasions when the repulses we sustained would very probably have been victories had the Boers been armed with our magazine rifles, for with it they certainly could not have sustained such a deadly hail of bullets that caused our lines to waver and then to bolt."

The garrison of Ladysmith can not have been on greatly reduced rations for a very long time. On December the 18th, they had a full ration of the necessaries of life for two months. But even at that time the difficulty about forage was beginning to be serious. The small space of grazing ground lying within the camp did not by any means suffice, for, inclusive of the mounted Volunteers, there were five and a half cavalry regiments and two brigade divisions of artillery, that is to say, six batteries. We shall probably hear that many of the animals perished, and that Buller has had some trouble in furnishing remounts. It may be noted that Buller will have a considerable force of mounted men when the Ladysmith garrison is again fit for the field: namely seven regiments of regular cavalry; a detachment of the Natal Mounted Police; a regiment of the South African Light Horse; Bethune's Mounted Infantry, and Thorneycroft's Mounted Infantry—a force of from four to five thousand.

Had Buller succeeded in his first attempt to drive the Boers from their positions south of Ladysmith, they would probably have suffered a demoralizing defeat, for the garrison was then ready to co-operate. A flying column had been formed consisting of the Devonshire and Manchester Regiment and the Gordon Highlanders, with the object of moving out and attacking the Boers on the first symptom of their discomfiture, and one of the heavy guns had been posted so as to support the movement. But after the garrison had been three times disappointed, General White probably desisted from thus accentuating the failures of the relieving forces, not to speak of the fact that his troops were too much exhausted to undertake anything.

Some time ago, we quoted a letter from a German in Natal showing how thoroughly friendly the Germans in that district are to the British. Here is another proof in the form of a telegram to *The Times* dated Durban, January 22nd:—"The German community here indignantly resent the odious charges against British soldiers in Natal which have been made by some German newspapers. The German Consul has written to the *Natal Mercury* declaring that the statements referred to are absolutely untrue and are only meant to work mischief."

Friday, March. 9.

This is certainly a strange time for disaffection to declare itself openly in the Cape Colony. The only explanation we can conceive is that the places which have now thrown in their lot with the Free State lie so far out of the beaten track that news of recent events has not reached them. Prieska and Kenhardt are situated west of Hopetown, at distances of 80 and 175 miles respectively from that place. Victoria West and Fraserburg are much farther south, the former being about 10 miles west of the line of railway from Capetown to De Aar, the latter about 75 miles south-west of Victoria West. It is scarcely possible that the rebels in these places should contrive to take any part in the campaign itself, but their open disaffection introduces a highly inconvenient factor, since they threaten the railway which forms one of Roberts' principal lines of communication with the south. In fact, the railway from Nelspoort

Digitized by Google Original from CORNELL UNIVERSITY

to Hopetown may now be said to run through hostile territory. Prieska is on the Orange River, Kenhardt on the Harlebeeste, a tributary of the Orange. It will be inconvenient to organise special expeditions for marching against these places, but probably Lord Roberts will consider it necessary. We are curious to see how pro-Boer publicists will view this new incident. Will they say that the inhabitants of Prieska, Kenhardt, Victoria West and Fraserberg are also fighting for their independence, and that they have a right to rise against the nation which has allowed them to settle for years on its territory, has afforded them full protection, and has granted them exactly the same privileges as those enjoyed by British subjects? Or will they open their eyes to the true fact that this is a deliberate war of aggression on the part of the Boers, and that its sole motive from the first has been to drive Great Britain out of South Africa? Which done, God help the unfortunate native populations.

With regard to Brabant, whose operations at Stormberg have been so successful, the following statements are made by the *The Times*' correspondent at Capetown :—

The news that Colonel Brabant has been appointed brigadier is welcomed with the liveliest satisfaction in colonial circles. The appointment is not only a recognition of splendid services in organizing Brabant's Horse, but will also give a stimulus to the enrolment of English farmers in the eastern province, who have the greatest confidence in General Brabant. He is known by the experience of many Kaffir wars to be a bold and skilful leader. I understand that the promotion of General Brabant is the first step towards the formation of a colonial division, which would be immensely popular. . . . .

The news of Brigadier-General Brabant's appointment has caused great satisfaction, as he is well known in the colony as an energetic organizer and a bold fighter, with that experience and "slimness" which are necessary to outwit the Boers. It is believed that the English farmers of the eastern province, who are the best fighting material in the country, having all the qualities of the Boer, will be much readier to join under him than they would be under Imperial officers, with all their English dash, whose methods are foreign to them. This source of strength in many districts has hardly been tapped.

I understand that the mounted force under Brigadier-General Brabant will probably be composed, besides the two regiments of Brabant's Horse, of Nesbitt's and Bayly's Horse, the Cape Mounted Rifles, the Frontier Rifles, and other eastern province rifle associations, and mounted Volunteers from the chief colonial Volunteer infantry battalions, together with additional squadrons of irregulars with colonial experience. Such a force would serve as an effective screen to cover the slower advance of the infantry.

From Kimberley to Mafeking is 223 miles. The force despatched by Lord Roberts for the relief of the latter place has therefore a very long march before it. The railway will doubtless be used as much as possible, but even then the advance must be slow, for, as the troops will be moving practically into hostile territory, to employ the railway in the ordinary manner for transporting them would be to incur great risks.

The question of the relative qualities of the British and the Boer artillery has brought into the field a number of controversialists. One of the most decisive utterances on the subject comes from an artillery officer of 50 years' experience, who says :—"I dispute the statement that Boer field artillery is in any way superior to our own—on the contrary, though finality in artillery may, as may also almost everything else, be relegated to the far distant future, I assert, without hesitation, that our field artillery is fully up to date both as regards guns and ammunition, and there is nothing in the reports from the seat of war which runs at all counter to this assertion."

Lord Strathcona's offer, now carried out, was certainly most munificent. The particulars are these :—

Lord Strathcona will provide, distinct from the Canadian Government contingent, a force of at least 400 mounted men and officers, and arm, equip, and convey them to South Africa, where they will be taken over by her Majesty's Government.

The force will be raised in Manitoba, the North-West, and British Columbia, and is to consist of single men, who must be expert marksmen, at home in the saddle, and thoroughly efficient as rough riders and scouts. The horses will be procured from the Canadian North-West.

The Canadian Government are cordially co-operating in the proposal and have consented to allow the use of the organization of the Militia Department in the selection, armament, and equipment of the force.

It is understood that the matter will be carried out under the general supervision of Major-General Hutton, C.B., commanding the Militia of Canada, and that the organization of the force will be proceeded with immediately.

GERMAN AFFAIRS.

Germany will get her fleet, or rather the fleet her Emperor wants. That is pretty certain. It is not to be a fleet equal to that of the strongest naval Power, but it is to be sufficiently formidable to make any Power hesitate before inviting a trial of force, and to weaken such a Power so seriously in a conflict that, in spite of victory, "its own position would not, in the immediate sequel, be secured by the possession of an adequate fleet." That is a diplomatic way of saying that any Power attacking Germany on the sea would be so much weakened as to be exposed to invasion. On the broad line of protecting her mercantile marine, this latest ambition of Germany's seems natural enough. Her foreign trade is developing rapidly, and the part of it carried by sea increased from 66 per cent. in 1894 to 70 per cent. in 1898. There has also been a great development in the coasting trade since the opening of the Baltic Canal, and the total amount now invested in German shipping is estimated at 500 millions of marks, while the mercantile vessels built in German yards in 1899 amounted to 190,000 tons.

It was considered necessary to telegraph to the Far East the arrival of Dr. Leyds in Berlin at the close of January, and to speak significantly of his reception by Count von Bülow. But it seems that, Dr. Leyds being the accredited Representative of the Transvaal at the German Court, his appearance at the Foreign Office in Berlin from time to time is a diplomatic duty. No one in Europe attached any special importance to the event.

We have spoken above of the German Navy Bill. The following *résumé* of it, from the pen of *The Times* Berlin correspondent, is very clear and explicit :—

The text of the new German Navy Bill, as agreed upon by the Federal Council, was published this evening. The new Bill proposes to increase the strength of the navy by raising the number of line-of battle ships from 19 to 38, the number of large cruisers from 12 to 20, and the number of small cruisers from 30 to 45. The non-recurring expenditure on the construction and armament of these vessels is estimated at 1,600 million marks, that on docks and harbours at 261 million marks. Of this sum it is proposed to raise 769 million marks by the issue of loans which will be expended over a period of 16 years; 1,092 million marks will be met from the revenue. The recurring expenditure will, it is calculated, show an average increase of 5,400,000 marks per year. The increase in the *personnel* is calculated at 33,746 men.

The Bill consists of three paragraphs, of which the first proposes to increase the number of ships on active service by a flagship and two squadrons, each consisting of eight battle-ships, two large and eight small cruisers to be employed for scouting purposes with the fleet stationed in home waters, and five large and five small cruisers for service on foreign stations. It is further proposed to increase the reserve by two line-of battle ships, one large and two small cruisers for service abroad. The monitor squadron for coast defence will be abolished, but the eight vessels of which it consists will be replaced in due course by battle-ships which will form part of the increased strength. The second paragraph lays it down that the first and second squadrons are to form the fleet on active service, the third and fourth squadrons the reserve fleet. All vessels in the fleet on active service and half of those in the reserve fleet are to be kept in constant use. The third and last paragraph runs :—"The provision of the supplies rendered necessary by this measure is to be settled every year by the Imperial estimates."

The introduction to the Bill states that during the next 16 years, as a rule, three large and three small ships are to be placed on the stocks. In order to bring the fleet intended for active service up to its full strength as soon as possible the new vessels intended for the first two squadrons are to be completed before beginning the replacement of the ships in the reserve fleet by new construction. Of the old Navy Act are retained the paragraph fixing a *maximum* which the naval expenditure for each year is not to exceed, and the paragraph which lays it down that expenditure on the fleet is not to be met by an increase of the indirect taxes upon articles consumed by the masses. The Bill does not fix the period within which the fleet is to be brought up to the contemplated strength. The Government, it is stated, is confident that the Reichstag, once it has agreed to the increase, will do everything possible to reach the goal.

The following news from Chicago refers to Dr. Holleben, formerly German Representative in Tokyo :—

Dr. von Holleben, the German Ambassador in Washington, was yesterday the guest of Chicago University, and received an enthusiastic welcome from the professors and students. Professor Laughlin, who received his Excellency in the name of the University, spoke of the great debt which America owed to German patriots, authors, and scientists, who had taken up their dwelling in the United States and had aided in the development of the country. He referred to Germany, Great Britain, and America as the grandparent, the parent, and the child. "United in loyalty to science," he said, "to art, and to literature, united in their desire to save the world from unreasoning war, united by the closest family bonds, in such alliance may the three nations live and prosper."

Dr. von Holleben expressed his satisfaction at the cordiality of his reception, and gave his audience an interesting account of the work of German Universities. At a banquet which was subsequently held the toast of the Emperor's health was proposed, and Dr. von Holleben said that, could the Emperor know the sentiment that had been expressed, he would repeat the words, "God bless our friendship with the United States."

The scheme for a Rhine-Elbe canal is now revealed in its full dimensions. It has been once rejected by the German Diet, but will be again submitted. The scheme forms part of a programme of water-ways to be constructed during the next 15 years at a total outlay of 450 million marks. Germany is certainly going ahead on a colossal scale.

The *Cologne Gazette*, referring to the recent achievements of the German Foreign Office, especially the acquisition of Kiao-chou, the Carolines, and Samoa, says: —"We do not regard it as a drawback that it was possible to gain all these successes without bluster and without war, and that the acquisitions were made in a calm, business-like way and not under the illumination of Bengal lights."

Digitized by Google Original from CORNELL UNIVERSITY

"A calm business-like way, without bluster or war," is an admirable manner of describing the acquisition of Kiao-chou, which was seized by a squadron in time of peace without notice of any kind.

The position taken by Germany with regard to contraband of war includes the doctrine that mail bags and letters can not be opened under any circumstances. It is justly queried, with reference to this, whether Germany or any other Power would permit closed mail bags to be delivered in a country with which she was at war, were there any possibility of preventing it.

We take the following from *The Times'* correspondents' *résumé* of German journalistic utterances on the subject of the seizures of German vessels and contraband of war :—

The case of the firm of Krupp and the request of the German Government that this firm should abstain from supplying one of the belligerents with material of war are treated in connexion with the seizure of German vessels. It is argued in the Press that if the British Government is so careful in preventing contraband of war from reaching the Boers, the German Government must take equal care to prevent supplies from Germany from reaching Great Britain. But the case of Krupp has another and a purely German aspect. The first reports that the firm was engaged on an English order emanated from a Social Democratic source. A Socialist journal published in Essen asserted that the Krupp works were executing an order which they had received from a private individual whose name was kept secret, but who was really an agent of the British Government. The calibre of the ammunition was such as is only used by England and Russia. The dimensions of the shells, as stated in the orders, were given in English inches, and they were constructed to receive a charge of lyddite. Up to the time that the reports concerning the alleged order appeared in the Press, the workmen at Krupp's always talked of the ammunition as "the English shells." The object of the Socialist denunciation, it is alleged, was not so much to protest against the action of a German firm in supplying a belligerent with war material as to exhibit the firm of Krupp in an unfavourable light in connexion with the navy agitation. It was argued that the firm could not consistently advocate a great increase in the German navy with the object of challenging the supremacy of England on the seas while at the same time they were supplying that Power with ammunition. One journal bluntly says :—"The *Berliner Neueste Nachrichten* has been bought and is maintained by Krupp. That journal conducts in the interests of the navy scheme a campaign against England, while the firm of Krupp supplies England with arms for the present war."

The ways of German journalism, especially Socialist journalism, are so inscrutable that it would be useless even to guess at the origin and object of the denunciation of Herr Krupp's firm. That firm has a reputation as high as any in the world, and its loyalty to Germany is beyond reproach. The firm is constantly employed, and never suffers from a lack of orders. Moreover, as I happen to know, it never in any circumstances enters into a contract with a "private individual," but only with Governments. In view of the present state of German feeling it is most improbable that the firm should have departed from its inflexible rule in this particular instance.

Dr. Leyds, speaking to the *Echo de Paris* on January 26th, declared that the exact Boer losses to date were 212 killed or died of wounds, about 1,000 wounded, and 200 prisoners.' On the very day when he made this assertion the *London Gazette* published despatches from Buller, White, and Methuen, dealing with the operations in South Africa down to December 28th. Let us see what are the figures officially stated by these Generals :—

BOER PRISONERS.

	Prisoners.
Brandslaagte	188
Belmont	50
Total	238

In these two engagements alone the number of prisoners exceeds that given by Dr. Leyds as the total up to January 26th. The man is a colossal exaggerator We know from trustworthy sources that the casualties which he puts at 1412 really aggregated 6,500. It has to be remembered that his figures include those for the attack on Ladysmith on the 6th January.

CONTROL OF RELIGIONS.

The Buddhist priests have not abandoned their agitation against Governmental measures for placing all religions on an equal footing *vis à vis* the law. They have held another meeting, this time in the Myoshin-ji, a Zen temple in Kyoto. All the principal temples, with the exception of the Nishi Hongwan-ji, were represented. Accounts were submitted, showing the result of the efforts made to prevent the passage of the Religions Bill in the last session of the Diet and the sums disbursed for that purpose. It was decided that funds should be raised for another campaign with regard to the next session of the Diet, and that the arrangement of the whole business should be left in the hands of Mr. Ishikawa, Vicar of the Eastern Hongwan-ji.

The *Fiji Shimpo* is very severe in its criticisms of the Buddhist priests. It says that they labour under a gross delusion as to the reasons for the Bill's rejection by the Upper House. They think that the measure itself provoked opposition. Such was not the case by any means. The greater number of those that voted against the Bill had no objection whatever to the measure itself, but were dissatisfied with the details of the Government's proposals. That does not concern the priests, however. They have no higher object than to collect a good round sum from innocent fanatics and spend it on "promotion," in other words, on their own amusement. The amount thus spent since last July is said to have been 300,000 *yen*.

Miyoshin-ji in Kyoto is now the headquarters of the agitation against the Religions Bill. The Buddhists have at any rate the merit of holding to their point. They are determined not to loosen their helmet strings in the hour of victory. But they are fighting against the spirit of the time and against the Constitution, and to such opponents they will have to strike their flag eventually. We propose not to follow the steps of their campaign any longer in these columns until some interesting development occurs, for our readers must be weary of the subject.

A STORY FROM YUNAN.

The *Fiji Shimpo's* special correspondent wires from Peking under date of the 4th instant that English troops have captured a Chinese fort in Yunnan, killing 80 of the Chinese troops and militia that garrisoned it. This is a strange story. We had not heard of any British troops being sent into Yunnan. But it is possible that the Authorities in Burmah considered it necessary to take strong action with regard to the outrage recently committed on the frontier. Accurate accounts of that affair are not yet to hand. Our readers doubtless remember, however, that news reached Tokyo on the 20th of February to the effect that a fracas of some kind had taken place on the Chinese frontier of Burmah, and that it had resulted in the wounding of four people, according to one account, and the killing of two, according to another. Both statements agreed in representing the victims as connected with the British Consulate, but while the first telegram called the culprits "bandits," the second made them out to have been Chinese soldiers appointed to guard the victims of the assault. If the British Authorities in Burmah thought it necessary to resort at once to military measures, we may assume that bandits were in question, and in that case it is not impossible that 80 have been killed and wounded.

THE TOKYO OVERHEAD RAILWAY.

Nothing has been heard for a long time of the projected over-head railway in Tokyo, for the construction of which the Diet gave its consent in the tenth session. It appears that great difficulties have attended the negotiations for the purchase of land. In the Kojimachi district, however, these difficulties have been overcome, and of the 18 land-owners whose property will be affected in the Shiba district the majority have made terms. It is expected, therefore, that the work of construction will commence in June, 1901. The first section of the line will be short. Starting from Shiba-ura, which is somewhat south of Shimbashi, it will pass along Hikage-cho, thence through the Yamashita Gate, thence along Yuraku-cho, and finally reach the central station in Eiraku-cho, in the immediate neighbourhood of the handsome pile of buildings erected under the auspices of the Mitsu Bishi Company. The making of this railway will doubtless conduce to the erection of new edifices on the large expanse of ground lying beyond the castle moat—an area of 200,000 *tsubo*, of which 84,500 *tsubo* belong to the Mitsu Bishi. At present there are four blocks of buildings on the latter lot—the new Tokyo Chamber of Commerce, the insurance companies' offices, the Nippon Yusen Kaisha, the Mitsu Bishi offices, and Messrs. Takata and Company's office. These edifices are on a scale altogether above that of any other buildings erected in Tokyo by private enterprise. The Chamber of Commerce rooms cost 200,000 *yen*, and the four Mitsu Bishi blocks are said to have involved an expenditure of about one million. According to published estimates, the over head railway company will require 40,000 *tsubo* of land for their central station and for the various structures connected with it, but the estimate seems rather exaggerated. Forty thousand *tsubo* of land in Eiraku-cho would cost over two million *yen*. It is understood to be the intention of the Mitsu Bishi Company to veto the erection of any buildings that do not satisfy a certain standard of solidity, and though edifices so costly as those already standing in the district are not likely to be speedily multiplied, it may be assumed that the Mitsu Bishi's rule, and their own munificent expenditure, will result in the creation of a quarter presenting a vivid object lesson to the citizens of Tokyo. Many and many a year must elapse before the capital of Japan ceases to be a city of hovels, but the time will come, in despite of earthquakes.

THE IMPERIAL WEDDING.

A project has been started in connexion with the Imperial Wedding. It is that all those disposed to offer any present to the Crown Prince and his bride should contribute money instead of purchasing objects, and that the fund thus obtained should be devoted to building a fine arts museum. It is known that their Imperial Highnesses are willing to accept wedding presents, but the great majority of people must evidently experience much difficulty in providing any gift. Combination would be absolutely essential, for it would very rarely happen that one person alone could afford to offer anything acceptable, and, under any circumstances, the great majority of the lower middle classes would be precluded from taking part in the movement. If, on the other hand, it were a question of subscriptions, every one without distinction could put up his mite. This view of the case has commended itself to several of the leading artists of Japan, and they have obtained the cōoperation of Viscount Hijikata, formerly Minister of the Household Department. There is also a prospect of the Tokyo Chamber of Commerce supporting the scheme. The Chamber has for some time advocated the formation of a public library, and has petitioned the Diet in that sense, but, of course, the Imperial Wedding is a special occasion, and will doubtless be viewed as such by the Chamber. To us the museum plan commends itself strongly. Japan, though she enjoys such a high reputation as a country of art, has no museum at all worthy of her name, the Hakubutsu-kwan at Uyeno, and the museums at Nara and Osaka not being in any sense representative. Probably a million *yen* could be obtained in connexion with the wedding, and such a sum would go a long way towards meeting the need. As foreigners we should be glad to see that course adopted, for whereas many, if not all, the foreign residents would be pleased to offer some congratulatory token to the Imperial couple, there is much difficulty in selecting anything suitable, whereas the system of subscription would make everything easy.

FUNERAL of VISCOUNT SHINAGAWA.

The obsequies of Viscount Shinagawa were performed on Saturday, the 3rd instant, the cortege leaving the residence of the deceased statesman at 9 a.m. and proceeding to the Hongwan-ji in Tsukiji, where the service was conducted according to Buddhist rites. The coffin was subsequently carried to the crematorium at Kameido, whence the ashes are to be sent to Kyoto for interment. There was a magnificent display of floral offerings from numerous friends, societies, and associations, and there were also many cages of birds which were set free during the service, in accordance with the beautiful Buddhist custom. An immense concourse of notables attended, among them being the Prime Minister and all the members of Cabinet and the Privy Council, Marquis Ito, Marquis Oyama, Prince Konoye, the Minister of the Imperial Household, Count Inouye, Count Hijikata, Count Soyejima and many other dignitaries of State, officers of the Army and Navy, representatives of public bodies, and private friends.

THE LAND QUESTION.

Two anonymous correspondents address a local contemporary on the subject of perpetual leases. The first, who signs himself "One of the Eleven," takes exception to our remark that "the discussion had assumed a somewhat farcical character," and says that if the Editor of the *Mail* had a few hundred thousand dollars invested in Yokohama property, he would not find the position so exceedingly comical. If "One of the Eleven" read our comments, he must have seen that we applied the epithet "somewhat farcical," not to "the situation," as he alleges, but, first, to the arguments advanced by a local contemporary which, in the face of the fact that the whole complaint of the land-holders is based on the taint of superficies supposed to have been given to the leases, nevertheless denied that superficies had anything to do with the trouble; and secondly, to the suggestion of a correspondent that the Japanese Government ought to issue a notification announcing its intention of observing its treaty engagements. To say that the line taken by such controversialists is "somewhat farcical" and to say that "the situation is exceedingly comical" are two wholly different assertions. We might allege, with truth, that Christianity has often had farcical expounders, but no honest man could pretend, on the strength of such a statement, to charge us with saying that Christianity is exceedingly comical. With writers of the type of "One of the Eleven" it certainly is not worth while to argue.

The second correspondent, "Romulus," says:—

> So long as the grounds are held by the Government and are recognized as "*Kwan yu chi*," the tenure may be *comparatively* safe because it is unlikely that any question will be raised in the Courts, but suppose that the Government *sells* the land to private parties and questions *are* raised—what then?

That appears to us to illustrate what we have often said, namely, that the whole difficulty arises from failure to appreciate the Government's obligation not to take any step calculated to impair the title guaranteed to foreigners by the treaties. As a matter of fact, the Courts have no competence to meddle with the lands. The 45th Article of the Law of Operation of the Civil Code removes these titles entirely beyond the purview of the legal tribunals.

THE TWO OTANIS.

The Rev. C. A. Tague complains that obscurity is caused in our notes on the Religious-Bill question by reference to Count Otani at one time as the "High Prelate of the Eastern Hongwan-ji," and at another as the "High Prelate of the Western Hongwan-ji.' We may explain that there are two Counts Otani, and that each of them is the High Prelate of one of the Hongwan-ji temples. Count Otani Koson presides at the Western Hongwan-ji and Count Otani Koyei at the Eastern. Unless the second name is used the two can not be distinguished, but since we have spoken of them always in connexion with their respective temples, and since we have more than once explained the fact that the two prelates have the same title, we did not suppose that any confusion could result from omitting the "Koson" and the "Koyei."

RUSSIA IN THE FAR EAST.

The Odessa correspondent of *The Times*, writing on January 21st, says:—"According to the programme issued by the committee of the Russian Volunteer Fleet, 21 voyages will be made by the cruisers between here and the Far East during the present year. It is highly probable that this number will be greatly exceeded, but this will depend on the number of men that the Government will send to the Far East as reinforcements to the already large army that they have quartered there, as well as the number of guns, ammunition, and garrison stores required at the strongly-fortified places of Port Arthur and Vladivostock. It is reported that for the strengthening of the fortifications of these two places a sum of 3,000,000 roubles is to be spent during the current year." This correspondent's intelligence confirms the news received from many quarters that Russia is massing large military forces in the Far East. It is extremely difficult to form any definite idea of her present numerical strength in Manchuria and her neighbouring territories. The estimates with regard to Manchuria alone vary from two thousand to fifteen thousand. Eight thousand is supposed to be the number at Port Arthur, twenty thousand at Possiet Bay, and twenty-five thousand in and about Vladivostock. Probably we shall not be far wrong if we estimate her total strength at present in Far Eastern Asia at fifty thousand to sixty thousand men, and it is understood to be her intention to bring the total to a hundred and fifty thousand by the close of the year 1903. What service are all these troops to perform? They certainly are not wanted for defensive purposes, or for guarding the new railway routes, or for keeping the peace. When we observe, also, the rapidity with which the new railways are being pushed forward, and that Vladivostock will soon be in communication by rail with Talien and Port Arthur, it is impossible to deny that Russia is developing formidable proportions. When her road to Newchwang is finished she will be practically in touch with Peking by rail, for the British line westward from Newchwang is now completed with the exception of one bridge.

It is curious that just as this news as to the Russian Volunteer Fleet was published, M. de Freycinet, addressing the Seine Senatorial delegates with reference to the Franco-Russian alliance, is reported to have said:—"Superficial observers alone can doubt the intimacy, which is closer than ever, between the Governments of Paris and St. Petersburg. The facts show the complete and—so to say—daily agreement existing between the two States in virtue of the treaties of mutual guarantee. The security assured to Russia by the alliance with France as regards her European frontiers permits her to concentrate in Asia forces enough to protect her own special interests—we refer to Afghanistan, where new battalions have just been sent. By virtue of the same principle, if France had either to act or to defend herself in Africa, she might despatch to the opposite shore of the Mediterranean a considerable number of troops which the Russian Alliance sets free." The time was, not so very long ago, when French statesmen did not speak in such explicit terms.

JAPANESE PEERS.

An interesting discussion is raised by the *Shogyo Shimpo* with reference to the Japanese peerage. There were 3768 peers in 1880 and the number had increased to 4523 in 1887. Of course there were many nominations of new peers in the interval; in fact, nearly all such nominations were then made. Still the *Shogyo* insists that there has been an undue tendency to extend titles to second, and even to third, sons in recognition of a father's special services. We do not see why our contemporary should complain of that, seeing that the general gist of its article is financial, but we presume that it reflects a well-informed objection to the growth of the nobility. In the early years of the *Meiji* era, the affairs of many nobles fell into a disastrous condition owing to their ignorance of economical principles and their unwise speculations. It then became one of the prime cares of the Household Department to induce them to convert as much of their resources as possible into entailed property (*sesshu saisan*). Ultimately, however, the new Peers Law placed these matters on an entirely optional footing. In 1898, the total sum fixed by entail in the houses of the ancient nobility was 16 million *yen*, whereas the sum thus fixed in the families of the 300 new nobles totalled only 4,000 *yen*, or about 13 *yen* a head. This great discrepancy did not indicate a corresponding difference of wealth. It was entirely due to the fact that the new peers, being shrewd men of the world, did not care to lock up their money in bonds or other securities paying low interest. They kept it employed in various speculations. At present, the entailed property of the several orders of peers stands as follows :—

Rank.	Entailed Property. Yen.	Average per family. Yen.
Princes 11	1,156,210	105 110
Marquises ... 33	5 929 913	119,088
Counts 89	4 484 595	53 386
Viscounts 363	4 946,987	13 628
Barons 220	140 016	636

The average for the Princes is comparatively low, owing to the fact that their ranks include many of the old Court Nobles, who are proverbially poor. On the other hand, the Marquises and Counts consist mainly of members of the ancient territorial nobility, and consequently they have a high average. But the Viscounts and Barons comprise many of the recent creations, and as these, for the reason assigned above, do not like entailing any of their property, the figure relating to them is small. The *Shogyo's* article is a general attack on the system of a hereditary nobility, but we do not find anything novel in the arguments adduced.

POLITICAL LEADERS.

Mr. Hoshi Toru accuses the Progressists of being out of touch with the times. That, he says, is the origin of all their troubles. They adopted for a campaign motto the abolition of the "three taxes," and they found themselves preaching to deaf ears, for the people did not want to have the taxes reduced and were quite prepared to put their hands in their pockets in order to promote projects with which they were in sympathy. The Progressists did not appreciate these things. They ceased to represent public opinion, and the nation consequently turned its back on them. Nor have they even the merit of consistency, for, while, as a Party, advocating a policy of retrenchment, the various groups forming the Party do not hesitate to inundate the Diet with Representations urging the expenditure of large sums on all kinds of projects.

Count Okuma says, on the contrary, that it is absurd to charge the Progressists with being conservative in matters of finance. They are quite as ready as any other body of politicians to spend money freely on worthy objects. Their contention is simply that the objects must be properly chosen, and that the methods adopted to obtain revenue must be discreet. They do not object to increased taxation : what they object to is the Government's manner of dealing with the taxes. Count Okuma is also very far from being satisfied about the Yokohama fore-shore complication. He thinks that serious irregularities occurred in connection with that affair, and he strongly condemns the Cabinet's manner of dealing with it.

In conversation with a member of the *Chiuo's* staff, Mr. Hoshi Toru is represented as having stated that the *entente* between his Party and the Cabinet exists as firmly as ever, and that no changes in the Ministry need be looked for until August or September next. There will then be a re-casting of the Cabinet, he affirms, but as to its nature he is reticent; nor does he undertake to say whether the Liberals may look forward to achieving their long-cherished aim, namely, the formation of Party Cabinets. Concerning the recent talk of renewing the coalition between the Liberals and the Progressists, Mr. Hoshi is not encouraging. It would be possible, at any moment, to form a coalition between the Liberals and the Imperialists, but since the two parties already work in harmony, and since their union would not give them a plurality in the Lower House, nothing special would be gained by taking the step. As to the Liberals and Progressists, however, Mr. Hoshi's dictum is, "nothing can be called impossible, but I don't cotton to their physiognomy (*sono tsura ki ni kuwanai*)." It must be confessed that, so long as Mr. Hoshi has charge of the controversial battery, the Progressists are not likely to be admitted peacefully to the Liberal Camp.

THE CAMPHOR MONOPOLY IN FORMOSA.

The competition for the camphor monopoly in Formosa promises to be very keen. It is stated that the Okura Company, the Mitsui Company, the Sanetomo House, Mr. Otani, the Kwansei Boyeki Kaisha, Messrs. Jardine Matheson and Company, Messrs. Samuel Samuel and Company, Messrs. Oppenheimer Freres, and others are among the rival bidders. A vernacular contemporary notes that of the six millions catties of camphor produced in the world, Formosa produces 5 millions. In Java, Sumatra, Borneo, and Japan the exhaustion of the supply is in sight, whereas in Formosa there is an ample supply for the next 80 years, and since 50 years suffice to bring a camphor tree to maturity, Formosa may be regarded as a perennial mine : judicious planting is alone required. The value of the monopoly is therefore likely to be very great to the person who is fortunate enough to secure it.

ELECTRIC RAILWAYS.

There is no apparent prospect of any improvement in the miserable condition of Tokyo, no sign of a street railway being built, whether electric or Serpollet, or any other. It is scarcely possible to doubt any longer that the fault lies with officialdom. The citizens are ready enough to undertake the work of building railways, but the Authorities can not make up their minds to grant permission. We did hope that before the usual influx of spring tourists from Europe and America had commenced this year, some beginning of operations would have been made, so that tangible evidences of good intention at least would have been visible in extenuation of the city's disgracefully backward condition. But that hope has proved illusory. Travellers from the West will still have to plough their way through quagmires of mud or do battle with whirlwinds of yellow dust, and would return to their own countries with an unpleasant conviction that Japan's boasted progress is all a sham were not other cities happily more enlightened than Tokyo. Who, making a forecast five years ago, could possibly have anticipated that the Korean capital, a by-word for dirt and general backwardness, would actually take the lead of the metropolis of Japan, and that nearly two years after the successful opening of electric railways in Söul, Tokyo would still be hesitating about beginning similar work? The conveniences of locomotion that do exist only help to render the defect more conspicuous. We need scarcely speak of the bone-breaking "bus," with its pretence of springs, its moribund horses, and its generally miserable appearance—a vehicle worthy of the slums of a prairie hamlet. Without descending to that disgrace, we have only to look at the tramcars, which are not only unsightly as to the cattle that drag them and as to their general arrangements, but also have the effect of utterly destroying the streets through which they pass. Pedestrians and vehicles alike make it their object to avoid the streets traversed by trams, so that whatever facilities of travel these old-fashioned rattle-traps furnish, are more than counterbalanced by the expulsion of traffic from several of the city's principal thoroughfares. It is not conceivable that the Tramcar Company would have clung all these years to the same obsolete groove, had there been any possibility of obtaining official permission to substitute electric power for the present system. Indeed, it is generally stated that the Company, 8 years ago, applied for official leave to make the conversion, and that it has been applying periodically ever since, but no one can undertake to explain the hesitation of the Authorities to grant its application. The thing is almost incredible. We can understand, though we can not sympathise with, the difficulties and obstructions that presented themselves to officialdom when several rival companies entered the field as competitors for the charter to build a general system of street railways. But there is no perplexity of that kind in the case of the Tram Company. It possesses an absolute monopoly of the streets traversed by its vehicles, and the monopoly has still a fixed term of years to run. If the directors are willing to substitute electricity for horse traction during the remainder of their term, every possi-

Digitized by Google
Original from CORNELL UNIVERSITY

ble facility ought be afforded to them, whereas, it would seem, they can not even obtain official sanction. So rumour says, at any rate, and meanwhile the horse-tram-cars go lumbering along, eschewed by all the better classes of citizens, tearing up the already bad roads, and making a laughing stock of the city. An ounce of fact is worth a pound of fiction. The Japanese nation may be progressive, but Tokyo can not lay claim to any such distinction. Tokyo gives the lie to all claims of civilized enlightenment advanced on Japan's behalf—muddy, dusty, railway-less, harbour-less, drain-less Tokyo.

GROWTH OF TOKYO.

It is very interesting to note how Tokyo is developing in a suburban sense. The central districts do not show any sensible increase of population. Indeed they may be said to have remained stationary in that respect for the past 10 years, which is not wonderful, seeing that they are already about as thickly peopled as is possible. But the suburban districts show an increase of nearly 200,000 since 1887. The *Kokumin Shimbun* publishes the following illustrative figures :—

	Central Districts.		Suburban District.	
Year.	Houses.	Inhabitant.	Houses.	Inhabitant.
1887.....	77 278	406.991	217 378	827 459
1892.....	71,423	356 115	206 955	851 914
1897.....	76 038	404.499	227 853	898 825
1898.....	76 981	402 499	233.486	1,002.863

There is still a large area of unoccupied land in most eligible suburban sites, but that it will be rapidly taken up when the electric railway is built can not be doubted. With such wretched roads as Tokyo now possesses, it is a terrible labour to get from the suburbs to the business centre, and, moreover, the suburban markets are ill-supplied. The electric railway will have an immense effect.

PROFESSOR TOYAMA.

We regret very much to learn that Professor Toyama is seriously ill. According to Tokyo newspapers, he suffered for some time from an abscess in the ear, and was obliged to undergo a severe operation which has not been attended by happy results. Inflammation of the brain has supervened, and his condition is now said to be somewhat critical. It is to be sincerely hoped that this report may prove to be exaggerated.

Our readers will learn with much regret that Professor Toyama's condition has not improved. It appears that the trouble began with an attack of influenza last October. Before he had fully recovered, Professor Toyama delivered a long lecture at a meeting of a learned society. He suffered a relapse in consequence, again became convalescent, and again disobeyed the physician's caution by attending a debate in the House of Peers and speaking on the subject of the proposal to appoint a committee for investigating the educational system. The exertion brought on fresh trouble, this time in the form of an abcess in the ear, which ultimately developed into inflammation of the brain. He has been three times operated on, but there are no signs of improvement and his condition is now said to inspire uneasiness.

Professor Toyama's condition is evidently precarious. The Emperor has conferred upon him the honours which almost invariably prelude death. He has been named an honorary professor of the Imperial University, has been raised to the second grade of the second class of official rank, and has received the Second Class Order of the Sacred Treasure.

PRINCE WALDEMAR.

His Royal Highness Prince Waldemar made his official landing on Monday forenoon at Yokohama and proceeded at once by train to Tokyo, arriving in the latter city at 11.45 a.m. He is now staying in the Shiba Detached Palace. On Monday afternoon, he visited the Shiba Mausolea, and in the evening repaired to the Imperial Palace, where, after being received in audience by the Emperor in the "Phœnix Hall" and by the Empress in the "Paulownia Hall," the Prince dined with their Majesties in the "Hall of Plenty and Effulgence."

Tokyo journals contain a good deal about the doings of Prince Waldemar, the great personages that have called on His Royal Highness, the great personages on whom he has called, and the various banquets at which he has been present. The Emperor visited him at the Detached Palace on Tuesday forenoon, and conferred on him the Grand Cordon of the Rising Sun, and on Wednesday forenoon the Prince was introduced to the sport of duck hunting, so well described in *The Field* by Colonel Haggard. For the rest, it is enough to say that His Royal Highness' time has been fully occupied receiving calls from and calling upon the Imperial Princes, the Ministers of State, and the Foreign Representatives. He has found leisure to purchase a complete collection of Japanese lady's head ornaments and Japanese costumes at an expense of 7,500 *yen*.

OFFICIAL APPOINTMENTS.

Dr. Weipart, Japanese Secretary of the German Legation in Tokyo, has been appointed German Consul in Chemulpo, and will proceed to his new post in the middle of this month. Universal regret will be felt in Tokyo for the departure of a gentleman so popular, and it is difficult to see how the German Legation can reconcile itself to the loss of such an exceptionally accomplished Japanese scholar and so learned a jurist. But Dr. Weipart is to be congratulated not merely on his promotion, but also on the fact that the sphere of his new labours offers many opportunities of obtaining distinction. There is no German Consul-General in Korea, nor any German Legation, and Dr. Weipart will thus have a comparatively free hand, being directly responsible to Berlin only.

Mr. J. H. Gubbins has been nominated British *chargé d'Affaires pro tem.* in Söul, during the absence of Mr. Jordan, who goes home on leave for 18 months. This appointment will deprive Her Majesty's Legation in Tokyo of a highly valuable official, but it is in the natural order of things that services so long and efficient as those of Mr. Gubbins should be recognised by nomination to a post of greater responsibility than the Japanese Secretaryship of the Legation.

TRUSTS IN JAPAN.

We mentioned in a recent issue that a movement is on foot to form a cotton-spinners trust in Japan, but we did not mention an apprehension which we nevertheless entertained that such an organization would be difficult to achieve, inasmuch as its basis, mutual confidence, is wanting. For years it has been patent that the formation of a trust was greatly wanted in the field of coal-mining enterprise. Japanese mine-owners were engaged in ruinous competition, which resulted in forcing rates down to a point far below the figures really obtainable in foreign markets. They could easily have obtained much larger profits without in any way endangering their business. Yet, when that obvious course was proposed to them, their invariable answer was that they could not rely upon each other sufficiently to organise a thorough system of cöoperation. Will not the same difficulty be in the way of a cotton-spinners' trust? The *Fiji Shimpo* thinks that it will. Already the thing has been essayed by cement manufacturers, but their experience was not such as to encourage imitation. Commercial morality, according to philosophers, is a special kind of conscience. It is only found in countries where commerce has long been an honoured avocation. Doubtless there is much more of it in Japan than there was twenty or thirty years ago, but the improvement has scarcely yet brought us to the region of trusts.

NOTES ON CURRENT TOPICS.

The new torpedo-destroyers *Usugumo* and *Niji* arrived at Gibraltar, *en route* for Japan, on the 4th instant, and the *Sasanami* left Singapore on the same day.

His Excellency Li Shintok, who represents China at the Japanese Court, has received the honorary title of assistant tutor to the Young Prince Imperial.

The Government has promulgated the law passed by the Diet last session, for dispensing with the prepayment of Court Fees in cases of appeals from penal sentences.

The Osaka Municipality has decided to issue the next instalment of its harbour-construction loan at 94. The amount is 2 million *yen*, and it has been completely taken up by the Second Bank.

According to the *Nichi Nichi Shimbun* the production of silk cocoons last year amounted to 2,512,562 *koku*, as against 2,027,342 *koku* in 1898, a difference of 485,220 *koku* in favour of 1899.

Subscriptions for the seventh issue of the Industrial Bank's debentures will begin on the 20th instant and end on the 10th proximo. The total amount is 1½ million *yen*, and the highest prize in the lottery is 1,000 *yen*.

The eminent American geologist, Mr. F. G. Wright, is expected to arrive in Japan on the 18th or 19th instant. During his stay in this country he will probably deliver lectures at the Imperial University and before the Educational Society.

Mr. Yano, former Japanese Representative in Peking, entertained Dr. Morrison, the Peking correspondent of *The Times*, at dinner in the Maple Club on Wednes-

Digitized by Google Original from CORNELL UNIVERSITY

day. Among the guests were Mr. Tokutomi, editor of the *Kokumin Shimbun*, Mr. Asahina, editor of the *Nichi Nichi Shimbun*, and Mr. Shimada, editor of the *Mainichi Shimbun*.

The Department of Communications announces that parcels containing ginseng can not be sent through the post from Korea unless they are accompanied by a permit from the Government of that country.

The new schools to be established in consequence of recent legislation are a High Normal School in Hiroshima, a High Agricultural School in Morioka (Iwate), a High Commercial School in Kobe, and a High Industrial School in Kyoto.

Lady Nakayama, mother of the Emperor, is again very ill. She had become sufficiently convalescent to move to Kanagawa, as the change of air was expected to prove beneficial, but on the 6th instant she had a relapse, and her condition at present causes uneasiness.

Mr. Hoshi Toru starts for China next month. The *Mainichi Shimbun*, implacable in its enmity, opines that the only result of his travels will be to furnish materials for some pretty paragraphs to Mr. Takenouchi, editor of the *Sekai-no-Nippon*, who accompanies him.

Rumour says that Mr. Otori Keisuke, Mr. Kaneko Kentaro, and Mr. Kiyoura Keigo will shortly receive patents of nobility as barons. We are not surprised. Rather is it remarkable that these gentlemen's names have so long been omitted from the peerage.

The recent rise in the price of raw cotton has affected Japanese spinners very sharply. They find themselves with small stocks on hand at a moment when the supply can not be replenished except at ruinous prices. It is stated that they will soon be obliged to give up night work at any rate.

His Excellency the Belgian Minister, Baron d'Anethan, who is now travelling in the South of Japan, was entertained by the leading Japanese residents of Moji on 27th of February. The Baron is said to have made a very happy speech dwelling on the extraordinary progress made by Moji during recent years, and discussing commercial affairs in general.

The new hall, forming an addition to the Fine Arts Gallery in Uyeno Park, was formally opened on the 4th instant, the President, Prince Arisugawa, performing the ceremony. The project of building this hall was mooted several years ago, but its execution was interrupted by the war with China. It has cost 13,500 *yen*.

The promulgation of laws passed by the Diet in its recent session continues apace. In the *Official Gazette* of the 8th instant, we find the Law relating to the Acquisition of Property for Public Uses; the Law for Disposing of Refuse; the Drainage Law; the Law relating to Guilds of Dealers in Products; the Law relating to Associations of Dealers in Principal Staples of Manufacture, and so on.

It is noteworthy that official ranks are bestowed in this era with much geater liberality than in pre-*Meiji* days. Very seldom indeed did an official or nobleman attain a higher position than the second grade of the third class in old times. In the pages of Japanese history we find men speaking with bated breath of *Ju sam-mi*, and as for *Shō sam-mi*, it was something quite extraordinary. But things have changed.

The Domestic and Foreign United Company (*Naigai godo-Kaisha*), with which Mr. J. R. Morse, Mr. E. Dun, the Chilian Representative and several Japanese and Chinese merchants are associated, appears to have been definitely launched. It has been decided that out of the capital of 250,000 *yen*, 50,000 shall be subscribed by the Chinese. Mr. Toyama of Osaka and Mr. Fujishima of Tokyo are put down for 30,000 each.

A number of persons have been arrested on a charge of inciting to riot in connexion with the recent developments of the Ashiwo mine affair. The Authorities are said to have obtained evidence that the disturbance was fostered by adventurers, and that the people were thus betrayed into acts of violence and turbulence which they would not otherwise have thought of perpetrating.

We mentioned in a recent issue that a company had obtained a charter for building an electric railway from Shinano-machi, in the Yotsuya suburb of Tokyo, to Omori and thence to Kawasaki. It is now stated that the Company has applied for permission to extend the line to Yokohama. As that would make a road competing with the Government railway, we imagine that there will be difficulty in obtaining a charter.

It has been decided that the Army's autumn manoeuvres shall be held this year in the middle of November, the district being Chikuzen, Chikugo, Buzen, or Bungo. Four Divisions will take part, namely, the 5th, the 6th, the 11th, and the 12th. The 5th and the 11th will form the defending force; the 6th and the 12th, the attacking.

The authorities have not confined themselves to punishing only the non-commissioned officers and first-class soldiers concerned in the recent maltreatment of privates in the Himeji garrison. Colonel Ikeda, who commanded the regiment in which the irregularities occurred, has been placed on the retired list, and Captain Watanabe, who was in charge of the company, has been seconded.

The committee appointed to draw up regulations for organizing a trust among the cotton-spinners of Japan is understood to be experiencing many difficulties. Chiefly embarrassing is the question of penalties for infringing the conditions of the trust. It is thought that a consensus of opinion can not be obtained among the members with regard to that point. Of course that is only another way of saying that a basis for establishing mutual confidence can not be found. People do not experience any such difficulty in organizing trusts in the United States.

After the Central Station of the Tokyo Elevated Railway has been built in the space called Maru-no-uchi—an event which is not expected until 4 or 5 years have passed—, an edifice for the uses of the Central Post and Telegraph Offices will be erected in the same vicinity. The premises at Yedo-bashi, now used for the Posts and Telegraphs, are spacious. They cover nearly an acre of ground. But they are rapidly becoming inadequate, for since the war of 1894-5 postal and telegraphic business has increased at the rate of 20 per cent. per annum.

The Peking correspondent of *The Times*, Dr. Morrison, is now on a brief visit to Tokyo, *en route* for Peking from England. Last Monday, he had interviews with Marquis Ito and Count Okuma, and lunched with Mr. Kato, formerly Japanese Representative in London. Dr. Morrison leaves Japan on Thursday for Shanghai, and will probably travel *viâ* Korea to Peking.

The question of electric street railways for Tokyo is again on the *tapis*. It is now stated that the Government's intention is to return all the applications hitherto received, prescribe certain hard-and-fast conditions, and invite new applications on these fixed lines. If that be so, then we may expect to see all the competition recommence, with its accompaniments of agitation, intrigue and recrimination. This affair of the Tokyo street railways is becoming one of the burlesques of the century.

It seem that the construction of railways in Formosa is proceeding more rapidly than was originally anticipated. Instead of requiring 10 years to complete the main trunk line, seven years will suffice. The sums expended each year will have to be correspondingly increased—namely, by 2 million *yen*. The outlay estimated during the current year is 3¼ millions. It has been obtained from the Bank of Formosa without recourse to the issue of bonds.

The enforcement of a law requiring every newspaper and periodical in Formosa to furnish a sum of a thousand *yen* by way of security for good behaviour has had a disastrous effect. Four journals and as many periodicals have put up their shutters, or are on the point of doing so, the only survivors being the *Taiwan Nichi Nichi* and the *Taiho Nippo*. There is talk of starting a new journal on a large scale, under the name of *Taiwan Chiuo Shimbun* (Central Formosa News).

The naval manœuvres, which commence at the close of this month, are evidently to be on an unprecedented scale. Every available ship is to take part in them, and we read that all operations connected with mobilization will be carefully performed, even the dockyards being required to muster all hands and engage in repair-work day and night. It is expected that the whole affair will last about a month, but the Authorities have decided that newspaper correspondents and the public in general shall be excluded.

A meeting of the foreign residents of Tokyo was held in the Parish Building, Tsukiji, on Friday, to consider the question of offering some token of congratulation to the Prince and Princess Imperial on the occasion of their approaching marriage. The meeting having been informed that some influential Japanese had conceived a project for a general subscription, the proceeds of which should be devoted to a permanent memento of the happy event, it was decided to postpone definite action until the fate of that project should be known.

It appears that not one but two private soldiers of the Himeji garrison recently

Digitized by Google Original from CORNELL UNIVERSITY

committed suicide, leaving documents which declared that it was impossible to endure the treatment received by them at the hands of the non-commissioned officers and first-class soldiers with whom they had to work. Officers were immediately despatched from Tokyo to conduct an inquiry, and the result is that two non-commissioned officers and eight first-class soldiers have been sentenced to various punishments, from 20 days' confinement to six months' minor imprisonment.

From the 16th instant the system of *kitte chokin*, or postage-stamp savings, goes into operation. Prettily decorated cards have been devised so that children may find pleasure in using them. They afford space for attaching a certain number of stamps, and are neatly divided into squares, one for each stamp. The idea is that children will make a pastime of collecting stamps to attach to the cards, and that when a card's complement is completed, it will be handed to the nearest post-office, where the stamps will be removed, the card given back, and the little proprietor will be duly credited with the amount of his or her economics, from 5 *sen* upwards.

An instruction has been issued by the Government requiring local officials to abstain from imposing unnecessarily harsh restrictions upon emigration to Hawaii. The law, while recommending that discrimination should be employed to prevent the influx of agitators and loafers into the peninsular empire, gives large discretion to those charged with the duty of applying it, but, as is often the case in Japan, they have been disposed to employ their discretion in a sense unfavourable to the general public. Hence the issue of an instruction recommending greater leniency, and distinctly stating that labourers applying for passage should not be required to furnish sureties.

A notification has been issued to the effect that land in the possession of Formosan aborigines may not be acquired by any outsider, Japanese subject or other, without the special permission of the Governor-General, under pain of fine and imprisonment. This veto is necessitated by the habits of the aborigines. They have no idea of settling on a farm, their custom being to cultivate a plot of land so long as it suits their convenience or their fancy, and then to transfer their labour to some other district. The consequence is that tracts of land change hands for some paltry consideration, and it appears that designing persons have been taking advantage of this peculiarity to get possession of large areas.

More or less sensational accounts continue to be published about the gold fields of Hokkaido. It is impossible to form any accurate idea of the area of the auriferous district, some authorities representing it as very large and others putting it at about five thousand acres. A new deposit is said to have been discovered at the Hiyama River, some 70 miles north-west of Hakodate, but the ore, being mixed with large quantities of iron, is not easy to take out. It does not appear that any efficient system of control has yet been introduced: about 200 persons are engaged in the work without any permits. There is talk of a new machine invented by an American named Scott and improved by a Japanese named Asakura. It has been patented, and great things are expected from it.

Japan is to be blessed by receiving some of the Buddhist relics recently found in Siam. Every one had read of the discovery. It occurred two years ago. The articles found with the casket were sent partly to the British Museum and partly to the museum in Calcutta, but the bones were handed over to the Siamese Buddhists, and now, through the intervention of Mr. Yendo Ryomin, who has been studying Buddhism for some time in Bangkok, the Siamese have decided that a portion of the bones shall be sent to Japan. There will be a grand ceremony of reverent reception. We presume that the happiness of being appointed custodians will fall to the lot of the *Shin* Sect, since Mr. Yendo is a disciple of that form of Buddhism.

The Yuraku-kai, of which Count Inouye is the founder, has appointed a committee of very influential men to investigate the best methods of encouraging home productions with a view to increasing exports and diminishing imports. The association further thinks that in order to promote trade between Japan and North China, arrangements should be made for remitting the import duties on goods coming from abroad, and landed temporarily in this country in transit. At present, Shanghai, in consequence of enjoying that facility, is the depot of a large trade which might otherwise pass through Japan. Kobe is regarded as the most suitable port of transhipment. The Committee consist of Messrs. Shibusawa, Masuda, Kato, Takahashi, Nozu, Watanabe, Sonoda, Misaki, Uriu, and others.

Mr. Otani Kahei has returned from America, whither he went to urge the expediency of abolishing the increased tax upon tea. He did not, apparently, achieve any signal success, but Tokyo newspapers represent him as tolerably well satisfied with the result of his mission. The tea-men in America, he says, had laid in large stocks in anticipation of the tax, and so long as their supply lasted they were quite content. But when it came to procuring fresh stocks and paying a heavy impost, objections were quickly heard, and these, added to the fact that the tax was originally imposed merely as a temporary measure to obtain war funds, make it certain that a measure of repeal will soon be adopted. On the other hand, the coffee interest is concerned in maintaining the tax, and thus the upshot of the matter is that nothing is likely to be done until the next session of Congress.

In the very early day of the *jinrikisha*, no one could have been more obliging, willing, or moderate than the man between the shafts. He was always ready to do a splendid day's work, and he always took his pay without grumbling. But by degrees he lapsed from that high standard. We do not think that he ever fell to anything like the level of the London cabman, for whereas in London, at one time, the general rule was that to tender a cabman his legal fare was to be roundly abused, insolence and extortion have always been exceptional among *jinrikisha*-men in Japan. Still the stranger is apt to be victimized, and now that the tourist season is in sight, the *Jiji Shimpo* writes an urgent condemnation of practices which tend to get Japan a bad name, and to deflect the Pactolean stream of travellers from her shores. Our contemporary recommends wider resort to the system of *jinrikisha* stands with fixed fares which every vehicle on the stand must observe, and would also have lists of fares drawn up in English and posted in conspicuous places.

Mr. Mariano Poncey, who visited Japan last summer, creating some commotion and becoming vicariously responsible for the removal of a very worthy gentleman's name from the list of membership of the Tokyo Club, has again arrived in this country. We trust that no one will be so foolish as to pay attention to him, unless he has come to explain that the insurgents in the Philippines see the error of their ways. It is all very well to talk about the sacred rights of independence. If there be a natural principle which entitles legislators to impose certain moral codes upon a nation, so also is there a natural principle which denies the privilege of independence to any nation that abuses the privilege as the Filipinos abuse it or as the Boers abuse it. If folks will not don the vestments of civilization of their own accord, civilized peoples have as valid a right to compel them to do so as a civilized community has to prevent its members from going about the streets in a state of nudity.

Contrary to expectation, the Law forbidding the Use of Tobacco by Juniors (*Misei-nensha Kitsuyen Kinshi-ho*) is promulgated. It obtained approval in both Houses of the Diet, but an impression prevailed that, in view of the obvious difficulty of carrying it into operation, the Government would withhold consent. However, that impression was erroneous; the veto becomes operative from the 1st of April. By "minor," for the purposes of the Law, is meant a youth of less than 20 years of age. The Law is not severe with regard to the smoker himself: the penalty in his case is only confiscation of his tobacco and smoking implements. But a parent or guardian wittingly allowing a youth to smoke becomes liable to a fine not exceeding 1 *yen*, and a tobacconist wittingly selling tobacco, cigars, or cigarettes for the use of a junior, may be fined as much as 10 *yen*. A great number of Japanese lads smoke from the age of 17. The new law will affect many juvenile smokers, and will seriously reduce the profits of tobacconists. We shall probably hear some complaints about the arbitrary manner of its enforcement.

There is a strong movement in favour of dissolving the present House of Representatives, and holding a general election in accordance with the provisions of the Amended Law of Election. By passing the Amended law the Diet has endorsed the Government's contention that the old law operated unjustly, since it did not provide even approximately adequate representation for the urban population. Such an injustice should not be left unremedied a day longer than is unavoidable, according to the view of those that favour the immediate dissolution of the House. In the ordinary course of events, the next general election would not take place until 1902, nor would the Amended Law become operative before that time. Hence the desire to

Digitized by Google Original from CORNELL UNIVERSITY

hasten matters. We imagine, however, that a considerable interval will be required for revising the lists of the electorates so as to bring them into agreement with the reduced property qualification, and that the Government will not be disposed to hasten the process. It is conceivable, also, that some pledge was given to the present members of the Lower House in consideration of the support extended by them to the Bill embodying the Amended Law.

It is stated in vernacular newspapers that out of 280 foreigners who are liable for Prefectural and Houses Taxes in Yokohama, only 110 have paid. The remainder, 174, owe their taxes for the second half of last year, and, at the end of the current month, will be owing their taxes for the first half of the present year also. The sum now due on account of Prefectural and House Taxes is 1,691 *yen*, and to that must be added the Town Tax of 8,455 *yen*. Of course the default is entirely due to the question of liability for House Tax.

The establishment of officers in the Japanese army at present is said to be as follows:—

Field-Marshals (Marquis Yamagata, Prince Komatsu, Marquis Oyama.)	3
Full-Generals (Viscount Nozu, Viscount Sakuma, Viscount Katsura.)	3
Lieut.-Generals	21
Major-Generals	48
Colonels	96
Lieut.-Colonels	118
Majors	481
Captains	1 397
Lieutenants	1,500
Second-Lieutenants	1,302

A Tokyo newspaper publishes a statement that at the New Year's Audience in Peking on the 2nd of February not a single member of the British Legation put in an appearance. This very conspicuous abstention was attributed to the action of the Chinese Government in giving to a Belgian syndicate a railway concession previously promised to a combined Anglo-Italian syndicate. It is suggested that the reverses experienced by the British arms in South Africa have inspired a feeling of contempt for England among the Chinese, and that they are disposed now to flout her, not being without incitement from other quarters to do so. That is not unlikely. It is much easier to lose prestige than to gain it, but China is scarcely in a position to presume upon England's temporary difficulties.

The excitement about the embankment in the Mamiya district of Saitama, on the upper waters of the Sumida, has again become acute. In the Ansei era (1854-9) a law-suit was instituted by the representatives of 48 hamlets, who claimed that the construction of the embankment exposed to serious injury some 7,500 acres of arable land, their property. The suit was successful and the embankment had to be removed. But it has since been re-built. About a thousand of the people concerned made their way to the Urawa offices on the 5th instant, at 10 p.m., to prefer a complaint. They did not move *en masse*, but reached their destination in parties of from 20 to 70 persons. No disturbance took place; the police succeeded in dispersing the demonstrators quietly. There are, of course, some villagers who find the embankment an advantage, and, moreover, an idea prevails that its existence is essential to prevent floods in the Sumida which would devastate the Asakusa region of Tokyo.

The posthumous honour of elevation to the Second Class of the First Official Rank has been conferred on the late chief of the Nabeshima Clan, the celebrated Naomasa, better known as "Kanso." The great revolution of *Meiji* was not the work of the feudal chiefs. When we have mentioned Rekko of Mito, Samuro of Satsuma, Shungaku of Echizen, Yodo of Tosa, and Kanso of Nabeshima, the list of *Daimyo* that promoted the work of national unification is exhausted, whereas it is easy to draw up a catalogue of two score names of *Samurai* every one of whom contributed materially to the making of Japan's modern history. Nabeshima Kanso, father of the present Marquis Nabeshima, was undoubtedly a man of genius, and the distinction he attained becomes more remarkable when we remember the kind of education given to a feudal chief in his time—an education purposely calculated to stunt the growth of intellectual impulses and foster that of unworthy passions. It is curious that so many years should have been allowed to pass without the recognition now made by the Court, but we presume that advantage has been taken of some special anniversary of the great noble's death.

The *Genbun Ichi-kai*, a society having for its object the unification of the written and spoken languages of Japan, held its first meeting at 4 p.m. on the 6th instant. The chief promoter of this society is Mr. Hayashi Mikaomi, who has long been connected with the British Legation in the capacity of writer, and we observe that Messrs. Crowe, Holmes, and Gordon, of the Legation, are associated with him. The other prominent promoters are Mr. Tsuboi, Mr. Okakura, Mr. Fujioka, and Baron Kanda—all men of eminence in the world of literature. The purpose of the society merits the support of every one interested in the future of Japan. It is really preposterous that a country should have two languages, one for writing and the other for speaking. The question bears incidentally on the position of women in Japan, for since the language used by men when discussing any subject outside the daily routine, approximates to that of books and newspapers, it can not be understood by a woman unless she has received an extraordinary education, and the result is that intellectual intercourse between the sexes becomes impossible.

KOREA.

Two thousand Korean rioters are said to have attacked a party of Japanese at Chuk-san in Kyŏngkwi-do, Korea. Two of the Japanese were wounded and two are missing. The details are not yet reported.

It is alleged that Mr. Hayashi, Japan's Representative in Söul, has applied to the Korean Government for permission to establish wireless telegraphic stations along the Korean coast. What that means, exactly, we can not tell, but such is the story.

The Söul correspondent of the *Jiji Shimpo* puts the income of the Korean Government for the present fiscal year at 6,162,796 *yen* and the expenditure at 6,161,871 *yen*, so that there is a surplus of 925 *yen*. That is very different from the exceedingly pessimistic figures published by other Japanese journals.

The same correspondent makes light of the Uensan mine affair. He says that it is all a question of money. The Pritchard-Morgan people have put up 100,000 *yen*, and if they chose to put up 80,000 more, nothing further will be heard about the despatch of soldiers to prevent mining operations or about other methods of opposition on Korea's part.

A telegram from Korea says that the Government of that country has at length decided to sanction the mining operations at Uensan, for which Mr. Pritchard Morgan has been so long and so pertinaciously applying. The sanction is said to be conditional, but we are not told anything about the nature of the conditions.

A singular story is published to the effect that the King of Korea has refused to grant an audience to the British Representative, on the ground that the latter behaved rudely at a recent audience when discussing the affair of the Uensan mine, and that the Korean Government had asked for his recall. The newsmongers are coming out. They are preparing to pervert into a prettily sensational incident the ordinary event of Mr. Jordan's return to England on eighteen months' furlough, a well-earned rest.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

There is a marked revival of interest in the ideograph problem. The *Yomiuri Shimbun* has invited leading men to express their views on orthographic reform, and not a few have responded to the request. Among them Mr. Maejima Mitsu, of Post Office fame, writes in a very earnest manner. He tells us that he has been working in the cause of reform for more than 30 years, that he has appealed in vain to statesman after statesman and scholar after scholar. He despaired of the success of the Romaji-Kai and the Kana-no-Kai from the first. The persons who took part in the movement did not, he says, realise the difficulty of carrying their theories into practice, and the majority of them were not really in earnest. Mr. Maejima thinks that the reform ought to begin with the newspapers and magazines, the writers for which have it in their power to accustom the public to understand articles without relying on anything more than an ideograph here and there. As the change from the characters now used to Romaji is considered too sudden, let Romaji be the final goal and let the *kana* be used as means of reaching it, says Mr. Maejima. There is perhaps little that is new to be said on the subject of the change which it is desirable to bring about. But there is still a good deal of opposition to change of any kind. Dr. Inoue Enryō has lately come forward in a most open way and championed the cause of the ideographs. The following is the gist of what he says, in reply to the advocates of reform, in a recent number of the *Tōyōtetsugaku Zasshi*. Dr. Inoue's article is entitled *Kanji hai subekarazu* (Ideographs should not be abolished):—Among those who are in favour of dispensing with the characters there are many who are not sufficiently

Digitized by Google Original from CORNELL UNIVERSITY

well-educated to appreciate them. Others are *Kokugakusha*, admirers of pure Japanese writing, who object to everything Chinese. Then there are of course a number of foreigners interested in furthering a change that will suit their convenience in various ways. Foreigners say that the ideographs are very difficult and that the study of them hurts the eyes, and what not. To Japanese they are not difficult, and as regards the short-sightedness from which so many students suffer, it has been caused in most cases by studying foreign books. It is said that Chinese characters are very complicated and much more difficult to remember than words written in Roman letters. But is this so? Take the character 天 (*ten*); does it not consist of much fewer strokes than heaven? Is not 地 (*chi*) easier than earth? It is said that the ideographs are very numerous, but they are derived from each other or formed by combination, so that if one knows one or two thousand one can by means of these understand more than ten times that number. Then is it not an immense advantage to be told by the construction of the ideograph to what class of things each object represented belongs? A certain portion of the character tells us whether the object is a vegetable, or a mineral, or whether it is a mental faculty or emotion. No such convenience is to be found in Roman letters! Then how much more artistic are the ideographs than the Roman letters. In our mode of writing the main ideas of the sentence are expressed in Chinese characters and the comparatively unimportant connecting links consist of *kana*; hence by glancing down the line we can get the sense with a rapidity that is not possible when the signs used all speak to the eye in the same way, as is the case with Roman letters. The idea is in the character, and no sooner do we see the latter than the former presents itself to the mind. There is no spelling out of long words in order to get the meaning. Our system imparts knowledge at sight. I deny that there is any great difficulty in our acquiring a knowledge of ideographs. Where we do find difficulty is in acquiring a knowledge of Western literature. It is of course necessary for us to study foreign books, because Occidentals are undoubtedly ahead of us in civilisation. Otherwise we should do well not to trouble ourselves with any such study. Just as in order to get new ideas Europeans have had to study two dead languages, ancient Greek and ancient Latin, so we have to tackle tongues that present great difficulties to us. But there is no reason why on this account an Oriental nation that for centuries has had the closest connection with China should dispense with characters that are still used by over 400 million people. There is a good deal of sentiment connected with our use of the ideographs which it is not desirable to suppress in any way. Our written language connects us with our forefathers and is associated in our minds with all that is sacred. Those who propose a radical change in orthography do violence to this sentiment. It is quite evident that our public documents owe much of their power to the language in which they are penned. Imperial Rescripts, for instance, would never command the respect they now receive if the ideas they express were clothed in what to us would appear as less dignified language. The argument that in order to amalgamate the written and spoken languages the use of ideographs should be discontinued has no weight with me. The process of amalgamation is going on to-day and can be carried as far as desirable without involving orthographic change of any kind.

* * *

The following literary notes are taken from various sources. Last November the *Shigakkai* (Historical Society) held an important commemorative meeting at the Botanical Gardens, Koishikawa, at which the President of the Society, Dr. Shigeno, gave an account of its history, and Mr. Shimada Saburō, in a speech that lasted two hours, impressed on the audience the importance of publishing in a fearless manner the material which had been collected. Mr. Hamao and others also addressed the meeting.

Three new literary organs have come into existence, the *Kyora Bunkō*, the *Kwatsubundan*, and the *Bungei Shimbun*. The first of these seems to be well got up, somewhat in the fashion of the *Shincho Gekkan*, but whether it will prove a success seems to be very doubtful. The *Kwatsubundan* aims at effecting great things, and the first number is well supplied with matter. The *Bungei Shimbun* is to appear three times in the month. It consists of about eight pages and sells at 2 *sen* per copy. New style verses, so much in vogue a few years ago, are not in favour at present. In recent years two young men have composed a great many verses that have been appreciated in some quarters. They are Messrs. Shimasaka and Tsuchii. The former has gone to Shinano to teach in a school and the latter has become one of the teachers of the Sendai Second High School. Both are said to be disappointed with the results of their literary labours as far as poetry is concerned.

* * *

There are certain modern Japanese on whose conservatism a very liberal education seems to have had little effect. Dr. Inoue Tetsujirō may be said to be one of these and Mr. Nishimura Shigeki another. The latter gentleman has contributed an article to the *Taiyō* on the foreign ownership of land, and the possession of mining rights, which reiterates the time-worn arguments against the adoption of this course and denounces the advocates of a liberal policy towards foreigners as traitors to their country and as greedy of gain. The fact that the new treaties confer no such rights as those just mentioned, Mr. Nishimura thinks, is something on which the nation may congratulate itself. If the pro-foreign party is allowed to have its way the independence of the country will be endangered. There is nothing new whatever in Mr. Nishimura's article, which may be pronounced unscholarly, as it fails to state fairly the arguments of the writer's opponents.

In the last number of the *Taiyō* Dr. Ariga has a very long article on the secrets of Western diplomacy, in which he speaks in high praise of Lord Salisbury's far-seeing policy in Africa and in China. Dr. Ariga reminds us that Prince Bismarck was wont to speak disparagingly of Lord Salisbury, of whom he said "He is one of the pillars of the British Empire, but a painted pillar." Bismarck no doubt sees in the land of shades how mistaken he was, says Dr. Ariga. This writer proceeds to show that years ago Lord Salisbury foresaw the possibility of England's recent difficulties in Egypt and the present crisis in South Africa, and, with a view of being ready to grapple with them, adopted a very conciliatory policy in other parts of the world, and made a special point of coming to an understanding with Germany. There is no doubt, says Dr. Ariga, that China has occupied a subordinate place in Lord Salisbury's mind, and that he has for many years past held that African questions are of more vital importance to England than Chinese. This accounts for the forbearance that has been repeatedly shown when Russia has scored successes in the Far East. The capabilities of even the greatest Powers are limited, and every foreign Minister has to determine where he shall insist on having his own way and where he shall allow other Powers to do as they please; the principle of statecraft being one of give and take. Superficial observers of the course of events have fancied that Lord Salisbury has been repeatedly checkmated by Count Mouravieff. But this has not been the case. Every concession made to Russia by England has been made with a view of facilitating the attainment on England's part of greater ends elsewhere. To England the concession of a Chinese port or railway rights in Manchuria were comparatively trifling affairs. English public opinion for a long time failed to understand Lord Salisbury. It was only when they saw how firmly he acted over the Fashoda question that it began to dawn on the English people that his yielding in China and elsewhere was part of a fixed plan that had the permanent stability of the British empire as its end. For a long time Russia's Foreign Ministers have acted on the principle that nothing would induce Salisbury to go to war. The Fashoda affair and the Boer War have thrown the Russians out of their calculations. At the beginning of the present war Russia tried to work up an alliance against England, but Count Mouravieff found, to his surprise, that nothing would induce Germany to go against England in this affair. Who did the checkmating here? asks Dr. Ariga. Lord Salisbury had foreseen the contingency and had carefully provided for it, and this while half the world was saying that he was being nonplussed by Count Mouravieff. The essay of which we have only given a short abstract shows a most minute acquaintance with recent events as well as with the intricate ways of modern diplomacy.

The same number of the *Taiyō* from which we have quoted above contains an article on the Transvaal War by Mr. Fukumoto Makoto in which the writer comes to the conclusion that England is in the wrong. He says that Japan can afford to be indifferent as to which side wins, as the combatants are both of alien race, but that the majority of Japanese seem to think that might is right and that if England can show herself to be stronger than the Boers, she has a right to rule over them.* This view, says Mr.

* We do not think this at all a fair account of Japanese public opinion on the subject. It seems to us that it inclines the other way, and sympathises with the Boers because they are supposed to be oppressed weaklings. So that, instead of worshipping physical force, the majority of Japanese regret its preeminence in the world.—(WRITER OF SUMMARY.)

Digitized by Google Original from CORNELL UNIVERSITY

Fukumoto, we ought to be ashamed of. He quotes a great many instances of what he calls English irrationality and seems to believe that the Boers have all the grievances and the Outlanders none.

* * *

Dr. Inoue Tetsujirō in the *Teikoku Bungaku* writes on ideas associated with colour. The following is the gist of his article. Black and red may be said to be opposites as regards association, the former being gloomy and the latter gay. The red of the early dawn has always been regarded with pleasure. Chaucer speaks of the Eastern sky as laughing. It is this association of red with lively feelings that makes women use it in their own dresses and deck their children with it. The colour is figuratively used for intense zeal. To be red-hot in a cause expresses the acme of earnestness. Rouge is with us a greater favourite than ordinary red, and pink has perhaps more charms for us than rouge. Pink-blossoms are not surpassed in beauty and delicacy by anything that the whole world of colour has to offer. When black and red are combined the gloom attached to the former seems to rob the latter of its cheerfulness. Taking man's life as an illustration of the ideas associated with colour, childhood may be represented by pink, youth by rouge, middle age by ordinary red, and old age by a very dark red (that is black and red combined). With blue depth and great expanse are associated. It is an imperfection in our language that we use the word *awo* for both blue and green. To us a light blue is green. In a figurative sense we uses our word for green in the same way as the English word green is used. If they have "green-horn," and a "green young man," we have *awo-shosei* and *awo-nisai*. With light green we associate the idea of delicacy and weakness. The ideas connected with yellow are less pronounced than those of many other colours. The colour is a favourite when seen in a sunset or in the autumnal leaf; as seen in the chrysanthemum for a long time in this country it was an emblem of seclusion or estrangement from the world. Yellow may be said to be associated with simplicity, while suggesting the remote. There is a great deal of grandeur connected with a glittering gold colour, but a dusky gold is by no means pleasing. White has always been associated with purity. For Japanese white blossoms have great charms, and a white flower is regarded as the queen of flowers. White figures largely in Shintō ceremonies, which may be said to be a religion that attaches immense importance to purity. White skin is much admired in this country. Shiny white, however, of any kind is considered objectionable. Glittering ice causes gloom, as does white foam on the seashore. . . . In foreign countries ideas are associated with flowers. Germans have what they call *blumens sprache*. But these associations are in many cases derived from local customs and incidents, and hence are not of world-wide interest. In the matter of colour it seems to me of great importance that the stage should never offend public taste. To introduce red on mournful occasions and black in the midst of mirthful scenes shocks the feelings of the audience and spoils the effect of a play.

* * *

The *Teikoku Bungaku* has published its usual January summary of the literature of the year and, as has been our custom for several years, we reproduce the principal parts of it in these columns.

I. EDUCATION. — Although there has been a great deal of discussion on educational questions, few of these have been in any way satisfactorily settled. The new educational magazines started during the year are:—The *Kyōiku Kōron* (公論), the *Kyōikudan*, the *Nihon no Shōgaku Kyōshi* and *Kyōiku-gakujitsu kai*. Among books, in addition to several translations, there appeared Saitō's *Jitsuyo Kyōiku-gaku* (The Science of Practical Education), Satō's *Shakai Kyōiku hō* (Methods of Educating Society); Ota's *Shinsen Kyōiku-gaku*, Shimoda's *Kyōiku Genron* and Yuhara's *Kyōiku-teki Shinrigaku*. Most of these were written with the object of discussing questions connected with elementary school teaching. As regards general theoretical discussion, there is much less of it than there was. The tendency to adopt foreign systems indiscriminately is less prevalent than it used to be several years ago, and the value of practical knowledge is being increasingly appreciated.

II. RELIGION.—Last year was remarkable for the way in which religion came to the front in public discussion, more especially in connection with the educational policy of the country, but it would not be true to say that religious devotion and faith have in any way increased. The controversy over religious education was fraught with many lessons. Buddhists and Christians used the occasion for emphasising their well-known views. One of the events of the year worth recording is the despatch by both sects of young men to foreign countries for the purpose of study. A large number of Buddhists seem to have a great desire to rationalise their religion and bring it into harmony with the spirit of the times. As for Christianity, never has there been a time when churches have been so poorly attended as they are now. (*Kaidō no sabishiki koto sono kyokudo ni itaritari*).

III. THE WORLD OF THOUGHT.—It cannot be said that there has been much activity in the region of abstract thought, but a great many practical questions have been discussed with a good deal of zest. A scientific study of mind has commenced, which promises to yield satisfactory results. Japanese mythology has been investigated by critics whose methods are distinctly modern; and in face of the revelations which writers on this subject have made not a few have come to the conclusion that traditional teaching on the subject of the gods is no longer worthy of credence. It is a decided characteristic of modern thought that it finds its chief interest in practical questions rather than in metaphysics.

IV. FICTION.—After the month of January there was not much activity. But what is very significant is the fact that both Rohan and Kyōka have turned their attention to real life and are bent on portraying it in an attractive manner. Both of these novelists have taken up their pens again in earnest.

V. LANGUAGE.—The study of the Japanese language has been pursued with renewed vigour during the year. Works on grammar, dialects, and similar subjects have been very numerous. The Gengo Gakkai have collected a large amount of material which is to be published during the present year in a magazine that will henceforth appear periodically.

VI. NEW STYLE VERSES.—Compared with former years the year 1899 was marked by an absence of specimens of this style of literature. There is no doubt that Bansui (Tsuchii) and Toron (Shimasaka) have no rivals in point of style, though they have many imitators. The few poems that appeared during the year were, in our estimation, an improvement on those of the previous year.

VII. TRANSLATION.—In this line last year showed a marked improvement on the year before. In fiction the works that attracted most attention were Futabatei's *Sakabukuro*, published in the *Bungei Club*; Shūtō's (Osada), *Ukarechō*, *Koi-no-Napoleon*, and *Wokan* and Bakkoya Sanjin's *Osero*, published in the *Taiyō*. This last work was specially well done. Sanjin has studied English literature to some purpose and has acquired the art of reproducing Shakespearian ideas in our language in a most effective manner. Other translations of comparatively minor importance are Gyokumei's *Magokoro*; Kocho's *Kokoro no Kuma*; Rohan's *Shide no umi*; Nanyō's *Mahō-isha*, and Ruikō's *Yukihime*. Though Iida Kiken's *Shiido*, published in the *Yomiuri Shimbun*, has called forth a certain amount of adverse criticism, as an introduction to the literature of Southern Europe it has considerable value. In providing reading matter for the young the labours of Iwaya Sazanami must not be forgotten. The *Sekai Otogibanashi* has embodied a great many of the ideas current in the West among young people, much to our satisfaction. Gyokumei's *Tsuki* (月) *Monogatari* and *Utsukushiki mori* (森) make excellent reading for young folks. Turning to more serious literature, a work that has been greatly talked about is the 審美綱領, *Shimbikōrei*, by Mori Ogai and Omura Seigai, which is no other than a reproduction of the German philosopher Hartmann's views on Esthetics. The defects of this work are excessive abbreviation of the original arguments and the employment of a large number of unfamiliar technical terms. Many of the words used were coined by the authors for the occasion and they give to the book an air of pedantry that is anything but pleasing. Mr. Takayama Rinjirō's *Kinsei Bigaku* (Modern Esthetics) in point of intelligibility is far ahead of the *Shimbikōrei*. Other learned translations worthy of mention are Dr. Nakajima's translation of Professor Ladd's "Cognition," Mr. Nakajima Tokuzo's *Shinrigaku gairon* (概論) (Wundt's); Yamabe's *Rinrigaku Hihan*, Standard of Ethics, (Sidgwick's), Fujii's *Tetsugaku-hanron* (汎論), Kumamoto and Shiraishi's *Doitsu-teikoku-shi* (History of the German Empire) and Hoshima's *Gengo Hattatsu*, Growth of Language, (Whitney's). The learned world is to be congratulated on the fact that at last the terms used in translation have attained to a state of considerable uniformity.

VIII. HISTORY.—There was great activity in this field of research during the year, and many steps were taken towards publishing the results of the labour of previous years. The Biographical Dictionaries that have appeared or are in course of compilation contain an enormous amount of historical information. There is the *Dai Nippon Jimmei Jisho* published by the *Keisai Zasshi* Company some years ago, which is now about to appear, in the enlarged and revised form; and there is the *Teikoku Jimmei Jisho*,

Digitized by Google Original from CORNELL UNIVERSITY

published by the Tōkyō Zusho Kaisha, which, though not equal to the work mentioned above, is very creditably done. It will not be long before Mr. Yoshida Tōgo's *Dai Nippon Chimei Jisho* (Japanese Gazetteer) makes its appearance, the first work of the kind that has been issued in Japan. Other important histories are the *Meiji Hōseishi* (History of Modern Law) by Mr. Kiyoura, formerly Minister of Justice, and the *Nihon Bijutsu Shi* (History of Japanese Fine Art) issued by the Hakubunkan. This work is to be sent to the Paris Exhibition, we hear. The specimens of art given in it are said not to be so fine as those contained in the 美美大觀, *Shimbitaikwan*, and this is to be regretted, but both works stand quite by themselves in Japan. Dr. Shigeno has in hand a history of the *Meiji* era, which is being written specially for the Chinese, with a view of giving them some idea of how Japan's transformation was brought about. The valuable historical materials which have been collected by the Imperial University are now undergoing publication, and it is expected that the first instalment will be issued in March next. The appearance of this work is awaited with considerable interest.

* * *

In No. 24 of the *Gwaikō Jihō* Dr. Ariga writes at great length on the foreign policy of the great European Powers during the nineteenth century and discusses very thoroughly the present tendency of political affairs in Europe. The nineteenth century he divides into the following periods: (1) The Age of Reaction (against the excesses of the French Revolution). (2) The Age of Constitutional Government. (3) The Age of Nationalism (when the people belonging to each nation assumed the control of affairs), and (4) The Age of Expansion. As it is impossible to reproduce the whole of the essay in this summary, even in an epitomised form, we will give only a short abstract of Dr. Ariga's views on the political situation now existing. The expansion of empires in a great many cases includes annexation of territory, and this involves the maintenance of large armaments, and as this is a costly affair, the policy of expansion undoubtedly meets with opposition among the people who have to pay the bulk of the taxes imposed with a view of carrying out the policy. So that the statesmen who are shaping the foreign policy of the various European powers are obliged to provide a stock of clever pretexts in order to blind the eyes of the people to the real significance of the course being pursued. Though the grabbing of territory is the real policy of the great Western powers, it is not as a rule so represented to the people of the various countries on whose support the Governments are dependent. The way for annexation is carefully prepared by the obtaining of all manner of rights and privileges. A variety of epithets are applied to the kind of control exercised over other powers; "influence" being one of the mildest of them. A certain portion of a country is said to be within this or that power's sphere of influence. This is the prelude to the establishment of a protectorate when a plausible pretext for such a course offers itself. At present Europe has its eyes on Africa and the extension of power there by various European states, but since only certain parts of Africa are suitable for European settlement, it will not be long before the interest of the West will be absorbed by China and Korea. In our life time we shall see gigantic changes in this quarter of the political world. The whole of the Far East may realise this in time to avert some of the consequences that would be involved in the carrying out of the present policy of European powers. . . . . What it is important to notice in connection with the foreign policy of each great European state is the tendency to combine forces against peoples of alien race wherever possible. The way in which England and Germany have come to an understanding is very significant. The policy of expansion adopted by both countries makes it desirable that in order to outvie other powers, they should act together as much as possible. They take the view that the world is big enough for each power to satisfy its ambition to the full. This Anglo-German coalition places France in an unenviable position, as Russia will never combine with France in the same way that Germany is combining with England. Her methods of extending her borders are not such as would be endorsed by the French people. Her love of stratagem, clever lying, bribery, and the like, and the fact that her government is carried on by a despotic oligarchy whose methods are repugnant to the notions of the French people render it impossible that the two nations should ever work harmoniously for any length of time in the carrying out of a far-reaching policy. It is curious that this coalition of Western powers against the East was proposed by Bismarck 15 years ago as the most effective policy to adopt in view of the difficulties attending the expansion of empire. It has been given to Count von Bülow, under the direction of the German Emperor, to put Bismarck's theory into practice. The results will be far-reaching, as the history of the 20th century will record.

* * *

In the *Gwaiko Jihō* appears a translation of a letter received by Dr. Ariga from Mr. M. Thomas Alfred Walker, M.A., LL.D., dated Nov. 14th, 1899, which gives the views of the writer and Professor Westlake on the real cause of the Transvaal War. These we thus state briefly:—England's treaty with the Transvaal does not justify her interference with the internal government of the country. She interferes on the general grounds that her subjects have been improperly treated and that she cannot consent to allow this to go on. This right of interference cannot be disputed. But the maltreatment of the Outlanders was only an occasion for bringing on the war. For years it has been a question as to which race should be ultimately predominant in South Africa, the Dutch or the English. The number of Dutch subjects in English territory rendered it possible that at any time they might elect to found a Dutch republic in South Africa, in which case England would occupy a very subordinate place. The Dutch in Cape Colony, having the franchise, might at any time take a step by which exclusive English rule would be at an end. This situation could only be saved by making it sure beyond the shadow of a doubt that Great Britain would brook no rival in South Africa. The war is the result of England's imperial policy, and the success of that policy is involved in her final triumph over the Boers. This great issue of the war is not seen by the mass of the English people, who regard it as having for its chief objects the punishment of the Boers for their oppression and the wiping out of the reverse suffered by our arms at Majuba Hill.

COUNT INOUYE ON THE ECONOMIC SITUATION.

Count Inouye, in the course of a recent address to the Bankers' Club, said the trade of Japan was not yet on a satisfactory footing. The pernicious effects of the war had endured to the present. The expansion of armaments had necessitated an increase of fighting men from 200 000 to 400 000, and this meant that 200 000 men have been withdrawn from productive employment. Indirectly, too, as well as directly, the expansion had injured the productive power of the people. He found from enquiry of the headmen of the villages in his neighbourhood that ex-soldiers were unable to return to their former labour after dismissal from the service. Moreover they were discontented with coarse food and clothing. Increase of population and rise in prices had brought about an increase of imports, and now of salt and eggs alone the imports were 1 200,000 and 800 000 *yen* respectively. The various enterprises which had sprung up after the war, and the extension of the railway system had also tended to increase the amount of imports. Considering, further, the increase of luxury among the lower classes, the future of Japan was not free from anxiety. People were apt to talk about a foreign loan whenever they found the money market tightening, but was it possible at present for Japan to float such a loan? England, the great money market, was now involved in an expensive war with the Transvaal, and could hardly be expected to be in a position to accept loans for other countries. There was only one remedy for the economical evils of Japan, and that was to prevent the exodus of specie by encouraging home manufactures Bankers, however, should set their faces against enterprises of a speculative nature.

CHAMBER MUSIC CONCERT.

The second Junker Chamber Concert of the present season was given in the Van Schaick Hall on Tuesday, 6th instant, before a small audience: the room being about half-filled.

Apologies were circulated for the absence of Mrs. Melhuish and Mr. H. A. Poole, absent through illness: their places were filled by Mrs. Payne and Miss Koda respectively.

Mrs. Payne, as usual, sang delightfully (although her first song by Grieg was spoiled by the *strepitoso* accompanist); and gained the only encore of the evening for her third selection by Tschaikowsky.

The remainder of the programme calls for no comment—the instrumental performances were not equal to those done at previous concerts. The following was the amended programme:—

PART I.

1.—String-Quartette in A Major .....Haydn.

2.—Scena..... Autumn Storm .....Grieg.
Mrs. Payne.

3.—Sonata in C minor for Violin and Piano.....Grieg.
Dr. Crusen and Prof. Junker.

PART II.

4.—Andante.....Violin Concert.....Mendelssohn.
Prof. Junker.

5.—Fantasia in C Minor .....Mozart.
Dr. Crusen.

6.—*a.* Treue Jonnie .....Beethoven.
b. Ye who have yearned alone..Tschaikowsky.
Mrs. Payne.

7.—2 String-Quartette:
a. Angelus.....Liszt.
b. Intermezzo.....Mendelssohn.

FAREWELL DINNER TO DR. CLAY McCAULEY.

The members of the Tokyo Club gave a farewell dinner on the 26th February to Dr. Clay McCauley, who, to the profound regret of the foreign and Japanese residents of Tokyo, is leaving this country after a long residence of conspicuous usefulness as an Unitarian Minister, and the greatest helpfulness as a leader in all intellectual and social movements. His Excellency the United States Minister presided at the dinner. We append the speeches :—

H.E. Col. Buck,—Gentlemen of the Club, we have as a guest this evening a gentleman who is about to leave the country with the conviction that he will never return to it: a gentleman who came to this country several years ago as a representative of a great organisation of most worthy people in the United States. I hear that he has won the confidence and respect and friendship of people of all nationalities alike. He has been for years a member of our club and one of its officers, and he has endeared himself to all by the rare qualities of comradeship and good will and heartiness of manner which he has always manifested to all who have met him. I think that I express the views of all present in stating that we will earnestly regret the loss of so valuable a member, a man who has been so long with us and who has always shown himself so active and earnest in the support of the club and in all other work in which he has been engaged. In wishing him, as we all do, a pleasant journey to the United States, all the good things of life, and all the happiness that any man can expect, I think you will all feel—as I do—that he will never forget his friends in Japan and that he will always have pleasant recollections of his friends and associations with the club. Gentlemen, I wish you to join me in drinking long life, health, and prosperity to our friend Dr. McCauley.

Dr. Clay McCauley—Mr. President and fellow members of the Tokyo Club :—I assure you it is not mere formality of speech when I say that I feel, as deeply as I can feel, the honour of being your guest this evening. I have been a member of the Tokyo Club for more than 10 years and I think for about half that time in close relations with it as one of its officers. I will not depreciate or criticise your judgment in asking me to accept your hospitality this evening, unworthy as I may feel. I will accept your goodwill as it is given and appreciate it in the depths of my heart. During the 10 years that I have been a member, I think there is hardly a day when I have been in Tokyo and have not been within the precincts of the Club. I was with you when we met in the limited precincts of the Rokumei Kwan, and I was with you in the struggles which we went through in our endeavours to obtain these more suitable quarters. My Club record has been a very large one, more so perhaps than that of most members should be, because, situated as I have been, without a home really, and having my residence near to the Club, I have made the Club as it were a part of my home, so that day by day I have come here and now I look back on my life in the Club as one of the most pleasant of my experiences in this country. Here in its rooms I have formed many of my most delightful friendships and closest intimacies, so that when I go away from my home here I will remember my life in Tokyo and especially in the Tokyo Club with the greatest pleasure. I am going away not to return; it is not a new experience, for the Club is one subjected to constant change. A Club in New York or London or Berlin or in any of the great cities of Europe or America has a fixed membership. Men commence in their youth and remain as members until, as old men, they sit round the card tables or mumble old stories round the fireside. But here we have an unfixed and unknown quantity: our life is constantly changing—I have never seen a place where there is more change. I have thought that our club is like an eddy in a great river: the great current passes on and yet there is a circular movement which remains in one place. The particles change but the form remains the same: we see people coming and going and yet the Club remains. Some are drawn upward to that bourne from which no one returns: some are shot off at a tangent into the great river of life, into the great sea of the world, and we see them no more. Constant change, coming and going, is commonplace; my departure is nothing new, and by and by there may be but few who will remember the faces of to-day or who can count more than a few years of continuous membership. This leads up to the thought that the special characteristic of the Club in its fuller usefulness is cosmopolitanism. There is no place in the world which equals this place for the clubbing together of people from all parts of the world.—men of all sorts and conditions speaking diverse tongues and having all sorts of differences of customs. This very cosmopolitanism is one of the most interesting features, as making towards the general understanding of man by man and towards universal peace. Men cannot come together as we do here and make friendships as we do without having such emotions raised within them that when they go home they will not be ready to counsel or even to back up any great war against those nations whose people they have learned so much better to understand. This national characteristic has a greater or less bearing upon the future peace of the world. And looking at it in this light I have always felt it my duty to act in the Club not so much as an American as a man. I have always tried to leave outside the door all the racial prejudices and to meet men of other nations not as such but as members of a common family, and I have tried to make the club a model home for such a family. And in all clubs this mingling of nationalities will bring about a better understanding and a better appreciation of nation by nation. I shall always remember my life in Japan with pleasure: I have made my home here in the club and have better learned to understand and to live. I go away, as much a citizen of the world as an American, and now, thanking you most cordially for what I feel unworthy to receive, the gift of your hospitality, I propose in return the Tokyo Club, and to the members I will drink the commonplace toast of health and prosperity and to the Club many years of continued success and usefulness.

Mr. J. Conder.—The President having done me the honour of calling upon me for a few remarks, as I am not a countryman of Mr. McCauley's, I would just like to say a few words on behalf of those other nationalities which, owing to several untoward circumstances, are represented here in rather small numbers to-night. We feel that we are losing a great friend and a gentleman who has done a great deal to help us in our amusements as well as in our more serious work. It is hard for those who remain to see friends to whom they have become attached taken away from them and we feel like the soldiers remaining of a company which has been decimated. One by one our comrades are taken off, some going to that bourne from which no traveller returns and some to a different earthly home across the ocean where we may or may not meet again. I wish to add the regrets and the hearty good wishes of Mr. McCauley's English friends and those of other nationalities represented in this Club. This dinner is entirely a farewell dinner to Dr. McCauley, but since it was arranged another departure has been announced. Another friend is going away, though only for a short time, and I think we should not lose the occasion of proposing a farewell toast to Mr. Herod.

Mr. J. R. Herod.—As Mr. Conder says in his remarks, so I also feel that I have no desire to detract from the fullness of our farewell to Dr. McCauley by seeming to share it with him. Neither do I wish to try to tarnish the eloquence of any one who has spoken so well, and I have another reason for not entering upon a long explanation of my feelings, which is that our speeches are growing into an endless chain into which you will all be drawn, and so it seems desirable to make the links as short as possible. I thank you all for your very generous remarks and toast. We are here to-night as it were in the Inn of the Canterbury Tales: Dr. McCauley has delivered the clergyman's speech and it would not become me to enter on a lengthy oration. Here in Tokyo we all have our places, I have my little row to hoe, and I try to do it quietly and well. As for Dr. McCauley I must pay tribute to a good-natured genial, hearty friend, every day the same, who will advise you and help you, and always for your good.

Mr. Fukai—I have not been prepared at all to say anything this evening, but since I have found that I am the only Japanese present I feel impelled to say just a few words in order to thank Dr. McCauley for what he has done for the country and for the Japanese. Since this country was opened to foreign intercourse the material side, so to speak, of European and American civilization has been very copiously represented in this country. We Japanese have exerted ourselves to adopt the material civilization of the West, but the intellectual refinement and higher culture has been rather poorly represented, and moreover our people have been rather careless in this matter. The result is that the moral and intellectual foundation of life in Japan has passed away, and we have not had up till now a very strong moral and intellectual life as based upon foreign ideals. But the Japanese now feel that it is necessary to adopt not only the material side but to assimilate our intellectual and spiritual life to that of the Western world. On this line I think that what Mr. McCauley has done during his long stay in this country is very remarkable. Of course there have been Christian missionaries who have done very good work here, and I do not hesitate to express my appreciation of their efforts. The Japanese nation in general has been unable to accept what these missionaries has to offer them. I am unable, perhaps, to express myself in sufficiently delicate language, and feel that I am speaking in too coarse a manner when I say that the Christian faith as preached by the majority of missionaries has not been acceptable to the majority of Japanese and the intellectual class of our people has not been very profoundly affected by the preaching of the ordinary missionary. But Mr. McCauley's work has had, I think, a very remarkable influence on the current of thought among the higher classes of Japanese, and I think it is beyond question and admitted on every side that he has done a great deal to introduce into this country the intellectual and spiritual side of western civilization. For this reason I think it is not proper for me, as the only Japanese present, not to thank Mr. McCauley for what he has done for this country, and I propose now in general, western and common civilization.

Dr. McCauley—There is a rule in Parliamentary circles that no one must speak twice until all others have spoken, but if you allow me I will break this rule and say a word or two in reply to Mr. Fukai's very unexpected sentiment. I am not recognised by the regular missionaries as one of their number, but it is an open fact that I have come as a representative of the higher thought and life of the western ethical life and attainment. I have tried to be a man in accordance with the professions of my belief, and I have come here as a representative of a body of men who feel that they were responsible for their beliefs in matters of religious faith and practice and who strive more to represent in actual life the worth of human conduct than to rehabilitate the spiritual world or to guide the course of human reason. My purpose in coming to Japan was not to impose upon the Japanese any faith of western countries, but to welcome any yearnings the Japanese themselves might have toward a spiritual faith. And so my

Digitized by Google Original from CORNELL UNIVERSITY

life has been one of attendance and waiting, ministry and co-operation: I have never taken the initiative. I think all the most helpful ethical teachers among us will be those who have felt the necessity of basing their lives upon ethical principles and upon high spiritual practice. The influence of our sympathy promises a great deal. I am anxious as a friend of Japan that she shall be saved from spiritual and moral wreck. I have no intention of giving you a sermon. I have tried in the way of sympathy and encouragement to welcome and develope the spiritual aspirations of the Japanese themselves. We are the first to leave the country on account of action taken by the Japanese. They have entered upon an autonomous commercial and practical life and we have urged them also to another life also autonomous—an autonomous religious life. And I think such a life growing out of the people themselves, will be permanent because it is of the people and not from without, and that it will grow and prosper. I am glad indeed to hear from a Japanese so much appreciation of this fact. The religious life of the future will constantly develope, and it is my hope that the future will bring a life of deepest reverence for all that nature and providence has given to man.

Dr. A. G. SMITH, of Yokohama, and Mr. MASON spoke warmly of Mr. McCauley's personal qualities as a travelling companion on many pleasant holidays.

Professor TERRY said he found that his club intercourse with men of all nationalities made him feel familiarwith all countries of the world.

Mr. DUER spoke in praise of the excellent results of cosmopolitanism as illustrated by the success of the Municipal Council of Shanghai, of which he gave a few particulars.

Dr. LEHMANN spoke on behalf of the German Community and the German Asiatic Society. Messrs. E. H. Vickers and C. S. Griffin also spoke, and Mr. Griffiths, just back from a long stay in Formosa, added a few remarks.

THE NIPPON GINKO.

The reports submitted by the Bank of Japan to the general meeting of shareholders show that the transactions conducted by it during the 32nd year of *Meiji* reached 9,300 millions *yen* approximately. Below are the comparative figures for the past five years:—

	Receipts. Yen.	Disbursement. Yen.	Total. Yen.
1895 ...	1,504,920,922	1,509,000,310	3,013,921,232
1896 ...	2,661,136,053	2,659,398,133	5,320,534,186
1897 ...	4,530,554,779	4,484,585,054	9,015,139,833
1898 ...	4,509,474,048	4,509,856,182	9,019,330,230
1899 ...	4,661,265,912	4,652,664,842	9,313,930,754

Thus the Bank's transactions have almost trebled during the five years, a result which must be regarded as the result of the steady development of the business interests of Japan.

Turning to profit and loss account we find that the profit for the period under review was 5 million *yen*. The following are comparative figures for the five periods above mentioned:—

	Net profit. Yen.	Rate of dividend. Per cent.
1895	2,666,899	14
1896	3,849,831	13
1897	5,846,560	13
1898	4,692,227	11
1899	5,030,052	12

The dividend for 1899, compared with that for 1897, shows a slight decrease, but the cause of this is to be found in the fact that in spite of a considerable increase in the amount of loans issued during last year, a reduction in the scale of interest, together with the depreciation of bonds, has necessitated the appropriation of profits in order to supply the losses arising from these circumstances. That the Bank has still been enabled to realize a profit of over five millions of *yen* is a fact which must be regarded as satisfactory.

As regards the reserves, the figures stand as follows:—

	Reserve. Yen.	Total Reserve from the beginning. Yen.	Ratio borne by the Reserve to the Capital. per cent.
1895...	1,050 000	8,600,000	38 2
1896...	650.000	9,250 000	41.2
1897...	2,670.000	11 920 000	52 9
1898...	1,100 000	13,020 000	43 4
1899...	980,000	14,000,000	46.6

From the above it may be perceived that the reserves have swollen from 8 million *yen* to 14 millions during the past five years, and the ratio they bear to the capital, which amounts to 30 millions at present, has increased to 46 6 per cent. The decrease from 52.9 per cent. for 1897 to 43 4 per cent for 1898 is simply due to the increase of capital in the latter year. The funds thus set apart as a reserve are to be appropriated for the purchase of bullion and public bonds.

As to deposits the following figures are given:—

	1899. Yen.	Inc. & dec. as compared with the preceding year. Yen.
Aggregate total of deposits	1,796,009,197	+148,714,473
Repayments	1,748,547,568	+ 50 533,391

As regards fixed loans the figures stand thus:—

Gen. loans (fixed) ..	45,362,954	— 82 697,956
Repayments	59,902,239	— 85 954,206
Loans at the close of the year	10,737,402	— 14,539,285

The enormous diminution in loans as seen in the above table is owing to the adoption by the Bank of the process of simplifying transactions by discounting bills on security of goods after the Commercial Code came into operation, whereas the enforcement of the Stamp Regulations has augmented the amount of taxes to such an extent as to exceed the discounts allowed for loans.

The loans on current accounts were follows:—

	1899. Yen.	Inc. or dec. as compared with the preceding year. Yen.
Loans	623 397.205	+92,817,221
Repayments	624,651,789	+92,121,639
Loans at the end of the year	2,207,585	— 1,254,584
Loans contracted ...	220	+ 19
Highest amount of overdrafts allowed	14,338.800	+ 874,000
Head Office ...	7,815,000	— 461.000
Osaka branch...	3.583,000	+ 642,000
West provincial branch.....	833 300	+ 350 000
Hokkaido branch	290,000	+ 19,000
Nagoya branch.	683.000	+ 52,000
Sapporo Out-office.....	40.000	+ 40.000
Kyoto Outoffice	844,500	+ 165,000
Otaru Outoffice	190,000	+ 7,000
Fukushima Out-office.....	60,000	+ 60,000

Thus the total loans issued have been over forty-three times the maximum amount of over-drafts allowed.

Again, during the year under review the discounts on both foreign and domestic commercial notes, as well as bills payable in specie at the Mint, have amounted to 419 million *yen*, an increase of 130 millions as compared with the previous year. As to domestic notes the figures stand thus:—

	Amount of discounts Yen.	Notes rejected. Yen.	Rates of rejections to applications per cent.
Head Office.....	197,399.179	9 500,918	4.6
Osaka branch ...	92,633,488	20,551,275	18.2
West provincial branch	30,492,121	5,648,186	15.6
Hokkaido branch	919,599	89.528	8.9
Nagoya branch.	20,853,695	2,311,323	10.
Kyoto Out office	38,727,857	11,421,655	22.8
Otaru Out office	4.792,304	349.711	6 8
Fukushima Out office	1,750.553	44,853	2.5
Total.....	387,568,800	49,917,499	

Compared with the previous year each district shows more or less decrease, but as the districts where rejections are numerous suffer from lack of credit it is to be hoped that the rate will still considerably decrease by the time for compiling reports for the 33rd fiscal year. With regard to foreign discount bills the figures stand as below:—

	1899. yen.	Increase or Decrease. yen.
Exchange bills for exports.	27,923 827	+3.225.214
On England	12 588 949	+4,843.072
On France	6.871,059	+ 132,062
On America	8 463,818	—1.749.919
Exchange bills for imports.	2,816 142	—4 372 341
On Yokohama	2,816,152	—1 932 789
On Kobe	—	—2,439.551
Total	30,739 969	1,147,126

The profit and loss account for the latter half of last year, classified according to localities, compared with the corresponding period of the previous year, is as follows:—

	Net profit for latter half of 1899. Yen.	Same for 1898. Yen.
Head office	1,911,351	1,888 507
Osaka branch	377.718	464,620
West provincial branch.	184,371	252,190
Hokkaido branch	—11,499	—3,727
Nagoya branch	127 733	117 810
Sapporo out-office	—12.899	—8 573
Kyoto out-office	170 956	137 946
Taipeh out office	—79 573	—162.342
Otaru out-office	13 454	17.043
Fukushima out-office ...	—205	—
Total	2,679.408	—2,703.476
Balance	24,067	

Minus sign represents loss.

Thus, the figures for the latter half of 1899, compared with the corresponding term of the preceeding year, show a decrease of 24.000 *yen*. This may be owing partly to fresh payments imposed by the Government upon the Bank in spite of the reduction in the amount of taxation for issues above the legal limit, and partly to a general falling off in the rates of interest.

As to bullion and specie actually held by the Bank at the end of 1898 and 1899, the figures stand as follows:—

	End of 1899. yen.	End of 1198. yen.
English gold coins	260.749	113.061
American gold coins ...	1,780.379	1,046.753
French gold coins	10,389	—
German gold coins	2.466	—
Russian gold coins	20,052	—
Old coins	342,137	328,485
Gold and silver mixed bars	16,536.858	17,156,011
Sundry gold bullion ...	8,069 671	—
Gold bullion	2,200 520	5,466 355
Gold coins	74,394,134	66,088 268
Silver bullion	7,000,000	—
Silver *yen*.....	127.009	—
Total.....	110,617.358	90,335 944
Balance	—	20,281,414

Compared with the corresponding term of the previous year, the above figures show an increase of about 20 million *yen*. This increment is attributable to the fact of trade having entered upon a normal course, and that the indemnity and English sterling bonds have been brought home from London. The following are the comparative figures for public bonds held by the Bank at the end of 1898 and 1899:—

	Market value in Dec. 1899. Yen.	Same in 1898. Yen.
Pension bonds (5 per cent. interest)	7,987,367	7,965,139
Old loan bonds	78.909	86,714
Naval bonds.....	1,343,722	1,343.099
Consols	20.993.175	25 442,118
Imperial bonds.....	3.684,600	3,907,100
War bonds	4.743.135	508,190
Foreign bonds	17,262,697	1,122,005
Total.....	56,100,606	40,374,366

Thus the amount of bonds has increased by 15 million *yen* during the past year. The Bank, it must be noticed, having purchased public bonds to the value of 7,620,000 *yen* during last year, subscribed to 2 million pounds face value

Digitized by Google Original from CORNELL UNIVERSITY

of similar debentures, and sold 8,410,000 *yen* worth of the same, the actual accounts at the end of the year stood as mentioned above. The augmentation noticeable in comparison with the corresponding period of the previous year is due to subscriptions for bonds raised in England.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom).

LORD ABBOT OTANI.

To the Editor of the "Japan Mail."

Sir,—Please allow me space to call your attention to what appears to me to be a discrepancy in your statements concerning Count Otani. In your issue of Jan. 27th, you speak of him as the "Chief Prelate of the Eastern Hongwanji," and the "High Prelate of the Eastern Hongwanji." Feb. 10th, you again speak of him, but this time as being of the *Western* Hongwanji. One more reference is made to him in your issue of Feb. 17th, when he is called "High Prelate of the Western Hongwanji" To those who know, the above might not lead to any confusion, but to those who do not know, your articles on the troubles in Buddhist ranks can hardly be said to be clear.

Yours truly, C. A. TAGUE.

Yamaguchi, February 26th.

THE BOER WAR.

To the Editor of the "Japan Mail."

Sir,—In answer to a letter addressed me from Sendai by Mr. Dening, asking me if I would agree to publishing Prof. J. A. Walker's letter to me in the *Japan Daily Mail*, I have the honour of writing to you to the effect that, the letter being not originally intended for publication, I fear I will do injustice to Prof. Walker by delivering his letter *as such* to publicity. But at the same time I see no harm in contributing to the *Mail* such extracts of his letter as will convey the general idea of what one of England's rising international lawyers thinks on the present war. It is as follows:—

"We have been having an exciting time here lately in international affairs. The Transvaal business is occupying all minds. It is a long time since there was such a display of national enthusiasm. I am afraid that in its inception I could not but recall the growl of Walpole on the outbreak of a popular war with Spain in the last century: "They are ringing their bells now; they will be wringing their hands soon." The final end of this war is, I suppose, well nigh inevitable, but it bids fair to be purchased by great bloodshed. I have not studied the events leading up to the war as closely as I could wish or as I hope to do. So far as I have gone, however, it does seem to me that, if the matter be treated solely as one of *intervention*, the British case is not strong. I mean to say that if the convention between Great Britain and the Transvaal be alone taken into account, President Kruger has a strong case. The word 'Suzerainty' in itself being meaningless, or well nigh so, one must go for British right in the Transvaal to the conventions made between the two governments, and it is clearly open for the Transvaal to contend that, whilst Great Britain did in 1884 reserve under "Suzerainty" the rights of international representation, she did expressly resign to the Transvaal Government the right of control over all *internal affairs*, amongst which must be ranked the determination of the conditions upon which the Transvaal citizenship shall be awarded. Regarded from this point of view, however oppressive the action of the Transvaal Government towards British and other immigrants, Great Britain would not be within her rights in interfering. It is not for Great Britain to be *custos morum* even of States under her 'Suzerainty.' The defence of the British action must, I think, be put on another ground altogether. The struggle is really a struggle of Dutch versus English for for the control of all South Africa. The war has been commenced on a minor issue, but the question is whether the British Imperial authority shall stand in South Africa and extend to the North, or whether there shall arise in South Africa a *Dutch* United States. The work of the Africander Bond cannot be disregarded. The Dutchmen of the Cape have been allowed equal rights with the British and they are in a majority. If the process which has been going on were to be allowed to continue, the Transvaal with the Orange Free State might play the part of head centre in a great conspiracy for the establishment of a Dutch Confederated States. Great Britain is striking at the arch-conspirators. That is to say, the war is, for the British, a *defensive* war of Imperialism. If you look at the map of Africa, again you will see how the non-possession of the Transvaal would nullify the acquisition of the all important Delagoa Bay. With the Transvaal under imperial control the Imperial line would be practically unobstructed from Delagoa Bay to Fashoda and Khartoum and so to the Nile Mouth. We are anticipating a War of Dutch Independence and at the same time securing our great central African Imperial Advance. This is my idea. I understand that Prof. Westlake has similar ideas. Meantime with the British people the war is a war of justice against Boer opposition, of British interests against Dutch monopolists, of revenge for Majuba Hill."

Prof. Walker's letter is dated St. Peter's College, Cambridge, Nov. 14, 1899. Hoping you will kindly sympathise with my almost solitary undertaking to publish a diplomatic review in order to instruct the Japanese public in these matters,

I remain, Sir, yours respectfully,

NAGAO ARIGA.

No. 56 Miogadani, Koishikawa, Tokyo, 24th February, 1900.

A REPLY TO "JUSTICE."

To the Editor of the "Japan Mail."

Sir,—I read with considerable amazement a letter in your issue of the 2nd inst., upon "The Boers and their Independence."

Justice lays it down "That the right to decide to what extent and to whom it will grant political privileges is essential to the sovereignty of any state," therefore he says, "the Boers are fighting for their independence."

What on earth has that to do with this South African War, in reference to which the proximate cause was the failure of the Boers to observe certain clauses of a Convention between Great Britain and the Transvaal Republic, whereby they had not only been guilty of gross injustice to British subjects but had created a state of affairs dangerous to the well-being of British South Africa?

Surely before "Justice" can with reason accuse the British Government of acting wrongfully towards the Transvaal Boers, he must show the above mentioned contention to be unfounded.

He then goes on to state that if the British had the right to demand privileges, the Transvaal was not an independent State, and they (the Boers) are now exercising a right always left to people who feel themselves wronged; the right of revolution.

Was more pernicious nonsense ever penned, save by a Bedlamite?

Had the Transvaal Boers been British subjects, will "Justice" point out to whom the British Government should have addressed its demands for privileges?

Of course, the fact that demands were made on the Transvaal of necessity implies that it was a more or less independent State.

As for the right of revolution always left to a wronged people, that strikes me as rather a dangerous doctrine to be held by a citizen of a State which frequently shocks civilized humanity with the spectacle of a mob of its white citizens cruelly murdering with impunity a fellow citizen because he happen to be a negro.

However, to return to the subject in hand, I venture to suggest it would have been much more to the purpose had "Justice" shown us in what respect the Boers are a wronged people instead of romancing as to the right to revolt. "Justice" then proceeds, "it is manifestly absurd to suppose the Orange Free State is assisting the Transvaal to resist a demand they themselves thought right."

Had he known one quarter as much of his subject as he should have done to justify him in expressing publicly his opinion as to the righteousness or otherwise of British action in South Africa, he would not now require to be told that shortly before the war broke out President Steyn astonished the British public by explaining his action in joining forces with the Transvaal, on the ground that the independence of the Orange Free State was of no value if that of the Transvaal ceased to exist. Later it transpired that a defensive and offensive alliance between the two States had existed for some time past, and finally abundant evidence has been brought to light to show that the real object of the rulers of the two Republics and their co-workers was to drive the British flag out of South Africa.

"Justice" will find in the January number of the *Nineteenth Century* an article entitled "The South African Conspiracy against British Rule," by the Rev. Dr. Wirgman, canon of Grahamstown Cathedral, who writes with the advantage of experience gained during a residence in South Africa of nearly 26 years. Amongst other things the article relates a conversation which took place some 17 or 18 years ago between Mr. Theo. Schreiner (brother of the present Cape Premier) and Mr. Reitz, now State Secretary of the Transvaal Republic, in which the letter invited the former to join the Afrikander Bond.

Mr. Schreiner declined to do so on the ground that he saw the object of the Bond was the expulsion of the British flag from South Africa, which, if ever attempted, would lead to a bloody war in which the God of Battles would be on the side of the British.

His prophecy has now been nearly completely fullfilled. Owing entirely to Mr. Reitz and his co-workers a bloody war is now raging in South Africa, and it only remains for the allied Republics to be overthrown (a by no means improbable event) for the whole of the prophecy to be literally and absolutely fulfilled.

The fact of the matter is, there are now in print so many accounts of the growth of this South African trouble that there is no excuse for "Justice" or any other person of intelligence remaining ignorant of the question except that of complete indifference to it; in which case it would be wiser for them to abstain from publicly ventilating their views.

FAIR PLAY.

March 4th, 1900.

THE BRITISH SOLDIER.

To the Editor of the "Japan Mail."

Sir,—A good deal has been said about the Psalm-singing and piety of the Boers, and it is sometimes said in such a way as to imply that the British go forth in a very different spirit. We who know the British soldier at all intimately know that this is not the case, though the national reticence is very apparent in religious matters and forbids anything like long prayers. I think that the enclosed extracts from a letter just received may interest some of your readers. The writer is engaged in raising a regiment of Colonial troops:—

"So far we have merely been collecting men, giving them a place to sleep in and something to eat, and then trying to drill them a bit. This morning we had our first regular parade, and as it was Sunday I made it a Church Parade and gave them quarter of an hour of prayers, using the Prayer Book Mr.——gave me, also a prayer composed by myself for the occasion and which I enclose, as I should like that you would use it too, as I know you will. To-morrow being Christmas

Digitized by Google Original from CORNELL UNIVERSITY

Day, we are going to have no work and have organized a bit of a dinner for the men, all the officers subscribing. We have some curious people in our ranks—men of all sorts; a brother-in-law of a duchess, a Lieutenant in the Navy who has got leave; we have several ex-officers and several men who were in the Jameson Raid; several Australians and several New Zealanders, a Swedish count—all sorts and conditions of men. Christmas Day.—I am very fit indeed, and don't feel the heat. I have had a very pleasant day. As there was nothing much to do in Camp, I made the men a little speech telling them to enjoy themselves but to be careful not to get into trouble, then I gave them a holiday. After that Mr.——, Mr.—— and I came into town and went to the Cathedral. It seemed more like Christmas when we heard the old hymns. We had an excellent sermon from the Bishop, who explained that it was not a mockery to say "Peace on earth," even though nations were at war, and that we might feel at peace even when going into battle. I like his preaching; he always has something interesting to say and he just talks enough about the war and not too much. After his sermon we stayed to Communion."

[Prayer enclosed:—O Holy Trinity, Father, Son, and Holy Spirit, send down a blessing on the ————, that they may be faithful and true and may serve Her Majesty Queen Victoria loyally and nobly. Grant that they may prevail over their enemies and that when this war is over they may return to their homes in honour, prosperity, and health. Grant this, O Lord, for Jesus Christ's sake.—Amen]

Yours truly, B.

Tokyo, March 5th, 1900.

FUKHIEN.

The *Jiji* publishes some notes by Mr. Shiga Juko on a recent tour in Fukhien. Mr. Shiga seems to have supposed at first that Fukhien was the most fertile district of South China, and the richest in valuable productions and mines. He was surprised, however, at finding that the territory, being so mountainous, has but a small area of ground fit for cultivation. The people, under such physical disadvantages, find great difficuly in gaining a subsistence. Every year there is a large emigration to Formosa, Australia, and California. Mineral wealth, however, appears to be scattered over the entire district. The most prominent mines are those of silver in Engchun, iron in Aukeng and Kotian, lead in Pengho, and anthracite coal in Siau bu. Hot springs of very high temperature also abound. In short, Fukhien may be considered a mining district, and it will be advisable for Japan to secure at once mining privileges as a preliminary towards the establishment of a footing in South China. Railway concessions are also important. A railway of 560 miles from Foochow to Kiukong is necessary. Some may say that, as Japan has been unable to construct even the Söul-Fusan railway, any attempt to acquire concessions in a territory like Fukhien, which is still more distant and has little or no direct connection with Japan, would excite the ridicule of the world. But it must be observed that the territory, if left to itself, is in danger of passing into the hands of other nations. The opening of the port of Tswanchiu is also of the first necessity. Seven-tenths of the immigrants into Formosa are from Tswanchiu, while the remaining three-tenths come from Canton. The inhabitants of Tswanchiu import their staple food, rice, from Formosa, and export, in return, hats, caps, pans, umbrellas, woven goods, and other necessaries. Ever since Japan's subjugation of Formosa, they have continued their trade, but in a different form. Their transactions with Formosans are now conducted secretly, and are thus attended with numerous abuses. This fact alone justifies the opening of Tswan-chiu. Commercial statistics relating to Foochow and Amoy show that their trade is gradually but steadily declining. As to travelling in Fukhien, Mr. Shiga's remarks are interesting. He says it is expedient to discard the former fashion of travelling in Chinese dress, and to adopt instead European costume, which lessens the dangers of the journey. Carrying a sword or a revolver seems to create absurd uneasiness among the natives, and the traveller had better leave such weapons behind. What strikes one in China is the difference between the various spoken languages. Fukhien alone has six different dialects, and interpreters not acquainted with the official language are therefore of little service. Two or three persons, however, well versed in the official tongue are to be found in every village. As to climate, it must be remembered that the three months of March, April, and May are rainy and that as the Chinese seem then indisposed to travel, serious inconvenience will be experienced in undertaking a journey at this time of year. Discretion must also be exercised at the beginning and the close of the year, for at this particular period murder and robbery are rife. Another point of great importance for travellers is that they should provide themselves in all seasons with at least three blankets, and one *futon*, except in mid summer, and should carry during the hot weather a mosquito net and a supply of foreign candles.

A MARINE PRODUCTS BANK.

The *Ketsai Zasshi* states that elaborate investigations have been made with regard to the representation which was made to the Diet for establishing a Marine Products Bank. It was found that dealers in marine products were in the 24th year of *Meiji* (1891) in debt to the amount of over five million *yen*. This was shown by a special report compiled by the Department of Agriculture and Commerce. These people have been in the habit of carrying on trade under the so called system of *mayegure*, or advance receipts, paying interest at more than 5 per cent. They were, however, able to liquidate the debts in a satisfactory manner without causing inconvenience to their creditors. But naturally they must be almost entirely at the mercy of wholesale merchants or capitalists.

It is thought that if the dealers were furnished with loans redeemable in yearly instalments they would be able to develop the industry to a considerable extent.

A central bank should be established, with offices or agencies in various cities and prefectures, the only branches being in Hokkaido and Kiushiu. As marine products at present amount to 50 million *yen* annually, the bank should be provided with a capital of at least 5 million *yen*, and vested with power to issue debentures to five times that amount, while loans should be issued to the extent of one-tenth of the total output in each Prefecture. Credit should be given to fishing corporations formed as juridical persons, and to persons holding immovable property. Advances on goods, and on deposits from fishermen should also be made, while accommodation should be given, in some cases, on the security of movable properties.

LANGFELDT AND CO. LIMITED.

The meeting of this company was held on Monday afternoon at No. 73. There were present Messrs. Weinberger, W. R. Bennett, C. B. Bernard, D. H. Blake, F. Grosser, F. H. Bull, B. H. Pearson, and C. Tornoe (Secretary).

On the motion of Mr. Bull, seconded by Mr. Blake, Mr. Weinberger took the chair, in the absence through indisposition of Mr. J. F. Lowder.

The report was taken as read. The Chairman commenting on it, said the business of the last half-year had on the whole been good, and but for the unfortunate Manila venture they would have been able to declare a fair dividend. The prospects of business, as pointed out in the report, were very favourable, and they hoped to make everything smooth by the end of the half-year.

After some remarks on the necessity of writing off large amounts for old stock, the report was passed.

On the motion of Mr. Bull, seconded by Mr. Blake, Messrs. Weinberger and Bernard, who retired by rotation, were re-elected directors.

Mr. Guinness was re-elected auditor, and the meeting closed with a vote of thanks to the directors, proposed by Mr. Bennett.

NEWS OF THE WEEK.

A fire occurred at 2.20 on the morning of the 5th inst. at 130, China-town, Yokohama, occupied by Tay Ah Man. The house was completely destroyed, and 3 adjoining houses and 1 godown damaged. The property belonged to Kon Ah Man, a commission agent, and was fully insured.

Vice Admiral Sir Compton E. Domville will succeed Sir E. H Seymour in command of the British fleet in China. He commanded B Fleet during the last naval manœuvres and is now Admiral Superintendent of Reserves. His flagship will be the *Glory*, now completing at Portsmouth, which will replace the *Centurion* on the China Station.

Tamura Eitaro, aged 28, and Ota Yonezo, aged 11, beggers, were arrested on the 4th inst. by the Isezakicho Police. It was found that the former tried to burn a pawnshop by setting fire to a dog kennel in Suyeyoshicho, 1chome, some time ago, while Ota had set fire to a house in course of construction in Hagoromocho Nichome, on the morning of the 1st inst.

Many regiments of the British Army and ships of the Royal Navy, remarks the *N.-C. Daily News*, have a pet on the strength of their company, and H.M.S. *Peacock*, now in Shanghai, has emulated the Welsh Fusiliers and adopted a goat. The sailors have made him a collar bearing the ship's name and as all hands are fond of him, he has a very pleasant time. "Billy," who is only in the kid stage of life just now, joined the ship at Manila.

Colonel and Mrs. Bullard, who have been appointed by General Booth to take command of the Salvation Army in Japan, arrived in Yokohama on the *Rohilla* on the 27th ult., and proceeded to Tokyo the same day. These officers come from the command of Army work in North India, and, owing to their long experience of Eastern customs and work, the appointment is looked upon with satisfaction by the Army workers.

A military correspondent at Odessa states that large quantities of both heavy and light ammunition are being concentrated there from the various military depots in the eastern provinces of Russia for early shipment to the Far East. A considerable number of guns, chiefly for forts, will also be taken out early next month, in order to supersede weapons of remoter make which were placed in positions in the Liaotung Peninsula when it first came into the possession of Russia.

The three Chinese tailors who were found gambling on the 26th February at 136, Yokohama, were tried before Judge Kuwada in the Yokohama Ku Saibansho at 10 a.m. on Tuesday, the courtrooms being crowded with Chinese. Barrister Fujiwara appeared for the prisoners. The evidence of the three policemen who arrested the men was taken, but each contradicted the other. At Mr. Fujiwara's request the procurator, judge, and clerk visited the premises. On their return Mr. Fujiwara made a lengthy speech, in which he quoted the Civil Code referring to gambling. He also said that the evidence showed that the Chinese were in the act of separating the checks, or chips, into four parts, preliminary to playing the game of "Ma Chau," and they were waiting the arrival of the fourth player necessary for the purposes of the game. The law could not arrest persons who were not actually gambling. Judgment was given in favour of the defendants.

IMPORTANT LAW CASE.

J. R. MORSE V. THE MAYOR AND CITY AUTHORITIES OF KOBE.

The case of J. R. Morse *v.* the Mayor and City Authorities of Kobe, for the cancelling of a contract concluded with the Kobe Waterworks and for the payment of 25,000 *yen* compensation for losses incurred through a breach of contract on the part of the Waterworks, came on for hearing on Saturday before Judge Fujise, Judges Shimamura and Morii in the Yokohama Chiho Saibansho. Mr. Suzuki appeared for plaintiff, and defendants were represented by Messrs. Kusaka, Sakurai, Ota, and Otsuki.

Mr. Suzuki, in opening the case for the plaintiff, stated that Mr. Morse was visited by the Mayor and members of the Municipal Council of Kobe, on 7th July, 1899, in order to negotiate the sale of Kobe Water Works bonds. An inducement was held out to Mr. Morse for the purchase of these bonds in the shape of a promise of large orders for materials to be used in the construction of the Water Works. The Mayor also told him that those bonds were not like the Tokyo City and Osaka Harbour Works bonds, inasmuch as they would be redeemable in sterling, or at a fixed rate of exchange, which would make them more attractive to purchasers abroad. The rate of exchange was discussed at length, the Mayor favouring the rate fixed by the Finance Department on the 1st July, 2s ½d. to the *yen*, but to this Mr. Morse refused to agree, as he would be obliged to borrow money at 2s. 1/16d. This point was finally settled in Mr. Morse's favour, and the following letter was sent to the Mayor by Mr. Morse :—

> "In accordance with our understanding, I agree to take from you Kobe Municipal bonds to the extent of *yen* 1,000,000 in the denomination of 1,000 each, with the endorsement of sterling exchange on the back of each bond at the rate of £103'7/8½ for *yen* 1,000, and at the rate of 92 per *yen* 100. One-half the above amount, I will take and pay for on the 15th of this month, and one-half on or before 15th December."

Mr. Morse stated that an agreement was entered into at once, and on 15th July he advanced the sum of *yen* 460,000 in exchange for the Mayor's receipt and the agreement to deliver *yen* 500,000 in bonds on 15th August. When the bonds were brought to him, he merely examined the English translation, and as he found the sterling rate in accordance with the agreement, he took it for granted all was right. On the 11th September, he examined these bonds with Mr. H. W. Denison, when, to his surprise, he discovered the rate of exchange was not mentioned in the Japanese text of the bond and that the translation was incorrect. He immediately wrote the Mayor pointing out the fact, but he received no reply from the Mayor. The matter was left in abeyance until the end of November, when Mr. Morse called on the Mayor. He asked the Mayor as to his intention regarding the redemption of the bonds in sterling. The Mayor replied that it was his original intention to have the rate of exchange fixed and to redeem the bonds in sterling, but after receipt of Mr. Morse's letter of Sept. 11th, he applied to the Minister of Finance and learned that he could not make such a contract, and therefore he could not change the Japanese text of the bond. Mr. Morse again wrote to the Mayor under date of Dec. 1st, 1899, stating that the misunderstanding had made it impossible for him to sell the bonds abroad, and consequently he could not take up the remaining *yen* 500,000 on the day appointed for the payment of the balance. He received the following reply :—

Kobe, Dec. 1st, 1899.

JAMES R. MORSE, Esq.

Dear Sir,—A proposition for paying with sterling for Water Works bonds of this city, which was made by you at our last meeting of the 29th ult., has been introduced again to the City Council, and the matter was very carefully discussed, but a decision was arrived at contrary to your desire, same as previously. The other request of postponing payment of balance on bonds until May of 1900, which was agreed upon between you and the City Council, to be paid up on or before 15th December this year, was also rejected. You understand the circumstances as above, and hoping the agreement will be carried out on or before the 15th December this year, as fixed upon at first.

Faithfully yours,
Y. NARUTAKI,
Mayor of Kobe.

On December 5th the Mayor wrote again stating that "it was and is our principle that we do not refund in sterling in any case." He said he had mentioned this in a letter dated 15th September sent in reply to Mr. Morse's letter of the same month, but this letter Mr. Morse had not received. The Mayor further asked Mr. Morse for payment of the balance on or before the 15th Dec., in accordance with the agreement. Mr. Morse wrote back reviewing the whole of the transactions, and pointing out that the placing of orders with Mr. Morse's firm for several hundred thousand *yen* worth of supplies on commission terms of 5 per cent. was an inducement held out to Mr. Morse at the time of contracting, but no orders had since been placed with Mr. Morse's firm, and therefore it was necessary for him to take legal action in his interest. Mr. Morse was waited on by several representatives of the Mayor on the 12th December. They asked him what his intentions were regarding the remaining undelivered bonds. Mr. Morse in his turn asked them if it had not been the original intention of the Mayor and members of the Council to redeem these bonds at the rate of exchange fixed in their agreement. They replied that it certainly was their original intention to do so, but the Mayor was compelled to cancel the original proposal, as he had failed to obtain the permission of the Finance Department.

Counsel for the defendants admitted that Mr. Narutaki, Mayor of Kobe City, representing the Kobe Water Works, had entered into an agreement with Mr. Morse for the sale of bonds, but the Mayor never agreed to the proposal of having the bonds redeemed in sterling.

Another of defendants' counsel stated that the refusal of Mr. Morse to fulfill the contract was due to an advance in the rate of interest in consequence of the war between England and the Transvaal.

This statement was contradicted by Mr Suzuki.

The defendants called for the evidence of Honda Seiji and Fujiwara Kichisaburo, members of the Waterworks Committee of Kobe, and also Miyauchi Nisaku, chief of the Kobe Waterworks.

The plaintiff applied that three witnesses, namely, Yamamoto Shigezo, and Ishii Sennosuke of Kobe, and Matsuo Shinzen, of the Finance Department, should be summoned.

The applications were granted with the exception of that referring to the last-named witness, which will be decided later.

The Court finally adjourned to 12th April.

TELEGRAMS.

THE BOER WAR.

Shanghai, March 2.

It is officially announced that Dundonald entered Ladysmith on the evening of the 28th.

A despatch from Buller dated the 1st inst. says that Dundonald with the Natal Carabiniers and a composite regiment entered Ladysmith the previous night.

The country between Buller and Ladysmith is reported to be clear of the enemy, and Buller, at the time of his despatch, was moving on Nelthorpe.

Clements occupied Colesberg yesterday and received an enthusiastic welcome.

Reuter's agent telegraphs from Paardeberg under date of the 28th ult. that the Boers are reported to be in force on the South West.

Buller cables from Nelthorpe on Thursday at 5 in the evening :—

"I have just returned from Ladysmith. Except a small rear-guard to the northward of Surprise Hill all the besiegers have retired in hot haste. The country to the south of the town is quite clear. The garrison will require a little nursing before being fit for the field."

Lord Lansdowne has announced that 38,800 troops will sail during the month of March, and 17,800 during April.

The Army Estimates total 61,499,400 pounds sterling, and provide for 430,000 men.

There are immense rejoicings in England over the relief of Ladysmith.

Lord Roberts telegraphs that on the 28th, the Boer prisoners departed for Cape Town under escort of the Imperial London Volunteers and the Gloucester Regiment. The women and children were sent to their homes. One hundred and seventy wounded Boers were brought in to the British Hospital, many having been pitiably neglected. The Boers are indignant at Cronje refusing them medical aid.

Reuter's correspondent at Paardeberg sends an account of the meeting between Lord Roberts and Cronje. Both men saluted, then Cronje dismounted, and Roberts shook hands with him, saying, "You have made a gallant defence, Sir." Refreshments were then ordered and conversation ensued.

Shanghai, March 3.

The Government has telegraphed to Australia for 2,500 more mounted troops. The Australian Premiers are considering the matter.

Roberts and Kitchener arrived at Kimberley on the morning of the 2nd, and were to leave again on the 3rd.

A party of Boers is active on the north-west of Kimberley, destroying and looting. There is also a party shelling Barkley West.

Newspaper correspondents telegraph from Paardeberg that the British scouts are in touch with the enemy to the eastward. Their force is estimated at 7,000 men.

Barton was wounded on the 29th ultimo.

The Times correspondent in Ladysmith says that the casualties since the investment of the place were as follows :—

	Killed.	Wounded.	Died of Disease.
Officers.....	24	70	6
Rank and File...	235	520	340
Total	259	590	346

Grand Total..... 1,195

Shanghai, March 4.

On the 3rd inst., Gatacre reconnoitred in force in the direction of Stormberg and shelled the Boers' laagers. The enemy replied with two guns, which were located.

The Colesberg Boers have all returned to the Free State.

Buller telegraphs from Ladysmith under date of the 3rd inst. that the defeat of the Boers was more complete than he had dared to anticipate. The whole district is completely clear, except on top of Reenen's Pass.

The Boers' last train left Modder

Digitized by Google Original from CORNELL UNIVERSITY

Spruit yesterday, and they then blew up the bridge. They moved their wagons to the north of Ladysmith six days ago, so that there is no chance of intercepting them, but they left vast quantities of ammunition and herds of cattle. They got away all their guns except two.

[NOTE.—Modder's Spruit is nine miles from Ladysmith along the railway to the Transvaal. It is therefore evident that the great majority of the Boers have retreated in that direction.—ED. *J.M.*]

Mr. Chamberlain has asked Australia for an additional force of 2,000 men, similar to the Bushrangers. The Imperial Government will bear all the expenses. The Premiers have agreed to heartily cooperate. New South Wales will probably contribute 750.

Shanghai, March 5.

Dundonald made a dramatic entry into Ladysmith. He found the ridge concealing Ladysmith unoccupied and determined to ride through the gap into the town. Two squadrons galloped swiftly over the rough ground until the sentry challenged them. Then the tattered, listless men of the garrison gathered round and raised a feeble cheer.

Reuter's agent telegraphs from Dordrecht under date of Sunday that Brabant's Colonial Division is now attacking the Boers in a strong position at Labuschagnes Nek.

President Kruger is visiting the Free State to consult with President Steyn. It is believed that the consultation has reference to proposals for peace.

A cablegram from Leyds published in America says that the Boers want peace, but that they insist on their independence.

The Australians, moving out of Colesberg with two guns, reconnoitred Wagon Bridge over the Orange River, which was found to be still intact. A shell dispersed fifty Boers who were on the opposite bank.

Shanghai, March 6.

The Queen has abandoned her projected trip to the Continent and has decided to remain in England at the present juncture.

Later news from Dordrecht says that Brabant's Brigade occupied the Boers' position. The enemy made a determined attempt to retake it, but were repulsed with heavy loss. The British casualties were 6 killed and 15 wounded.

The Times' correspondent telegraphing from Osfontein, under date of the 2nd inst., says that opposition is anticipated at Abraham's Kraal, 30 miles east of Paardeberg, where Joubert is collecting a force from the whole of the Ladysmith troops and the N.-Eastern elements of the Free State. It is reported that the advanced posts of the Boers hold Achtertang.

The enemy is still in force at Norvals' Pont bridge.

All was well at Mafeking on the 15th February.

The Budget to meet the war expenditure of 60 millions increases the income tax by 4d. in the £, the tax on beer by 1s. a barrel, the tax on spirits by 6d. per gallon, that on tobacco by 4d. a pound, that on cigars by 6d., and that on tea by 2d. a pound. It extends the stamp duties on transactions in stocks to produce sales, suspends the sinking fund and certain annuities for next year, and raises the remaining 35 millions by bonds or stocks terminable in 10 years and not by consols.

The casualties in the relief of Ladysmith were 93 killed and 709 wounded.

The Emperor of Japan telegraphed to the Queen his congratulations on the success of the British troops in South Africa.

Shanghai, March 7.

Gatacre has entered Stormberg unopposed.

Brabant's victory was complete. The Boers are in full retreat and are being pursued.

Reuter's agent telegraphs from Osfontein under date of the 3rd inst. that French's artillery shelled the right of the enemy's position on the North of the river. The Boers' position extends eight miles, and the country is favourable for British operations. There is abundant water.

A strong Kimberley force is marching to the relief of Mafeking.

Buller reports that Natal is practically free from the enemy. There are 800 typhoid cases in Ladysmith.

The House of Commons has adopted the Budget resolutions relating to additional duties, and has also approved the loan.

Shanghai, March 8.

Reuter's correspondent at Ladysmith telegraphs that a portion of the garrison made a reconnaissance and discovered the Boers in a position behind Pepworth Hill. An engagement followed, but the attack was not pressed, and the troops returned. The casualties were slight.

The Boers stubbornly resisted Brabant on the 4th and 5th, and then retreated suddenly, moving their guns and wagons. The British casualties amounted to 30 killed and wounded.

Reuter telegraphs from Capetown under date of the 8th that the districts of Prieska and Kenhardt have proclaimed themselves Free State territory. Nearly the whole of the Dutch population is rebellious. The movement is spreading to Victoria West and Fraserberg, as well as other districts. The rebels are estimated at 3,000.

H.M. the Queen visits Ireland in April.

Lord Roberts telegraphs from Osfontein, under date of the 7th inst., that on that day he attacked the enemy occupying a position 4 miles on the North and 11 on the South of the Modder River. The cavalry succeeded in turning the left flank of the enemy, who are now in full retreat, closely pursued. The British casualties are few.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE IN TOKYO.)

Saigon, March 2.

The British casualties from the beginning of the war until the present time aggregate 12,834.

The English have occupied Colesberg, the Boers retiring into the Orange Free State.

Buller telegraphs that General Dundonald's column entered Ladysmith on the evening of the 28th. The Boers have evacuated the whole region between Colenso and Ladysmith.

Saigon, March 3.

Buller entered Ladysmith on the 1st of March. The garrison is in a very enfeebled condition. The Boers have retired with their artillery. There is great enthusiasm in London.

Saigon, March 4.

Cronje was yesterday put on board a British ship at Simonstown.

The Boers are concentrating on the road to Bloemfontein.

In the French Chamber, M. Lasels questioned the Government on the subject of irregularities committed by the High Court. The discussion ended by a vote of confidence, 287 to 138.

Saigon, Feb. 5.

General de Gallifet, Minister of War, was recently attacked with congestion of the lungs. His condition is improved, but absolute repose is ordered by his physicians.

The President of the French Republic yesterday received Mr. Thompson, President of the American Youths Association for erecting a monument to Lafayette. He handed to M. Loubet, in the name of President McKinley, the first dollar received for the subscription. The speeches exchanged on the occasion affirmed the friendship of the two republics.

General Joubert is concentrating his forces at Abrahams Kraal.

The Times announces from Lorenzo Marquez under date of the 4th March that there is a persistent rumour that the Transvaal has opened negotiations for peace.

Saigon, March 7.

The House of Commons has voted an increase of taxes amounting to 25 millions sterling for the expenses of the War.

Saigon, March 8.

Roberts is concentrating his forces at Osfontein near Paardeberg; the Boers are concentrating theirs in the same neighbourhood. Buller is sending columns of troops towards the passes on the frontiers of the Orange Free State and the Transvaal.

Three thousand Dutch in the provinces of the N. W. of the Cape Colony have revolted.

(BY SPECIAL ARRANGEMENT WITH THE "JIJI SHIMPO.")

The wives of the various Foreign Ministers in Peking have been received in audience by the Empress-Dowager.

Later.

The Empress-Dowager is dangerously ill. There is a rumour of her death, but its truth is uncertain.

CHESS.

All communications should be addressed to the Chess Editor of the *Japan Mail*, No. 51, Main Street, Yokohama.)

SOLUTION OF PROBLEM No. 462.

Key move Q to Q R 4

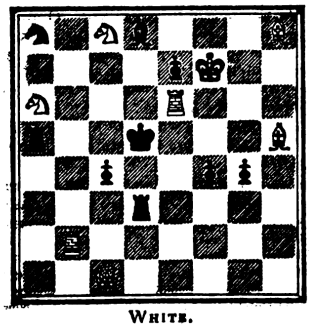
Correct solution received from "East Anglia."

PROBLEM No. 464.

By E. P. Bell.

"Best Two-er" *Football and Field* Tourney.

Black.



White.

White mates in two moves.

Game No. 569.

S. W. Bampton, of the Franklin Chess-Club, Philadelphia, and one of the crack players of the Quaker City, and Griffith, the rising star of the University of Pennsylvania, played the following game in the Franklin-Club Championship Tourney now in progress. The score and notes are from *The Times*, Philadelphia.

Ruy Lopez.

White—Griffith.	Black—Bampton.
1—P to K 4	P to K 4
2—K Kt to B 3	Q Kt to B 3
3—B to Kt 5	P to Q R 3
4—B to R 4	Kt to B 3
5—P to Q 3	P to Q 3
6—Castles	B to K 2
7—R to K sq	Castles
8—Q Kt to Q 2	Kt to K sq
9—B to Kt 3	K to R sq
10—Kt to B sq	P to B 4

Mr. Griffiths has adopted a slow development which is not congenial to his style, and the result is that Black now assumes the role of first violin.

11—Kt to K 3	P to B 5
12—Kt to Q 5	B to Kt 5
13—P to B 3	B to Kt 4
14—Q to K 2	Kt to B 3

White now commits a technical mistake in pushing his K R P and thereby weakens his position. In defending, keep your Pawns as far as possible unmoved.

15—P to K R 3	B to R 4
16—Kt takes Kt	Q takes Kt
17—B to Q sq	Kt to K 2
18—Q to B 2	Q to Kt 3
19—Kt takes B	Q takes Kt
20—P to B 3	B to B 2

Now, by virtue of his P to R 3, White has a hole at Kt 3.

21—Q to B 2	B to K 3
22—K to B sq	R to B 3
23—K to K 2	R to Kt 3
24—K to B sq	Q to R 4
25—K to K 2	R to Kt 6

It fits like the paper on the wall.

26—R to R sq	Q to Kt 4
27—R to R 2	Kt to Kt 3
28—B to Kt 3	B takes B
29—P takes B	Kt to R 5
30—K to B sq	R to K B sq
31—P to Kt 4	R to B 3
32—P to Kt 5	R to Kt 3
33—P takes P	P takes P
34—R takes P	P takes R 3
35—P to Kt 4	Kt takes B P

A fine sacrifice.

36—P takes Kt	R takes B P & wins.

For if Q takes R, then Q to Kt 8 ch, etc.

Games from the Vienna Tournament.

Sicilian Defence.

White—Brody.		Black—Maroczy.

TORTURING DISFIGURING HUMOURS

ITCHING, BURNING, AND SCALY ERUPTIONS OF THE SKIN AND SCALP, WITH LOSS OF HAIR.

The agonizing itching and burning of the skin, as in Eczema; the frightful scaling, as in psoriasis; the loss of hair and crusting of the scalp, as in scalled head; the facial disfigurement, as in pimples and ringworm; the awful suffering of infants and the anxiety of worn-out parents, as in milk crust, tetter, and salt rheum — all demand a remedy of almost superhuman virtues to successfully cope with them. That Cuticura remedies are such stands proven beyond all doubt. No statement is made regarding them that is not justified by the strongest evidence. The purity and sweetness, the power to afford immediate relief, the certainty of speedy and permanent cure, the absolute safety and great economy, have made them the standard skin cures and humour remedies of the civilized world.

Those who have suffered long and hopelessly and who have lost faith in doctors and medicines may make trial of these great curatives with the most gratifying success. The treatment is simple, direct, agreeable, and economical, and is adapted to the youngest infant as well as adults of every age. *Bathe the affected parts with Hot Water and Cuticura Soap to cleanse the surface of crusts and scales, and soften the thickened cuticle. Dry, without hard rubbing, and apply Cuticura ointment freely, to allay itching, irritation, and inflammation, and soothe and heal, and lastly take the Cuticura Resolvent to cool and cleanse the blood.* This sweet and wholesome treatment affords instant relief, permits rest and sleep in the severest forms of eczema and other itching, burning, and scaly humours of the skin, scalp, and blood, and points to a speedy, permanent, and economical cure when all other remedies and even the best physicians fail. The SET, consisting of Soap, Ointment, and Resolvent, or each separately, may be had of all chemists and stores where medicines are sold throughout the world.

THE BOONS AND BLESSINGS.

YOKOHAMA: SATURDAY, MARCH 17TH, 1900.

BIRTH.

At the British Legation, Tokyo, on March 11th, the wife of ARTHUR HYDE LAY, Acting Japanese Secretary, of a son.

DEATHS

On Tuesday morning, March 13th, at Kobe, JOANNA, widow of the late Captain Joseph Thomas, aged 64 years.

At the Shanghai General Hospital, on Monday, the 5th of March, 1900, JULIUS GIESE late Captain of the N.Y.K. *Fushiki Maru* aged 51 years.

SUMMARY OF NEWS.

GERMANY has declined to intervene on behalf of the Transvaal.

THE condition of the garrison at Mafeking is very pitiable, supplies of food running short and illness increasing very rapidly.

CRONJE is to be deported to St. Helena pending the close of the war.

A WAR loan of £30,000,000 has been issued in London and covered twenty times over.

THE German gunboat *Iltis* arrived at Nagasaki on Thursday evening from Amoy. She will leave for Kobe after a day or two.

THE administration of the Caroline, Pelew, and Ladrone Islands, recently purchased by Germany from Spain, will be attached to that of German New Guinea.

H.M.S. *Edgar* has been ordered to leave England early in March for Hongkong with relief crews for the sloops *Algerine* and *Phœnix* and the surveying ship *Waterwich*.

THE German warship *Hertha* arrived in Yokohama harbour from Hongkong on Wednesday. She has on board His Excellency Vice-Admiral Bendemann, and his flag was duly saluted.

THE British have occupied Bloemfontein without opposition, the former President of the Orange Free State presenting Lord Roberts with the keys of the public departments.

THE sum of £20,000, the balance of £60,000 stolen from Parr's Bank a year ago, has been mysteriously returned. The notes were found on Feb. 10 inclosed in a steamer passbook.

A COOLIE named Okazaki Tsurukichi, employed in cutting stone from the quarry at Nakamura Takachigayato, was killed on Friday afternoon, a large piece of boulder falling on him.

THE ship's company of the Danish war ship *Valkyrien* were entertained to dinner at the Public Hall on Saturday evening. The men made a great impression as they marched along the Bund.

HONGKONG papers state that Lieut. C. R. Emrich, of the U.S.S. *Brooklyn*, died in hospital at Hongkong of typhoid fever, and was buried there with military honours on the 26th February.

THE exchange of ratifications of the Samoan Treaty took place on Feb. 16 h at the State Department at Washington. This is he last ceremony necessary to give full effect to the Samoan agreement.

THE newspapers of Berlin announce that Mme Nellie Melba, the prima donna, is engaged to marry Herr Dr. Joseph Joachim, the famous violin virtuoso. Herr Joachim is 69 years old and Mme. Melba is 34

IN the Yokohama Chiho Saibansho on Saturday the suit for divorce brought by Mrs. McKelvey (*née* Lela Miriam Stilson Bell) on the ground of desertion, was dismissed. Plaintiff was ordered to pay the costs of the suit.

ON Sunday morning, at 10 o'clock, a junk belonging to Hoshino & Co., a forwarding agency in Yokohama, capsized near Urapa. An N. Y. K. steamer, the *Fukagawa Maru*, rescued the ship-wrecked sailors, who were brought to Yokohama.

RAINS and a rapid thaw caused many English rivers to overflow about the middle of last month, and there were unprecedented floods in various parts of the United Kingdom. Several provincial towns were inundated, great damage being done to farmers. Hundreds of sheep and other live stock were drowned, and much of the railroad traffic was suspended.

AN ordination service was held in All Saints' Church, Kobe, on Sunday forenoon, Mr. Edward Makeham being admitted to the order of Deacons. The Bishop of Osaka conducted the service. Mr. Makeham will labour among the seamen of the port.

THE Tugela River is the longest if not the broadest river in Natal. It rises in the Drakensberg mountains, and where it enters British territory there is a rapid and precipitous leap of 1,800ft. This is one of the greatest waterfalls in the world.

A *soshi* actor belonging to the "Kiraku-za" Theatre recently decamped with some theatrical robes. He was arrested by the Kotobukicho Police on Friday. His name is Onouchi Ukinosuke, age 19, and recently he stole some money from his fellow actors.

SIX hundred bales of cotton, arrived by the *Oopack*, consigned to Ko Tai, a Chinese merchant of No. 52 Settlement, have been refused landing by the Sanitary and Water Police Authorities. The cotton is to be sent back to Shanghai, by the *Oopack*.

OVERTURES for peace have been made during the week by Presidents Kruger and Steyn, but as they demanded the full independance of both republics, Lord Salisbury telegraphed back that the proposals could not be accepted. A peace delegation has left for Europe.

WE are glad to learn that the appeal recently made through our columns on behalf of the building fund of the Army and Navy Mission Work at Yokosuka has resulted in some 600 *yen* being collected. Much more is still wanted, but this amount justifies the committee in beginning work this month.

THE case of Umeseko, the quartermaster of the *Tamba Maru*, who bit Mr. Kent, the fourth officer, and was sentenced to five days' detention and appealed, came up on Friday in the Chiho Saibansho before Judge Satow. Barrister Tanaka appeared for the prisoner. The former sentence of five days' detention was confirmed.

LORD WOLSELEY has received a letter from the Queen in which Her Majesty says that, realising the necessity of measures for home defence, she appeals to her old soldiers, both officers and men, to serve her once more for one year, confiding in their devotion to the country and loyalty to the throne. Such battalions will be designated Royal Reserve Battalions.

TERRIFIC snowstorms took place throughout Germany in February. Great damage was done to shipping, and thousands of telephone and telegraph connections were broken. The street traffic in Berlin was greatly impeded and other cities suffered seriously, particularly Bremen, Hamburg, Oldenburg, Kiel, Dresden, Rostock, Breslau, Koenigsburg, and Papenburg.

THE prospectus has been issued of S. Moutrie & Co., Ld., which is to take over the business of S. Moutrie & Co., of Shanghai and Yokohama. The proposed capital is $125,000 in 2,500 shares of $50 each, the provisional directors being Messrs. R. P. Allen, E. P. Wickham, and S. Moutrie, the last of whom will join the board after allotment, and is to be the manager of the Company for ten years. Of the shares, 1,200 have been applied for and will be allotted in full, and the remaining 1,300 are now offered to the public, the list of applications closing on the 31st instant.

SOUTH AFRICA.

Saturday, March 10.

It is interesting to observe that just after the publication of Lord Methuen's statement as to the almost insuperable difficulty of undertaking successful flanking operations against a Boer army, in view of its great mobility, Lord Roberts is winning decisive victories by that very kind of strategy. Yet the statement and the object lesson are not so contradictory as may seem at first sight. Methuen was speaking with reference to the forces at his own disposal. What he meant to convey, doubtless, was that unless a commanding officer had an army large enough to hold the Boers effectually in front while sending a powerful column to turn their flank, the latter operation must prove futile. Methuen never had such an army under his command. There is some reason to think that the numbers of the Boers opposed to him at Belmont, Graspan, the Modder, and Maggersfontein were exaggerated owing to this very faculty of mobility. The enemy succeeded in concentrating such a force at every point threatened that an undue estimate of his strength was suggested. Still he certainly had not less than ten thousand men, whereas Methuen's whole force totalled only fourteen thousand; a disparity quite insufficient for effective flank attacks combined with strong frontal movements. Above all, Methuen was weak in cavalry. He could not muster even a few squadrons to turn a Boer retreat into a rout, French and his cavalry brigade having been left behind to secure the lines of communication. Roberts, on the contrary, is comparatively strong in cavalry and mounted infantry. He is the first English general in this war who can be said to be thus equipped. Dundonald's Horse were of immense service to Buller, but the opportunities for using troops of that kind against a position like the Boers' entrenchments at Ladysmith must have been few. Roberts' successes have been due almost entirely to his mounted men. By means of them he severed the communications of the Maggersfontein Boers; by means of them he arrested Cronje's retreat and compelled him to go into laager; by means of them he has now turned the enemy's flank at Osfontein. We may add that the only British successes south of the Orange River were the work of cavalry, namely, French's operations about Colesberg and Brabant's operations in the vicinity of Stormberg. One of the tactical lessons taught by this war will be the necessity of adding to every army a large mounted contingent. It will be a welcome lesson to England, where equestrianism may be called a national accomplishment, but in Japan's case it gives new prominence to a question we have often discussed, that of providing a supply of horses to take the place of the miserable ponies that now drag the guns and carry the troopers.

Tuesday, March 13.

The Boers can not be said to be making a good fight at present. Their effort at Osfontein was evidently intended to be resolute, but it ended in something like a fiasco. An attempt to hold a line of entrenchments in a country suited for turning movements by cavalry can never be effective. It would seem, too, that the Boers are weak in field artillery. That fact must have struck every one reading the accounts of the various fights. The enemy's guns have never made any mark. They do not appear to have had more than four batteries (24 pieces) of field artillery at Ladysmith, where the main body of their troops was massed. What is most difficult to understand, however, is their failure to assemble a strong force for the defence of Bloemfontein. There has not yet been time, perhaps, for the whole of the Natal army to reach the scene of the fighting in the Orange Free State. From Ladysmith to Bloemfontein via Johannesberg is 558 miles, and from Bloemfontein to the field of the fighting on the 10th instant is about 60 miles. We may assume that the bulk of Joubert's columns had made good their retreat from Ladysmith before the 27th of February, and that Buller's last struggle was with the rear-guard, which subsequently occupied the Drakensburg passes. There had thus been an interval of only eleven or twelve days for Joubert to bring his men across to Bloemfontein and marshal them in position to oppose Roberts' advance. Twelve days would scarcely be sufficient to move any very large number of men and horses to such a distance by a single line of road, but certainly it should have amply sufficed to carry over five or six thousand at least, and since there were supposed to be fully thirty-five thousand Boers already under arms on the west of the Drakensberg, we see no reason why Roberts should not have been confronted by from twenty to twenty-five thousand men, at a moderate calculation, whereas De Wett had not more than ten thousand in line at Osfontein. These things are perplexing. One is tempted to think that either the Transvaalers are leaving the Free-Staters to fight alone, or that the number of the Boer forces has been over-estimated. It is very possible, however, that the Boers are now directing their efforts solely to hampering Roberts' advance, in order that time may be gained for bringing up the Natal forces, and thus concentrating a strong army at some favourable place on the west and south of Bloemfontein. That hypothesis would account for the comparatively feeble character of the opposition Roberts is encountering at the moment.

Perhaps it may be well to explain that Broadwood's Brigade, which is spoken of in the telegram as having found the Boers in position at Driefontein, is a body of colonial cavalry. Since December, vigorous and most successful efforts have been made in Cape Town to organize mounted troops. The first regiment of South African Light Horse thus organized was sent to Natal under Colonel Byng in December, the intention being to recall it for service in the Free State as soon as Buller could spare it. The second regiment, under the command of Colonel Broadwood, was fully organized by the middle of January, and is now evidently operating in the van of Roberts' advance. There can be no doubt that by this time a fine force of cavalry and mounted infantry has been brought together in Cape Colony. Most of it is probably guarding the lines of communication, but some has been sent to the front.

Buller had 32 infantry battalions of regular troops after he joined forces with the garrison of Ladysmith. Losing Warren's Division, his force will be reduced to 24 battallions, plus cavalry, artillery, and a strong body of colonial mounted troops. Some of his artillery and cavalry may be withdrawn, but he will remain with something like thirty thousand men.

Thursday, March 15.

The advance of the British force in the Orange Free State does not appear to be directed against Bloemfontein only. On the 10th instant a battle was fought at Driefontein, and on the 11th we hear of Roberts continuing his march from Aasvogelkop. Now it is quite certain that, if our maps are correct—and two of them show an agreement indicating accuracy—, the troops that fought at Driefontein on the 10th cannot possibly have been anywhere in the neighbourhood of Aasvogelkop on the 11th. The former place lies on the road trending north-east from Kimberley and debouching at a point considerably to the north of Bloemfontein, whereas the latter is on the direct road running eastward from Kimberley to Bloemfontein. Of course, a commanding officer, when he has to advance a large body of troops, avails himself of all serviceable roads, for reasons which constitute the alphabet of military operations. But he must choose roads that converge towards his point of attack, whereas the two roads of which we speak do not converge on Bloemfontein. The northerly route leads in the direction of Winburg, and an army marching by it could scarcely take part in an assault on Bloemfontein. Its immediate objective would be a point on the railway considerably north of that town, and its ultimate objective, Winburg. We do not lay down these facts with absolute certainty, since the only published maps of the region of operations leave a great deal to be desired in the matter of accuracy of detail. But, as we have said, the two most trustworthy show Driefontein to be a small lake quite out of the direct route of troops moving against Bloemfontein, and hopelessly out of the route of troops having their advance guard at Aasvogelkop. The inference is not quite plain, but what suggests itself as most probable is that Roberts has divided his army into two columns, one of which, the smaller, is marching direct upon Bloemfontein, while the other is advancing with three objects, first, to interpose between the Bloemfontein Boers and the Transvaal reinforcements, by severing the railway at a point fifty or sixty miles north of Bloemfontein; secondly, to cut the line of retreat of the Bloemfontein defenders and get between them and Winburg; and thirdly, to move upon Winburg itself with the least possible delay. If this plan of campaign is actually in operation, we may see results very much more important than the mere capture of Bloemfontein. It will be observed, of course, that this northerly movement, supposing it to be actually in progress, would be a plan precisely in keeping with the strategy which proved so successful in the case of Kimberley. From the moment that a strong British force set foot in the district between Kimberley and Bloemfontein, the position of Cronje at Maggersfontein became untenable, and from the moment that a strong British force sets foot in the district between Bloemfontein, Pretoria and Winburg, the position of the Boers in Bloemfontein will become untenable, and the Transvaal and the Free State will be broken in two. We entertain a strong hope that this programme may be in

Digitized by Google Original from CORNELL UNIVERSITY

process of execution. The capture of Bloemfontein would, of course, be a great stroke, and its moral effect upon the Free-Staters could not be doubtful. But much of its value would be diminished if the Boers now fighting for the defence of Bloemfontein and opposing the passage of the Orange River, were able to retire safely and effect an union with the Transvaal army under Joubert. The forces under Roberts' command are large enough to warrant a division such as that we have indicated. He must have from fifty to sixty thousand men at least manœuvering in the Free State, and it is not likely that he is driving them all towards one point when a dual objective offers such large advantages. We must note, however, one factor of uncertainty, namely, whether it has been possible to organize transport facilities for all the movements we are supposing. There are at least six distinct transport services now at work in South Africa. There is Buller's transport; there is that of Gatacre and Brabant; there is that of the Colesberg-Norvalpont column; there is that of the north-western column just sent against the Cape Colony rebels; there is that of Mafeking-relief column; and there is that of the Bloemfontein column. It must have been a colossal undertaking to organise all these services, and the rapidity with which the feat has been accomplished is one of the finest records of the war. It will have been observed that within two or three days of the receipt of news that disaffection had declared itself at Victoria West, Fraserburg and Kenhardt, we heard of troops having been despatched to those districts, a clear proof of the high state of preparation that had been reached. Still the organization of another transport service for a Kimberley-Winburg corps might overtax the available resources. We must be content for the moment with conjectures.

It is possible that the Boers will carry out their intention, announced some time ago, of making no serious attempts to defend Bloemfontein but of quietly transferring the seat of Government to Winburg. Bloemfontein is not a large place. It has only 8,000 inhabitants, one half of whom are coloured people. Still it is the capital of the Free State, and it probably contains great quantities of stores and ammunition, which the Boers can not have had time to remove. Winburg is much more favourably circumstanced for purposes of resistance. It is only 80 miles from Bethlehem, to which point the railway runs from Van Reeuen's Pass through Harrismith, and, being 60 miles north of Bloemfontein, it is correspondingly accessible from the Transvaal. The occupation of Bloemfontein, apart from the moral effect produced upon the Free-Staters by the loss of their capital, would create a most embarrassing situation for the Boers that are still attempting to oppose the passage of the Orange River by Clements, Gatacre, and Brabant. It is from Bloemfontein that they are receiving their supplies.

The Transvaal's appeal to Germany is unexpected. It comes earlier than could have been anticipated, and it confirms the impression suggested by recent events that the union between the two Republics has been shaken, and that the Transvaalers see themselves threatened with the necessity of having to carry on the war single-handed.

THE LATE PROFESSOR TOYAMA.

Professor Toyama died on the night of the 7th-8th. It has been stated that he expired on Wednesday morning, but the latest intelligence is that his condition did not become hopeless until that night, and that he expired before Thursday morning. We do not pretend, however, to speak with any certainty as to the time. There are some who even allege that death has not yet taken place, their assertion being based on the absence of any official statement. Japanese etiquette, as our readers are aware, does not permit the conferring of rank on an individual after death, under ordinary circumstances, and it thus happens that the official intimation of a distinguished man's decease is often deferred for some days. However, there can be no doubt about the lamentable fact of Professor Toyama's death, whatever be the exact time of its occurrence. He was only 48 years of age, in the very prime of physical and intellectual vigour, and in his case intellectual vigour meant something very much out of the common. His story brings him upon the stage at the early age of fifteen, when, in the year that saw the fall of the Shogunate, he already held the post of teacher of English in the Kaisei Gakko, embryo of the Imperial University, of which he was destined to become President thirty-one years later. During that interval he had filled many posts connected with education, and had studied for some five years in the United States, graduating at the University of Michigan. He possessed a singularly accurate knowledge of the English language, and could use it with great effect for purposes not only of scientific and philosophical discussion, but also of satire, as some of his friends and most of his enemies knew to their cost. For he was a man with many enemies. His exuberant energy of mind drove him into the political arena, where he was prepared to run a vehement tilt against any one that differed from him. The public remembers vividly his uncompromising attacks upon the Educational Department after it passed under the control of Mr. Ozaki Yukio, attacks which, however forcible and brilliant, would have possessed greater dignity had they not come from an official who had just lost the portfolio held by the rival he assaulted. As a member of the House of Peers, also, Professor Toyama showed his polemical qualities. His speeches, sparkling with epigram and sometimes outspoken almost to the verge of discourtesy, disturbed the continuity of the Peers' traditions, and inspired his sedate colleagues with anxiety not to come within range of such an opponent. Yet with all this fire of fight and strong intellectual combativeness the late Professor was a man of thoroughly kindly disposition. His name was associated with numerous charitable institutions and educational enterprises of a benevolent character, and his aid, whether material or moral, could always be relied on for the promotion of any good object. We believe that his mental attitude towards the Christian religion was favourable, but it always seemed to us that in this one respect he lacked the courage of his opinions. Like all clever men, he had his poetic moods, and the result was an endeavour to mould the Japanese language into a form resembling that adopted by Western poets. We do not think that much success can be claimed for the effort. There is talk of conferring a peerage on the deceased scholar. His labour in the cause of Japanese education certainly seems to justify that distinction.

The late Professor Toyama left instructions that his funeral should be conducted on the humblest and least expensive scale, but it was, of course, out of the question that a man of such eminence should be carried to the grave without a great number of mourners. At 1 p.m. on the 11th instant the cortêge left the residence of the deceased in Ushigome and proceeded to Yanaka in Uyeno. Nearly all the men of note in the scientific, literary and educational circles of Tokyo followed the bier, so that the procession was one of the most imposing ever seen in Tokyo. Conspicuous among the mourners were Count Kabayama, Mr. Okuda, Viscount Kuki, Viscount Tani, Mr. Uyeda, Mr. Sawayanagi, Mr. Kikuchi (President of the Imperial University), Viscount Fukuoka, Marquis Hosokawa, Mr. Otori, Mr. Hamao and Mr. Kato. The death of such an eminent man in the very prime of life has caused wide-spread sorrow.

IRELAND.

The *Nichi Nichi Shimbun*, while contrasting the disaffection of a section of the Irish people with the loyalty of the British colonies, comments on the fact that no soldiers in the British army fight more bravely for England than the Irish, and that many of England's greatest generals have been men of Irish extraction. It need scarcely be said that these remarks are elicited by the Queen's recent order that the shamrock should be worn by all ranks in Irish regiments on St. Patrick's Day. This act, combined with the Queen's approaching visit to Ireland ought to have a marked effect upon the romantic, emotional Irishman. But the bane of Ireland is the professional political agitator, on the one hand, and the people's innate love of fighting on the other. You can not find an Irishman able to give an intelligent account of the reasons that make him such a hot advocate of Home Rule. At least, we have never found such a man, and it has been our privilege to hear many Home Rulers essay a statement of their faith.

THE SPECIE BANK.

The Specie Bank held its regular semi-annual meeting on the 10th instant at 2 p.m., Mr. Soma occupying the chair. The following accounts were presented and passed :—

	Yen.
Gross Earnings	8,471,913
Brought over from last account	411,625
	8,882,938
Expenses, &c.	4,083,436
	4,799,502
To Reserve	500,000
Dividend	3,900,000
(namely, regular dividend 900,000, special dividend 3,000,000)	
New buildings	50,000
Carried over	349,502
	4,799,502

N.B.—The special dividend in question is paid on account of the third issue of new shares. The Bank's capital is now 29 million *yen*, of which 18 millions will soon be paid up.

DEATH OF THE AMERICAN CONSUL-GENERAL.

We deeply regret to announce the death of the United States Consul-General for Yokohama, Mr. John F. Gowey, which took place at the Consulate on Tuesday morning at 8.30. Mr. Gowey had been in poor health for some time, suffering from an internal tumour, and he had had the intention of returning to America this month. An operation was undertaken on Sunday by Drs. Koch, Eldridge, and Rokkaku, and was completely successful as far as the immediate object was concerned. Unfortunately, however, the patient's vitality—he was always a delicate man—was at a very low ebb, and, though for a time it appeared that he might rally, signs of sinking were observed about 3 a.m. on Tuesday, and he succumbed a few hours later, death being due to exhaustion.

Mr. Gowey was born at North Lewisburg, Champagne County, Ohio, on December 7th, 1846, and was educated in the Public Schools and at Ohio Wesleyan University. He studied law under General John H. Young at Urbana, Ohio, and was called to the bar on June 10th, 1869. He afterwards practised at Urbana, and, interesting himself in politics, became a member of the Ohio Legislature, representing Champagne County during the years 1873-5. He was then elected prosecuting attorney for the county, in which post he served for four years. He acted as delegate from Ohio to the National Republican Convention of 1880. In April, 1882, he was appointed by President Arthur as Registrar of the United States Land Office at Olympia, Washington Territory, and he served in this position till August, 1886. In November of that year he was elected a member of the Upper House of the Territorial Legislature, and in 1889 became Mayor of the City of Olympia, being re-elected in 1890. In 1889 he was chosen a member of the Constitutional Convention for the new State of Washington, and was chairman of the Republican State Committee for 1889 and 1890.

In August, 1890, Mr. Gowey was appointed by President Harrison Consul General for Kanagawa, and the appointment was confirmed by the Senate, but he resigned it without entering upon the discharge of the duties. Seven years later, he was again appointed, this time by President McKinley, to the Consulate General of Kanagawa. In July of the same year the title of the Consulate General was altered to Yokohama, and a new Commission was made out appointing Mr. Gowey, who arrived here in September, 1897. During his residence in this country Mr. Gowey, though a man who by the bent of his intellect was of rather retiring habits, made many friends, both among his own nationals and the other members of the community. His intimate knowledge of law and the judicial cast of his mind enabled him to fulfil with the greatest efficiency the duties of a judge devolving on him before the advent of mixed residence, and his legal acumen was not more remarkable than the kindliness and forbearance he showed on the Bench. His loss will be generally mourned, and the greatest sympathy will be felt for the widow in her bereavement. Mr. Gowey had one son, who is at present in Korea. According to present arrangements the funeral will not take place till his return.

The late Mr. Gowey was a Mason of high standing in the United States. Passing through all the chairs appertaining to the lower degrees, he gradually rose to the exalted rank of Assistant Inspector-General in the 33° of the Scottish Rite, Southern Jurisdiction of the U.S.A., his strong predilection for literary and intellectual research finding wide scope in the ritual, philosophy, and traditions of the mystic craft.

The affairs of the Consulate are temporarily in the hands of Mr. J. McLean, Vice-Consul.

CURRENCY AND THE CUSTOMS.

The Customs returns for this year show an excess of imports over exports to the amount of 20 million *yen* during the months of January and February. The specie exported in the same interval exceeded that imported by six millions. This balance of trade is now a perpetual source of uneasiness to the Japanese. It is one of the penalties they have to pay for engaging in the unnatural struggle for gold that the monometallic mania has imposed upon the civilized world. Some critics allege that the rise in the price of commodities and the large demand for imported goods are due to what they regard as an undue issue of convertible notes by the Bank of Japan, but when we are asked to believe that an average of six shillings per head of the population represents too great a volume of circulating media in a progressive country like Japan, we are inclined to be sceptical. Certainly, if imports exceed exports to the extent of 100 million *yen* throughout the year, as seems to be anticipated, and if specie flows out to a corresponding extent, the foundations of the gold system will become insecure. But how many examples of serious inconvenience arising from such a cause does the economical history of world furnish? Certain Japanese publicists remind us of the gentlemen who have undertaken to agitate about the tenure of land in Yokohama. The former keep themselves and their countrymen in a state of perpetual ferment about chimerical perils that threaten the national finances, and the latter, by constantly uttered complaints, surmises and suspicions have convinced the public that their titles are unsound, and persuaded the Banks that to advance money on such security would be most unwise. Foreign Banks lend millions of *yen* readily enough on the guarantee of the Japanese Government. Is it likely that they would hesitate to lend a few thousands on the same guarantee plus a full equivalent in landed property if the holders of the property had not themselves announced that their tenure is defective?

POLITICAL MATTERS.

Mr. Tanaka Shozo, the celebrated member of the Lower House, is suffering from an ailment which is said to have developed symptoms of insanity. He has always been noted for extreme excitability, and upon him rests the responsibility of many of the "scenes" that have taken place in the House. It would not surprise the public to learn that he suffers from some abnormal irritability of the brain.

There is renewed talk about Ministerial changes. The Liberals seem to be again agitating, and as usual the motive attributed to them is an impatient desire to obtain a share of administrative power so as to realize their long cherished aim of Party Cabinets. Three projects are said to be on the tapis, first, to secure Marquis Ito's aid and reconstruct the Cabinet *in toto*; secondly, to make Marquis Saigo Premier and work on conservative lines; and thirdly, to leave Marquis Yamagata at the head of the Ministry and obtain some portfolios for the Liberals. We give the rumour for what it may be worth.

Rumours continue to be circulated about a determination on the part of a section of the Liberals to obtain some speedy and substantial recognition of their services to the Government. They are said to have reverted to their old demand, two or three portfolios; and the plea attributed to them is that they can not go to address their constituencies without having something solid to show as the result of their long connexion with the Cabinet. They contend that they are in danger of being discredited as blind adherents of a Ministry which accepts their assistance but which does not give them any substantial return. The *Fuji Shimpo*, referring to this rumour, predicts that so long as Marquis Yamagata remains at the head of the Government there is no chance of the Liberals' obtaining their desire, for the Marquis will not consent to preside over a Cabinet which includes representatives of a political party.

BUDDHIST RELICS.

Preparations continue for receiving with due honour the modicum of the bones of Buddha that the Government of Siam is about to present to Japan. The *Nippon* indulges in some caustic humour in connexion with this matter:—The only relic of the sacred body possessed by Japan is the *Namubutsu no share* preserved in the shrine on Shimyo at Hiyei-zan. This is supposed to be one of the Buddha's eyes. Prince Shotoku held it in his clenched hand when he was born, and he did not open the baby fingers until he reached the mature age of 2 years, when, turning to the West, he joined his infant palms in prayer and the relic fell out. It is, therefore, not the mere remnant of a disintegrated corpse, but a miraculously preserved relic. Yet the Sect which have the honour of being its custodians attach less value to it than they do to the tooth of Nichiren, the founder of their faith. There is an ivory bone of Buddha in Ceylon, and there are various unauthenticated and probably false portions of his person in different parts of the world. "The clog and the idol, are they not carved out of the same tree?" Plain-spoken as these reflections are, it seems to us that our worthy contemporary would be reconciled to a great demonstration in welcome of the relics were Japan to be the recipient of all the bones found in the crystal urn. But that she should be a sharer on equal terms with Ceylon and Siam appears to ruffle the *Nippon's* sense of dignity.

It has been discovered at Aldershot, happily in time, that many of the carbines served out to the 4th Cavalry Brigade were undersighted, and in other respects defective. The weapons have been called in.

"HAS JAPAN A FUTURE?"

Under the above title, the *Congregationalist* has the following:—

The sudden rise of Japan to a recognized place among great civilized nations is one of the most remarkable of the political phenomena of the closing years of this century. Will she maintain this place? She has won it by the aid of Christian nations, especially the United States, Great Britain, and Germany. She has learned from them the principles of civil and religious liberty. She can stand with them only by maintaining these principles.

Last year the treaty went into operation which gave Japan full jurisdiction over United States citizens within that country. The same year Japan adopted a restriction against personal liberty that would be tolerated by no other civilized nation. The department of education issued an order forbidding religious instruction in recognized private schools, "even outside the regular course of instruction." In our comment on this matter some months ago, we were in doubt whether the decision committed the government to the deliberate purpose of suppressing religious teaching in schools supported by private funds; but the interviews between the representatives of such schools and of the Department of Education, recently published in the *Japan Mail*, remove all doubt on that point.

A petition for relief from these restrictions was presented to the Minister of Education, signed by several Japanese, American and English educators. The petition sets forth that the position of the department is without precedent in enlightened countries, and that it is an infringement on the religious liberty guaranteed by the constitution. To these points it was replied that the authorities were aware that the position was without precedent, but that the matter had been decided from the Japanese point of view, and that the liberty guaranteed in the constitution is liberty to believe a religion, but not necessarily liberty to propagate it. The counsellor for the department, Mr. Okada, further urged that the higher public schools were overcrowded, and that if students were admitted to them from private schools they would crowd out those from public schools; and that, as they might have a better knowledge of English than those from the public schools, they might put the latter at a disadvantage.

The results of these interviews are not encouraging to those who have looked for the development of Japan into an enlightened nation. The arguments urged for the narrow policy adopted do not exhibit either mature statesmanship or the character that aspires to it. If it is persisted in, Christian schools in Japan must be closed. If that is made necessary, it will mean the exclusion of Christian civilization and the principles of liberty which belong with it. If Japan denies these principles to her citizens, she will lapse into national weakness. If the Japanese point of view is one that leads her rulers to deprive her subjects of liberties granted by all enlightened nations, she will not find herself ranking with those nations.

We do not at all believe that the position taken by the Japanese Government will be permanent. A bill has already been introduced into the House of Peers by the Government giving to Christianity the same official standing as Buddhism, and if the bill passes all religions will be alike before the law. We note that the Minister of Education expressed some confidence that in time Christian schools doing the work of public schools might have the same privileges granted to them. But the question of the future of Japan does not depend on the reluctant granting or the withholding of privileges from Christian schools. Will her Government treat its subjects with justice? Does it respect its own constitution? Is it disposed to protect those individual rights without which enlightened government and national progress are impossible? It is on these vital matters that Japan is on trial before the nations and her answer to these questions will decide whether her sudden rise is a temporary phenomenon or the advance of a great people to a position of abiding power in the world.

It is well that the Japanese should clearly understand the views entertained in Western countries with regard to their proceedings in this important matter. There have been many indications that the Educational Department desires and intends to apply the celebrated *Kunrei* in such a manner as to impose minimum restrictions upon the introduction of the religious element into the atmosphere of private schools. But so long as the *Kunrei* stands some restrictions are inevitable, and just so long will it remain idle to say that the spirit of the Constitution is operative.

DEGRADED PEERS.

Three members of the nobility have been reduced to the rank of commoners by His Majesty's order. Viscount Toda for dissolute habits, and Viscounts Umezono and Sanemori, with the latter's son Sanemono and his daughter Eiko, for the disordered condition of their household affairs (*katei-binran*), which, we presume, is a way of saying that they are insolvent. This incident furnishes a text for the *Jimmin* to preach on its favourite subject, the advisability of limiting the hereditary tenure of a title to two, or, at most, three generations. That is a very old contention. Of all countries we should say that Japan is the most unlikely field for the application of such a doctrine, seeing that she has the oldest nobility in the world, and that the sacrifice involved in depriving them of their titles would be proportionately great.

With reference to the general subject of which this fall of certain noblemen from grace forms a part, *Yamato Chuyo*, writing in the *Japan Times*, expresses the opinion that a remedy for the present demoralized state of society will be found "when the young men of yesterday shall have become the fathers of growing families" and when, in consequence, "the young generation of to-morrow will have parents who will be alive to their responsibilities, both individual and social, and with real authority and possessed of extensive experience and a practical education before which the children must needs bow." It is very interesting to hear the opinions of a thoughtful Japanese upon a subject so important. We are not quite sure, however, that we fully understand *Yamato Chuyo's* meaning. His article begins with an explanation that when Japan entered upon her new career at the commencement of the *Meiji* era, she "passed under the control of young men" who would brook no authority and heeded no warning from their elders. These men, he goes on to say, "untrammelled as yet by those household cares which are the bone and marrow of social morality," not unnaturally "ran to excess in the gratification of the weaker side of their nature." It appears, therefore, that the "young men of yesterday," whose acquisition of growing families plus all the usual accompaniment of household cares, is to furnish a remedy for existing demoralization —these young men are the makers of the *Meiji* era; the youths who placed themselves at the country's helm in 1867 and have been steering her pretty constantly ever since. Very true undoubtedly is the assertion that young men took charge when the Bakufu fell. We have often ticked off the list of names, 56 in all, which represent the makers of the *Meiji* era, and, so far as we have been able to make out, their average age did not greatly exceed thirty. But that is 33 years ago. Many of the 56 have crossed the Styx, and those that remain must average over sixty years of age. Is it not a little late in the dayto hope that they will by and by become parents "alive to their responsibilities both individual and social" and so forth? We should like to hear *Yamato Chuo* explain his meaning more explicitly, for the subject is full of interest.

A HOTEL IN KYOTO.

The following circular has been issued:—

THE ORIENTAL HOTEL, LIMITED.

SIR,—I beg to enclose herewith copies of Resolutions which will be proposed at an Extraordinary General Meeting of the Company to be held on the 19th inst. The opinion of the Directors is unanimous that the proposed changes would be very advantageous to the Company, and they have no hesitation in recommending the Resolutions to the Shareholders.

The new capital is asked for in order that the Company may be enabled to purchase an excellent site in Kyoto, and to build thereon and furnish an hotel to be worked by them in conjunction with the Oriental Hotel in Kobe.

There is at present at Kyoto no hotel under foreign control or management. The only foreign style hotels at Kyoto are Yaami's and the Kyoto Hotel. These both belong to the same Japanese proprietor, and it is a generally recognised fact that they do not comply with the requirements that foreigners expect in a first class hotel.

Kyoto, owing to the charm of its situation, its beautiful neighbourhood, and its many objects of interest, has a greater attraction for foreign residents and travellers than any other city in Japan, and more time is spent there by tourists than in any other of the places usually visited.

The number of foreign visitors to Japan is increasing annually, and there is every reason to believe that it will continue to increase. The acquisition by the United States of the Philippines, the Revision of the Treaties between Foreign Powers and Japan, the greatly increased facilities to travel by the addition of new steamship lines, and the improvement in speed and accommodation on the lines already existing, the opening up of China to railway, mining and industrial enterprises, and the general increase in Japan's foreign trade, are but some of the many reasons that are bringing more and more travellers to the Far East and to Japan.

The field that is now open for a good hotel at Kyoto under foreign management must most assuredly be availed of sooner or later, and your Board is of opinion that such an hotel worked in conjunction with the present Oriental Hotel could be worked to far greater advantage than by a new Company, and would prove a most remunerative undertaking.

A beautiful and most suitable site containing about 12,000 *tsubos* has been secured, and arrangements have been made for the management of the new hotel, which the Directors feel confident will work satisfactorily. It is estimated that the cost of opening the Branch will be covered by the increased capital.

The opening of such a Branch is authorised by the Memorandum of Association of the Company, and the Articles of the Company provide for an increase of capital.

Should you be unable to attend the meeting, and wish to support the Board in passing the above resolutions, you will be so good as to sign the enclosed proxy in favour of the Chairman, Mr. A. H. Groom, and forward the same to the Secretary at the Oriental Hotel, Kobe, before the 16th instant.

The rights of Founders' shares and Debenture holders will be in no way prejudicially affected by the carrying out of this scheme; on the contrary, the value of the former and the security of the latter will, the Directors believe, be materially enhanced,

I am, your obedient servant,

GEORGE A. ADAM,
Secretary.

Kobe, March 8, 1900.

This appears to us to be a project of which the success is assured. That a good hotel is wanted, and badly wanted, in Kyoto can not be doubted for a moment. The test of several years' experience shows that the Japanese have not yet acquired ability to successfully run an hotel on foreign lines. The subject has often previously been discussed in our columns. A conclusive example is the Imperial Hotel in Tokyo. Considering the advantages it possesses in the matter of site, building and opportunity, we are bound to say that the Imperial Hotel is a failure. The reason is Japanese management. If Europeans or Americans were to set up a Japanese hotel in Tokyo and

Digitized by Google Original from CORNELL UNIVERSITY

attempt to work it entirely without Japanese aid, no people would more keenly appreciate the irrational character of the enterprise than the Japanese. Yet such an undertaking would be less unwise than an attempt on the part of Japanese speculators to establish a hotel in pure Oriental style in their own capital; for whereas foreigners in Japan have innumerable models of Japanese restaurants and inns to guide them, Japanese in Japan are almost entirely without such aids. Thus the Imperial Hotel does not begin to be what it might be. The most partial visitor can not call it comfortable or really well managed. When due allowances are made for the absence of foreign assistance, the hotel is good enough. Indeed, it deserves some praise. But there should be no necessity to make allowances. There would not be were the hotel's career governed by principles of serious finance. From the Imperial Hotel in Tokyo, however, to Yaami's or the Kyoto Hotel in the western capital is an immense descent. The Kyoto hostelries are examples of how not to do it. One endures them because nothing better is to be had, but they would not attract a single foreign visitor were they brought into competition with a rival establishment properly organized and worked under competent foreign management. That is why we regard the projected hotel as a certain success, for with such men for directors as Messrs. Groom, Hellyer, Reynell and Simon, all of whom have had long experience in Japan, it is sure to be well designed and organized, and, as the letter quoted above justly points out, Kyoto is, of all cities in Japan, the most attractive to foreign tourists. It is more than probable, indeed, that when this enterprise becomes an accomplished fact, many tourists who now make Tokyo or Yokohama their head-quarters will decide in favour of Kyoto. It appears that the projectors contemplate something on a large scale since they speak of acquiring twelve thousand *tsubo* (ten acres) of land. That is enough to make a small park, and a very beautiful park it would be, as well as a very convenient, for the site commands an exquisite outlook over the city and is only some seven minutes walk from the railway station. Under any circumstances it is a good speculation to procure a large area at present in Kyoto, for land in that city does not yet command a fraction of the value it will possess in future years. We look upon this enterprise with much interest as it will be the first started by foreigners outside the Settlements, and its success will probably inspire others to follow suit. The local authorities will doubtless see reason to place every possible facility at the disposal of the projectors, for it is in the interests of the citizens of the old capital that as many foreign tourists as possible should be attracted thither.

The newspapers of Tokyo speak of Mr. M. Kirkwood as the principal promoter of the proposed Kyoto Hotel. We presume that Mr. Kirkwood is a considerable share-holder, but his name does not appear among the promoters, so far as we know.

H.M.S. *Barfleur*, with Rear-Admiral Bruce on board, left Nagasaki on Friday afternoon for Yokohama by way of Kobe. The *Barfleur* will return to Nagasaki in the course of two weeks or so. H.M.S. *Centurion* is expected there from Hongkong in a few days.

BLUNDERING RADICALISM.

In a recent issue, the *Jiji Shimpo* published a leading article headed "His Majesty the Emperor's Congratulatory Message." Here is an exact translation of the article:—

It is stated that His Majesty the Emperor sent a congratulatory message to Her Majesty the Queen of England with reference to the victories won by British troops in South Africa, and that Her Majesty immediately returned a courteous answer. That this will have the effect of drawing the two Courts into still more intimate relations need scarcely be observed, neither can we doubt that its useful effect will also be to augment and make closer the sentiment of warm friendship between the two countries of England and Japan. Her Majesty the Queen of England has shown exceptional solicitude about the present war. She has (for example) invited and entertained the families of officers proceeding to the campaign, and to every soldier at the seat of war she has sent a packet of chocolate bearing her own signature. It is said that even her appetite and her rest have been impaired by anxiety, and that in spite of her great age she has abandoned her usual visit to a health-resort abroad. The complexion of the war in South Africa recently underwent a marked change, and we have seen the English army gain victory after victory. Naturally that is due to the excellence of the strategy employed, but when the matter is summed up we can not choose but ascribe something to Her Majesty's influence and virtue (*onosukara keikwaku no kwambi wo tsuge taru ga tame to wa iye sore wo ichigen sureba Heika no itoku ni kisesaru wo yesu*). The great victory on the Modder River, the relief of Ladysmith—the news of these successive victories must have given Her Majesty much satisfaction and we may assume that it brought great joy to the nation also. The people of Japan do not for a moment regard England's victories as an affair of an alien country. They have full and genuine sympathy with her, and although the congratulatory message sent by the Emperor may be primarily ascribed to the good relations between the two Courts, it must also be regarded as representing the sympathy that the whole Japanese nation entertains towards England. We do not doubt that the people of England will appreciate our feelings, and that this incident will conduce to strengthen the amicable relations of the two countries."

These are warm utterances, and we venture to assure the *Jiji Shimpo* that Englishmen will fully appreciate the great friendliness they display. It is, therefore, with a feeling of profound disgust that we read the following letters addressed to a local contemporary and published by it with reference to the *Jiji's* article:—

TO THE EDITOR OF THE "JAPAN HERALD."

SIR,—In your issue of last evening, you published a translation of the *Jiji's* comment on the Emperor's congratulatory telegram to the Queen of England anent the recent British successes in South Africa, and the Queen's reply thereto. This exchange of courtesies would have been harmless in itself, had it not excited in the mind of the writer in the *Jiji*, a crawling subservience to the idea of royalty, which sounds weirdly in the nineteenth century and smacks unmistakeably of Stuart days in England, when orthodox courtiers believed in the doctrines of Divine right and professed to regard the Sovereign as the Lord's Anointed. Perhaps some allowance has to be made for the Oriental exuberance of the *Jiji's* style when speaking of Princes, Potentates, and Powers, but, even so, it is pernicious balderdash to refer to British victories as being due to the "glorious virtues of Her Majesty, though *partially*, no doubt, * * * to the perfection of the plans adopted by the Commanders in the field." Such contemptible grovelling is not likely,—at least I hope not—to please the independent Englishman, who, while he may respect the Queen as a sensible constitutional monarch, and a good woman in private life, does not regard her as of more than mortal clay, or as in any other way immune from the weaknesses of ordinary humanity. The fact is, Sir, that the apparently growing tendency in some quarters to exalt the monarchical theory and pay gratuitous homage to royalty *per se*, is almost enough to drive one to republicanism, as a protest. I repeat that the *Jiji's* language is simply sickening in its ostentatious humility, and does not reflect the opinions of respectable Englishmen who wish to see credit given to those who deserve it, irrespective of such accidents as birth and station.

Yours, INDEPENDENT.
Yokohama, March 9th, 1900.

THE "JIJI SHIMPO" AND THE QUEEN.

TO THE EDITOR OF THE "JAPAN HERALD."

SIR,—I notice in the *Japan Herald* of yesterday evening, that the *Jiji Shimpo* is of opinion that the successes now achieved (in South Africa) are due in no small degree to the "glorious virtues of Her Majesty." I believe that the words in the original are more emphatic, and consequently more absurd, than in your translation; they ascribe the credit of Roberts' and Buller's success primarily to the Queen, and quite secondarily to the skill of the Generals. Suppose a great disaster instead of a victory had befallen the British troops, would that, too, have been due to the virtues of the Queen, or would the Generals have been censured for their stupidity? There is a double edge in this sycophantic writing.

I have no doubt that both papers were actuated with the best intentions in applying to the case of Great Britain the courtly terms of expression in common use in Japan, and all Englishmen will cordially recognise the good spirit evinced by this courtly tone towards England—a good spirit consistently shown by the Japanese throughout the the varying fortunes of the war. But the words used seem to imply that many Japanese have a very erroneous idea of the feeling with which the majority of soberminded Englishmen regard the monarchical institutions of their country; and that impression it would be well to correct.

The great body of Englishmen, I take it, are in favour of monarchy for two reasons. The first is a sentimental one. The British monarchy is a venerable institution, and we cling to it from sheer habit, just as we cling to the wig and gown of the barrister, to the solemnly senseless forms of parliamentary procedure, to the absurdly antiquated English in official proclamations, to the obsolete language of the Bible. Our upper classes—both the small section of the Howards, Percies, and Paulets and the large section of successful lawyers, stock jobbers, brewers, and manufacturers—must have a centre round which to revolve, and the great middle classes, who can never hope to step into the magic circle, still enjoy reading the court circular, and satisfying their innate British spirit of snobbery by following the movements of the great. This, though a purely sentimental, is nevertheless a very strong motive of attachment. The second reason is a more practical one. Englishmen do not see that, either in France or America, the Republican ideal is free from any of the vices of limited monarchy, while it has a large crop of faults peculiarly its own, which we are happily spared. Then, again, in a vast and scattered Empire like our own, composed of races and communities of different races and conflicting interests, the Queen is certainly a more potent name to conjure with than a President Chamberlain or a President Primrose. For these various reasons ninety nine out of every hundred Englishmen are well satisfied with things as they are, and even the hundredth, though he may speak loudly about liberty and justice and the rights of men, would not risk ten shillings on the realisation of his Republican ideals.

But it must not be assumed, for all that, that our loyalty is the loyalty the Turk feels for the Commander of the Faithful, that the French aristocrat felt for Louis le Grand, or that Filmer preached in the time of the Stuarts. It is a strictly reasoned and moderate loyalty. Most of us cheerfully admire the personal qualities of the present Queen, and even the most lukewarm admit that, even if she has not done much good, she has refrained from doing harm. But, with the exception of a few poor fools, we are under no illusions of the Divine right order. The Victorian age has doubtless has been a great one for England, but it would have been as great if any equally innocuous monarch, with an equally good title, had occupied the throne. To give the Queen credit for all the grand achievements of her reign is not nonsense merely, but dangerous nonsense. It assumes that the Sovereign has some higher and more sacred power than the sanction of the nation: that there is in kingship some subtle essence that differentiates royalty from ordinary human humanity. That doctrine received its death blow when the English, by the cruel irony of fortune, had to choose for their king the boorish ignorant elector of a petty German principality, and it would be dangerous as well as foolish to revive it in an age when every schoolboy has ideas on the evolution theory and has some smattering of the philosophy of Bentham, Mill, and Spencer. The earlier Princes of the House of Brunswick, of the earth earthy, inferior in manners, education, and intelligence to the ruck of the

Digitized by Google Original from CORNELL UNIVERSITY

aristocracy they governed, were never more than a disagreeable political necessity, supported loyally, but without enthusiasm, from sheer motives of expediency. The Queen is not so regarded; she has won a place in the hearts of her subjects partly by her personal virtues, but chiefly by being content to leave the Government almost entirely in the hands of her Ministers. If the English Sovereign were to pursue any other course, the great majority of Englishmen would remember how their ancestors' stout English hearts rose against the tyranny of the Stuarts, and it would be found that what passes current as loyalty to the Throne, is but another name for loyalty to the free institutions of England.

It is possible that Mr. Chamberlain's recent reference to the "almost sacred name of the Queen" has given a twist to Japanese ideas. It was certainly a remarkable phrase for an ex-Democrat and ex-Republican like the Colonial Secretary to use, but I presume that he only meant it figuratively; he considers the name of the Queen sacred just as he considers that of a Duchess, or a Marchioness or even a brewer's lady in good society—sacred. Mr Chamberlain's reverence for blue blood has grown to immense proportions since he gained admission to the gilded salons of the great. But if he used the word in its literal sense, he was talking most pernicious nonsense, calculated to disgust and offend many who are truly attached to the present constitution, with its Royal figurehead and its sovereign people.

Yours faithfully, VOX POPULI.

Yokohama, March 9th, 1900.

The language used by these two writers is finely forcible. It has a noble ring of the stump-orator. Even had the *Fiji* used the words attributed to it by the *Japan Herald* the utter gracelessness of tirades like those indulged in by "Independent" and "Vox Populi," should have suggested itself to any mind, however coarse its fibre. If a foreign journal publishes an article breathing hearty friendship for England at a time when the newspaper press of nearly all other countries has nothing but abuse for her, the most tactless Englishman might have sufficient grace to refrain from harsh criticism of the diction of the article, even though he finds there something out of touch with his own special views about monarchies, democracies, and such matters. But this is not a gross offence against good taste only. The attacks of "Independent" and Vox Populi" are based upon a falsehood. The *Fiji Shimpo* never said that "the British victories were due to the glorious virtues of Her Majesty, though partially, no doubt, *** to the perfection of the plans adopted by the commanders in the field." What it said was that the victories were "of course due to the excellence of the strategy employed, but that when the matter is summed up, we can not choose but ascribe something to Her Majesty's influence and virtue." "Vox Populi" carries the falsehood even further. "I believe," he says, "that the words in the original are more emphatic, and consequently more absurd, than in your translation; they ascribe the credit of Roberts' and Buller's successes primarily to the Queen, and quite secondarily to the skill of the Generals." Did "Vox Populi" consult the original? Most assuredly he did not. No one with even the most rudimentary knowledge of Japanese could fall into such a monstrous blunder. What right has he, then, to stand forth and talk about "the original"? "Independent" was misled by the ridiculously false translation of the *Japan Herald*, but "Vox Populi," not content to be merely misled, must come forward with a still more absurd mis-statement of his own to mislead others, pretending, foorsooth, that he has referred to "the original." The exquisitely comical side of the incident will probably appeal to the *Fiji Shimpo*. We hope that our contemporary will laugh heartily at these viciously democratic sermons of "Independent" and "Vox Populi" based upon a text which is cipher. Will they apologise? Perhaps, but if they have the grace to admit their error they might have had sense to see how utterly tactless and repulsive their letters must appear.

We judged rightly when we predicted that the correspondents of a local contemporary who, misled by a grossly false rendering of an article in the *Fiji Shimpo*, attacked that journal's political creed, would not have the grace to apologise when they discovered their error. They represented the *Fiji Shimpo* as saying that the recent successes of the British troops "are apparently due to the glorious virtues of Her Majesty, though partially, no doubt, it (*sic*) may be attributed to the perfection of the plans adopted by the commanders in the field," whereas what the *Fiji* really said was that the victories were "naturally due to the excellence of the strategy employed, but that when the matter is summed up, we can not choose but ascribe something to Her Majesty's influence and virtue." The two statements are totally different. One makes out that the soldierly qualities of the British force contributed in a partial degree only to their victories, the Queen's "glorious virtues" being the chief cause of success; the other gives the credit primarily to the soldierly qualities, but claims that, in casting up the final account, Her Majesty's influence and virtue must not be omitted. No Englishmen would endorse the former assertion; every Englishman would endorse the latter. That is just the difference. Every Englishman is ready to admit that the virtues of the Queen have been one of the factors making for England's progress and growth in the Victorian era, and that the honour and affection in which Her Majesty is held by her subjects and by her soldiers, help to consolidate the empire and to strengthen its armies. What the *Fiji Shimpo* really wrote might have appeared in any British newspaper without provoking hostile criticism. What the *Fiji Shimpo* was erroneously represented as having written, could not have appeared in any British journal without exciting ridicule. The simple and manly course for "Independent" and "Vox Populi" would have been to say:—"We have been misled by an incorrect translation. Now that we know the truth, we withdraw our strictures." But they do nothing of the kind. Or, to speak, more correctly, *he* does nothing of the kind. For there is apparent reason to believe that "Independent" and "Vox Populi" are one and the same person; that the person is in reality an *employé* of the journal to which he addresses himself, and that the adoption of different "noms de plume" when discussing the same subject in the same issue of the same journal, is merely one of those tricks which pressmen of a special type deem justifiable. "Independent" and "Vox Populi" having now been reduced to one person, we find that person attempting to escape from the very false position into which he was originally betrayed, and his avenue of escape is personal abuse of the editor of the *Japan Mail* supplemented by a pretence that the old-fashioned and silly doctrine of the divine right of kings has been again resuscitated. It was a very small matter to have been misled in the first instance, whatever may be said of the gracelessness of the comments based upon the misapprehension. But it is a proceeding of another complexion to adhere to an error that has been demonstrated, to decline to make one word of apology for rude sarcasm based entirely upon that error, and to endeavour to hide such conduct under abuse of a third party and under dissertations on wholly irrelevant issues. The assumption of a dual personality, the employment of different *noms de plume* by the same individual, the manœuvre of manufacturing simulated expressions of public opinion within the precincts of a newspaper office, the refusal to acknowledge an established blunder or to withdraw or express regret for abuse based upon it—all these things make a very pretty record.

THE SPINNING INDUSTRY.

Twelve of the cotton-spinning companies, including nearly all the most influential, have succeeded in forming a trust, on the basis that the amount of yarns exported by the association shall bear a fixed ratio to the number of spindles at work: namely, 10 bales for 5,000 spindles, 20 for 10,000, and so on up to 20,000 bales, when the ratio becomes vague, the number of bales being put at "50 or upwards." The Mitsui Bussan Kaisha are agents for the Trust, and its business will be conducted in their Osaka office.

It is stated that the number of the various spinning factory-hands in Japan aggregates 58,000, and that the conditions of their service are so unsatisfactory that ten per cent. of the total quit the work every month. Thus in ten months the whole of the hands are renewed. The expense involved in changing an employé and teaching him is estimated at 10 *yen*, whence it would follow that a loss of nearly seven hundred thousand *yen* is entailed annually by this constant unrest. The explanation given is that the factories have not yet learned how to treat their work-people properly. The *Chuo* considers that this problem, so long as it remains unsolved, represents one of the three great obstacles to industrial progress in Japan, the other two being want of capital and want of raw material.

DEATH OF BARON YAMADA.

The death is announced of Baron Yamada. Inflammation of the lungs, coming in the sequel of an attack of influenza, terminated fatally on the morning of the 12th instant, after an illness of eight days. The deceased was in his sixty-seventh year, but his general health was robust up to the time of his last illness. The early part of his career was connected with judicial duties, and having subsequently served as Governor in some important prefectures, including Osaka and Kyoto, he received the portfolio of Agriculture and Commerce in 1897. In the following year he became Director of the Board of Audit, which position he held at the time of his decease.

Subscription lists have been opened in Shanghai on behalf of the widow of the late Sir Chaloner Alabaster, who has been left in needy circumstances; and for the Indian Famine.

THE U.S. AND JAPAN.

It is plain that if the United States Government persists in applying to Hawaii the restrictions enforced generally in American territory against the immigration of contract labourers, and against foreign ships engaging in the coastwise trade, the very exceptional feeling of friendship hitherto entertained by this country for the United States will be considerably chilled. After all, a distinct promise was made to Japan at the time of the annexation of Hawaii that the rights and privileges already acquired by this empire in Hawaii should be respected and confirmed. Can it be claimed that the promise is fulfilled if contract labourers who have hitherto been free to enter Hawaii, are forbidden by law to proceed thither; or if Japanese ships touching at Hawaii, are not allowed thereafter to enter America's territorial waters? No such claim can be honestly set up, nor is there the least probability, we imagine, that the Washington Government will think of setting it up. Japan's position in this matter is exceptional. She has nearly sixty thousand of her subjects in Hawaii, and the fact should be taken into due consideration even though no attention were paid to the promise by which America has bound herself.

Complaints of America's contemplated action with regard to Hawaii and the Philippines continue to be published by vernacular newspapers. It is now pointed out that the United States is no longer in a position to complain that Japan sells much to America and buys little in return. The balance of transactions has been almost established and Japan is now entitled to expect considerate treatment. But it will not be considerate treatment, nor anything like considerate treatment, if America deliberately ignores the pledges given by her to the Japanese Government at the time of the annexation of Hawaii, where Japan has sixty thousand of her subjects. It is plain that this question threatens to make an unfortunate breach in the close friendship hitherto existing between Japan and America.

It is predicted by the *Asahi Shimbun* that the action of the United States is destined to present one of the most difficult problems of foreign policy for Far-Eastern nations. This forecast is founded on the fact that America has undergone a metamorphosis. From a republic, self-contained, treating foreign States with the utmost consideration, entirely free from aggressive impulses and regulating her international procedure by the rules of right and justice, she has suddenly become metamorphosized into a military Power, obeying the instincts of conquest and expansion, and stretching aggressive hands even to distant regions of the Far East. She has acquired Hawaii and the Philippines as the first-fruits of her new career, and seeing that despite her comparatively weak navy and small military establishment, no Power in the world seems disposed to say her nay, it is difficult to set any limits to her doings hereafter when she shall have furnished herself with a strong navy and a big army. We need scarcely say that the *Asahi's* article is inspired by the prospect of the United States' applying its restrictive policy to its new possessions, Hawaii and the Philippines. The *Asahi* regards that as a great misfortune, but sees no remedy and can only lament such a signal fall from grace on the part of the Great Republic. But have we not all foreseen these things for many years? America can not be an exception to the universal rule, growth or decay.

The condition of some of the Japanese who were rendered homeless by the recent sanitary precautions in Hawaii is said to be very pitiful. Miserable lodgings have been provided for them, and they are expected to subsist on two meals of gruel daily. This information is furnished by a emigrant who has just returned from Hawaii. He alleges that the Government had always desired to destroy the quarter where these Japanese lived among a number of Chinamen, and that the alarm of plague furnished a welcome pretext. It is well to receive such statements with reserve.

The United States Government has issued regulations providing that seamen discharged from foreign ships in American ports shall stand upon the same footing as contract labourers for purposes of landing. It appears that the issue of these regulations has been necessitated by abuses which have occurred on a somewhat extensive scale. Ship-masters have been in the habit of placing upon the list of the crew the names of men who had not any genuine connexion with the duties of navigating the vessel, but who resorted to that device for the purpose of evading the Immigation Law. Arrived in the States, they at once obtained their discharge papers from the ship, and were enabled to land as sea-men, though in reality they were labourers. It is to prevent this evasion of the laws that the new regulations have been issued. They do not affect the landing of *bonâ fide* members of a ship's crew.

MR. JORDAN AND THE KOREAN GOVERNMENT.

The Sōul correspondent of the *Nichi Nichi Shimbun* sends a most circumstantial account of the "incident" which is said to have occurred between Mr. Jordan, the British Representative in Sōul, and the Korean Foreign Office. The correspondent undertakes to furnish even a verbatim copy of despatches said to have passed between the Foreign Office and the Chargé d'Affaires. We do not see how copies of these documents can have come into the possession of a newspaper correspondent, and we therefore refrain from translating them in full. The gist of the Korean despatch is that Mr. Jordan having several times applied for an audience with the Emperor, it was necessary to inform him that his conduct, on the occasion of a previous audience, had been deficient in the usual forms of courtesy and that application had consequently been made to Her Majesty's Government for his removal. The despatch went on to say that he habitually endeavoured to secure his ends by threats and exhibitions of force; that the Korean Government objected to such methods, and that if concessions were desired, they must be sought by conciliatory means. Mr. Jordan, in reply, is said to have denied emphatically that he had been guilty of any lack of courtesy, however slight; to have objected that, did any grounds for such a complaint exist, they ought to have been set forth at the time instead of waiting until several days had elapsed; and to have concluded by saying that if the Emperor received him, he should take the opportunity of assuring His Majesty that there had not been the smallest intentional departure from the strict rules of etiquette and courtesy on the part of the British Representative.

Is it conceivable that the Korean Foreign Office penned such a despatch? We have never found anything of the kind in any archives. But inasmuch as Mr. Jordan is about to quit his post on eighteen months' leave and to be succeeded by Mr. Gubbins, the public will be disposed to indulge in its usual pastime of putting two and two together.

AN ILL-TIMED CLAIM.

If Colonel Mareuil, chief of Joubert's staff, had been gifted with a little foresight, he would have refrained from writing to *La Liberté*, claiming that two Creusot agents managed the Boer artillery throughout the siege of Ladysmith, for the management of the Boer artillery throughout the siege of Ladysmith must be regarded as the greatest fiasco of the war, up to the present. We stated in a recent issue that the Boers had 24 guns for the attack of Ladysmith. That statement referred, however, to the position at the close of December, and we know that the Boers placed new guns in position at a later date. Among the attacking artillery there were at least two 15-cent. Creusots; in other words 5.9-inch guns, which were much more powerful weapons than the two 4.7-inch Naval guns possessed by the garrison. The Boer armament included also five 4.7-inch howitzers. Using these seven heavy pieces during an interval of three months, and supplementing them by seventeen field-guns, they produced scarcely any impression on Ladysmith. That is not a record to be proud of. If French experts were really responsible for it, Colonel Mareuil would have done better to conceal the fact. We are inclined to think, however, that the explanation of the failure is the obstinacy of the Boers. Had the siege operations been under the effective control of French officers, it is scarcely possible that Ladysmith could have held out. But it is one thing to put guns in position and another to ensure their proper use. We have been told of a private letter from a German officer serving with the Boers. He complained bitterly of their refusal to take instructions, and their dogged resolve to work in their own way. Referring to this very matter of the bombardment of Ladysmith, he said that to show the Boers how to do it was precisely the way to prevent them from doing it. Ceusot's men seem to have made a fiasco, and their countryman, Colonel Mareuil, has been unwittingly unkind to them, but we should like to hear the story of the survivor of the two.

A TELEGRAM OF CONGRATULATION.

Mr. Kodama, formerly Chief Judge of the Supreme Court and now a member of the House of Peers, has addressed the following telegram to the Queen:—

Shosuke Kodama, member of the House of Peers of the Imperial Diet of Japan, humbly presents congratulations to your gracious Majesty for the success of the British arms in South Africa.

Digitized by Google Original from CORNELL UNIVERSITY

THE TWO REPUBLICS.

The news that overtures for peace have been made by the two Republics, naturally evokes comment from Japanese journals. The *Jiji Shimpo* concludes that, in view of the blood and treasure England has expended, she can not possibly reconcile herself to anything less than annexation. Whatever the Government might be disposed to do in deference to prudential considerations, the nation would surely not endorse any half-hearted measures. It is nevertheless our contemporary's evident opinion that England's relations with the other Powers of Europe will be jeopardized by the annexation of the two Republics, for a large increase of territory supplemented by the development of strength that this war will bring, must have an effect on the balance of power, and will augment the jealousy of rival States.

These comments are suggestive, and we should hesitate to dissent from them altogether. But with regard to the terms granted to the two Republics—assuming that England will, by and by, be in a position to dictate terms,—it seems to us that there is a consideration much more imperative than the imperial ambition of the British people. It is that, as a matter of elementary precaution, Great Britain is bound to provide against any repetition of the experiences she has just suffered. It is beyond question that the two Republics had been steadily and strenuously preparing for war during many years, and that their ultimate purpose was, not merely to defend their independence, which was not threatened by any forcible process, but to drive the British flag out of South Africa. Is it not England's plain duty to guarantee herself against a renewal of that attempt? Were the two Republics situated on her borders, so that she could watch them closely and be always prepared to deal swiftly and effectively with emergencies, she might be justified in recognising their independence. But they are seven thousand miles distant from her shores, and they lie in the interior of a continent which is ill-provided with facilities of transport. To move an efficient army against them is a stupendous task. If, then, they are allowed to return to an independent condition, England would have to choose between three courses: either to maintain a military force of a hundred thousand men in the Cape Colony and Natal, in order to guard against disaffection among the Dutch Colonists and against a second invasion of her territories by Boer armies; or to abandon South Africa to whatever fate its inhabitants can work out for themselves; or to drift back into the old state of unpreparedness and reliance on happy chance. None of those courses can be contemplated for a moment by a practical nation. The first essential of any settlement must be the complete disarming of the two Republics and the establishment of a system of government which will effectually check all attempts to strike against England's dominion in South Africa. Were the maintenance of the Republics' independence compatible with the attainment of those objects, all thoughtful Englishmen would like to see them independent. We know the sweets of liberty and we respect and admire the courage and perseverance hitherto shown by the Boers. But the safety of the British empire stands paramount in the eyes of British statesmen and British subjects. They will never consent to the restoration of a situation from which the perils and sufferings of the past five months might be evolved again at any moment. As to the question of the balance of power, no State except Germany is immediately concerned. Some Germans hold that the preservation of their South-African colonies is not consistent with the annexation of the two Republics by Great Britain. Englishmen do not think anything of the kind. They believe that the future has only friendship and co-operation in store for the Teuton and the Briton. But it is at all events apparent that whatever apprehensions the Germans may entertain on that score, Germany is not going to interfere between England and the Republics. Apparently the German press does not think that right was originally on England's side, but certainly the German nation will not deny the right of conquest when conquest is achieved.

TOKYO CHAMBER OF COMMERCE.

The Tokyo Chamber of Commerce has just held an extraordinary meeting at which it was unanimously decided that the privilege of owning real estate and of engaging in mining enterprise should be extended to foreigners. Our readers are aware that the Diet, in its last session, passed a bill giving to foreign juridical persons the right of engaging in mining. But the Tokyo Chamber proposes to go further, and to confer the right on individual foreigners. The Chamber bases its recommendation on broad lines. It places the question of the introduction of foreign capital in a secondary rank, and argues that Japan, having entered the comity of nations on equal terms, ought not to discriminate any longer between her own people and the foreigners who come under her jurisdiction. We are glad to find such an expression of liberal views on the part of the Chamber, and to observe that higher ground has been taken than the mere selfish consideration of attracting foreign capital.

THE BURNING OF THE THEATRE FRANCAIS.

The destruction of the Théatre Francais, news of which appears in our telegraphic columns, is a most lamentable affair. The site of the building teemed with associations of the high and palmy days of the French monarchy. In 1629 the great Cardinal Richelieu caused the Hotel de Richelieu to be erected, after the plans of the architect Le Mercier, on the sites of the old Hotels d'Armagnac and Rambouillett. The *salle de l'opéra* of the Cardinal Duke, which was upon this site, was burned down in 1763 in a fire which swept away the whole group of buildings. The opera house was rebuilt, but in 1781 another fire destroyed the new building. Louis XVI. then commenced the construction at the opposite extremity of the Palais Royal of a new theatre, which was opened to the public on the 15th May, 1790. This is the theatre which has just been destroyed. It contained, in addition to archives most precious for purposes of theatrical research, artistic collections of inestimable value.

MURDER OF BRITISH OFFICIALS ON THE BURMAH FRONTIER.

News from China makes it plain that the telegraphic reports recently received of a murderous outrage on the Burmah-Chinese frontier were in the main correct. Two Englishmen, Dr. Kiddle and Deputy-Assistant Commissioner Sutherland, were killed, and Mr. Litton of the Consular service was wounded. The murderers are said to have been soldiers forming a guard supplied by the Governor of Yunnan, and the scene was Mengka, which lies about 150 miles south-west of Momien. These facts are stated in bare outline. They appear, however, to be well authenticated and they render it difficult to understand the news subsequently telegraphed to the effect that a force of British troops had attacked a Chinese garrison and killed 80 men. It will probably be found that the perpetrators of the outrage were, not Chinese guards, but some of the bandits who infest the region.

The *Rangoon Times* of the 14th February reports:—Further news has been received from Mr. Scott that the Las burnt certain Shan villages, notwithstanding the presence of Chinese troops. Mr. Scott has summoned the military police reserve from Hopang to his assistance. Captain French-Mullen is starting to join Mr. Scott at Mongkaw on the 19th instant.

DEATH OF MRS. IWASAKI.

The death is announced of Mrs. Iwasaki, mother of the late Mr. Iwasaki Yataro, and grandmother of Baron Iwasaki Hisaya. She expired at 6 a.m. on the 14th instant, in her eighty-seventh years. Mrs. Iwasaki had always enjoyed exceptionally good health, but she was overtaken this winter by an attack of influenza, which brought on other complications. The funeral will take place on the 18th instant, at half-past two in the afternoon, and the interment will be in the family vault at Somei, where the remains of the late Mr. Iwasaki Yataro lie.

THE LEE-ENFIELD AND THE MAUSER.

Our paragraph about the Lee-Enfield and the Mauser rifles has misled more than one correspondent. It seems to be thought that because we wrote "Mauser .276 (Spanish)," we intended to imply that the Mauser is a Spanish invention. All the world knows that the Mauser is a German rifle. But there are two types, the German (.311) and the Spanish (.276). They are usually distinguished as "German" and "Spanish." That is all. Since, however, we are responsible for having brought this matter on the tapis, it seems only fair to quote the remarks recently made by a correspondent of *The Times* with regard to the comparative efficiency of the two weapons:—

SIR—Among the volumes of correspondence about defects, real or implied, in our military equipment, as the outcome of events in South Africa, disparagement has been cast on our service rifle and the marksmanship of our soldiers, while the Mauser rifle and marksmanship of the Boers have been unduly over-rated. These ideas find ready belief among many always ready to accept anything to our detriment, but so many references have been made to me for my opinion on the subject that in deference to a generally expressed desire I venture this remonstrance.

My task is to show that our service rifle is as good as, and in no respect inferior to, the best in the

Digitized by Google Original from CORNELL UNIVERSITY

hands of the Boers, and that it is a gross perversion of facts to rank the Boers of to-day as superior to our soldiers as marksmen. It is therefore incumbent on me, first, to say that my experience in the subject of rifles (military and sporting) and ammunition extends back 40 years, and that 18 years of my service were passed (in all grades from regimental to chief instructor of a school of musketry) solely in the instruction and training of officers and men in musketry.

The majority of the rifles in the hands of the Boers are Mausers, of which there are two calibres —the German, ·311 and the Spanish, ·276. The subjoined table gives the technical merits of these rifles in comparison with others in a concise form :—

Name.	Calibre.	Bullet: Weight in grains.	Bullet: Driving value.	Bullet: Comparative weight per section.	Approx initial velocity foot seconds.
	Inches.				
Lee straight pull	·236	112	·273	2·5	2,500
Krag-Jorgensen, &c. ...	·256	162	·335	3 0	2,400
Mauser, Spanish	·276	173	·313	2 8	2,250
Lee-Enfield..	·303	215	·326	2·9	2,000
Mauser, German.....	·311	227	·325	2·9	2,025

These figures are worthy of attention, for they show of the ·236 that, though it may have the highest initial velocity, it is lowest in all other points and is therefore inferior in ranging power; of the ·256 that it is superior to all others all round; of the ·303 and ·311 that there is nothing to choose between them; and of the ·276 that its higher initial velocity is neutralized by the low figures of its bullet values, and it is inferior to them in range. It is, therefore, evident that the British Lee rifle is not inferior to the German Mauser, and that though the initial velocity is inferior to that of the Spanish Mauser, its superior bullet values make it superior in ranging power. It will be obvious to those acquainted with the subject of "ballistics" that the above comments in no way refer to the systems of breech and magazine mechanism, but solely to the barrel (*i.e.*, calibre and rifling) and cartridge (*i.e.*, explosive and bullet).

Now, as to the respective standards of marksmanship of the average Boer and of "Tommy," have those who so freely praise the former and belittle the latter condescended to consider the conditions under which they have met in the field of war? The Boer carefully prepares for himself a "position" comfortably placing himself in safety behind earth or rocks whence he can see, and not be seen, and can fire deliberately, generally, too, having previously measured distances and made a rest for his rifle. Now look on the other picture. Our soldiers come into action, say, at 1,500 yards, and thence onwards are under a perpetual storm of lead, and to reach their unseen enemy have to lose no time, but drop, fire, rise, rush, the excitement and exertion making the heart and head throb, and hand and eye shake. The wonder is that even their splendid courage carries them through it. Let these conditions ever be reversed, and the Boers, even in triple strength, attack our infantry in a prepared position, and I venture to say that not a single Boer would ever reach the British line. The belief that the Boer is a wonderful shot is utter nonsense. Some of those of 40 years ago might have been fine game shots owing to plentiful practice, but the Boer of the present generation is but an indifferent shot and it must be borne in mind that the majority have only recently been served out with military rifles, with which they have had little training. On the other hand, our men have had excellent training under careful supervision, are familiar with their rifle, and under service conditions are better shots than the soldiers of any other nation.

I crave your permission to add that it is not from partiality for our service rifle that I have written this, for ever since its initiation in 1888 I have strongly opposed it, on account of the system of breech and magazine mechanism. It is not a difficult matter to lay hands on a military rifle superior in all points to the Lee-Enfield, and we British should at least spare no money to equip our Army with the very best that money can procure, for the blood of our soldiers is the costliest in the world.

I have, &c.,

W. F. NUTHALL, Colonel, late Inspector Army Ord. Depart.

Miss Mary Ritchie, daughter of the Right Hon. Charles Thomson Ritchie, president of the Board of Trade, was married to the Hon. Frank Russell, son of Lord Russell of Killowen, at Brompton Oratory on Feb. 17th.

MISCELLANEOUS TOPICS.

The torpedo-destroyer *Kagero* arrived at Nagasaki on the 14th instant.

Viscount Nomura Yasushi has been appointed a member of the Privy Council.

A batch of students, numbering 331, have just graduated at the Naval Artillery College.

The Osaka Shosen Kaisha has added to its fleet a steamer of 1887 tons and 11 knots speed.

Dr. Kitasato has had an honorary degree conferred on him by the Imperial Military University of St. Petersburg. He already holds similar distinctions from learned bodies in other countries.

Countess Hijikata has had a stroke of paralysis and now lies in a dangerous condition. The Countess' health has been more or less broken since the unhappy death of her favourite son, about a year ago.

Prince Waldemar was received in farewell audience by the Emperor and Empress of Japan on the forenoon of the 10th instant. In the afternoon he visited the Red Cross Hospital, and on the 11th he left Tokyo, after a sojourn of six days.

It appears that the Odawara Electric tram does run to Yumoto, after all. Conflicting statements have been published, but according to a prospectus just issued by the company, the rail goes from Kodzu to Yumoto a distance of 8 miles. The electricity is generated by water power.

The *Asahi Shimbun* reports that the Japanese police have arrested a Formosan bandit chief in the interior of China and brought him to Amoy. We presume that the constables engaged in their work were Formosan Chinese in Japanese employ, but even on that hypothesis their incursion into Chinese territory seems peculiar.

A considerable part of the buildings belonging to the *Boseki Yōhin Kaisha* (Cotton-spinning Supply Company) in Osaka has been destroyed by fire. The loss is estimated at 70,000 *yen*, but there is insurance on the building to the amount of 40,000 *yen*, and on the stock to the amount of 3,000 *yen*.

Very conflicting accounts are given of the produce of the Esashi gold mines. The *Chugai Shogyo* puts the whole of the last year's yield at *yen* 600,000 worth, and says that the number of persons engaged in the work was 12,000. The *Jiji*, on the contrary, alleges that the output during April, May and June, alone, of 1899 was 19 *kwan* 166 *momme*, and that the total output for this year will be about 70 *kwan*. It is at all events evident that the district is yielding a rich return. The auriferous area is estimated by the *Shogyo* at 1,379 *ri*, which would be a square with a side of about 37 *ri*. It is difficult to believe that the area can be so extensive.

There is talk of a fine arts company being organized on a large scale, the promoters being Japanese, American, English and French. Japanese newspapers put the capital at twelve million *yen*, and say that it is to be a partnership concern, commencing operations in 1902. The names of the partners are given. The Japanese is Mr. Kobayashi of Nikko, and the foreigners, so far as we can discover from their transliterated names, are Messrs. Gardiner, Piers and Meyn.

The high cold wind felt in Tokyo and Yokohama on the 12th instant is now connected with a heavy snow-fall reported from Fukui in Echizen, Yokkaichi in Ise, Tottori in Inaba, and from Shizuoka and Sapporo. From the last named place 8 feet of snow is reported.

Prince Waldemar entertained several of the Japanese Ministers of State and the Foreign Representatives at dinner on board his ship on the 13th instant. It is understood that his Royal Highness will now proceed again to Tokyo and take up his quarters at the Imperial Hotel, whence he will visit Nikko and other places of note.

Count Itagaki, interviewed by a member of the *Mainichi's* staff, reverts to his frequently advanced opinion that there is urgent need to reform the manners and customs of the Japanese people. His censure seems to be directed specially against their want of modesty. We sincerely hope that he will succeed in imbuing many publicists with the same idea.

According to Tokyo journals, the stock of silk in Yokohama at present is much larger than it was at the corresponding period last year. These are the figures given :—

	At present.	At corresponding period of 1899.
Kikai-ito	6 680 bales	2,206½ bales
Zanguri	1,180 bales	108 bales
Kakeda	682 bales	24 bales
Totals	8,542 bales	2,338½ bales

The debts of the Eastern Hongwan-ji total 1,200,000 *yen*, it is said. Conferences have recently been held with the object of devising some means of paying off the money, and the result is that the adherents of the Sect in Kaga, Noto, Echizen and Etchiu will be asked to put up one-fourth of the amount, while Kyoto, Nagoya, and other places will find the remainder. This temple has been a heavy burden on the shoulders of the faithful.

It is stated that Tokyo is at length on the verge of taking the final plunge in favour of electric street railways, and that the Sampa-godo will see the concession come in its direction after all. 'Tis a long lane that has no turning. The public, however, has been so repeatedly deceived in this matter that belief in anything practical will not be easily entertained.

There is a project on foot to construct another line of railway between Tokyo and Yokohama for the carriage of goods only. Its termini would be at Etchiujima and the Yokohama Custom House, respectively. The promoters imagine that as goods only would be carried, their road would not compete injuriously with the Government railway, though the idea apparently is to run the two side by side. Surely that is a somewhat sanguine view?

The Industrial Bank announces its seventh issue of prize-bearing bonds. The amount is 1½ million *yen*, the rate of interest, five per cent., and the face-value of each bond, 20 *yen*. The bonds become redeemable from October 1st, 1900, and the redemption will be completed in 40

Digitized by Google Original from CORNELL UNIVERSITY

years from that day. Applications will be received from the 20th instant up to the 10th proximo, and the subscribers will be required to pay the amount allotted to them between May 1st and May 5th. The prizes are, one of 1,000 *yen*; nine of 100 *yen*, and ten of 140 *yen*.

The newly arrived Austro-Hungarian Representative hadaudience of the Emperor to present his credentials on the 13th instant, and was afterwards received in audience by the Empress.

The two Turks, whose destitute condition has for some time caused concern to charitable Japanese, are about to be shipped to the United States with a sum of 194 *yen* in their pockets. The money was collected chiefly through the exertions of Mr. Masuda Mankichi, the diver, who, ever since his operations in connexion with the wreck of the Turkish frigate *Etourgoul*, seems to have taken special interest in Turkey and its affairs. He has supported these castaways for a considerable time at his own charges.

Experiments are about to be made by Japanese merchants in cotton-growing in the province of Fuhkien. The work is to be under the auspices of the Osaka Cotton Spinners' Union, which has decided to put up a sum of 3,000 *yen* annually for three years, entrusting the conduct of the enterprise to Mr. Inouye Jiutaro. There is reason to believe, it is said, that the climate and soil of Fuhkien are well adapted for the purpose, and naturally the enterprise is viewed with popular favour as a kind of assertion of the rights acquired by Japan within her "sphere of influence."

A fatal accident is reported from the kerosene-oil district in Echigo. It occurred at the Urase wells near the village of Nagaoka. Seventy-seven men are employed there. They live in wooden shanties, and as there has always been danger of land-slips or avalanches, the buildings exposed to these perils are erected within a forest, so as to utilize the shelter of the trees. In spite of that precaution, however, an avalanche buried one of the edifices at 5 a.m. on the 3rd instant. There were 12 men in the hut at the time. Nine of them were dead before the snow could be removed; one was slightly injured, and two escaped unhurt.

In digging the foundations for the Prince Imperial's Palace, a rather interesting discovery was made. The workmen came upon a stone-lined cellar, the roof of which had fallen in. Among the earth and rubbish that filled the interior, a number of silver vessels were found—dishes, arms, cups, and such things, some of them weighing several pounds. All were ornamented with vine-leaf scrolls and chrysanthemum-paulownia medallions. There could be no doubt that they had originally belonged to the *Daimyo* of Kishiu, whose residence stood on the site of the proposed Palace in pre-Restoration days. They have accordingly been restored to that family.

The very small scale on which Japanese institutions are modelled is beginning to attract much attention among the economists of this country. Count Inouye recognised the evil many years ago and urged reform, especially in the field of agriculture, where not only are farms inconveniently small, but also the same farm is often divided into several parts widely separated from each other, to the great waste of labour. The *Nichi Nichi Shimbun* has a clever article on the same subject. Banks, railways, insurance companies, commercial and industrial enterprises—everything partakes of the tiny character of the household industries which for centuries have constituted the typical form of Japanese bread-winning undertakings. There is immense need of change.

The idea is that the Mitsu Bishi firm will devote something like ten million *yen* to putting up solid brick structures on the large tract of land held by them in the Maru-no-uchi district. By degrees foreign firms will doubtless desire to have offices in Tokyo, and Maru-no-uchi would be an ideal place for providing accommodation. Doubtless the Mitsu Bishi will be prepared to build according to plans approved by the intending occupant of an edifice. Thus ulitmately, in the immediate vicinity of the central station of the street railways and of the post and telegraph offices, there will spring up a little city altogether different in style from the Tokyo of to-day.

The talk recently heard about the organization of an Anglo-Japanese company to exploit the kerosene wells of Echigo, now assumes the form of a statement that Messrs. Abe Hikotaro and Tanaka Keisuke have formed an association with Messrs. Samuel Samuel and Company, and that the association has acquired some wells at Kamada for a sum of 60,000 *yen*. From thence to Naoyetsu a pipe is to be laid, and it is stated that the idea is to bring various Japanese firms into the coalition which will ultimately assume large dimensions. This enterprise appears to us to be very promising, and we are glad that a great English company is taking a part in it.

The repairs of the *Fuso* have been completed at the Kure Docks, and the ship has successfully undergone her speed and gunnery trials. It is said to have been a very extensive work, as the ship had received great damage in her collision. But the Kure experts proved themselves fully equal to the occasion. There are now two docks in operation at Kure, and the larger of them is capable of accommodating a first-class line-of-battle ship. It is expected that the Naval Department will at once give orders for the construction of a third-class cruiser, and that the materials will be ordered from England next month.

The *Fiji Shimpo* steadily continues to exhort the Government to take some decisive action about the Tokyo Street Railways. "Give the charter to a private company, and be done with it," says our contemporary; "or announce definitely that the Municipality itself will undertake the work, and let a beginning be made." We may add that the story of the street railways has exhibited one thing at all events, namely, the extraordinary patience of the Japanese people. Not a single question was asked in the Diet about a subject which in Europe or America would long ago have excited the public beyond endurance. The Authorities seem to be labouring under a kind of intellectual paralysis in this matter.

Our vernacular contemporaries speak of a plan for clearly defining the bounds of Tokyo city and Tokyo suburbs. In the city would be included the Nihonbashi district, the Kyobashi districts, and parts of the Kojimachi and Kanda districts. A canal would be dug surrounding the city, and special regulations would be enacted, prescribing the nature of the buildings, the arrangements as to drainage and road-making and so on, within the city (*shinai*), a different system being applied to the suburbs (*shigai*). This programme is based on a conviction that the city, as it now exists, is altogether so straggling and so extensive in proportion to its inhabitants that no efficient municipal system can be applied without resource to excessive taxation.

At a conference of prison wardens just held in Tokyo, it was decided that prisoners should be divided into nine classes with reference to diet. The first class, consisting of men engaged in the most arduous kind of manual labour, will receive a daily ration of 9.4 *go* of rice and barley, and the ninth class, which comprises persons awaiting trial and persons undergoing punishment for minor offences, will have 4.2 *go*. We should think that prisoners of the first class will be puzzled to dispose of such a ration, although a large part of it is barley; but prisoners of the ninth class are apt to go hungry very often, for, though 4 *go* of rice is supposed to suffice for an ordinary person leading a sedentary life, 4 *go* of a mixture containing two-fifths of barley is a scanty meal for an able-bodied man.

The *Mainichi Shimbun* declares that two foreigners of a very doubtful character are residing at an hotel in Yokohama. They go out in various disguises and do not allow any one to have access to their chamber. The suggestion, we need scarcely say, is that they are Russian spies. If there were appended some demonstration of the things likely to occupy the attention of a spy in Yokohama, this story would gain in credibility. In the year immediately preceding and immediately following the beginning of the *Meiji* era, almost every foreigner, however humble his position or insignificant his individuality, imagined that all his sayings and doings were perpetually subjected to Japanese espionage. Some of the people of this country appear to be similarly tormented by a Russian spectre.

It is stated that a considerable increase has taken place in the number of appeals from convictions in cases of minor offences, and the fact is attributed to recent legislation, which dispenses with the necessity of putting up a certain sum of money when lodging an appeal. The Appeal Court of Tokyo has had to increase its sections from three to five, we read, but it is difficult to believe that the new law can have yet produced such a marked effect, as it has only been a few weeks in operation. At all events, if the facts be as alleged, they show that the legislation was required. There is an uneasy conviction in many minds that owing to the present system of conducting preliminary examinations in Japan, not a few unjust convictions take places. The radical remedy is to amend the procedure so as to bring it into line with more civilized methods, but in the meanwhile every facility provided for obtaining a review of a lower tribunal's verdict is welcome.

Digitized by Google Original from CORNELL UNIVERSITY

It is suggested by the *Jiji Shimpo* that instead of putting sea-coast lads in a lath-and-plaster building for purposes of elementary education, their school should be a ship anchored in the harbour of Yokohama, Kobe, or Nagasaki. That interesting idea is based on the theory that it is all important for the Japanese to become conversant with maritime affairs. Our contemporary speaks of the boat-men in the service of some of the Western feudal chiefs in the days of the Tokugawa. These boatmen used to assist in transporting the Daimyos and their belonging over-sea, for the purpose of their compulsory visits to Yedo in alternate years. They were a greatly despised class, but in modern times some of them have become highly prosperous. There is, in fact, a great opening for the youth of Japan in the field of maritime enterprise. Already the demand for sailors and ship's officers far exceeds the supply, and the *Jiji* observes that England's example ought to inspire the Japanese. The Englishman is in demand for sea-going purposes all the world over.

KOREA.

The Korean Government is reported to have agreed that compensation must be given in connexion with the recent outrage at Chiksan, of which Japanese subjects were the victims. The sufferers have arrived in Söul and are pressing their claims in person.

The Emperor of Korea is said to have rejected the suggestion of the Judicial Department that An Keiju, who recently left his refuge in Japan and voluntarily surrendered to the police in Söul, should be punished with death. It appears probable, now, that An will escape with comparatively slight punishment.

According to a telegram published by the *Asahi Shimbun*, the Uensan-mine complication has been settled, the Korean Government agreeing to grant the concession to Mr. Pritchard Morgan. No details are given by our contemporary's correspondent, but we may observe that this result conflicts with the previously published reports of strained relations between Her Majesty's Legation in Söul and the Korean Government, and of an application by the latter for Mr. Jordan's recall.

Quite an extensive series of experiments in wireless telegraphy is being conducted under the auspices of the Japanese Naval Department in Korean waters. Apparently the idea is connected with coast defence, for the islands on which stations are being erected may be said to extend from the mouth of the Tadang on the west coast to Yuensan on the north east. The telegraph lines between Söul and Fusan being in Japanese hands, it is not unnatural that these experiments should be undertaken by the Japanese Naval Department. The circumstances are well adapted to the use of wireless telegraphy, and it is evident that if all the main islands in the waters of Korea were brought within such a circuit, a great step towards a system of coast defence would have been taken.

The *venue* of the Horticultural Exhibition, now being arranged by the British Women's Patriotic Association, has been changed from the Bluff Garden to the Public Hall, and the date is fixed for May 23rd.

LAW FOR THE REMOVAL OF GARBAGE.

The above law has recently been promulgated over the signatures of the Premier and the Home Minister. We condense it as follows:—

Art. I.—Any person who owns, or occupies, or uses land in a city is under obligation to remove dirt and rubbish from the place which he owns, occupies, or uses.

Art. II.—The city authorities are required to perform the dirty of cleansing the streets in cases where the obligation falls on no individual.

Art. III.—The city authorities are required to dispose of garbage collected by persons under obligation to remove same.

Art. IV.—Any revenue or gain realized in connection with measures specified in the preceding article accrue to the city funds.

Art. V.—The local Governor may appoint special officials in a municipality with a view to enforcing strict cleanliness and to inspecting the condition of each district.

Art. VI.—The officials so appointed are empowered to enter any private land for the enforcement of necessary measures.

Art. VII.—In case any private individual fails to comply with the provisions of this law, or his methods are deemed to be imperfect, measures may be taken directly by the aforesaid officials at the expense of the municipality.

Art. VIII.—The persons under obligation will be liable to expenses incurred by the Municipality for the measures mentioned in the preceding article.

Art. IX.—The kind of dirt or rubbish to be removed and the process of removing the same, as well as other necessary arrangements for maintaining cleanliness, shall be determined by Ordinance.

These regulations shall come into operation from the 1st of April in the 33rd year of *Meiji* (1900).

LITIGATION AND ARBITRATION.

In the Kobe Chiho Saibansho judgment has been delivered in the case of Yamada Keisuke, of Kyoto, against Th. de Berigny, of Berigny and Co., Kobe. The claim was for 18,529 *yen*, and arose out of a contract to supply railway sleepers to the defendant. Defendant alleged that the sleepers were not supplied up to time, and that some were not of the quality of the sample. The Court, however, decided against him, and gave judgment for the amount claimed with costs. It is interesting to note that the contract included a provision that in case of any dispute the matter should be submitted to the Kobe Chamber of Commerce for arbitration. The plaintiff, however, applied directly to the Court, ignoring the provision. Dealing with this important point, the Judges, in giving their decision, said:—

> We considered this point and discovered that a party can institute an action at Court, no matter what the nature of the case is, provided that it is not exempted specially by law and that the Court is also entitled to judge the case. The right of instituting an action against another party is a most important right and it is not to be thrown away beforehand. It is specified in the 8th book of the Application of the Civil Codes, relating to the provisions for arbitration, that parties may refer their disputes to arbitrators, but it is not absolutely held to be necessary to submit to arbitration, no matter how the matter stands, even though an agreement to arbitrate has been executed. The provisions relating to arbitration aim at bringing a dispute to a peaceful conclusion, and either party is entitled to institute an action in Court when he thinks that an amicable conclusion is not to be expected. No provisions specified in Law prohibit the plaintiff in such case from instituting an action. The defendant's protestation is wholly groundless.

THE INDIAN FAMINE.

Recent advices from India give particulars of the very great proportions the Famine has now assumed. The distress is unparalleled in the history of British rule in India. The Queen has given £1000 to the Indian Famine Fund; the Prince of Wales two hundred and fifty guineas; the Princess of Wales a hundred guineas; and the Duke and Duchess of York £100 each. Other contributions are: The London Stock Exchange, £10'000; Messrs. Neumann & Co., £1,000; Messrs. Schroeders, £500; Messrs. Speyer Bros., £500; Messrs. F. Huth & Co., £250; Messrs. W. & A. Gilbey, £250; Lord Leven, £100; Lord Llangattock, £100; and Lord Wenlock, £50. The opening of the Indian Famine Relief Fund has been received encouragingly in England. The Lord Mayor's appeal dwells on the population and area involved, and the extent of relief required, mentioning the fact that fertile tracts, which have never been affected, are in sore straits. The sympathy, he says, binding England and India together is stronger and closer than at any previous period. By Feb. 28, the Fund has reached £78 000. A Famine Relief Fund had been opened by the Viceroy. There was an immense gathering in Calcutta, and six lakhs of rupees were collected at the meeting. The Maharaja Durbhunga has contributed one and a half lakh of rupees; the Maharani Hatwa one lakh; Messrs. Mackinnon, Mackenzie and Company eighty thousand rupees; the Viceroy ten thousand; the big mercantile firms from five to thirty thousand.

NEWSPAPERS & WAR EXPENSES.

One would have thought it was sufficiently well known, remarks the *Printer's Register*, that with a great daily newspaper war time is rarely, if ever, a period of profit, but, on the contrary, quite the reverse. But the *Church Family Newspaper* has been addressing questions on the subject to the heads of some of the London dailies. Mr. J. Le Sage, managing editor of the *Daily Telegraph*, has replied that there is no mystery as to how war affects a big paper. If it is able to give first-class despatches its circulation is greatly increased, "but then war, in itself, is very costly, especially when nearly every word costs four shillings, as in the present instance, for cable alone." Mr. E. Peacock, manager of the *Morning Post*, writes:—"Except in the case of halfpenny evening papers, which cost little to get up and make their profit upon street sales, a war is a misfortune to newspapers. It diminishes advertising business, increases expenditure by thousands of pounds, and brings in per contra only thousands of pence. Of course, there is that intangible quantity 'prestige' also to be placed to the credit side of the account."

These remarks apply equally well to some newspapers in Japan.

THE CHILDREN'S CONCERT.

The Children's Concert, which was postponed on account of the death of the late U.S. Consul-General, Mr. John F. Gowey, has now been fixed for Tuesday, the 21st inst., with the dress rehearsal on the Saturday preceding. One novel feature of the entertainment may be mentioned. It is that the two upright pianos to be used have been made entirely in Yokohama at the manufactory of Mr. T. Nishikawa of No. 30 Hinodecho Nichome—being the first time that pianos of Japanese make have been used at a foreign concert on the Bluff.

A Nihilist plot is said to have been discovered, having its headquarters at Warsaw and ramifications at St. Petersburg, where some 150 persons have been arrested. No details as to the object or organisation of the plot have ranspired, but the persons implicated appear to belong to the middle classes.

Digitized by Google Original from CORNELL UNIVERSITY

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the *Fukuin Shimpō*, under the title of "National emotional deficiencies and Buddhist Teaching," we find some very discerning remarks. The writer maintains that the Japanese, as a people, have always lived for the present, that among them practical experience has stood for more than mere speculation. In worshipping the ancients they have felt that their ancestors were like themselves in most things, if better in a few. The real typical Japanese mind is at once optimistic and utilitarian. The view of life taken is a cheerful one. No kind of pessimism is entertained naturally by the Japanese. The question which the *Fukuin Shimpō* puts and endeavours to answer is, how far has Buddhism suceeded in eradicating fundamental national characteristics? This subject is treated by Mr. Adachi in his "History of Buddhism." There is not the slightest doubt, observes Mr. Adachi, that the Japanese are an optimistic people, that they set a high value on this present world, that they hold experience in great esteem. Shintō has helped to perpetuate this feeling, and the influence of Confucianism has been in the same direction. Original orthodox Buddhism may be said to occupy the opposite pole of thought, to be pessimistic to the core. But no attempt was made to propagate this extreme form of Buddhism in Japan. The system known as the 大乘, *daijō*, and many of the original precepts of Buddhism were not taught. What was propagated was the 小乘, *shōjō*. The reason for the adoption of this course was the feeling that the more extreme form of Buddhist teaching would prove too much opposed to Japanese sentiment to allow of its being successful. Commenting on these remarks, the *Fukuin Shimpō* says:—In the main we agree with this view. The Japanese mind has no regard for mysticism and takes no delight in such subtle distinctions as are drawn by Buddhism. Though it is quite certain that Buddhism was greatly modified to suit the native mind, yet it has been engaged in its turn in changing national sentiment so as to bring it nearer its original conception of the world and human life. But the history of Buddhism is on the whole a history of compromises. Even the very greatest teachers seldom disclosed their real thoughts and made use of all manner of devices for inducing people to join their sects. The giving of Buddhist names to Japanese deities and the representing local Japanese divinities to be identical with old Indian Buddhist divinities are well-known facts. But this system of compromise has, on the whole, proved a failure, says the *Fukuin Shimpō*, and those persons who advocate the Nipponising of Christianity are on the wrong track. For a religion to change its teaching to suit national sentiment is a confession of weakness. Christianity must never do this in Japan if it hopes to fulfil the highest function of religion, the transformation of national as well as individual character.

* * *

The *Fukuin Shimpō* (No. 240) has an article on Reformatories by Mr. Tomeoka Kōsuke, who, perhaps, is the greatest authority in Japan on this subject. Mr. Tomeoka thinks that Japan has in the past neglected to prevent crime by providing employment for the class of youths who are apt to take to crime as a means of making a livelihood. But there are signs that the authorities are turning their attention to methods of reform, and there is a feeling among those in power that in the past sentences have been unnecessarily severe in many cases. In the draft of the Revised Code the question of mitigating circumstances is specially dealt with. Mr. Tomeoka has studied the systems of reform prevailing in Germany, France, England, and America. He says that no country has been so successful as England in closing the avenues that lead to crime. In England, crime has decreased at such a rapid rate that there are not much more than half the number of prisons that used to exist. The cause of this decrease is the industrial homes provided for the young, where they are taught how to make an honest living. There are in England 229 Reformatories for the young, to which boys of criminal tendencies are sent. The inmates of these institutions amount to 30,000 and the cost of their maintenance is 4½ million *yen*. Compared with England Japan's method of treating crime may be pronounced an entire failure. The amount we spend in maintaining prisons England spends in preventing crime. The results of the two different methods of procedure are very striking. While Japan has 60,000 prisoners England has only half that number. There are three methods of preventing crime. One is to endeavour to change the minds of prisoners while they are in prison. A second is to endeavour to control their lives after they have been discharged from gaol. A third is to educate those young people who hover around the brink of the abyss of crime. The third method, if the results it yields be considered, proves to be the least costly of the three. It stands to reason that the earlier the work of imparting instruction designed to prevent crime be commenced the more effective it is likely to be. Hitherto Japan has not realised this. Prison expenses are now to be borne by the Treasury, and the Central Government has decided on establishing Reformatories in every province. This is good as far as it goes, but it would be far better were a number of training schools for young unfortunates established. It would be well to entrust this work to private enterprise and to give Government grants to institutions, as is done in England. It is very questionable whether even the Reformatories established by the Government will be efficiently worked. The carrying on of all such work by a set of officials who take no real interest in it is apt to become perfunctory and to fail in attaining the end in view. Works of benevolence can only be successful when all engaged in them are full of benevolent feeling. . . . . According to investigations made by the Home Department, there are at present only three institutions in Japan of the kind that have been so successful in England, where the young are taught how to get a living. These are the Okayama Orphan Asylum, the Shibusawa Poor Asylum, and the Hara Reformatory. This kind of work should be carried on by religious sects. This is beginning to be realised by both Buddhists and Christians, but it cannot be said that in the Christian Church works of benevolence have been pushed as much as education. The Buddhists, since the Sugamo prison episode, have awakened to the fact that they must not be behind Christians in advocating and promoting prison reform. Not long ago no less than 7 million *yen* was collected by Buddhists for the furtherance of works of charity. The Chief Abbot is contemplating a visit to Europe accompanied by 13 students. The latter are to spend some years in studying social questions and in investigating the methods of teaching and enlightening the masses followed in the West. Mr. Tomeoka concludes his interesting article by urging Christians to put more energy into works of benevolence.

* * *

Commenting on the multiplicity of Christian sects in Japan, as shown by the reports (40 in number), sent in to the Home Department, the Rev. K. Ibuka, writing in the *Fukuin Shimpō*, expresses general satisfaction with the existing state of affairs in the Christian Church. He says that the body of Christ (the church) is one in all essential respects. All Christian sects hold alike the following truths. (1) That there is a God, who is the creator of the Universe. (2) That Christ, the Saviour, is the Son of God. (3) The Holy Spirit's influence on man. (4) Future rewards and punishments. (5) That the Old and New Testaments contain the teaching of God in a special manner. The differences between sects concern either (1) Ecclesiastical Government, or (2) Forms of worship or ceremonies. These are all of minor importance and are perhaps an unavoidable concomitant of imperfect knowledge. Any outward union Mr. Ibuka thinks to be unrealisable. A union founded on compromise would not last. Compromise is repulsive to some of the best Christians. What they believe, they believe sincerely, and they fail to see why they should relinquish this belief to please others. Heart union, Mr. Ibuka thinks, exists in the minds of all the best Christians. With any attempt to force outward union, Mr. Ibuka has no sympathy. The Christian army consists of a number of regiments that are fighting against a common foe under different flags and what they should try to do is to outvie each other in heroic action.

* * *

At the 21st meeting of the Comparative Religion Society, held some weeks ago, Mr. Hachihama read a long paper on Magical Art or Enchantment. We can only give a few of the conclusions to which he has come on this subject. Mr. Hachihama is the author of a book called *Meishin no Nippon*, which is practically a history of Japanese superstitions. In the paper now before us he says that there is evidence to prove that in Japan as elsewhere magic has always connected itself with religion. Just as in our word "magic," the pretended intercourse of the old Persian magi with spirits from the other world is commemorated, so in the Japanese word *majinai*, the *maji* is allied to *majiru* and *majiwaru*, and intercourse with the gods is the chief idea embodied. Mr. Hachihama does not think that Japanese magic was borrowed from China originally but that it sprang up in a natural manner and has mixed with general teaching in reference to the gods. Its objects are two, to protect persons from evil and to confer benefits on them. Harm-bringing magic is almost unknown. From incantations it is entirely separate. It is quite different from divi-

Digitized by Google Original from CORNELL UNIVERSITY

nation too. Divination aims principally at knowing Heaven's decisions and acting on the knowledge, but magic, while including the above objects, aspires to altering those decisions in favour of certain human beings. The term *majinai* conveys to us an idea of comfort and pleasure, it being undoubtedly gratifying to read the past and read the future. Magic is called an art because it adopts certain methods of inducing the gods to change their minds, or nature to change its course. The handling of the figure known as *teriteribōsu*, so as to insure the weather desired, is an art. Magic is most comprehensive as regards regions where its influence may be felt. It not only professes to interfere with the acts of men, but it claims power to stamp out disease and to protect against calamities. Illustrations of this are to be found in abundance in Mr. Hachihama's paper, but the subject is too indirectly connected with religion proper to allow of its occupying more space in this summary.

* * *

In the *Tōkyō Maishū Shimpō*, in an article entitled "Religion and the State," Mr. Ukita Kazutami maintains that all powerful States have originated with religion. The following is the gist of Mr. Ukita's essay:—The history of Europe shows that it was under the controlling influence of Christianity that the now powerful nations consolidated. The liberty of the early Teutons was the liberty of barbarians from which nothing great ever proceeds. The beginning of Germany's greatness dates from the time when the ancestors of the present race first became subject to the rule of the Church of Rome. In the early years of the formation of a nation what is most needed is authority to which all alike are willing to bow. Despotism rather than liberty is needed for the welding of society in the first stages of development. The despotism of mere physical force is not enough to make a strong nation. The feeling that there is a higher law than that made by man to which the rulers and ruled must alike bow is a necessary factor in the creation of the highest kind of national unity. It is when a state has connected itself with the Divine law and when it is regarded as entrusted with the administration of that law that it becomes sacred in the eyes of the people. The patriotism of a people, then, may be traced to religious feeling among them. When the early Tokugawa Shōguns decided to patronise Buddhism and to make it a State religion, they saw that it would contribute enormously towards making government easy. To say that the most religious people in Japan have always been the most patriotic is only saying what is true. And what is worthy of note is that among Christians the patriotism is as strong as it is among Buddhists and Shintoists. . . . But, however necessary is the connection of Church and State in the early years of a nation's history, later on the feeling of the majority is in favour of their entire separation. To rely on religion to enforce or to furnish a ground for the exercise of the authority of a Government is felt to be out of date now-a-days. And for a religion, on the other hand, to be invoking State patronage or aid is deemed a sign of weakness. All things have their season. The connection of religion with the State, which formerly was a source of national strength, is now deprecated on all sides as neither good for the religion nor good for the State.

* * *

In the Roman Catholic organ, the *Koye*, under the title of "Religious Bondage" a writer complains of the bigotry of Protestant countries in the matter of granting religious liberty. Though Governments may declare all religions to be alike in the eyes of the law, public opinion draws sharp distinctions, and in Protestant countries Roman Catholicism is at a discount. Denmark and America are specially cited. It is said by the writer in the *Koye* that in the United States the tide of popularity has turned against Admiral Dewey solely on account of the report that he is about to marry a Roman Catholic. And yet, says the writer, America is always boasting of her fairness and liberality.

In No. 208 of the *Koye*, writing of "Public Opinion on Religion" a contributor says that it is worthy of record that during the past few months some very noted men have acknowledged in a public manner the necessity of religion in Japan. Among these Count Okuma and Dr. Inoue Tetsujirō specially call for mention. But though it is agreed that some form of faith is needed there is no consensus of opinion in Japan as to what this faith should be, and many write in disparaging terms of all existing religions and advise the starting of something new. The writer arrives at the conclusion that the number of imperfect creeds in the world is apt to be very bewildering, and hints that perfection is only to be found in one quarter, which of course is the orthodox teaching of the sect to which he belongs.

* * *

Dr. De Forest, of Sendai, has recently published a small pamphlet on "Home Life in Japan" which, while acknowledging the many good customs prevailing among the Japanese, points out what are the drawbacks connected with married life among the Japanese. Adoption, marriage, divorce, and concubinage are all discussed in turn. We observe that Dr. De Forest, while condemning much that takes place in Japan, confesses that Western countries have by no means reached a state of perfection as regards the relation of the sexes. He maintains that many of the customs of the Japanese form great barriers between them and foreigners, and contends that the reputation of Japan as a civilised country is affected by the retention of practices which are not openly sanctioned in Europe and America.

L'Abbé Francois Ligneul has added two new works to his already formidable list. They are both on the Roman Pontiff. The first entitled *Romakyō-ō* gives a historical account of the present Pope and some of his predecessors, discusses the ideas entertained in reference to the office he holds, and describes Rome, with its numerous associations and objects of interest. After his wont, M. Ligneul at the close of the little volume deals with several very knotty questions connected with the main subject, such as the badness of some of the Popes, (M. Ligneul is careful to explain that by "badness" he only means unsuitability for the office assumed) and Papal despotism. M. Ligneul in the concluding pages of the book takes notice of the fact that in Japan in late years Popery has been a synonym for despotism. For the mistaken notion that the rule of the Pope is necessarily despotic, the Japanese have, according to M. Ligneul, to thank those Protestants who have deliberately misrepresented the Holy Father and his methods of government. The title of the second work before us is "The Pope and Modern Society." This consists of 26 chapters, the heading of each of which is different. The connection of the Pope with every branch of modern society and with all phases of popular modern thought is discussed, the headings being such as the following: "The Pope and Liberty of Speech," The Pope and Secret Societies, "The Pope and Revolutionists," "The Pope and Economists," "The Pope and Writers on Sociology," and so on. The work covers 177 pages and sells at 20 *sen* per copy at the Sansaisha, Kijichō, Kanda, Tōkyō.

* * *

Some little time ago Mr. Shimada Hankon read a very long paper to the Keizaigaku Kyōkai on the connection between religion and government in Japan in times past. Mr. Shimada displays a very minute knowledge of this subject and his essay was considered of sufficient interest to be printed in full in a secular magazine, the *Keisai Zasshi*. It is too long for us to attempt to epitomise it in these columns. We content ourselves with culling from its pages a few facts which it seems to us have a distinct bearing on the attitude of the nation to religion generally at the present time. At the beginning of the Meiji era there existed only two chief departments of government, one being the 神祇官, Jingikwan, and the other the 大政官, Daijōkwan. The former always took precedence of the latter, and the orthodox theory was that in all matters the administrators of Government were carrying out the instructions of the gods. With the creation of the Kyōbushō in March, 1873, came the gradual separation of government and religion. The Jingisho, which dates from the beginning of Meiji, and which was replaced by the Kyōbushō, is chiefly remembered on account of its raids against Buddhism, which it attempted to crush beyond all hope of recovery. The Kyōbushō, while favouring Shintō, treated Buddhism with more consideration than had been shown to it by the Jingisho. There was an attempt made at the beginning of the Meiji era to compile a Japanese Bible, which was intended to occupy the place of a canon. But, after holding numerous meetings to discuss the subject, the scholars came to the conclusion that the task was beyond them. A document drawn up by the leaders of the movement is still in possession of the Shajikyoku. Under the Kyōbushō all the priests, whether Buddhist or Shintō, were ranked as subordinate Government officials under the title of Kyōdōshoku. At this time modern Shintō sects were unknown, Shintō adherents being spoken of as Eastern or Western adherents. The Kyōbushō directed that the term Shintō should be applied to religion in general, and that no distinction should be made between Buddhist and Shintō priests. An institution known as the 大教院, Daikyōin, was created which had for its object the amalgamation of the two creeds. But the amalgamation consisted of the subordination of Buddhism to Shintō, Buddhist priests being actually required to don the *Kannushi's* distinc-

Digitized by Google Original from CORNELL UNIVERSITY

tive dress. After these ridiculous vagaries had been resorted to for some time, says Mr. Shimada, Shimaji Mokurai returned from Europe and at once advocated the abolition of the Daikyōin and pronounced it to be a mischievous institution. The fact was that, though the Government was nominally controlling religion, there was nobody in the higher ranks of officialdom who knew or cared anything about it. But, the attention of the Government being called to existing abuses, they created a set of supervisors or overseers known as 管長, Kwanchō, who were the representatives of sects, that held the rank of *Chokunin*, and who were responsible to the Home Minister for all irregularities committed by their subordinates. There was no attempt in this arrangement to sift the wheat from the chaff. A sect like the Tenrikyō, noted for its contaminating practices, held equal rank with the Shinshū or other bodies. Though it takes us back to an earlier period than we have now reached, it is important to mention that when the Jingishō was still in existence an attempt was made to force certain Nagasaki Christians to conform to Shintoism. These Christians were summoned to Tōkyō, tried, but found innocent of any offence of which the law could take cognisance. In Tokugawa days they would have been killed. But the Government decided that, since they were backed by a foreign power, it was politic to allow freedom of action. The whole episode only made the ecclesiastical zealots ridiculous in the eyes of the world. Mr. Shimada gives a long account of the secularisation of Buddhism, and of the degradation of all its lofty ideals. He shows conclusively that Government patronage has invariably proved a curse instead of a blessing. The most prosperous sects have been those which have least depended on Government help, such as the Shin and Hokke. The almost universal contempt in which Buddhist priests are held to-day by the educated classes is to be attributed to the character of the men who now fill the office. In some parts of Japan it is common to choose the greatest fool in the family for the priesthood, on the ground that it is the only possible way of his getting a living. . . . . In ancient times there was an important distinction drawn between two classes of priests, a distinction which extended to character. There were what were called 官僧 *Kwansō* and 遁世者 *Tonseisha*. The latter renounced the world and did not even call themselves priests. The former were the rectors of temples that were richly endowed by the Emperors and the consequences of the patronage they received were very manifest in the lives they lived. Mr. Shimada agrees with Mr. Fukuzawa in thinking that both in origin, education, and conduct the Buddhist priests of the present day are as low as they well could be. There are few temples where women are not kept on one pretence or another. The children that are given out to be maintained out of charity are usually the priests, own offspring. It is a pity, concludes Mr. Shimada, that a religion which has such a glorious past should present such a spectacle to foreign eyes in this enlightened age.

* * *

Dr. Motora and 15 other gentlemen have addressed a series of questions on religion to the students of all the High and Middle Schools of Japan. They are asked to say whether in their homes, at school, or by reading books they have had religion urged on them, or whether, on the contrary, in the family, the school, or among friends they have been prejudiced against religion. They are questioned too, as to the effect on their minds which intercourse with society generally has had. The following queries are put: (1) Do you believe in religion? Are you at liberty to believe it if you wish? (2) Have you any desire for religion? (3) Have you at any time believed in religion? If so, and you have relinquished this belief, state your reasons for this course. (4) If you believe in no religion, what do you depend on for regulating your daily conduct? Do you dislike religion? If so, why? (5) If you don't believe in religion yourself, do you recognise its necessity for others? If so, on what grounds?

* * *

Mourning over the decay of morals during his long illness last year, the necessity of making a special effort to create a new basis of ethics impressed itself on the mind of Mr. Fukuzawa, and a short time ago he invited the co-operation of all teachers at the Keiōgijuku in preparing a small pamphlet setting forth the main principles of the system of practical morality recommended. The pamphlet which was compiled by the teachers and approved of by Mr. Fukuzawa has been printed and widely circulated, and summaries of its contents have appeared in the newspapers. It will be seen that under 29 headings the compilers of this little work have embodied the teaching of Mr. Fukuzawa on morals generally. The statement is of considerable interest from several points of view. The following is its gist. (1) The essential principles of our system of practical ethics are self-respect and independence of spirit in both men and women. (2) Persons endowed with self-respect should be careful not to do anything that would be derogatory to their rank as human beings. (3) Every individual should aim at being entirely independent of the help of others by working for his or her living. (4) One of the chief aims in life should be to keep both body and mind in a state of health and vigour. Anything that tends to interfere with this should be avoided. (5) To develop to the utmost and to make as complete as possible the lives which have been given to us by nature, is one of our chief duties. (6) A spirit of progress and enterprise on the one hand and a firm hold on what we already possess on the other require courage, and this courage must be cultivated. (7) The intellect needs to be developed in order to enable a person to weigh various possible courses of conduct and to decide on the proper one to follow. (8) The exalting of men at the expense of women is a barbarous custom. (9) Marriage being one of the gravest events of a man's life, great care should be taken in the choice of a partner. That a man should have only one wife, who should live with him on equal terms as long as the two lives last, is one of the very first principles of ethics. (10) The love that exists between parents and children is real and unmixed, and nothing should be done to lessen or destroy it. (11) Boys and girls, while looking forward to be independent in later life, when under the care of their parents should follow their directions in all things. (12) After becoming adults men and women alike should continue to study and to cultivate their moral natures. (13) If the object be to built up a thoroughly strong and active community, the independence of families and of individuals in each family must be established. (14) In order that society may be effective as a whole, it is necessary that each individual, should respect the rights of others, and, while maintaining his own independence should be careful not to interfere with the independence of others. (15) To harbour hatred and jealousy and to indulge in retaliation of any kind for injuries received is a barbaric and evil custom. In establishing reputation and clearing it from any reflections that have been thrown on it, no underhand methods of any kind should be resorted to. (16) In all the duties of life it is of immense importance to cultivate a sense of responsibility. In things great or small we should act honestly and straightforwardly towards those to whom we are responsible. Self-respect demands this of us. (17) In intercourse with others we should trust them and give them good reason to trust us. It is only by mutual confidence that men can act together and accomplish their purposes. (18) It is by a due observance of the etiquette of life that men show their respect for each other. Remissness in etiquette is inexcusable. (19) Judge of the feelings of others by what you feel yourself. Your regard for your own affairs should teach you how to make allowance for the same feeling in other. (20) Kindness of heart should extend even to animals. Objectless destruction of life is to be condemned. (21) By means of art and literature man's heart is refined and elevated. Therefore the cultivation of a taste for these becomes a duty. (22) Since government is absolutely necessary to our welfare and security as subjects of the empire, we are under an obligation to pay what taxes are required for the maintenance of the government. (23) Having paid our taxes, it is within our rights as citizens to see that the money is wisely spent, and we also have a right to a voice in law-making. (24) We are all under an obligation to defend the country against foreign foes by sacrificing our property and our lives if such should become necessary. (25) Obedience to the law is imperative. (26) In intercourse with foreigners we are to bear in mind that they are on an equality with us. To treat foreigners as inferiors is altogether out of keeping with the ideas of self-respect and independence which form the basis of morals. (27) It is our duty to hand down to posterity in an improved form the civilisation we have received from our ancestors. (28) Education has for its object the development of self-respect and independence in the minds of the young and the imparting of instruction as to how a living is to be made. (29) The above principles we not only agree to observe ourselves, but we shall take steps to induce others to observe them.

The *Jiji Shimpō* on the 25th ult. published a leading article on the subject of practical ethics, showing the necessity of something being done to supply the young with higher ideals than they now possess.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom).

A GERMAN MAGAZINE.

To the Editor of the "Japan Mail."

Sir,—If you think it might be of sufficient interest for some of your readers, you would oblige me by informing the public through your valuable paper that now for the first time a German magazine has been published in this country by Germans. There is already in Japan a bi-monthly German magazine, *Zietschrift für Deutsche Sprache*, edited by some clever Japanese for spreading and deepening the knowledge of the German language.

The new magazine, a copy of which I beg to send you to-day, is issued monthly, and published by the Evangelical-Protestant Missionary Society (German and Swiss) under the editorship of Pastor H. Haas. Its title is *Die Wahrheit* (Truth); so it introduces itself as related to *Shinri*, which is also a publication of our Mission, but in Japanese under the editorship of Mr. Minami. The size of *Shinri* has been somewhat reduced since January, since it is devoted from now to the discussion of scientific theology and philosophy only. *Die Wahrheit*, however, will contain chiefly religious matter in a popular form in order to be profitable to others besides theologians.

The first number brings an introductory article "Die Wahrheit," by H. Haas; "Ist die Religion Wahn oder Wahrheit?" by O. Schmiedel; "Das Christentum und die ärztliche Praxis," by E. Schiller; "Schillers Lotte als Christin," by T. Burggraf; "Janssen und die geschichtliche Wahrheit," by H. Haas, and "Vermischtes."

I am, Sir, your obedient servant,

AD. WENDT.

Tokyo, March 5th, 1900.

AN ILL-TIMED CLAIM.

Monsieur l'Editeur du "Japan Mail."

Monsieur,—Bien qu'habitué, en lecteur attentif de votre estimable journal, aux profondes et savantes déductions que vous savez tirer chaque jour des faits plus ou moins exacts que la censure nous laisse parvenir sur la guerre Sud-africaine, je ne puis vous cacher la surprise que m'ont causée les conclusions de votre article du 10 courant, "An ill-timed Claim."

Vous me permettrez donc de ne pas être de votre avis quand vous venez attribuer l'insuccès du siège, ou plus exactement, de l'investissement de Ladysmith, à la manière défectueuse dont les agents du Creusot auraient dirigé le service des quelques pièces de siége dont disposaient les assiégeants. Je suis même surpris qu'un officier d'artillerie puisse admettre que 4 ou 5 canons de siége, aidés d'une vingtaine de canons de campagne, et tirant à intervalles éloignés par suite de la rareté des munitions, soient en mesure de réduire au silence, par simple bombardement, une place défendue par 9,000 hommes et 38 canons.

Si donc le bombardement de Ladysmith n'a pas eu d'effet destructeur sérieux, c'est que les Boers manquaient à la fois de canons de siége et de munitions et non pas que ces canons étaient défectueux ou mal servis. Votre critique des agents du Creusot, en admettant qu'il y en ait eu, me parait donc mal fondée.

Vous faites également erreur en disant que les *canon de siége* boers de 5″ 9 sont de beaucoup plus puissants que les *canons de bord* anglais de 4″ 7; c'est au contraire ces derniers qui sont plus puissants que les canons de siége.

J'ajouterai, en terminant, que si j'ai cru devoir protester contre votre critique, c'est non pas pour la critique en elle-même, laquelle ne saurait rien changer à la situation actuelle, mais parce qu'elle émane d'un officier d'artillerie dont la haute compétence et la parfaite impartialité dans ces questions spéciales ne sauraient faire de doute.

UN ARTILLEUR FRANÇAIS.

Tokyo, 16 Mars, 1900.

[Surely our correspondent has greatly misinterpreted our article. We expressly stated our belief that the fault was due to the Boers themselves, and not to the agents of Creusot. In fact we said that if Frenchmen had really directed the artillery operations, Ladysmith could not have held out, and that the obstinacy of the Boers in neglecting advice was probably the real cause of the failure. As to the question whether two naval 4.7-inch guns were competent to resist five 4.7-inch howitzers and two 5.9 inch Creusots, we must adhere to our original opinion; and as to the ammunition, it seems to us that the scarcity must have been on the side of the besieged.—Ed. *J. M.*]

YOKOHAMA LITERARY SOCIETY.

The usual fortnightly meeting of the Yokohama Literary Society took place at Van Schaick Hall on Friday evening, when there was a very good attendance of members and friends. The overture was nicely played by Mrs. Helm and Mrs. Abegg, after which Mr. A. Bellamy Brown read his paper on "A Misunderstood Man of Letters," the subject being William Makepeace Thackeray.

Mr. Brown combatted, at the outset of his address, the charge of cynicism so freely placed to Thackeray's account in the "way-bill of life" which the public and unauthorized biographers generally draw up after the departure of all famous characters from this "brief stage." Quoting from the recently issued biographical edition of Thackeray's works, which have come from the pen of his devoted surviving daughter, Mrs. Ritchie, and also from Mr. Lewis Melville's "Life," and Mr. Spielman's "History of *Punch*," Mr. Brown sought to convey to his hearers some idea of the inner life of the great English stylist, that more intimate side of his nature which Thackeray strove to hide entirely from the public gaze. Tracing his career from his birth in Calcutta in 1811 until his departure from Weimar, when the real struggle for bread commenced, the lecturer took his hearers by retrospect into the literary life of England in the early forties, when Thackeray first began to attract attention in the pages of *Punch* and *Fraser's Magazine*. Referring to Thackeray's married life, Mr. Brown said—As we now know, the fond hopes formed of this union were but partially realised; or rather, after opening very brightly, the marriage ended in gloom and cruel sorrow; for, within a few years, Mrs. Thackeray fell ill and the blight of insanity came upon her, to cloud and embitter the rest of her husband's days. It was one of the saddest of life's little ironies—the hackneyed phrase seems sadly inadequate in his case—that this man, overflowing with the domestic affections, should be deprived of all hopes of a happy home circle just at that period of life at which a man generally makes a happy exchange in preferring his wife's drawing-room to the smoking-room of the club, and assuming, as Trollope puts it, those domestic ways of living which are so becoming and pleasant as one tops the hill and begins to see the plain below across which the evening shadows will soon be falling. In one of his ballads, Thackeray makes a pathetic reference to his loneliness.

Ah me! how quick the days are flitting!
I mind me of a time that's gone,
When here I'd sit, as now I'm sitting,
In this same place, but not alone.
A fair young form was nestled near me,
A dear, dear face looked fondly up,
And sweet lips spoke and smiled to cheer me—
There's no one now to share my cup.

Letters were quoted to show how keenly Thackeray felt the joys of home-life and how deeply the iron entered into his soul when this all too brief happiness passed away. Henceforth he devoted himself to his daughters, those children to whom he refers so lovingly in his ballad of the "White Squall":—

I thought, as day was breaking,
My little ones were waking, and making
A prayer at home for me.

To the break-up of his home-life; to his diffidence in his powers as a writer to attract public attention to his works; to his unreadiness with his "tale of bricks" at the appointed day; to his unmethodical habits, and to the disappointments experienced in his early youth, the lecturer attributed Thackeray's quasi-pessimistic views of life—this was the secret of his fits of melancholy apart altogether from his horough dislike of all that partook of snobishness and low-breeding. Several letters written by Thackeray during his tours in the United States were quoted, as well as many stories which have been related by Americans and Britishers who knew the novelist intimately, the lecturer seeking to disprove the popular fallacy of Thackeray's incurable cynicism. To those who are acquainted with Thackeray solely through the medium of his more famous books, the ancient charge may, perhaps, seem fully substantiated. Yet how they misunderstand the man! The light which has recently been thrown upon the scene, disclosing him as he really appeared to his children and more intimate friends, shows that Thackeray was a high-minded, big-souled giant, with the faith of a little child in many things which the world is too apt to scoff at, and with a super-abundance of love for all who truly loved him. The lecturer concluded by quoting some stanzas from Shirley's Brook's noble tribute in *Punch* at the time of Thackeray's death, the eve of Christmas Day, 1863.

He was a Cynic! By the love that clung
About him from his children, friends and kin;
By the sharp pain light pen and gossip tongue.
Wrought in him—chafing the soft heart within.

The musical portion of the programme was resumed after the interval and proved, as usual, very delightful. Mrs. Irwine and Miss Leach were loudly applauded for their songs; and Miss Irene Scott received a hearty recall for her pretty violin solo. The pianoforte selections of Mr. W. Karl Vincent were of a very high order. Following is the full programme:—

Part I.

Overture ....." Walser ".....Ph. Sharwenka.
Mrs. Abegg and Mrs. Helm.
Paper..." A Misunderstood Man of Letters."
Mr. A. Bellamy Brown.

Part II.

Violin Solo..." La Cinquantine "...Gabriel Marie.
Miss Irene Scott.
Duet ....." The Angel " .....Rubenstein.
Mrs. Irwine and Miss Leach.
Piano Solo..... (a) " Serenade " .....Ohlsen.
(b) " Romance " ...Rubenstein.
Mr. W. Karl Vincent.
Song ... " Imperfectus " ... Sir William Robinson.
Miss E. Burdett Leach.

DRAINAGE LAW.

The principal provisions of this law are:—(1) For constructing drains or water courses in the city the permission of the Home Minister must be obtained, the applicants presenting a programme of operations, the estimates of expenditure, and a statement as to the time of commencing and completing the work. (2) Owners or occupants of land are required to make suitable arrangements for draining dirty water or rain water into the main drains. (3) Any portion of State land may be ceded to the Municipality without compensation if necessary for drainage purposes. (4) The Home Minister may, if it be necessary, issue orders to city authorities for the construction of drains. (5) These provisions are also applicable to Urban and Rural districts and villages.

Short Diary.

Dec. 3.—Colonel Plumer entered the Transvaal from Tuli.

Dec. 8.—Sharp fight near Enslin with Boers who attempted to raid telegraph and railways. Boers beaten off and communication restored.
Sortie from Ladysmith under General Sir A. Hunter. Lombard's Kop carried and the Boer guns captured or destroyed. British casualties 4 killed, 17 wounded.

Dec. 9.—General Sir W. Gatacre with a serious reverses in attempting to surprise the Boers at Stormberg. The British were forced to retire with a loss of 23 killed 62 wounded and about 600 missing.

Dec. 10.—Sortie from Ladysmith under Lt.-Col. Metcalfe. Surprise hill captured and a howitzer destroyed. British casualties 12 killed, 44 wounded, 6 prisoners. General French drove the enemy from Vaal Kop.

Dec. 11.—General Lord Methuen attacked 12,000 Boers entrenched at Magersfontein. Attack failed and the British withdrew to the Modder river next day. British casualties about 957.

Dec. 12.—Garrison at Mafeking placed on reduced rations.

Dec. 13.—General French defeated about 1,800 Boers between Arundel and Naawpoort. British casualties 9. Boer Boer casualties about 40.

Dec. 14.—Engagement near the Orange river between Boers and Mounted Infantry. The Boers retired to Gormansberg.

Dec. 15.—General Sir R. Buller advanced from Chievely against the Boers position near Colenso on the Tugela. The British were repulsed with a loss of 11 guns and 1,100 casualties.
An Army Order was issued for the mobilisation of a 7th Division for service in S. Africa.

Dec. 18.—Field Marshal Lord Roberts was appointed Commander-in-Chief in S. Africa, with General Lord Kitchener as Chief of the Staff.
The War Office announced that the remainder of the Army Reserve was to be called out, and that 9 battalions of Militia together with Yeomanry, Volunteers, and Artillery reinforcements were to go to S. Africa; also that the Colonial offers of troops would be accepted and irregular cavalry be raised locally in S. Africa and at home.

Dec. 19.—The War Office issued regulations regarding the employment of Yeomanry and Volunteers in S. Africa.

Dec. 24.—A portion of General Sir W. Gatacre's force occupied Dordrecht.

Dec. 30.—The Boers were defeated in a skirmish near Dordrecht.

BANKING IN JAPAN.

According to investigations completed by the Finance Department and published in the *Keizai Zasshi*, the number of banks throughout the empire at the end of January last was 2,051, their aggregate capital being no less than 440,386,669 *yen*. Compared with December of last year the figures shows an increase of 19 banks and 2,197,200 *yen* capital. Below are details:—

Banks.	No.	Capital at the end of January yen.	Increase in comparison with the previous month. No.	Capital in yen.
Nippon	1	30,000 000	—	—
Specie	1	24,000,000	—	—
Industrial	1	10,000,000	—	—
Agricultural and Industrial	45	27,820,000	—	—
Formosa.....	1	5,000,000	—	—
Saving { home.....	353	36,625.000	3	660,000
Saving { abroad..	1	1,250,000	—	—
Joint stock. { home.....1,355		273,749,315	10	1,357,200
Joint stock. { abroad...	6	2,964,450	—	—
Joint partnership.	53	10,706,900	3	100,000
Joint capital	133	10,075,184	1	30,000
Individual	102	8,195,520	2	50,000
Total 2,051		440,386,669	19	2,197,200

Many of these banks are on no very sound basis, and it is doubtful whether their operations will be long continued. Following are figures for the past three and a half years:—

Banks.	Capital in Yen.	Increase per half year. Numbers.	Capital in Yen.
Dec., 1899 ...2,032	438,189,469	121	30,759,165
June, 1899 ...1,911	407,430,304	104	22,553.970
Dec., 1898 ...1,807	384,876,334	79	20,477,210
June, 1898 ...1,728	364,399,124	125	42,806,110
Dec., 1897 ...1,603	321,593,014	146	35,818,500
June, 1897 ...1,457	285,774,514	117	40,639.970
Dec., 1896 ...1,340	245,134,544	—	—

COTTON SPINNERS' TRUST.

At a meeting of the principal cotton dealers and representatives of the Mitsui Bussan Kaisha, recently held in Osaka with a view to organising a cotton yarns trust, the following resolutions were passed:—(1) That the new organisation be called the Cotton Yarn Trust, and its central offices be established in Tokyo, with branches in Nagoya, Osaka, Okayama, and Kiushiu. (2) That the term of the Trust shall expire on 31st January of the 34th year of *Meiji* (1901). (3) That the object of the Trust shall be to promote mutual advantages in the sale of cotton yarn. As to the means of attaining this end, the following provisions were drawn up:—(1) Telegrams to be forwarded every day from the cotton-producing districts with regard to the condition of cotton, fluctuations in price, and other facts of importance. (2) Similar intelligence to be forwarded from Shanghai and Hongkong, which are now the chief markets for yarns. (3) The chief manager, on receipt of above telegrams, shall report to other managers the prices of yarn, which shall be determined by estimating the cost of labour and a profit of 7 *yen* per bale, in the case of goods to be sold in the interior. As for goods for export 50 *sen* will be paid for each bale out of the repayment of the Bombay freight in addition to 2 *yen* to be allowed for encouraging the trade. (4) Each spinning company of the Union shall report to the Head Office the daily output of yarn, as well as the amount produced during several months past. (8) The Head Office shall also report to each company the amount of daily transactions and the class of goods sold. (6) Payment for and delivery of goods shall be effected directly by the parties concerned. (7) Each corporation admitted into the Union shall pay 25 *sen* for each bale towards the expenses of the Trust. (8) Defaulters shall at once be excluded from the Union Spinning Corporation.

PEKING.

(From our own Correspondent.)

February 23rd, 1900.

The most exciting event in these parts was the selection, a month ago, of a successor to the throne. The successor is not to the present Emperor, Kuang-hsü, but to the previous Emperor, Tung-Chih. Thus Kuang-Hsü, by being of the same generation with Tung-Chih, is not in the line of succession. He should not have been chosen originally, and for that act the Empress Dowager was criticised. Now for other reasons she repents of her choice and makes a new experiment. The Emperor, however, has not abdicated. This is unnecessary, as his life cannot be long prolonged. The new choice is the grandson of the late Fifth Prince, a lad of 14 years. He is put under the tutelage of two of the highest literary men in the Empire, who are also the most conservative. In fact, the whole trend of the present *régime* is most reactionary. It is to be hoped that the reaction will go no further. If politics are like the swing of the pendulum it is about time for a reaction to take place. There is still a considerable party of progress even among the Peking officials. They are careful in what they say, but they prefer progress to the old *régime*. They disclaim all connection with Kang Yu-wei, who is the one object of the Empress Dowager's wrath. Her policy seems to be that of winning over the most conservative first, and when that is done she may enter on reform measures of her own.

The foreign Ministers had audience with the Emperor on the 19th. He said nothing himself, but his little speech was read by Prince Ching. There is sympathy felt for him in his loneliness by both Chinese and foreigners, but there is nothing done to bring about his rescue or to add a little comfort to his last days. Merchants and others in Shanghai and elsewhere have telegraphed in favour of the Emperor retaining his high rank. This has angered the Empress Dowager, but has restrained her in insisting on his abdication. She is content to have him a puppet in her hands.

A price is placed on the heads of Kang Yu-wei and Liang Chi Chiao. We hear that the latter has become a Japanese subject. This may legally prevent his capture or death, but there are those ready to have the honour o killing the man. Beware!

MR. W. G. BAYNE AS "FALSTAFF."

Mr. W. G. Bayne has made his reappearance on the Shanghai stage. Here is the welcome accorded him by the *North China Daily News*:—Many years have passed since the three Falstaff scenes from "Henry IV" were given in Shanghai by the A.D.C., when Mr. Bayne, the *Falstaff* on Tuesday, was the slim young prince, and Mr. Stephenson, the greatest melodramatic actor we have ever had in Shanghai, the *Falstaff*. Those who saw Mr. Stephenson in the part will never forget the humorous unction and the twinkle with which he gave the words: "By the Lord, I knew ye as well as he that made ye;" it was better than Phelps, undoubtedly the best professional representative of *Falstaff* in modern times. But reminiscences are apt to flatter, and we do not doubt that if we could see Mr. Stephenson's *Falstaff* again to compare it with Mr. Bayne's, we should find that the latter was every whit as good a rendering. Mr. Bayne, to use the current phrase, enters thoroughly into the skin of the fat knight; he is *Falstaff*, the greedy, thirsty, irresponsible, witty, unscrupulous, fat old Jack, magnanimous in his very cowardice. What a loveable old wastrel he is, so loveable with all his faults that such a stern and self-sufficient old school-marm as Queen Elizabeth herself insisted on Shakespeare's writing another play of which he was to be the hero; and to this we are said to owe *The Merry Wives of Windsor*.

Later in the evening Mr. Bayne appeared as *Jones Robinson Brownsmith* in the evergreen "Little Toddlekins." He was excellent, as usual. "Every telling point in his lines was made the most of, and at all times he held the house completely."

NEWS OF THE WEEK.

Judgment was given in the Yokohama Chiho Saibansho on Monday morning by Judge Satow, in the case of Mr. A. L. Manley against a Japanese, for medical expenses for plaintiff's dog, which had been cut with a sword by the Japanese. Plaintiff was awarded the sum of *yen* 20.50, the amount claimed, the defendant to pay coats.

The marriage of Lord Chesterfield to Miss Enid Wilson set precedent at naught, the bride wearing a satin train embroidered with silver lilies, doves, and stars, while the bridesmaids wore scarlet cloth coats with triple capes and picturesque felt hats. Lord Chesterfield's gifts to them were big sable muffs, instead of the ourthodox bangle, while his gift to the bride is a diamond tiara and a cheque for £2,000.

Kimberley was reduced to great straits just before its relief. Details of the December death rate show that in a population of 14,000 whites and 19,000 blacks the mortality was 60 whites and 138 blacks per thousand. The infantile death rate was 671 per thousand among the whites and 912 per thousand among the blacks. Enteric fever was prevalent. This frightful state of things showed no improvement in January or February.

President Kruger's letters have about them a ring of the celebrated despatches of the Kaiser's grandfather, the Emperor William. In a letter to President Steyn about the supposed defection of Free Staters at the Modder River, Oom Paul says: "If we retreat it is owing to cowardice. I have noticed that want of co-operation has caused us to evacuate our positions. Your Honour must impress upon the officers and burghers that they must resist to the death. In the name of the Lord, with this determination, and with a prayerful attack, I have confidence that we shall secure the victory. For Christ has said 'Whosoever would keep his life shall lose it, but whosoever would lose it for truth's sake shall keep it.' Send this together with your plans and advice to the officers."

Messrs. David and William Henderson and Co. launched at Partick on 31st January, a twin-screw steamer, built to the order of the Nippon Yusen Kaisha. This vessel, which is similar, but with increased first-class passenger accommodation, to the five steamers completed by the builders a little time ago for the same owners, has been built under the supervision of Mr. A. R. Brown, Japanese Consul at Glasgow, and Mr. George M'Farlane. Her principal dimensions are:—Length, over all, 493 ft.; beam (moulded), 49 ft. 2 in. depth (moulded), 33 ft 6 in.; and she has a gross tonnage of about 6,000. The machinery will be supplied by the builders, and consists of two sets of triple-expansion engines, each having cylinders 20 in., 33½in. and 56 in. diameter by 48 in. stroke. The vessel was named *Shinano Maru* by Mrs. Negishi, wife of the Japanese manager of the company in London.

Mr. George Lynch, artist of the *Illustrated London News* in Natal, who was taken prisoner by the Boers, describes a hymn service in the Boer laager behind Lombard's Kop, from which the Transvaal "Long Tom" daily bombarded Ladysmith. "About fifteen men, mostly about thirty or forty years, were crowded into the tent, which was excessively hot. Two candles were stuck in bottles placed on empty cases; the men squatted around, two or three reading from the same hymnbook. They had laid their pipes beside them and their rifles were stacked about the tentpole. They sang well in lusty, clear voices free from any nasal twang. The effect was strikingly picturesque, the strongly marked, earnest faces in the candle-light thrown out against the dark background of the shadows behind. Similar scenes were to be witnessed at each laager every evening, sometimes in three or four tents at the same time."

A burglar broke into the Yaami Hotel, Kyoto, on Sunday morning at about 3 o'clock and carried away *yen* 515 in Japanese and foreign money, a revolver, a hat, and ivory pipes belonging to Messrs. Anderson and Borland, who arrived from Yokohama on the 2nd and 7th respectively. The burglar first entered the room occupied by Mr. Anderson and took the articles mentioned into the corridor. He then entered the next room occupied by Mr. Borland, who was awakened by the noise of the burglar searching for valuables. He called to the people of the hotel, when the burglar pointed a revolver at his face and fled out of the room.

The last will and testament of the late Duke of Westminister was filed on Feb. 16th. It shows a gross estate valued at £594,229. This does not include, of course, the enormous entailed landed property. The widow will get the residuary estate after the various bequests. The testator left to the National Gallery Hogarth's celebrated painting, "The Gate of Calais." To old servants the Duke left annuities. Those of five years received one year's wages. Princess Adolphus of Teck, whose marriage portion was £75,000, received nothing in addition under the will. The bequests to the daughters vary from £25,000 to £40 000. The sons receive life annuities of £30 000 and £50,000 each. The *Daily Chronicle*, commenting upon the will, says: If the death duties had never been imposed would the Duke of Westminister's estate have been declared at the absurd figure of £500 000? Unless the public are entirely astray in their calculations, that sum more nearly represents a single year's income. We should imagine that the total estates approximated £14,000,000, at which they were once estimated.

SATSUMA-CHO FIRE BRIGADE.

The annual meeting of subscribers to the Satsuma-cho Fire Brigade was held on Wednesday afternoon at Keil's Building, Mr. J. Dodds presiding.

REPORT.

The following report was submitted :—

ACCOUNTS.

The contributions collected from the various Fire Offices for the year amount to Yen 2,230.00 and the Policy fees paid in by Agents to the Hongkong and Shanghai Bank during the twelve months to Yen 2,837.00. The former shows an increase of 225 Yen, and the latter a decrease of 948 Yen compared with the year ending December, 1898.

The Working Account and General Expenses show an increase in the total for the twelve months of about Yen 425, which is accounted for by additional wages and other little expenses. With the balance in hand it is hoped that arrangements may be made for the building of two new Fire Wells and for the connection by Telephone between the Fire Station and the Police Station on the Bluff, and also between the Brigade's Chief Station at Lot No. 238 and the Settlement Police Headquarters.

WATCHMEN AND PATROL.

The Tower look-out has been kept up all through the year, and the regular service of Patrol men has been carried out as usual during the Winter months.

FIRE, &C

The Brigade men have attended to 23 Calls during the year, and in addition to the fires in the former Settlement, at which they have done good work, they have rendered valuable assistance at the fires in native town, including one in Ashibikicho, &c., which destroyed about 3 200 houses on the night of 12th August.

The water supply at all fires in the former Settlement has been good.

SUPERINTENDENT'S REPORT.

Satsumacho Fire Brigade,
Yokohama, 1st January, 1900.

To the Fire Brigade Committee,
Gentlemen,

I have the honour to present the following report of the work of the Satsumacho Fire Brigade during the year 1899.

The number of calls for Fires, or supposed Fires, has amounted to 23 ; of these in the *Yamashitacho* (former Settlement) 7 ended in total destruction, 7 were slight, 2 no damage, 1 chimney alarm and 1 false alarm.

On *Yamatecho* (Bluff) —1 resulted in total destruction and 2 were slight.

In Native Town—2 ended in total destruction with loss 3,211 houses and several partially destroyed.

The causes, as reported, were as follows, viz :—

YAMASHITACHO (Former Settlement).

Unknown	8
Doubtful	3
Overheat of Stove	1
Rain on Lime	1
Defective Flue	1
Carelessness	1
Kerosene Lamp	1
Chimney Alarm	1
False Alarm	1

YAMATECHO (Bluff).

Overheat of Fire Grate	1
Bath Heater	1
Stove	1

NATIVE TOWN.

Unknown	2
Total	23

The figures above only refer to calls which involved the turning out of the Firemen, Fire Engines, Hose Reels, &c., belonging to the Satsumacho Fire Brigade.

I beg to place on record that the Fire Brigade have worked most amicably with the Police and Water-works authorities.

I think it but right to mention that great credit is due to Mr. S. Ikariyama, Inspector-in-Charge of Kagacho Police Station, for his urbanity at all times, and his endeavours to have his force work in unity with this Brigade, and also to Mr. K. Okada, Inspector-in-Charge of Yamate-honcho Police Station, and his men for the valuable assistance rendered at fires on the Yamatecho during the year.

I have the honour to be, your obedient servant,

N. MORGIN,
Hon. Supt. Satsumacho F.B.

LIST OF FIRES DURING THE YEAR 1899.

YAMASHITACHO (Former Settlement).

January 2nd—No. 5 Bund, Y. U. Club, Outbuildings, &c., Damage estimated at	$ 5,000
January 12th—No. 180, Outhouses, Very slight, Damage estimated at	—
March 20th—No. 20, Grand Hotel slight, Damage estimated at	900
March 27th—No. 90, Outhouses, Very slight, Damage estimated at	—
March 28th—No. 92, Office Building, Very slight, Damage estimated at	—

NATIVE TOWN.

August 12th	Ashibikicho, &c., Over 3,000 Houses destroyed.
August 18th	Ogimachi Nichome, About 4 or 5 Houses destroyed.

ENGINE, ETC., AVAILABLE AT FIRES.

"Relief" steamer, Shand and Mason, 350 gallons per minute.

"Victoria" steamer, Shand and Mason, 400 gallons per minute, worked by the Brigade stationed at the Brigade Station.

6 Hose Reels.

6 Stand Pipes.

21 Lengths Leather Hose, about 840 feet.

60 Lengths Canvas Hose, about 3,000 feet now in use.

2 600 feet new spare Hose. All 2½ inch.

1 Police Ladder, Fire Escape, and combined Ambulance from Merryweather and Sons, London.

3 Ladder Trucks, each with 6 lengths scaling ladders, 10 fire hooks, axes, 1 steel grappling-iron with 100 ft. of rope, and an ambulance.

1 Small French Manual Engine, 17 gallons, 6 men

1 Small American Manual, 44 gallons per min., 10 men with 200 feet hose, at General Hospital, Bluff.

1 Shand and Mason's Large Manual, 134 gallons per min., 30 men, with 10 lengths 2 in. canvas hose, 500 feet, stationed on the Bluff, in the U.S. Naval Hospital's compound.

2 Small Shand and Mason's Manuals, 17 gallons per min., 6 men, with about 500 ft. of Hose, at the Bluff Station.

6 Extinctems, (Dicks' Patent), at the Bluff Station and Public Hall.

CHANGES UNDER THE NEW TREATIES.

Owing to the new Treaties having come into force the status of the Brigade has been changed, and, although worked on the same lines as before and with the same staff, it is re-named the Satsumacho Fire Brigade, and under the arrangements with the Authorities two Honorary Advisers must be appointed at each annual meeting to represent the subscribers to the Brigade (Fire Insurance Agents). The present arrangements are that the buildings, materials, and plant are lent to the Japanese Authorities, the working expenses of the Brigade being undertaken by the Foreign Fire Insurance Offices through the Honorary Advisers, and any changes in the staff or other arrangements are to be left to the Honorary Advisers and the Authorities.

COMMITTEE.

The present Committee, consisting of Messrs. James Dodds, H. Grauert, J. D. Hutchison, J. Kern, E. Flint Kilby, N. P. Kingdon, James Walter, and W. B. Walter, beg to tender their resignations.

The Committee recommend the adoption of the following Resolution at the annual general meeting, viz :—

That the appointment of Messrs. E. Flint Kilby and J. D. Hutchison as Hon. Foreign Advisers to the Brigade to carry on its business with the Japanese Officials be confirmed. That the working of the Brigade be continued as heretofore, but be in charge of the Yokohama Fire Insurance Association Committee, with whom the Hon. Foreign Advisers shall communicate in case of need.

Yokohama, March 12th, 1900.

SATSUMA-CHO (YOKOHAMA) FIRE BRIGADE, IN ACCOUNT CURRENT WITH THE HON. TREASURER.

DR.

WORKING ACCOUNT FOR THE YEAR.

1899. Dec. 1st. To Supt. Morgin, wages for the year	Yen. 1,560.00

J. D. HUTCHISON,
Hon. Treasurer.

Examined with vouchers and found correct.

J. M. COLLUM, Auditor.
2nd March, 1900.

Digitized by Google
Original from CORNELL UNIVERSITY

The CHAIRMAN, in a few comments on the report, said a copy of the full agreement with the Japanese authorities was now in the minute book of the Brigade and was open to inspection.

On the motion of the CHAIRMAN, seconded by Mr. HOLM, the report was passed.

The CHAIRMAN then directed attention to the following paragraph in the report:—

The present Committee, consisting of Messrs James Dodds, H. Grauer, J. D. Hutchison, J. Kern, E. Flint Kilby, N. P. Kingdon, James Walter, and W. B. Walter, beg to tender their resignations. The Committee recommend the adoption of the following Resolution, viz.:—

That the appointment of Messrs. E. Flint Kilby and J. D. Hutchison as Hon. Foreign Advisers to the Brigade to carry on its business with the Japanese Officials, be confirmed. That the working of the Brigade be continued as heretofore, but be in charge of the Yokohama Fire Insurance Association Committee, with whom the Hon. Foreign Advisers shall communicate in case of need.

He said the old Fire Brigade Committee considered that the Fire Insurance Association Committee was the proper body to work the Fire Brigade under the changed conditions. Latterly the Brigade had been supported almost entirely by the subscriptions of the Fire Insurance Companies and the policy fees collected at the time of insurance. This system would be continued, and the fees would be collected at the time of issuing the policies.

Mr. T. W. MCILRAITH proposed, and Mr. BAUKAL seconded, the adoption of the recommendation.

Mr. FORD said in regard to these fees there had been some difficulty in collecting them in many instances, and he thought it would be well to see to this. Several people had declined to pay the fees.

It was pointed out by Mr. FLINT KILBY that in the new tariff the fees were incorporated as part of the tariff.

The resolution was passed unanimously, and the meeting broke up.

TELEGRAMS.

THE BOER WAR.

(OFFICIAL TELEGRAM.)

The following telegram has been kindly placed at our disposal by Her Britannic Majesty's Minister in Tokyo:—

"From Lord Salisbury to Her Britannic Majesty's Minister in Tokyo.—On the 5th inst. the Boer Presidents telegraphed their offer to make peace on condition that the incontestable independence of the two Republics as sovereign international States be secured and assurances given that those of Her Majesty's subjects who have taken part with the Republics in the war shall suffer no harm whatsoever in person or property. I replied on the 11th instant that, in view of the use to which the Republics have put the position given to them by the Conventions, and the calamities which their unprovoked attack has inflicted on Her Majesty's dominions, Her Majesty's Government are not prepared to assent to the independence of either the South African Republic or the Orange Free State. The full text of both telegrams has been laid before Parliament."

(REUTER'S SPECIAL SERVICE.)

Shanghai, March 9.

The *Daily News* says that 5,000 Kaffirs are digging trenches round Pretoria.

It is stated that the Government has decided to send Cronje to St. Helena until the termination of the war. No proposals for the exchange of prisoners will be entertained.

Buller's total losses from the 14th to 27th Feb. were:—

252 .....killed.
1,512 .....wounded.
95 .....missing.

The *Daily News* says that the Boers routed at Osfontein are estimated to have numbered 10,000. They were commanded by De Wet and De Larey. The British captured a gun, an immense quantity of forage, and a large number of tents.

Gatacre has occupied Burghersdorp.

Clements occupied Norval's Pont on the 3rd inst. The bridge was found blown up and the enemy were holding the north bank, but not in great strength.

A telegram from Mafeking, dated the 19th of February, says that typhoid and malaria are raging in the women's and children's laager. Many of the garrison are dying owing to want of good food. The hospitals are full to overflowing.

The Queen drove through the chief streets in the West End yesterday and received an immense ovation. It was a memorable scene.

At the sale of the Duke of Westminster's stud, Flying Fox fetched 37,500 guineas.

The Queen has ordered that henceforth on St. Patrick's Day, all ranks in the Irish regiments shall wear as a distinction a sprig of Shamrock in their head dress, to commemorate their gallantry in the recent battles.

Shanghai, March 10.

Roberts telegraphed from Osfontein on the evening of the 7th that the British were very successful, the enemy being completely routed. They were at the time of wiring in full retreat. The enemy's position was extremely strong, and a direct attack would have caused heavy loss. Therefore, a turning movement was made, the fighting being necessarily wide. It was practically confined to the cavalry. The horses were much exhausted.

French reports that the horse batteries did much execution. The British casualties were 50.

Roberts telegraphs from Poplar Grove, under date of the 8th, that Kelly-Kenny's Division, infantry brigades and horse artillery, marched 10 miles eastward.

Troops have been despatched to the disaffected districts in the north-west of Cape Colony.

The Naval Brigade from Ladysmith has arrived at Durban *en route* for Simonstown. There was tremendous enthusiasm.

General White has gone to Maritzburg.

Clements has moved his main camp six miles nearer to the Orange River. The Boers have completely withdrawn to the Free State.

Roberts telegraphs from Poplar Grove that Presidents Kruger and Steyn were present in the fight on the 7th, and did their utmost to rally the Boers, but the rout was complete, the Boers declaring that they were unable to withstand the British artillery and such a formidable cavalry force.

Shanghai, March 11.

General Warren's Division is going from Natal to re-inforce Roberts.

A war loan of 30,000,000 sterling has been issued. The rate of issue is 98, the rate of interest 2¾ per cent., and the loan is repayable on the 5th April, 1910.

Reuter telegraphs from Poplar Grove under date of the 9th instant, that French is 10 miles ahead. He reports the front clear of the enemy. The Boers are disorganised. The general impression is that the progress to Bloemfontein will be unopposed.

The eighth division begins to sail from England on the 14th inst.

Kitchener is on the Victoria Road organizing the advance of troops into the rebellious districts of Griqualand.

Brabant has occupied Jamestown.

Various peace reports are current. The Republics are said to be insisting on their independence, but nothing definite has transpired, and little is expected therefrom.

White had a splendid reception at Pietersmaritzberg. He is weak and feverish.

The Boers are entrenching near Biggarsberg, and guarding the western passes of the Drakensberg.

Shanghai, March 12.

The War Loan has already been thrice covered.

Offers have been received from the United States to take the whole loan.

Brabant is advancing on Aliwal North. Broadwood's brigade, when advancing towards Bloemfontein yesterday, unexpectedly found the enemy in a strong position on the kopjes at Driefontein. Kelly-Kenny's division arrived and there was sharp fighting. The British cavalry turned the position. The Boers were dislodged from the centre kopje, but they tenaciously hung to the rest. Forty Boers were taken prisoners; there were a number of dead. The British force is moving forward to-day.

Roberts telegraphs from Driefontein under date of the 11th. He says that the brunt of the fighting yesterday fell on Kelly-Kenny's Division. The Welsh and the Essex Regiments dislodged the Boers from two strong positions at the point of the bayonet. The Boers suffered heavily, leaving 102 dead and 20 prisoners.

Roberts has again telegraphed to President Kruger and President Steyn complaining of the abuse of the white flag and also of the use of explosive bullets.

Shanghai, March 13.

Large numbers of rebels are surrendering in Ladygrey, Herschel and Aliwal North. It is reported that thousands of rebels contemplate surrendering to Brabant.

[Note—This part of the message is rendered obscure through the mutilation of two words. —ED. *J.M.*]

The Boers on the border are in serious straits.

Reuter's agent telegraphing from Driefontein on the 11th inst., says that the Australians were largely engaged in the fighting on the 10th inst., which was very severe. When the enemy fled the Australian Cavalry alone was able to pursue.

Shanghai, March 14.

Presidents Kruger and Steyn, besides addressing Lord Salisbury, appealed directly for the intervention or the mediation of the Great Powers. America, Belgium, Holland and Switzerland answered promptly and emphatically in the negative. Lord Salisbury replied:—"The British Government can only answer your Honours' telegram by saying that Great Britain is not prepared to assent to the independence of either the Transvaal or the Free State." In connexion with the request of Presidents Kruger and Steyn, the United States offered to mediate, if desired, but Great Britain declined. The Presidents in

Digitized by Google Original from CORNELL UNIVERSITY

their despatch state that they will persevere with the war to the end if England is resolved to destroy their independence.

The Times' correspondent writes from Mafeking under date of the 6th that the sickness and suffering are terrible. The garrison is subsisting on horse flesh and on bread made from forage.

Our losses at Driefontein were 320 wounded and 70 killed and missing.

* Delayed in transmission.

Shanghai, March 15.

The statement is incorrect that America offered mediation. She merely acted as go-between in transmitting the message from Pretoria to London. Messrs. Fischer and Wolmanse, with Mr. Wessels, of the Free State, have sailed for Europe as a peace deputation.

Brabant has occupied Aliwal North.

Shanghai, March 15.

Roberts wires that by the help of God and the bravery of the troops he has taken possession of Bloemfontein. The British flag now flies over the Presidency vacated by Steyn.

The late President Frazer and the members of the late Government, the Mayor and the Landrost, and the other officials met Roberts two miles from the town and presented the keys of the public offices.

The enemy have withdrawn from the neighbourhood, and all seems quiet.

The inhabitants gave the troops a cordial welcome.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE IN TOKYO.)

Saigon, March 10.

On the 8th inst. at midday the Théatre Francais was destroyed by fire. An actress, Mademoiselle Heuriot, was found burnt to death in the midst of the ruins.

At Osfontein Roberts advanced to attack the Boers, who retired after a feeble resistance.

In Buller's last operations he had 1,869 killed, wounded, and missing.

Saigon, March 11.

The library, the archives, and most of the objects of art of the Theatre Français were saved. The fire is attributed to a stove. The representations of the Theatre will be continued at the Odéon or the Opera.

The Boers are entrenching in the Biggarsberg and Drakensberg Mountains.

Roberts' head-quarters are at Poplar Grove, 10 kilometres to the east of Osfontein.

General French is pursuing the Boers.

Saigon, March 12.

Several English newspapers speak of President Kruger having made proposals for peace. But England will show herself uncompromising.

Saigon, March 13.

The French Minister of Finance has prepared a project of law for imposing a tax of 4 per cent. upon the general income, which will be assessed at five or six times the amount of the house rent.

A telegram from London says that a sharp engagement took place yesterday at Drieffontein, on the road leading to Bloemfontein. The Boers were driven from their entrenchments.

Saigon, March 15.

Lord Salisbury has announced in the House of Lords that he has received proposals of peace from the Presidents of the Transvaal and the Orange Free State, and that he has replied refusing to consent to the independence of the Republics.

(FROM OUR OWN CORRESPONDENT.)

Shanghai, March 14.

The Hongkong and Shanghai Banking Corporation's building at Peking has been totally destroyed by fire. Everything valuable was saved.

15 K Rsq	KtxB		

NOTE.

3...B to B 4 is a weak move. Safer is 3.—Kt to B 3, the Four Knights Game. Herr Kaufmann, being one of the strong Vienna amateurs, we assume that he tried this variation as an experiment, and for the sake of a livelier game; but it turned out too lively. Black played weakly afterwards, too. 5...B takes P is inferior to 5...B to Q 3. Black's chief difficulties arise from being compelled to play 6...P to Q 3, compelling 7...P to Q B 4, which leaves eventually a weak Q P. He could have mended matters somewhat with 9...B to Q 2 (instead of 9...K^t to K 2,) whilst after 11, P to B 5, he was compelled to 11...P to B 3, in order to stop 12 P to B 6, which would have given White an overwhelming attack; but the attack was not less violent as it is, Herr Neumann concluding by giving up the Queen in the end, having enough in hand to win the game speedily.

NOTES.

The death is announced of Dr. Max Lange, the well-known player and theoretician, at the age of 67. His name will always be remembered in connection with the Max Lange variation of the Guioco Piano opening.

The Austro-Hungarian National Tournament at Vienna the prizes for which were bequeathed by the late Baron Kolisch, resulted in a victory for Geza Maroczy, who scored 9 games out of 11. The second and third prizes were divided between C. Schlechter and a new player named Brody. Alapin took the fourth prize, the other scores being Marco, Wolff, and Zinke 6, Kolve, 5. Popice, 4½, Albin, 4, S. Schwarz and Prock bringing up the rear. It is unfortunate that ill-health prevented Charousek from competing. The next international tournament begins at Paris on May 15 The prize fund already amounts to 16,000 francs.

Phillsbury is an inveterate smoker of strong cigars. When questioned, recently, by a reporter of the Washington *Post*, whether or not his smoking was harmful to him as a Chess-player, he said:—"No, I don't find smoking interferes with my play. Some folks say it takes the sharp edge from one's intellect, and spoils one's memory. I haven't found it so. I've smoked since I was fourteen, and I can play better when I have a cigar in may mouth—only a cigar, never anything else. When I play a lot of games at the same time I must be keyed up to it, as it were. I practise what you call self-hypnotism. It is largely will power. You see, it's just this way. When it comes my turn to make a move at one of the Chess-boards my mental powers are concentrated severely on the one move. All the other Chess-boards, the Checkers, and Whist are obliterated from my mind. It is as though I had never started playing these games at all. I seem to remember nothing of them. I come to a decision, the move is made, and I turn again to the cards in my hand. Quick as lightning the game of Chess vanishes from my mind. Now it is nothing but Whist with me. I seem never to have had a thought of anything but the game of cards. I play one. Then I move one of the checkers. These transitions of mind take place so quickly that I seem to be playing Chess, Checkers, and Whist all at once, and to be thinking of all the games at once. But it is as I explained. The only thing I really need for the ordeal is my cigar.

LATEST COMMERCIAL.

IMPORTS.

There is still a deadness about the market and prices must be taken as purely nominal. Home values have still a tendency to rise, but Japanese buyers are not inclined to accept the prices asked.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MARCH 24TH, 1900.

BIRTH.

On the 20th March, at Kobe, the wife of JAS. L. ROBERTSON, of a Son.

MARRIAGE.

On the 20th February, at Zion Reformed Church, Chambersburg, Penn., U.S.A., by the Rev. A. M. Schmidt, assisted by the Rev. Dr. Schaeffer, ROBERT E. GILL, of Kobe, Japan, son of the late Rev. Wyatt Gill, B.A., LL.D., of the South Pacific, to MARY COMFORT, only daughter of the late William E. Hollowell, of Chambersburg, Penn., U.S.A.

DEATHS.

On the 19th March, 1900, at No. 107 A Bluff, GEORGE JOHN WILLIAM, aged 2 years 4 months, infant Son of Michael Trockey.

Died suddenly, on the 15th instant, at Ealing, Middlesex, England, JOHN ALEXANDER FRASER, late of Yokohama, (by Telegram).

SUMMARY OF NEWS.

THE CROWN PRINCE'S marriage will take place in May.

THE Agra Bank has resolved to go into voluntary liquidation.

MRS. PATTON'S benefit concert last Tuesday was a pronounced success.

THE possibilities for peace in South Africa have not increased during the week.

PRINCE WALDEMAR has finished his visit to this part of Japan and left Yokohama on Friday.

THE Boers are retreating North-ward before Lord Roberts, skirmishing at every suitable point.

PRESIDENT STEYN threatens to shoot as a traitor any burgher who refuses to fight against the British.

THE plague is raging at Calcutta and Patna, the deaths during one week in Bengal exceeding 41,000.

MR. K. KOSAKA, public procurator of the Yokohama Local Court, returned from Europe on the 16th inst.

THE Osaka Shosen Kaisha have purchased the German steamer *Uto Maru* (1,000 tons). Delivery was taken at Kobe.

THE Yokohama Choral Society's second concert for the present season will be given in the Public Hall on Wednesday.

TRAINS on the Yonezawa-Niwasaka line, suspended by reason of the snow, commenced running again on the 19th inst.

SNOW fell at Hodogaya, Fujisawa, Oiso, Odawara, and Hakone on the 19th. Some snow fell in Yokohama on Sunday.

FIVE hundred emigrants accompanied by two constables left Kagawa Prefecture on the 15th inst. for Nemuro and Muroran.

A FIRE which is estimated to have destroyed 10,000 *yen* worth of goods, broke out in a spirit factory at Nishinohato-machi, Bakan, on the evening of the 18th inst.

REAR-ADMIRAL MORI, harbour-master of Yokohama, will leave for Shanghai and Hongkong in a few days to make an examination with regard to harbour work.

WE understand that the Tokyo Dramatic and Musical Society have in rehearsal that most amusing of farcical comedies "Charley's Aunt," which will be given soon after Easter.

A REPORT from the Governor of Kumamoto to the Home Department says that a fire broke out on the 15th inst. at 11.30 p.m. at Sakasegawa-mura, and 180 houses were destroyed.

ALL the mail-steamers for Europe and America alike are crowded with Eastern residents returning to the home-lands either for good or on furlough. The exodus from Yokohama is very great.

ON the 19th instant, when the 3.10 p.m. train from Shinagawa was passing the glass factory, a shot was fired which broke the window of a first-class carriage. No body was injured.

ICHIKAWA DANJURO, the famous actor, is ill and the play at the Kabukiza has had to be postponed until the 24th. Danjuro speaks of retiring definitely from the stage owing to increasing age. If he carries out this intention the next play will be his last. It is called the "Soga Kyodai" and Onoye Kikugoro will appear with him.

NINETY-NINE emigrants left by the steamer *Belgian King* for San Francisco, on the 15th. Japanese emigrants to the number of 135 left by the steamer *China* on the 15th instant for San Francisco.

THE news reached Yokohama on Wednesday of the death at Ealing, England, of Mr. J. A. Fraser, for over 30 years a resident in Japan, where he won the esteem of all who knew him. He leaves a widow and young family.

THE Formosan Governor-General reported to the Home Department that at Taipeh one new case of plague and one death were declared on the 15th. There have been 120 cases and 100 deaths since the 1st January.

THE death-rate in Manila for the last six months has been equal to 60 per 1000 per annum. The *Manila Times*, after comparing Manila unfavourably with Hongkong, says that the Manila death-rate is positively appalling.

A COLLISION occurred off Temposan, Osaka, on the 19th inst., between the Osaka Shosen Kaisha steamer *Kamogawa Maru* (427 tons), and the steam dredger *Kanasaki Maru* (100 tons) belonging to the Osaka Harbour Works. Both vessels were badly damaged.

A FIRE broke out at 2.40 a.m. on the 17th at No. 152, Furocho Nichome, Yokohama, occupied by a blacksmith named Takahashi Matsugoro. Twenty-nine houses were destroyed and 13 damaged, including a Christian Church. A rumour is current that the blaze was the work of an incendiary.

SOME coolies engaged in the Matsuyama coal mine, Fukuoka, were imprisoned a few days ago, owing to the cage in which they were descending, breaking and blocking up the shaft. Three were killed, but the other five, though maimed, lived from the 6th to the 17th instant, subsisting principally on the water which they could find.

ON Tuesday night at 10 o'clock, Okin, wife of Inouye Ginjiro, living at Miyagawacho, Sanchome, Yokohama, jumped into the canal with intent to commit suicide. She and her husband had been drinking when a sweet-heart of the husband called and the wife, in a fit of jealousy, ran out of the house, and threw herself into the water. She was rescued by passers-by.

A QUESTION has arisen as to whether the assistant surgeons in the American army who accepted commissions with the rank of Captain are entitled to the pay of that grade. The comptroller General has ruled that the pay of assistant surgeons who have served less than five years is $1,600 per annum, being the pay of 1st lieutenants of cavalry; and after five years service $2,000 a year.

TIS an ill wind that blows nobody any good. The other day a poor man living at Umeda, Umejima-mura, Minami-adachi, Tokyo, had to take a day off from his usual work in order to cleanse his house to satisfy the sanitary regulations lately enforced by the police. In turning out an ancient pot he discovered the following old coins, the existence of which had never been suspected, 126 *nibu* (gold), 83 *nishu* (gold), and 66 *ichibu* (silver). The man now declares that the plague has made him rich.

SOUTH AFRICA.

Saturday, March 17.

From Bloemfontein to Kroonstad, which President Steyn has chosen for his new capital, the distance is 110 miles; just the distance from Maggersfontein to Bloemfontein. Kroonstad has some evident advantages from the Boers' point of view. It is only 70 miles from the Transvaal frontier, and can therefore be easily reinforced from the Transvaal. Further, it is only 60 miles from Bethlehem, the terminus of the railway passing from Ladysmith over Van Reenen's Pass into the Free State. Thus any troops that the Boers may have in the Drakensburg district between Van Reenen's Pass and Harrismith can be quickly concentrated in the neighbourhood of Kroonstad. Two rivers have to be crossed by an army moving from Bloemfontein towards Kroonstad. They are the Vet and the Valsch; the former 50 miles beyond Bloemfontein, the latter a few miles south of Kroonstad. It is probable that the Boers will make a stand at each. One of Roberts' difficulties is that in marching against Kroonstad he had Van Reenen's Pass on his right flank. That feature might not be serious so far as concerns the attack on Kroonstad itself, but to advance northward of the latter place without clearing the Boers from the Drakensberg passes of the Free State might be dangerous. Here, perhaps, we find an explanation of the news that Warren's Division has been dis embarked again at Durban. Roberts observes that the Boers are still clinging to the mountains with the object of menacing his communications, and he has therefore decided to entrust to Buller the task of driving them out. Another point is that the Boers are reported as occupying strong positions at the junction of the Biggarsberg and the Drakensberg ranges. We infer, therefore, that they have not yet fully evacuated the north-western corner of Natal, and that Lord Roberts proposes to have them driven off British territory altogether. At all events, if the Boers choose to remain on the frontiers instead of hastening back to defend their cities and territories, General Buller may be well employed in keeping them there.

If it were permissible to suspect Lord Roberts of a little grim humour, we might suppose that his description of the causes which gave Bloemfontein into his hands was addressed to President Kruger and the psalm-singing Boers. The old President, whose sincerity we do not doubt but whose worldly interests may reasonably be supposed to colour his interpretation of the Scriptures, places ostentatious trust in Providence, and would have his comrades believe that ultimate defeat is impossible since the Deity is on their side, as may plainly be shown by exegetical demonstration. But Lord Roberts comes along, captures the Free State's chief town, and then announces that the victory has been achieved by "the help of God." The British Army, we suspect, will laugh not a little over the Commander-in-Chief's despatch, reading it as a direct response to the boasts of the Biblical Boers. Providence can scarcely be fighting for both sides. Nothing now remains for Kruger except to say that "whom the Lord loveth he chasteneth."

The *Jiji Shimpo* makes a pretty point in connexion with this despatch of Lord Roberts. Addressing itself to the multiplex demagogue who, writing in the columns of a Yokohama English journal, has shown so much concern lest any credit should be given to the Queen to England for the victories of her troops, if inquires how Lord Roberts' analysis is to be read. The *Jiji's* article, which roused the dual democrat's ire, said that the successes in Africa were naturally due to the excellence of the generals' strategy, but that it was impossible not to give some credit to the Queen's influence and virtue. That statement was interpreted to mean that the valour of the troops and the skill of their commander had partially contributed to these good results, but that the Queen's illustrious virtues were the main factor making for triumph; and a great deal of fine ratiocination was employed to show that if Her Majesty was to be credited with the present successes of her men, she must also be blamed for their previous failures. What the *Jiji* now wants to know is whether Lord Roberts intends to say that God was the prime contriver of the British army's recent victories, and that the army itself acted a partial and secondary part only; and what we who write should like to learn is whether, in returning thanks to the Deity, Lord Roberts must be held to allege that the early failures of our troops are ascribable to the temporary alienation of Providence.

Monday, March 19.

We observe with interest that the view expressed in these columns with regard to Buller's third attempt to relieve Ladysmith coincided with that taken by military experts in London. According to the correspondent of the Associated Press, the theory most widely accepted in military circles was that Buller's retirement "was ordered by Lord Roberts, and that both General Buller's and General Macdonald's operations were made by the direction of the Commander-in-chief in order to occupy the Boers at widely separated points so that they would be unable to transfer any portion of their forces to oppose the projected advance" into the Free State. We do not think it correct to say that Buller's retreat was ordered by Lord Roberts, but we do believe that the main purpose of his third attempt was to hold the Boers rather than to relieve Ladysmith. It was pointed out originally in these columns that the apparent success of the Boers' plan in keeping the war outside their own territory and compelling the British to fight under most disadvantageous circumstances would be turned into failure unless they seized the right moment for falling back and concentrating their divided forces. They did not seize that moment; they allowed it to pass, and the consequence is that a powerful British army is being driven into the vacuum resulting from their disjointed operations. President Kruger is reported to have said that he was not at all chagrined by the failure to reduce Ladysmith, Kimberley, and Mafeking. The Boers, he explained, were quite as well satisfied to keep the garrisons of those places imprisoned within their lines and living, or starving, at British expense, as to have them subsisting in Pretoria in the capacity of prisoners of war. The old gentleman's excuse might not have sounded quite so silly if the forces of the two Republics numbered a quarter of a million, and if they could consequently have afforded to permanently detach forty or fifty thousand men for the purpose of watching twelve or thirteen thousand Englishmen. But the situation assumed a very different complexion when they had to devote nearly their whole army to detaining purposes, not leaving any considerable force for operations in the field. It is possible, of course, that they may still have some clever strategical programme up their sleeve, and that their failure to defend Bloemfontein was deliberate, in view of the unfavourable nature of the country for their special manner of fighting. But when a State allows its capital to be occupied by the enemy's forces, it has suffered a disadvantage not easily retrieved. Of one main buttress at any rate the Boers' cause has been deprived: all the hopes they founded on an uprising of the Cape Dutch must now be definitely abandoned. They must rely on their own unaided strength, which is diminishing every day, while that of the British is increasing. We look still for some very severe fighting and probably a heavy list of casualties, but the tide has certainly turned.

General Buller has been very hardly treated by fate in this war. The task that devolved on him was one of immense difficulty, and if ever ill-luck dogged a commanding officer's efforts, his was a case in point. It is quite plain that the disaster which compelled him to abandon the first attempt at Colenso was due, not merely to failure on Colonel Long's part to carry out instructions, but to direct disobedience of orders. Colonel Long allowed himself to be carried away by the circumstance of the moment, and the loss of all his guns resulted. It appear, further, that the retirement from Spion Kop was not sanctioned by Buller. He exonerates the officer who ordered it, but the fact is that the retiring force actually met a body of troops moving to their support. Had they held on a little longer, the hardly-won position need not have been abandoned. Then, as to the third essay, Buller had to figure as making another failure, when in reality he succeeded in achieving his object; and as to his final effort, which ended in the relief of Ladysmith, the public will always regard it in the light of a corollary to Roberts' coup at Maggersfontein, though the list of casualties shows that Buller fought a hard and bloody fight.

Wednesday, March 21.

The point of paramount interest in the immediate future of the South-African campaign is the use that Lord Roberts will make of his lines of communication. There are three railways available for the attack of the Transvaal; that from Cape Town *via* De Aar, running through British territory along the borders of the Free State and the Transvaal; that from Port Elizabeth and East London, crossing the Orange River at two points, Norvals Pont and Bethulie, respectively, and forming one road from Springfontein northwards *via* Bloemfontein to Pretoria; and that from Durban *via* Laings Nek to the Transvaal capital. It seems to us very probable that the British General will organise three *corps d'armée*, one to enter the Transvaal from the east, using the Natal railway; one to enter from the West, making Vryburg, perhaps, the starting point and using the Cape Town railway;

Digitized by Google Original from CORNELL UNIVERSITY

and one to enter from Viljoen's Drift, using the Bloemfontein-Pretoria railway, With the troops now in South Africa, each of these corps could be forty thousand strong, leaving fifty thousand to guard the lines of communication, and assuming that twenty thousand are *hors de combat* from casualties and sickness. Another fifty odd thousand are to sail from England during March and April, but we omit them from the account at present. It is plain that Buller is not to be left idle in Natal with forty thousand men. He has the first right of all to take an active part in the further stages of the campaign, for he has borne the brunt of it hitherto with much suffering and comparatively little glory. Then, again, it is not likely that Methuen's column, which has been sent to relieve Mafeking, will either march back to Kimberley when it has effected its immediate purpose, or remain inactive at Mafeking. We speak of Methuen as being in command of the relief column. But Methuen's Division has evidently been broken up. The Highland Brigade is with Roberts; two thousand of the Guards are with Pole-Carew in the district south of Bloemfontein, and the remainder of the Guards, about five thousand, have not been mentioned in recent telegrams. It may be taken for granted that they form the bulk of the Mafeking column, and that the relief of the place will not be the only part played by them in the future campaign. Lord Roberts will naturally desire to demonstrate to the Transvaalers the uselessness of continuing the struggle, and the effective way to accomplish that, so far as we can see, would be to march three armies into their territory, one from the east, one from the west, and one from the south. Each of these armies would draw its supplies from a different maritime base, which is a consideration of no small importance with regard to facilities for obtaining and transporting food stuffs and material of war. Besides, if the Transvaalers contemplate a guerilla war, the best way to defeat them is obviously to spread the attack over as wide a range of territory as possible. Doubtless, had this fight taken place 50 years ago, the Boers would have ended by making another trek. But their trekking days are at an end, for they are surrounded on three sides by British territory and by Portuguese on the fourth. It seems hard at first sight that in the whole of wide Africa there is not a place for them to obtain the solitude and seclusion they desire. But they should have been content with what they had, instead of trying to drive England out of South Africa in order to build up a huge republic with the dominions snatched from her. They owe their misfortunes to the ambition and greed of their leaders.

Thursday, March 22.

The news of Sir Alfred Milner's departure from Cape Town, accompanied by his military and private secretaries, may mean, perhaps, that some negotiations for peace are on the *tapis*. If so, they probably refer to the Free State only. But it may also mean—and this we think the more likely interpretation—that Milner goes to consult with Lord Roberts with reference to some questions of local government in the occupied territory.

The pursuit of Olivier's commando in its retreat from Aliwal North is a difficult undertaking. The commando probably took the road to Rouxville (25 miles from Aliwal North) in the first place, and then turned eastward to Smithfield (22 miles from Rouxville), whence a road leads direct to Winburg via Helvetia and Dewetsdorp. Smithfield lies in a plain, but once that place is passed, Olivier's column would ascend a high plateau, and remain on it until within some twenty miles of Winburg. It is highly improbable that the Springfontein cavalry can have reached Smithfield (55 miles from Springfontein) in time to intercept Olivier, and there would be nothing left except to follow him along the mountain plateau. The cavalry from Bloemfontein, however, is more favourably situated. The distance from Smithfield to Dewetsdorp is nearly 60 miles; the distance from Bloemfontein to Dewetsdorp is barely 40, and the Bloemfontein road appears to be the more feasible of the two. If the cavalry set out from Bloemfontein at about the time of Olivier's passing Smithfield, it ought to intercept him in the neighbourhood of Dewetsdorp. It might also take a more northerly route to Thaba Nchu, 42 miles from Bloemfontein and 28 miles north of Dewetsdorp. In that case, supposing that the Bloemfontein cavalry set out while Olivier was between Dewetsdorp and Thaba Nchu, it should be able to cut him off. Should Olivier reach Thaba Nchu, however, without being intercepted, he will doubtless make a long detour eastward *viâ* Ladybrand, and to continue the pursuit would then be almost hopeless. Unless, therefore, we hear that he has been forced into action near Dewetsdorp or Thaba Nchu, the probability is that he will escape. The country is in his favour, and we may assume that he has a much better knowledge of it than his pursuers have.

Brandfort, where the Boers have blown up the railway bridge over the Modder, is 35 miles north of Bloemfontein. The destruction of the bridge can not make much difference to the British troops, for the Modder at Brandfort presents no serious obstacle. Besides, Driefontein, where the Boers were recently defeated, is on the north of the Modder, and troops advancing eastward from that district would render it impossible for the Boers to make any stand at Brandfort. The mere destruction of a railway bridge is a comparatively useless operation unless there is a possibility of keeping the enemy, under fire while he attempts to repair it.

Lord Kitchner's presence at Prieska in Griqualand West suggests that he regards the disaffection in that district as a matter of some importance. So, doubtless, it is, since it threatens the security of the communications with Cape Town. But apparently the rebels have no special desire to join the fighting, or they would have already come into collision with the force sent to subdue them.

Friday, March 23.

So far as can be at present ascertained, the number of men detached by the Boers from Ladysmith for the defence of the Orange Free State was only six thousand. Twelve thousand are said to have remained to oppose Buller's advance, but, if that estimate be correct, what became of the rest? No one supposes, we presume, that White, with nine thousand men, was surrounded in Ladysmith, and that Buller, with some thirty thousand men, was held at bay at Colenso, by an army of only eighteen thousand Boers. There can not be the least doubt that in the early days of the investment the Boers had from twenty-five to thirty thousand of all arms. They were able to keep ten thousand investing Ladysmith, and to put from fifteen to twenty thousand in their line of defences opposite Buller. Was this army reduced to eighteen thousand men at the finish, and are we to suppose that from seven to twelve thousand had been put *hors de combat* by British bullets and bayonets and by disease? Buller and White had over six thousand casualties from the commencement of their offensive and defensive operations, but it is most improbable that the Boers, acting chiefly on the defensive, suffered to any similar extent. There are two ways of explaining the discrepancy; first, that many of the Free-Staters quietly went back to their farms; secondly, that the Boers, so soon as they began to suffer reverses, set themselves to understate the numerical strength of the beaten troops. The latter hypothesis is highly probable. If we accept it, the conclusion is that the forces facing Buller at the close of the Colenso struggle numbered about eighteen or twenty thousand.

Under any circumstances it is becoming more and more difficult to reconcile facts with the statement industriously circulated by the Boers at the beginning, namely, that they had a hundred thousand men in the field. If they possessed any such force, it has managed to make itself invisible in the most remarkable manner. Cronje was supposed to have twelve thousand men at Maggersfontein. Then, when his communications were cut, he attempted to retreat with a force which does not appear to have numbered more than five thousand. The remaining seven thousand marched northwards, and ultimately effected a junction with the six thousand sent from Ladysmith. So, at least, it would seem. Meanwhile, the contingents on the Orange River also were hastening northward. These numbered at least four thousand in the Stormberg district and five thousand at Colesberg, independently of any troops that Cronje may have detached to strengthen the latter corps with the idea of striking at Roberts' communications. Here we have twenty-two thousand men available for the defence of Bloemfontein. Yet Roberts found himself opposed by ten thousand only. We can only say that if the Boers really have in the field anything like the forces they claim to have, they are employing them in a most disjointed and ineffective manner.

Prejudice has a wonderful power of colouring spectacles. Some good folks were thrown into a condition of almost hysterical pity by the spectacle of Cronje surrounded and refusing to surrender. The *Sun's* correspondent cabled that "all Europe was looking on in mingled horror and admiration at the magnificent but heart-rending tragedy." What was all Europe doing with its eyes, then, while the Mafeking tragedy was in progress, month after month; or the Kimberley tragedy; or the Ladysmith tragedy? At Ladysmith, when the investment was complete, General White asked Joubert to allow the women and children to withdraw. Joubert refused. It was his purpose to employ the sufferings of the women and children as a means of breaking down the courage of the British garrison. It is impossible to conceive anything more brutal.

Digitized by Google Original from CORNELL UNIVERSITY

At Mafeking the Boers, despite frequent warnings, directed their cannon, time and again, against the buildings where the women and children were lodged. The garrison, a mere handful of men, had to endure this shocking sight, and had subsequently to see the women and children dying of disease brought on by starvation and confinement. But there were no newspaper correspondents to talk of the "magnificent and heart-rending tragedy," or of "a mighty voice of protest rising from one end of the European continent to the other." These partisans make themselves supremely ridiculous.

With reference to the subject of transport in South Africa, the following very interesting extract from a letter of *The Times* Cape Town correspondent contains striking information :—

It has been truly said that an army fights on its belly—a fact some of our generals at times overlook—and in the matter of keeping man and horse supplied with food the ox-wagon transport plays a great part in South Africa. True it is that so far during this campaign the railways have done all of this, but when the Free State is reached the ox will be called on. Meanwhile at the various camps all over the country the ox transport is being utilized for all sorts of useful purposes, such as removal of stores to outposts, carriage of fire wood and daily camp necessities. In the Cape Colony alone a contract was concluded with Mr. Julius Weil to supply 700 wagons, each with a span of 16 oxen. Though originally the idea had been to allocate these in equal proportions between three advancing columns, the exigencies of the campaign have resulted in one-third being sent to De Aar, which supplies Naaupoort, Arundel, and Orange River forces as called upon, while the balance of about 470 wagons is retained at Queenstown and Sterkstrom. In addition to the wagon contract, another was concluded for a practically unlimited number of small spans of oxen, to be used in military carts and wagons. The Imperial Government learned several valuable lessons in the Zulu war, and one of these was to contract for such transport and not to purchase. The service is at once more efficient, and in the end is undoubtedly more economical. The contract could not apparently be in more able hands. Without default, almost without hitch, the requirements of the C.O.'s are attended to and carried out successfully. The amount of organization required is of Cook-like proportions and does credit to the contractor and his able lieutenants. The large transport camps at De Aar, Sterkstrom and Queenstown well repay visits and should be good object-lessons to those in charge of the Imperial mule transport, whose camps cannot be spoken of in very high terms. These latter, however, it must be admitted, have to deal with servants less amenable to discipline. The mule drivers are all Cape boys, while the ox drivers and leaders are Kaffirs or Hottentots, who very speedily learn to obey a firm and just master.

The contractor's system is admirably simple. The owners of every five wagons hiring to him were invited to nominate a white man as conductor, and in most cases owners themselves took the positions, so securing men personally interested in looking well after wagons and oxen. To every 50 wagons, however, the contractor also appointed an inspector of his own choice, and in addition a head man for every hundred wagons, to whom, for purposes of maintaining order, honorary military rank was granted. The result is most successful. In the transport camp strict military discipline is observed and the complex machine runs like clockwork. If it be reckoned out it will be seen that in a camp of 230 wagons there must be at least 460 natives, without counting all drivers and leaders of small spans of six and eight oxen used in military carts, and that, with the same exception, at least 3,680 oxen have to be looked after. The task requires brains, system, and patience to an extraordinary degree. The question of pasturage alone would wear out a Job, particularly when it is remembered that the owners of farms, mostly Dutchmen, throw every conceivable obstacle in the way. Our English commanders to a certain extent are fighting with one hand tied behind their backs. The delicate susceptibilities of the "loyal" Dutch must in no way be offended, and accordingly, though there may be martial law in operation, the service has to suffer, not only as regard grazing for oxen, horses, and mules, but in many more important, even vital, points. No restriction on the liberty of the subject must be attempted for fear of alienating an already hostile people. The task of keeping the transport efficient, always difficult and rendered doubly hard, has notwithstanding, so far been ably carried out.

POLITICAL PARTIES AND MARQUIS ITO.

There has been a good deal of editorial discussion recently in Tokyo with regard to Marquis Ito and political parties. The question immediately debated is that of reform or reconstruction—whether the existing parties can be brought into a satisfactory condition by alterations and adjustments, or whether they must be reorganized *de novo*. In the articles that have been published on the subject we do not find much that would interest or instruct our readers. The kernel of the matter is simply this, that all the parties are anxious to secure Marquis Ito for a leader, and that the Marquis is unwilling to throw in his lot with any one of them unless very radical changes have been effected. Marquis Ito is at present engaged upon a work which demands most extensive research, profound knowledge, and much time. He is the only statesman in the empire who possesses the combination of qualities necessary for such a work. It would be possible, doubtless, for others to conduct the required investigations ; though evidently it must always be a task of immense difficulty to draft a code of laws for the regulation of everything relating to the Throne in such a manner as to embody the most enlightened principles of the new civilization without doing violence to any of the immemorial traditions of Japan. Still such a feat is not beyond the reach of industry and care. But the man responsible for the work must also possess the full confidence of the Sovereign and of the nation, and truly we do not see that this combination of qualities to be found anywhere outside Marquis Ito. One can easily imagine, therefore, that the Marquis has no inclinations to abandon his present undertaking for the sake of leading a political party unless he sees that such a course is essential to the successful development of parliamentary institutions, which may be said to be of his own creation in Japan. That point of view does not appear to have presented itself to the journalists who are now discussing the political situation. But they make one very interesting and very discouraging assertion. It is that whereas Marquis Ito's conception of party reconstruction is based upon the sincere adoption of a patriotic policy and on its earnest pursuit without regard to personal profit, the party politicians are actuated chiefly, if not solely, by notions of selfish ambition. The *Asahi*, for example, goes so far as to say that the prevailing conception of party cabinets is not an institution representing the honest public-spirited views of the majority of the nation and maintained in place by the supporters of those views, but is simply a machine for bringing the sweets of office and the golden opportunities of power within reach of a certain coterie of professional politicians. The verdict seems harsh. Doubtless it embodies something of the injustice that disfigures all sweeping generalities. But it is a Japanese judgment on contemporary Japanese.

FOREIGN INSURANCE OFFICES AND THE LAW.

It is stated that seventy-four applications have been made by representatives of foreign insurance offices desirous of transacting business in Japan, but that there has been much difficulty in granting them because of the failure of the applicants to comply with the exact provisions of Japanese law. The officials of the Department of Agriculture and Commerce, who have to deal with such applications, are said to have made every effort to instruct the applicants as to the proper procedure to be pursued, but the success attending their endeavours has not been so marked as to prevent appeals to the Foreign Ministers on the part of the applicants, and remonstrances addressed by the Foreign Office to the Department of Agriculture and Commerce. There appears to be an impression among some of the foreign applicants that the official attitude is more or less influenced by a desire to drive them out of the insurance business in Japan altogether; but the officials declare that they fully understand it to be in the best interests of the country to encourage foreign insurance enterprise, since, in the matter of experience and solidity, the advantage is certainly on the foreign side. We ourselves do not for a moment doubt the good faith and helpful intention of the officials, but we really do not understand why there should be so much difficulty in complying with the form required by law. In many, we may almost say in the great majority of, cases it may be presumed that the applicants have recourse to duly qualified conveyancers to get their applications drafted, and there is consequently no apparent reason why serious errors should be made. It is hard to suppose that the fault is entirely on the foreign side, though unfortunately there is no possibility of denying that the suspicions referred to are entertained by some foreigners, and that a long time must still elapse before they are completely dispelled. What is to be hoped is that, in applying the new system, every care will be taken not to furnish grounds for fresh distrustfulness.

THE INDUSTRIAL BANK.

The first five issues of premium-bearing bonds by the Industrial Bank were not successful : it was found necessary to fill up the list of subscriptions by various expedients. The sixth attempt, however, produced a very different result, for, whereas the amount to be issued was only a million *yen*, the applications total 2,800,000 *yen*. According to the President, Mr. Takahashi, the Bank would have been glad to seize this favourable opportunity of placing a larger number of its bonds, but such action would have been illegal. Steps have now been taken, however, to remove that obstacle, and the directors will henceforth possess fuller discretionary power. The bonds are now quoted on exchange and received by the various banks as security for loans. Mr. Takahashi further says that the Industrial Bank and the Agricultural Bank have completed arrangements for cöoperation, and that the friction hitherto existing between them will be entirely removed in the future. He adds that the applications made to the Bank for accommodation greatly exceed the funds at its disposal.

THE VENGEANCE OF THE EMPRESS DOWAGER.

In a remarkable but somewhat apocryphal letter from a member of the Reform Party in Peking, which the *North China Daily News* publishes, it is declared, on the strength of verbatim statements made by one of the Palace Eunuchs, that the Empress Dowager, on January 24th, caused the Emperor to sign his abdication, and would have deposed him had not urgent remonstrances arrived, the first of them from Mr. Kin Lien-Shan, Manager of the Chinese Telgraphs in Shanghai. The Eunuch adds that the Empress was bitterly enraged against Kin; that she determined to have his head, and that there would be nothing left undone to compass her end. Kin fled to Macao, and the next thing heard was that the Viceroy Li, in obedience to instructions from Peking, had applied for his extradition on a charge of having defrauded the Shanghai Telegraph Administration of several tens of thousands of taels. The fugitive official may be guilty, but the sequence of events suggests disquieting suspicions. At all events, he is not thought guilty by foreigners in China, where he enjoys much favour as a leader of the reform movement. Of course, if a *primâ facie* case can be made out against him, the Macao Authorities will have no choice but to extradite him. Great efforts are being made in his behalf, however. On the slender plea that his supposed crime was committed in Shanghai, which is under foreign jurisdiction, the Portuguese authorities were induced to allow him the assistance of an English barrister, and an expert has been summoned from Hongkong to help him. Meanwhile, some idea of the feeling excited by his case may be gathered from the following extraordinary and most indecorous paragraph which appears in the *China Mail*, to the great discredit of that usually sober journal:—

That gruesome old ghoul, that iniquitous old female, the Empress Dowager, is up to her bloodthirsty games again, and is, despite repeated warnings, bent upon exterminating the Reform Party in China. If Great Britain, the dominant power in the Far East, permits Mr. Kin Lien Shan to be ruthlessly butchered, all the Farm can say is that we have lost that proud privilege of righting wrongs that has been associated with the word Englishman from time immemorial. We have heard enough of Palace intrigues at Peking. Won't somebody be so kind as to get up a counterplot to depose and deport the Chinese Delilah? 'Tis a consummation devoutly to be wished.

MONEY AND INFORMATION.

Lord Salisbury's recent remarks in the House of Lords have not passed unnoticed in Japan. His lordship said, in effect, that Great Britain had been taken by surprise with regard to the Boers' warlike preparations because her officials had not been in a position to purchase information. With all her immense wealth, England grants such small sums for purposes of secret service that she is placed at a great disadvantage compared with other Powers. In this particular case the result has been an expenditure of millions of pounds, the loss of hundreds of valuable lives, and a serious shock to the nation's peace of mind. The *Jiji Shimpo* notes these facts, and warns the Government of this country not to commit a similar error. If information is needed, it must be paid for, as Lord Salisbury truly said, and without information what can be accomplished?

ANOTHER ROMANCER.

We are sorry to observe that Mr. John Foster Fraser, who spent a short time in Japan in the course of his round-the-world bicycle trip, has been obliged to employ the resources of romance in order to manufacture articles about this country. In a recent number of *Cassell's Family Magazine* Mr. Fraser says:—

The Japanese constable is a most irritating little animal. First he is so insignificantly little and he looks so ridiculous, with no chest, in his little French uniform, and he struts so preposterously and swings his little sword, and in the villages he makes all the folks bow as he goes by, that really I often—out of pure malice of heart—wanted to lift him up by the scruff of the neck and pitch him into an adjoining pond. You hear a great deal about Japanese politeness. That is quite right if you leave out of count the policeman. He thinks it his duty to be rude to foreigners. He wants to see your passport at every street corner, even if you only halt to buy a bun. He marches into your room at an hotel with his hat on, and he only rarely gives the usual salutation. Without invitation he helps himself to any food lying about. As you do not know Japanese and he does not know English, you talk by the means of a conversation book. He will pitch the passport loose across the room instead of returning it to its envelope. His whole manner is perky, conceited, and aggressive. He is not nice.

We are unwilling to deal harshly with Mr. Fraser, but the only possible comment on his account of the Japanese policeman is that it is a tissue of libels. There are six emphatic falsehoods in Mr. Fraser's short paragraph. The Japanese policeman does not "make all the folks bow as he goes by." He does not "want to see your passport at every street corner." He does not "without invitation help himself to any food lying about your room at an hotel." He does not "pitch the passport loose across the room instead of returning it to its envelope." His whole manner "is not perky, conceited, and aggressive." All these assertions are the exact opposite of the truth. We do not think it would be possible to find a more polite and obliging individual than the Japanese policeman invariably shows himself in his dealings with foreigners. We have known him ever since he came into existence more than a quarter of a century ago, and never once, not even once, have we observed him make any approach to the conduct of which Mr. Fraser accuses him. The epithets deservedly applicable to his behaviour are "helpful, kindly, and deferential." We are not speaking of his manner of arresting inebriated or riotous liberty men. As to that part of his career we frankly confess ourselves without any direct experience. What we speak of is his behaviour under the circumstances alluded to by Mr. John Foster Fraser, and we declare that the writer in *Cassell's* could not have penned a falser or a crueller libel. It is really too bad that a flying tourist, merely for the sake of making piquant and saleable copy, should slander a class of Japanese officials who merit the praise and gratitude of foreigners. What right has Mr. John Foster Fraser to publish a tissue of smartly phrased falsehoods which can only have the effect of injuring the relations between foreigners residing in Japan and the people of the country, and which depict the Japanese policeman in the falsest possible light? This manner of manufacturing copy is simply fraudulent. No other term properly describes it.

AN INTERESTING COMPARISON.

In connexion with the subject of the effective spirit of saving in Japan, the *Kokumin Shimbun* publishes the following comparative table showing the figures relating to post-office savings banks in various countries:—

Year.	Country.	Percentage of Depositors.	Average amount per Depositor.
1898	Belgium	22.77	144 Yen
1897	England	18 99	158 Yen
1897	Holland	12.54	79 Yen
1895	Italy	9·73	62 Yen
1896	Sweden	9 02	59 Yen
1897	France	7·51	113 Yen
1899	Japan	2 93	17 Yen

The system of post-office savings banks was inaugurated in Japan in 1875, in England in 1861, in Belgium in 1865, in Holland in 1876, in Sweden in 1883, and in France in 1881. Japan certainly makes a poor showing in this list. That the amount of deposit per head should be comparatively small would not be surprising, but it is disheartening to find that only 293 persons are depositors out of every ten thousand of the population, whereas the smallest number in any of the European countries employing the system is 751.

DEATH OF COUNTESS HIJIKATA.

We regret to announce the death of Countess Hijikata, which took place on the 15th instant at 5 p.m. The deceased lady was in her sixty-third year. Her illness had not been long, but its hopeless nature was recognised from the first. During Count Hijikata's long tenure of office as Minister of the Imperial Household, the Countess discharged her social duties with hospitality and assiduity that were the subject of general comment. Her death is referred to in feeling terms by the leading Tokyo journals.

The remains of Countess Hijikata were interred at Somei on the afternoon of the 20th instant. A desire having been publicly expressed that the obsequies should be as free as possible from ostentation, the number of floral tributes was not remarkably large, but very handsome bouquets were sent by their Imperial Highnesses Princes Komatsu, Arisugawa, and Fushimi. Among those who followed the bier were Marquis Ito, Marquis Saigo, Viscount Aoki, Count Inouye, Prince Konoye, Prince Tokugawa, Admiral Yamamoto, Viscount Tani, Mr. Shibusawa, Mr. Hoshi, the Representatives of Russia, America, and Italy, the Ladies of the Imperial Household, and many other notables.

THE PATRIOTIC FUND.

Amount received by the Chartered Bank of India, Australia, and China, on account of the Lord Mayor's fund for the widows and orphans of the officers and men of Her Majesty's forces who may lose their lives from the war in South Africa.

JAPANESE FINANCE.

In a speech recently delivered at an entertainment to welcome some returning officials of the Finance Department and bid farewell to some others departing for Europe and America, Mr. Sakatani made some interesting statements. He explained that the amount to be raised this year, under the *post-bellum* programme, is 32 million *yen*. Of that total, 10 millions will be furnished by the Deposits Bureau, and 6½ million will come from the Bank of Formosa. Thus there will remain only 15½ millions to be provided, and as considerable sums have to be carried over from last year's appropriations, on account of unfinished works, no difficulty is anticipated in financing the remainder by recourse to the domestic market. The money will be applied chiefly to railway construction and to the building and equipping of the Iron Foundry.

Concerning the currency, Mr. Sakatani, considered that the system was now established on a solid basis. Since the adoption of gold monometallism the quantity of the precious metals in Japan had undoubtedly become larger, owing to the fact that gold was drawn hither from China and Korea. Against a volume of 200 million *yen* of convertible notes, the Treasury held a hard-money reserve of 100 millions, which was more than ample for all purposes. The South-African war and exceptional tradal conditions had recently caused an exodus of specie, but that was a temporary incident which need not cause any uneasiness.

FUNERAL OF MRS. IWASAKI.

The funeral of Mrs. Iwasaki took place on the 18th instant in very unfavourable weather, rain falling incessantly and the temperature being unseasonably low. The attendance was nevertheless enormous. The line of vehicles must have extended nearly two miles, and in spite of climatic deterrents the streets through which the cortege passed were lined thickly with spectators. Baron Iwasaki Yanosuke, nephew of the deceased, and Baron Iwasaki Hisaya, her grandson, were the chief mourners, and among those that followed the bier were Marquis Saigo, Mr. Okuma Hidemaro (representing Count Okuma), Count Itagaki, Count Matsukata, Viscount Tani, Mr. Shibusawa Eiichi, Mr. Soma, Mr. Amenomiya, Mr. Kato, Mr. Takahashi, Mr. R. Irwin, Mr. S. Dun, Mr. Howard, Mr. Kirkwood, Mr. J. Conder, Messrs. T.B. and A. Glover, Captain J. M. James, Mr. W. B. Mason, Captain Brinkley, and many other residents of the capital, official and private. The procession started from the house of Baron Iwasaki Hisaya precisely at the appointed hour and reached the family vault at Somei a little before three o'clock. Admirable arrangements had been made, and owing to the spaciousness of the grounds surrounding the vault and the perfect organization, the great crowd of vehicles passed, one by one, to their appointed places without the slightest hitch, while the mourners repaired to large edifices erected for the purposes of the ceremony. The service was chaunted by about fifty Buddhist priests, the principal of whom pronounced a warm and sympathetic funeral oration in memory of the deceased lady, whose noble character had won universal esteem.

FORMOSA.

Baron Kodama, Governor-General of Formosa, seems to be satisfied with the progress of events in that island. Speaking to a representative of the *Kokumin Shimbun*, he said that five years had elapsed since Japan acquired Formosa and two since he became Governor. It was now possible to assert that the perennial disturbers of the peace had been completely quelled in the Taipeh and Gilan districts, though they still gave same trouble elsewhere. The great difficulty experienced by the Japanese had been to distinguish between rebels and peaceful subjects. The former, by a clever system of terrorism, induced the latter to protect and conceal them, so that the police were much perplexed. Naturally it had been supposed at the outset that the bandits would chiefly have their retreats in out-of-the-way places. But experience had shown that such was by no means the case. They frequented the districts where opportunities of plunder were most available, and respectable people gave them asylum for the sake of escaping their extortions. The literati had been prominent offenders. Retaining always a conviction that Japan's tenure of Formosa would be only temporary, and that everything calculated to embarrass her was patriotic, they did not hesitate to encourage the bandits and assist in concealing them. The Governor-General is persuaded, however, that the political views of the literati have undergone a radical change. They see now that Japan has come to stay, and that their interest lies in assisting to secure public peace and good order. Thus the prospects have greatly improved.

Mr. Soyeda, President of the Bank of Formosa, says that the Japanese do not show the spirit of enterprise very strongly in the matter of going abroad in quest of fortune. Formosa is only now beginning to attract men of the better classes, and they do not come provided with capital at all adequate for entering into competition with the Chinese or the foreign residents of the island. The number of foreign residents is comparatively small, but the business done by them is on a large scale; altogether above the heads of the Japanese. It must be confessed, however, that the state of affairs represented by Mr. Soyeda himself is not calculated to encourage immigrants. He says that the rate of interest charged by the Japanese for loans to each other is not lower than 60 per cent. annually, and is sometimes as high as 120 per cent., whereas the Chinese lend to each other at rates varying from 5 per cent. to 12 per cent. Apparently usury of the most extreme kind is the order of the day among the Japanese. Yet, after all, what Mr. Soyeda describes is only a replica of the state of affairs in Tokyo, where the Japanese Shylock exacts his sixty per cent. without flinching, and will take his pound of flesh into the bargain. The Bank of Formosa gives accommodation at 3 *sen* daily (10.95 per cent.), but other banks charge 8 *sen* (29.20 per cent.). House rent, too, is enormously high where Japanese are concerned. The usual rate is a *yen* per month for a space of one mat. Hence, for a little house measuring 15ft. by 25ft. one has to pay 30 *yen* monthly. The scale of living is proportionately extravagant among the Japanese, whereas the Chinese not only live economically but also are not subjected to any high charges for rent, since they own their own houses. Under such circumstances it is difficult to understand how there can be any prospect of successful business competition with the Chinese.

The bidding for the camphor monopoly in Formosa is expected to be very keen. In spite of somewhat onerous conditions —namely, 100,000 *yen* to be lodged as guarantee money, and security to be given to the extent of 1,800,000 *yen*, there are already 25 applicants in the field, including many eminent foreign firms; as Messrs. Jardine, Matheson and Company, Messrs. Samuel Samuel and Company, Messrs. Otto Reimers and Company, &c. Among the Japanese we find the names of the Mitsui firm, the Okura firm, the Sumitomo firm, the Daito firm, the Takata firm, and many others. The competition turns on the figure at which the camphor is offered for sale in the market. The firm which undertakes to sell it at the lowest price will obtain the concession. It is nevertheless expected that large profits will accrue to the successful monopolist.

EXPORTS AND IMPORTS.

The increased import duties levied under the Revised Treaties do not appear to have checked the incoming of foreign goods. They were not, of course, intended to have any such effect, but many people feared that such a heavy addition to taxation must work injuriously. Last year, owing probably to large importations made in 1898 in anticipation of the operation of the new tariff, exports showed signs of growing to something like equality with imports, and people who still afflict themselves about "the balance of trade" began to recover their equanimity. But this season the old tendency to preponderance on the side of imports is asserting itself very strongly. During the first half of the present month, the exports from Yokohama and Kobe were 6,335,122 *yen*, and the imports 11,961,886 *yen*, there being thus an excess of 5,626,764 *yen* on the side of imports. The customs returns show that the outflow of specie during the 15 days was 1,764,853 *yen*, but it is stated that the Hongkong and Shanghai Banking Corporation has just exchanged notes to the value of some five million *yen* at the Bank of Japan and that a corresponding exit of gold will be soon witnessed. The imports include 4,730,000 *yen* worth of raw cotton, a large part of which will doubtless be worked up into yarn for export, but that fact does not appear to give much consolation to Japanese economists.

THE LATE MR. J. A. FRASER.

The news of the death of Mr. John Alexander Fraser, at Ealing, England, on the 15th inst., will occasion deep sorrow among a very wide circle of the foreign community of Yokohama. To few men is it given to win such a deep hold upon the affections of his fellow-men as Mr. Fraser won during his long residence in Japan, and to his widow and young family in England much sympathy will be extended in their great loss.

THE GREAT HUNT.

The great hunting expedition, which is to take place round the base of Fuji-yama on the 1st and 2nd April, is said to have had its origin in kerosene oil. It is a curious connexion of ideas, but the explanation is simple. A certain Mr. Suwabe Ichinosuke discovered in the Fuji district indications of a kerosene well. He communicated the fact to Mr. Kimura Tadaichi, of Tokyo, who proceeded to the place, and, in the course of investigations, was so struck by the scenery and by what he heard about the prospects of finding game, that he recalled the celebrated *battues* of Yoritomo seven hundred years ago, and conceived the project of organizing something similar to-day. He put up 1,500 *yen* for the inevitable *undo-bi* (promotion expenses), and secured the hearty cöoperation of that ardent sportsman, Mr. Tomoji, of the House of Representatives, as well as that of Messrs. Haseba Junko, Ayai Takeo, and other prominent men. The public seems to have been caught by the project. It is said that subscriptions are pouring in, and that all the railways will give tickets at reduced rates. We read, also, that the archers of Fuji-gori in Shizuoka Prefecture have organized a band of 20 bow-men, who will compete with the carriers of guns. It is to be hoped that no human being will be mistaken for big game, but the affair appears to be assuming dimensions which had no parallel in the days of the Minamoto sportsmen.

A CURIOUS CHARGE.

In its issue of March 16th, the following accusation is preferred by the *Japan Herald* against this journal:—

The really pitiful extremities to which the editor of the *Mail* is reduced in his frantic desire to score against us, may be gauged from the fact that he does not hesitate to falsify a quotation from the *Herald*, in order to make it appear that we have been guilty of a grammatical slip, of which he alone is the unscrupulous author. The *Herald* originally wrote: * * * "The recent *success* of the British troops is apparently due to the glorious virtues of Her Majesty, though partially, no doubt, *it* may be, etc.," a perfectly correct construction. This, the *Mail*, in its dire distress, changes in this manner: "They represented the *Jiji Shimpo* as saying that the recent successes of the British troops '*are* apparently due to the glorious virtues of Her Majesty, though partially, no doubt, it (*sic*) may be attributed to the perfection of the plans adopted by the commanders in the field.'" A poor enough expedient, certainly, but of some interest in this connection, as unmistakeably revealing his inability to answer categorically the arguments of our correspondents, or the charges against himself.

If the *Japan Herald* turns to its issue of the 14th instant, it will find there the following:—

"We hear, the writer continues, that the Queen of England naturally pays great attention to the war, and (the following is a literal translation of the *Jiji's* high-flown style) *the recent successes of the British troops are apparently due to the glorious virtues of Her Majesty, though partially, no doubt, it may be attributed* to the perfection of the plans adopted by the Commanders in the field."

Our quotation, therefore, was absolutely correct. The *Japan Herald's* accussations that we are the "unscrupulous author" of its own blunders; that we have been driven to a "pitiful extremity," a "poor expedient," and so forth are amusingly false. Why does not the editor examine his columns before charging others with wilfully misquoting them? It is very entertaining, but we are prepared for such proceedings on the part of a newspaper which openly confesses that it sees nothing contrary to the canons of honest journalism in publishing in its correspondence column letters concocted in its own office over different *noms de plume* on the same subject in the same issue, and in subsequently allowing this plural correspondent to make use of the editorial columns and personate the editor as champion of the correspondents. Such a hi-presto dodge is quite unique—a member of a newspaper's staff transforms himself into a many-voiced public, writes letters to himself over various fictitious signatures, gets them inserted as communications coming from outsiders, and then, entering the editorial chair, makes use of the editorial "we" to defend his own correspondence. We believe that the history of newspaper enterprise might be searched in vain for a more bare-faced confession of journalistic fraud.

KOREA.

The conditions upon which the Korean Government has agreed to grant a concession of the Unsan Gold Mine to Mr. Pritchard Morgan are said to be three:—First, that mining operations shall be carried on for one year conjointly by the English concessionaire and the Koreans; secondly, that after that period the privilege shall be limited to the Englishman; and thirdly, that even after the conclusion of a year, Koreans shall be employed to work the mine. If the agreement secured on Mr. Morgan's behalf be of the nature here set forth, we do not see why there should have been so much hesitation in granting it. The English concessionaire would doubtless have been willing to accept such conditions from the outset.

The Fusan complication is rumoured to have been settled, Japan recalling two police officers and fining them, and the Fusan Consulate addressing a warning to the restaurant where the incident occurred. We need scarcely say that these terms are not viewed favourably by critics who, on the faith of stories coming from the Japanese side only, claim that the whole fault rested with the Russians. It is understood that Russia asked to have the two police officers dismissed and the restaurant closed. If so, she has been content with much less than she wanted.

It is stated that agents of Messrs. Holme, Ringer and Company in Nagasaki have proceeded to Masampo, with the intention of trying to purchase land there from its Japanese holders, in order to re-sell it to Russia. This design is denounced in very strong terms by a vernacular contemporary, but we do not detect its iniquity. If the Japanese that have purchased the land want to sell it, why should not the Russians buy it? We are reminded of the folks who rail against Mr. Chamberlain because a firm with which his brother is connected sold ammunition to the Boers before the South African war broke out. If that was wrong, then Messrs. Krupp and Company ought not to sell guns to China, and still less should England build war-vessels for Russia.

A telegram to the *Jiji Shimpo* from Söul announces that, on the 16th instant, three Russian war-vessels entered the harbour at Chemulpo, and on the 17th the Admiral in Command proceeded to Söul with a guard of marines, for the purpose of having audience of the Emperor.

THE IMPERIAL WEDDING.

The Committee entrusted with the duty of making arrangements in Tokyo for the commemoration of the Prince Imperial's wedding has decided that no subscription less than 1 *yen* shall be received. Persons subscribing 500 *yen* or upwards will be honorary members of committee; 100 *yen* or upwards will constitute a title to special membership, and 10 *yen* will make an ordinary member. The 1 *yen* limit will exclude a great many willing contributors.

It is expected that the marriage of the Crown Prince will take place on the 9th of May. No definite programme seems to have been elaborated as yet with regard to the nature of the celebration or the method that will be adopted by the people to commemorate it. The only statement as yet circulated is that there will be a grand ball at the Palace on the third day after the wedding.

For some time opinion was divided between a place of public entertainment (*Kokaido*) and an art museum as the better monument in commemoration of the wedding of the Prince Imperial. It has been finally decided, however, that the latter project is the more advisable, and the approval of the Imperial Household Department seems to have been obtained. An association calling itself *Togu-gokeiji Hoshuku-kai* has been formed with Baron Senge, Governor of Tokyo, and Mr. Masuda, Mayor of the city, at its head. Its offices are to be in the Tokyo Municipal Building, and due notice will doubtless be given as to the proper method of forwarding subscriptions. The present plan is to erect a museum covering an area of 300 *tsubo* (a quarter of an acre) at a cost of 350,000 *yen*, but the programme will be increased if a larger sum is forthcoming. Nothing is said as to the manner of furnishing the museum, though that part of the undertaking will be far the more difficult. We should like to know, also, in connexion with this matter, what is to be the fate of the fine pile of buildings formerly occupied by the Engineering College. Years ago they were handed over to the Household Department for the purpose of making an Imperial Museum, but nothing has been done in the way of carrying out that aim. Could not these buildings be brought into the present scheme?

THE QUEEN'S THANKS.

The following letter has been sent to us for publication:—

SIR,—Her Majesty's Principal Secretary of State of Foreign Affairs has been commanded by my gracious Sovereign Her Majesty the Queen to convey to you her thanks for your kind message of congratulation on the occasion of the recent victory of Her Majesty's forces in South Africa, and I have accordingly much pleasure in acquainting you with Her Majesty's appreciation of your cordial sympathy.

I take this opportunity to offer you the assurance of my high consideration.

ERNEST SATOW,
H B.M. Envoy Extraordinary and Minister Plenipotentiary.

SHOSUKE KODAMA,
Member of the House of Peers of the Imperial Diet.

CHINA'S FOREIGN TRADE.

We have been in the habit of looking with surprise and pleasure at the rapid development of Japan's foreign trade, but the record in China's case begins to be worthy of scarcely less admiration. In the Report just published by the Imperial Maritime Customs, we find it stated that the trade during 1899 was "characterised by an astonishing development," and that "merchants, both foreign and native, made handsome profits in almost every branch." The total trade reached the great figure of 460,533,288 Tls., being an increase of 91,916,805 Tls. as compared with the figure for 1898, and being more than double of the figure for 1890. In short, the trade grew by over a hundred per cent. in ten years. The customs revenue, of course, increased proportionately, reaching an aggregate of 26,661,460 Tls., or 4,158,063 Tls. more than the sum collected in 1898. That result is specially fortunate at the present juncture, when China has to devote such large sums to the payment of interest and sinking fund on account of her foreign debt.

We observe that the import duties collected represent only 3 per cent. *ad valorem*, on the average. Some prominence is given to the fact, doubtless in view of the attempts the Chinese Government is now making to obtain a revision of the tariff. The proposals put forward for that purpose do not extend to any nominal increase of duties, but merely contemplate arrangements such as shall secure the levying of the five per cent. fixed by the treaties. If the change be effected, it will make a considerable difference in the income derived by China, for whereas she now collects only 6,356,623 Tls. on an import trade of 228,955,688 Tls., she would collect 11,447,794 Tls. were the rate 5 per cent.

It is not probable that Chinese statesmen give themselves much concern about that ancient bugbear, the balance of trade. If they did, they would have cause for distress, since the country's imports, last year, aggregated 264¾ million Tls., whereas the exports totalled only 195¾ millions, the excess on the side of imports being 69 millions. Indeed, if we add up the figures for China's foreign trade during the 13-year period, 1887 to 1899, we find that whereas imports totalled 2,099 millions of Tls., exports aggregated only 1,603 millions. Not once during the whole of that period was the "balance of trade" in China's favour, and it would appear that she must have parted with specie to the value of 496 millions of Taels in 13 years. But she does not appear to have been at all inconvenienced by the performance, not having any gold monometallic standard to embarrass her.

Much of the increased prosperity shown by the above figures is attributed by the Report to the development of means of communication. We quote:—

> The internal trade of the country was also unusually brisk, and the important changes which will be brought about by the extension of railways have already been proved. Newchwang and Tientsin have promptly responded to the stimulus of better means of communication, and the trade at those ports has leapt forward, although the former suffered from a severe outbreak of plague. It is found that immediately trains begin to run, districts through which there was comparatively little traffic, such as between Paoting and Peking, suddenly commence to hum with life and activity, and there springs up a flourishing trade which was formerly undreamt of and impossible for want of cheap transport. The Russian line has been completed as far north as Moukden, and the extraordinary richness of Manchuria will soon become evident. The Lu-Han Railway, from Peking to Hankow, makes steady progress. Within six months it is expected that trains will be running as far south as Chingting. The difficulties in the southern section, where extensive tunnelling is required, make construction slower there, but rails have been laid for 40 kilomètres northwards from Hankow, the track is now being made as far as Sinyang—to which place it is hoped to run trains within two years,—and the whole line of 1,200 kilomètres is to be completed in five years, including the difficult engineering feat of bridging the Yellow River. The line between Taku, Tientsin, and Peking continues to advance in prosperity, and the extension beyond Shanhaikwan towards Newchwang is being rapidly pushed forward. Yingkon, the real port of Newchwang, will shortly be connected by rail with the capital. Difficulties regarding the question of control are hampering the concessionaires of various other lines, but it is to be hoped these will soon be satisfactorily arranged, as there is no longer any doubt that the effect of cheap transport will lead to an enormous development of China's trade.

Elsewhere the writer says:—

> It is true that the trade, when the possibilities are considered, is of small dimensions; but the future is distinctly bright, if the results to be expected from the coming railways are calculated. The Chinese, from highest to lowest, are traders by instinct and are prompt to take advantage of every opportunity of profit. To form an idea of what future prospects are it is fair to make a comparison with India. The areas of the two Empires are almost identical and their products very similar. But China has a larger, a more industrious, and more intelligent population; while, on the whole, the country is probably more fertile and possesses greater mineral resources. In the former country trade is assisted by good roads, railways, and lightness or absence of taxation; in the latter, at present, it is hampered by directly opposite conditions. The result is that the exports from India are worth three times the exports from China. With equal opportunities, which the building of railways and opening of mines will bring about, this discrepancy should disappear. The year 1899 has shown in a striking manner what an advance is made when circumstances are propitious.

The growth of Japan's trade with China is very satisfactory. In 1892, it totalled 14,756,034 Tls.; in 1899, the figure was 53,147,889 Tls. It is true that the total for 1899 includes the trade with Formosa, of which the value was 5,149,656 Tls.; but if we make that reduction, the trade with Japan proper in 1899 still represents 47,998,633 Tls., or more than three times the amount in 1892. We take from the Tables the figures relating to imports of Japanese manufactured goods, which are highly suggestive:—

MANUFACTURED GOODS IMPORTED FROM JAPAN TO CHINA.

	1898.		1899.	
	Quantity.	Value. Tls.	Quantity.	Value. Tls.
Shirtings...	5,732	14,170	8 630	19,292
T-Cloths...	103,663	198,447	242 652	446,726
Drills	1,065	2,632	9 577	26,384
Sheetings..	6,601	15,210	31,820	84,409
Handkerchiefs ...	doz. 17,745	7,967	doz. 21,739	9,949
Towels ...	191,945	78,975	209 062	96,802
Cotton Flannel..	pieces. 56,835	79 301	pieces. 176,676	272,633
Cotton Cloth ...	151,329	103 716	181,016	135.055
Cotton Crape ...	44,462	36,270	73 069	66,285
Cotton Yarns ...	piculs. 485,244	10,383,716	piculs. 779,700	16,901,045

Indian yarns still sell in larger quantities than Japanese, but the latter appear to be rapidly catching them up. Thus we find that the imports of Indian yarns for 1898 and 1899, respectively, were 1,399,930 piculs (value 26,832,302 Tls.) and 1,906,426 piculs (value 36,371,170 Tls.); an increase of 26 per cent. in quantity against 60 per cent. in Japan's case. There are no figures relating to yarns spun in China, but the Report thinks it "probable that the local mills will gradually get the better of their foreign rivals." That is an important consideration for Japan. And there is one obvious reason for the prediction in the fact that "the yarn made from Chinese cotton is much whiter than the Indian yarn and obtains better prices," so that the Japanese are obliged to import raw cotton from China to mix with Indian.

THE LAST WATCH.

(An incident of the battle of Graspan.)

Major Plumbe of the Royal Marine Light Infantry had a pet terrier dog who followed him through the fiercest fire imaginable, and who was found, six hours after the fight, guarding his master's dead body.—

"Goodbye, my dearest dog, my faithful Tip"
He faltered—as in accents low and kind,
And swimming eye, and pale and trembling lip
Before he left—he gave one look behind.

"Goodbye, goodbye, old dog," he breathed again.
"For where I go,—old friend, you must not come."
And with these words, he strode across the plain
Dreaming his last sad dreams of Love and Home.

Mid cannon's roar, and rifles' deaf'ning crack.
One has but little thought of woe or weal;
But once Tip's Master gave a quick glance back,
And smiled, to see Tip trotting at his heel.

The Kopje's stormed, fierce raged that dreadful fight.
They gain the top at last with British yell!
With one last piercing cry for "Queen and Right,"
One prayer—one thought—one groan—
Tip's master fell!

The battle's o'er;—while there beneath the skies,
The hero's life blood stains the dark earth red.
In Death's grim agony Tip's master lies;—
But trusty Tip is watching by his head.

Ah! loving faithful Tip! He licks the hair
That clotted lies upon the noble brow;
And raises on those features once so fair,
A wan faint smile in that dark hour of woe.

He feebly strokes Tip's round and silky head;
The effort's great;—and with a last low groan,
The Hero murmurs—as he sinks back dead,
"I thank Thee, God—I do not die alone."

The hours drag on, and midst the broken cries
Are mingled raging wind and beating rain.
Yet, when at length Dawn glimmered in the skies,
The terrier still stood guard beside the slain!

E. M. D'A.

An Australian cyclist, Mr. A. Richardson, has just completed one of the longest and probably the most difficult bicycle rides in the world, a journey round Australia, 11,000 miles. He travelled about 100 miles a day.

Digitized by Google Original from CORNELL UNIVERSITY

MISCELLANEOUS TOPICS.

There are now six foreign medical practitioners in Tokyo who have received Japanese diplomas.

It is announced that the Italian Consul in Yokohama will in future be charged with the care of Roumanian interests in Japan.

Prince Tokugawa, the last of the *Shōguns*, was present at a dinner given by His Imperial Highness Prince Arisugawa on the 17th instant to His Royal Highness Prince Waldemar of Denmark.

The Bank of Japan has raised its rate of interest by .2 per cent. all round, and has also announced its intention of charging interest on over-drafts although they may be cleared before the evening of the day on which they are made.

A collision took place at Aichi on the 20th instant, between a train on the Kansei Railway and a number of empty carriages standing in the station. Nine persons were severely injured, and there were several minor hurts.

A statement is circulating in Tokyo that a fire occurred last month in the workshops of Lord Armstrong and Company, and that, in consequence, the completion of the armament of the *Asahi* will be delayed. We have not heard of this event from other sources.

News has been received by telegraph that the Russian Authorities in Vladivostock have decided to impose a tax of 1,000 *yen* annually on every warehouse for storing tea. The intelligence is somewhat vaguely transmitted, but it apparently admits of no other construction.

The Osaka arsenal has just completed the building of a 27-cent. Canet gun. It is to be tried on the 22nd instant, in the presence of Marquis Oyama and Viscount Katsura. The Arsenal has also constructed a rifled mortar of similar calibre. These are the largest pieces hitherto turned out at Osaka.

The line-of-battle ship *Shikishima* left Colombo for Japan on the 19th instant, and is expected to reach this country by the 4th or 5th of April. The torpedo-catcher *Usugumo* is also reported to have left Malta on the same day, and the *Niji* was expected to arrive there about the 22nd or 23rd.

It is expected that the Hawaiian Authorities will very soon remove the embargo imposed upon food stuffs imported from Japan. The embargo applies generally to food stuffs coming from any Oriental port, but Japan is likely to be excepted, as she has succeeded in stamping out the Pest.

The *Riusei Maru*, belonging to the Futayama Shokai, went ashore off the Shantung Promontory on the 15th instant, while on a voyage from Yokkaichi to Wei-hai-wei *viâ* Kobe and Moji, with a cargo of cement and sundries. A British man-of-war from Wei-hai-wei came to her assistance, and she reached her destination on the 18th.

The project of a free library in Tokyo, started by Messrs. Greene, Soper, Honda, Fukuoka, White, Sano, Lloyd and others, seems to have taken definite shape. A meeting has been held, and all the preliminaries are understood to have been arranged. The capital fund is to be two hundred thousand *yen*.

A terrible accident is reported from Kure Dockyard. During a gale of wind on the 14th instant, a tall iron chimney, which had just been erected and was receiving a coat of paint, collapsed, and, falling on the roof of No. 5 workshop, caused the death of 9 men, the severe injury of 2, and the slight injury of several. Twelve men who were engaged in painting the chimneys seem to have escaped unhurt.

It is observed that foreigners have not submitted for the approval of the Educational Department any readers for use in Japanese schools. Formerly the Department would not have been at liberty to accept works thus presented, but that restriction was withdrawn in October last. Very likely the fact of its withdrawal has escaped general attention; otherwise we imagine that some enterprising foreigner would have tried his hand at work of such a promising character.

We stated in a recent issue that, according to rumour, the arrest of a Formosan bandit chief had been effected by Japanese police in the interior of Fuhkien, and we expressed incredulity that anything of the kind should have occurred. It now appears that the man was apprehended by the Chinese local authorities at Japanese request, and that he was handed over to the Japanese in deference to comity, since the two Empires have not concluded any extradition treaty.

A strike is reported among the students in the *Otani Gakurin* of the Eastern Hongwan-ji. It appears that, owing to some complication, 32 students were expelled at the beginning of this month. The others took umbrage at this proceeding, and, on the 14th instant, some 300 absented themselves, leaving only about a score of fifth-year students to continue the work of the school. It should be mentioned, perhaps, that this is a divinity school.

It is stated that the question of compensation for losses incurred in connexion with the recent sanitary measures in Hawaii will be settled by striking an average value for the property destroyed, the aggregate value of each block of ten houses being divided by 10 to obtain the value of a single house. There should not be anything to complain about in such an arrangement. The Hawaiian Authorities, it is said, had long been anxious to clear away the quarter of the town which they took this opportunity of destroying.

The *Kokumin Shimbun* is convinced of the sincerity of the Czar's desire to preserve peace, but our contemporary finds difficulty in reconciling that desire with the steps that Russia is taking to increase her military forces in the Far East, and with the tone of some of the Russian journals. The latter have of late written as though a conflict between their country and Japan were inevitable, and it can not be said that a conviction of the necessity of fighting is consistent with a resolve to keep the peace.

In consequence of the death of Baron Yamada, President of the Board of Audit, some changes in the personnel of local governors are said to be imminent. Mr. Utsumi Tadakatsu, now Governor of Kyoto, will be appointed to succeed Baron Yamada, and will be succeeded in the governorship of Kyoto by Mr. Takasaki Chikaakira, Governor of Miyagi. Mr. Nomura Masaaki, Governor of Gifu, goes to Miyagi, and Mr. Tanaka Takamichi, Police Inspector, becomes Governor of Gifu.

Judge Takano has appealed to the Court of Cassation against the judgment recently rendered by the Tokyo Court of Appeal. It appears that the latter judgment did not cover the main question, namely, the liability of the Minister of Finance to re-imburse Judge Takano's salary after his removal from office by an order of the Governor-General of Formosa. The judgment was only what is called *chiukan hanketsu*, that is to say, a ruling on a collateral point of law. If perseverance really has any reward, some measure of success ought to attend Judge Takano's efforts.

The ceremony of granting certificates of graduation to pupils of the Tokyo Marine College took place on the 17th instant, Prince Arisugawa presiding. Nineteen certificates were handed to students of navigation and thirteen to students of engineering. This college was originally founded by the late Mr. Iwasaki Yataro for the purpose of educating men to serve in the Mitsu Bishi fleet. It is now in the hands of the Communications Department. Since 1896 its dimensions have proved insufficient, and ground is being prepared at Etchiujima for an edifice on a larger scale.

Good work has already been done by the Society formed some time ago in Japan, calling itself *Zenrin Yakusho-in*, and having for its object the translation and circulation in China of books calculated to promote progress and to further friendly relations between the two empires. It has translated a history of the Restoration in Japan, a history of national literature, a record of the organization of the Japanese police system and other works, and has also succeeded in obtaining copyright from a number of Taotai in the large cities of southern and central China. Stores are to be opened for the sale of the books first in Shanghai and afterwards in other places.

Mr. "Miyake Setsurei" does not endorse the sarcasm indulged in by a writer in the *Nippon* with reference to the reception that should be given to the bones of Buddha, which are soon to come from Siam. Apparently he would have them welcomed with all pomp and ceremony. That is how the great majority of Japanese Buddhists feel, we imagine. A liberal allowance of religious emotionalism is required in order to become enthusiastic about apocryphal fragments of a Saint's corpse; but we can imagine how Christians would behave under circumstances analogous with those of these Siamese relics.

We mentioned in a previous issue that a project is on foot to start a free library in Tokyo, and that a number of prominent missionaries and Japanese philanthropists are connected with the scheme. There is also a movement for organizing a circulating library. The promoters are Mr. Makoshi Kyohei (of the Yebisu Beer Company), Mr. Kuroda Tsunahiko, Mr. Igarashi Kosho, and others. Their idea is to take for model such institutions as

Digitized by Google Original from CORNELL UNIVERSITY

those of Smith and Mudie, and to have officers in all the principal towns and former foreign settlements. The charge for borrowing a book would be 25 *sen* a month, or 50 *sen* in special cases. We doubt whether the scheme is not premature. Certainly the foreign supporters would not be numerous.

The effective desire of wealth is considered to be discouragingly deficient in Japan, says the *Kokumin Shimbun*. Doubtless one reason is that, owing to the low standard of living, the incentive to economy is not powerful. Recent statistics show that the number of depositors in the post-office savings banks is 1,234,900; or an average of 9.732 per cent of the population. The total amount deposited at the time of compiling the statistics—December, 1898—was 21,868,557 *yen*, being an average of 48.4 *sen* per head of population; or of 2.42 *yen* per family of 5 persons. This is certainly not a brilliant showing. The people of Shinano Prefecture head the list; Tokyo comes second, and Kumamoto is the worst of all.

It is insisted by the *Jiji Shimpo* that the only wise and practical course for Tokyo to take is to raise a municipal loan for purposes of city improvement. According to the present fiscal regulations, the aggregate sum obtainable by taxation is half a million *yen* annually. A moiety of this amount goes to pay interest and sinking fund on the money borrowed for constructing the water-works, and other liabilities reduce the remainder so that only 147,000 *yen* is available for improvements. Obviously an interminable time would be required to complete the work on that basis. The best plan, therefore, is to float a loan of two million *yen*, and devote the yearly income to interest and amortization. Such is the *Jiji's* advice. But what can be accomplished with two million *yen*?

The *Nichi Nichi Shimbun* has a strong article advocating Government assistance for projects connected with the construction of railways in China by Japanese experts. It is pointed out that one of the chief conditions exacted by foreign powers when they obtain spheres of influence in China is that, in the event of recourse being had to foreign capital for the building of railways in the district concerned, material shall be purchased and experts procured from the country that has secured the "sphere." Unless Japan gives practical effect of a similar nature to her title in Fuhkien, she will certainly be left behind in the race. Our contemporary is persuaded that she ought to have the building of all the roads connecting the main line with the principal ports, as Amoy, Fuchow, and so on.

It is journalistically stated that the vehement discussions which took place in the committee entrusted with the duty of revising the Criminal Code have at length been brought to a conclusion, and that the draft of the revised code is now ready for submission to the Diet. There were hopes that it would have been submitted during the 14th session, but the Committee found it impossible to complete the draft in time. The Code of Criminal Procedure has now to be revised. We observe with regret that an opinion is said to prevail in judicial circles against allowing counsel at preliminary investigations. There is strong reason to believe that much injustice is wrought under the present system, and that publicity of procedure from the outset, as well as the employment of counsel, are the best and only correctives.

The Minister of State for Education has issued an instruction for the guidance of the faculties of all schools, public and private, of the middle and junior grades. The matter in question is the method of enforcing the law recently enacted against the use of tobacco by youths under the age of twenty. Count Kabayama is of opinion that needless trouble and friction would be caused by attempting to discriminate between lads of under or over twenty, and that as a youth of more than twenty in very seldom found in a middle or primary school, the best plan will be to forbid the use of tobacco altogether in such institutions. His Excellency adds that the drinking of *sake* and the frequenting of *yose-seki* (penny-theatres) must also be interdicted, but further instructions will be issued with regard to these points.

There are 5,645 telephones established in Tokyo, and there are 5,641 applications waiting to be satisfied. It is a constant subject of complaint and astonishment that the Authorities can not contrive to meet the wishes of applicants with some semblance of expedition. Among the 5,641 persons now waiting to be provided with telephonic facilities, 1,700 will be supplied during the course of the present year; 2,200 may expect to get their machines by the end of 1901, and the remainder, some 1,800, will have to wait until 1902. It is a most extraordinary showing. Eight years have elapsed, if we remember rightly, since a telephonic exchange was established in Tokyo, and yet it has not been found possible to furnish telephones to more than 6,000 persons.

A great deal is said and written about the value of North-China markets to Japanese cotton manufacturers, but the returns of the Imperial Maritime Customs—just received—for the last quarter of 1899, do not show much evidence that Japan's trade is expanding in these districts. We take out some figures:—

IMPORTS OF JAPANESE COTTON YARNS.

	1896. Piculs.	1897. Piculs.	1898 Piculs.	1899. Piculs.
Newchwang ...	180	8,520	5,697	8,626
Tientsin.....	0	0	0	0
Chefoo	8,847	19,770	58,164	10,617

These figures are certainly not particularly encouraging. The record for Indian yarns is as follows:—

IMPORTS OF INDIAN COTTON YARNS.

	1896. Piculs.	1897. Piculs.	1898. Piculs.	1899. Piculs.
Newchwang ...	29,766	52,778	60,121	53,094
Tientsin.....	62,304	30,582	50,275	30,585
Chefoo	32,383	10,849	7,970	2,770

In Newchwang alone does the market for Indian yarns show any sign of improvement. Turning to yarns manufactured in China, we have the following:—

IMPORTS OF YARNS MANUFACTURED IN CHINA

	1896 Piculs.	1897. Piculs.	1898. Piculs.	1899 Piculs.
Newchwang.....	0	3,501	5,202	4,875
Tientsin	0	0	0	0
Chefoo	30	1,266	3,836	45

The complications connected with the Yokohama fore-shore reclamation scheme do not seem to have yet terminated. It was arranged between the Yokohama party, who applied first for the concession, and the Oyamada party, who obtained it, that the latter should give the former 25,000 *tsubo* of the reclaimed land, but that only 10,000 *tsubo* should actually be in land, the other 15,000 *tsubo* being commuted for a payment of 15,000 *yen*. The money fell due on the 15th instant, but it is stated that the Oyamada folks were not ready to pay it, and that they have obtained an extension of time by getting a bank to endorse their promissory note. That part of the matter was easy enough to arrange, but the great difficulty is that nothing definite can yet be done about the land, for owing to irregularities connected with the Oyamada application, permission to commence the work is witheld. The *Asahi Shimbun*, from which we take these details, says that the fore-shore affair made its debut as a scandal and its exit seems likely to be of the same character.

Some Japanese military authorities have been lamenting the defective physique of their countrymen. Lieut.-General Kawamura says that it is necessary to provide a specially short, light rifle for the troops, since they can not carry or use one of ordinary dimensions. Colonel Yokoi remarks that there is a striking difference between the sea-coast population of the country and the inhabitants of the cities. The Seven Islands of Izu appear to furnish the best men Japan has. Recruiting statistics show that 33.4 per cent. of the islanders attain a stature of 5ft. 2ins. and upwards, whereas the figure for the denizens of the Nihonbashi district of Tokyo is only 14.2. The Kyobashi district is a little better, owing to the presence of a number of mechanics. In the capital the best men physically are those connected with horses, and next to them come the boatmen. Worst of all are the students of middle-school grade or higher. Their physique is inferior even to that of actors and professional musicians or story-tellers. That is a very grave fact. It shows that the nation's scholastic efforts are over-taxing its strength.

It is stated that the President of the United States has given his assent to the new Currency Bill. We have no intelligence as to whether any or all the proposed amendments were included in the Bill before it emerged from the hands of the Senate, but the point is not of paramount importance, for the main amendment, which was obviously intended to soothe the bimetallists, could not have produced any practical effect. The amendment declared that the provisions of the Bill were not intended to place any obstacle in the path of accomplishing international bimetallism, provided that concurrent action on the part of the leading commercial nations of the world could be secured, and provided that a ratio could be found insuring permanence of relative value between gold and silver. Neither of these conditions seems likely to be satisfied in the near or the distant future, so that the amendment becomes a meaningless sop. It is claimed by those in charge of the Bill that its provisions would not in any way interfere with the legal tender quality of the standard silver dollar, but the friends of silver were anxious, at the date of last detailed advices, to have a clause inserted, specifically declaring that no interference was intended. It is probable that they have succeeded. People will be at liberty to use either the 412.5 grains silver dollar or the 25.8

Digitized by Google Original from CORNELL UNIVERSITY

grains gold dollar in making payments, but there is no concealing the fact that the effect of the Bill is to turn America's feet definitely into the route of gold monometallism.

The German Admiral in command on the Far Eastern Station was received in audience by the Emperor on the 20th instant at 10.30 a.m., Count Leyden introducing him.

The eminent Buddhist prelate, Mr. Shaku Soyen, Chief Abbot of the temple Yengaku-ji at Kamakura, which is the principal place of worship of the *Rinzai-shu*, a branch of the *Zen* Sect, goes to America by invitation next July, and will lecture at Harvard University on the Great Vehicle. He enjoys the reputation of being gifted with remarkable eloquence, but how much of that quality can survive the ordeal of translation into a foreign tongue we dare not anticipate. There is nothing more lame or halting than one of these lectures where each of an orator's periods is repeated by an assistant speaking in a different language.

The old agitation in favour of changing the time of the Diet's session seems to have been revived, and the Liberals are said to be advocating the change. When the Diet is convened at the fall of the year, it loses at least a fortnight of its allotted three months in consequence of having to adjourn over the 1st of January. Evidently its working days would be more numerous if it assembled at some other season. But the public will naturally ask, are more working days required? The Diet makes so little use of the days already available that to increase them would be apparently superfluous. Last session, the House of Representatives not only confined itself to committee work day after day, but also reduced its hours to a minimum when it did assemble for debating purposes.

It is understood to be denied by the Naval Department that Japan agreed to transfer to the British Government certain guns ordered from Lord Armstrong and Company for her use. The telegrams have been very explicit on this point, but the Japanese Naval Authorities have no knowledge of the matter, and without their knowledge such an incident can scarcely have occurred. It is possible, they say, that the Company made some arrangements to suit its own convenience or the exigencies of the moment, but they were not arrangements of the definite character indicated by the telegrams, nor will they have the effect of delaying the completion of the armaments for Japanese vessels. There is, indeed, some difficulty in understanding how the transfer could have been effected, since guns destined for Japan must have been cast with an inscription to that effect, and could not have been taken over in that condition by the British Government.

The air continues to be full of rumours about political agitation in the sense of a reconstruction of the Cabinet. We shall not ask our readers to peruse the various reports circulated. When they are boiled down, the solid residuum in every case is an aspiration on the part of the Liberals to obtain two or three portfolios for their leaders. They are represented as entertaining various projects. Assuming that Marquis Yamagata will not consent—and the outcome of applying to him is pithily compared to asking an image of Buddha for a share of its lotus pedestal—, then Marquis Saigo is to be applied to. Failing Marquis Saigo, then Count Matsukata, and so on. It seems to be recognised as hopeless for any of the existing parties to approach Marquis Ito, though that is the dearest wish of all alike.

A *mousseline-de-laine* trust has been formed in Osaka, and is now in full operation. It was suggested by the fact that, owing to competition among sellers in the domestic market, the price obtained for the staple in Japan was 3 or 4 *sen* per yard less than the price ruling in Europe. Eight Osaka dealers and one from Yokohama combined. They put up a sum of 5,000 *yen* each, and went to work on an agreement that all their stocks should pass through the hands of the trust, and be sold at prices fixed by the latter, the profits being divided one-half *per capita* and one-half in proportion to the quantity of the goods. The value of the staple handled by the trust since the beginning of March, when it came into existence, is said to have been from 2,300,000 *yen* to 2,400,000. It is now proposed to invite the cō-operation of Tokyo dealers.

There are, says the *Jiji Shimpo*, over 1,600 banking institutions in Japan at present, with a total capital of 327,000,000 *yen*, being an average of 180,000 *yen* per Bank. Viewed superficially, that may seem to be a convenient state of affairs, but in reality it represents a dangerous abuse. The mushroom growth of these petty banks is not prompted by any desire to do genuine banking business. Their chief purpose is to borrow money. It is found in practice that a bank can obtain money on much easier terms than a private individual can, and the discovery has induced speculators to organize so-called "banking institutions," which are without solid foundations, lead a hand-to-mouth existence, and tend to undermine credit rather than to strengthen it. Our contemporary considers that great fault is to be found with the supervision exercised by the Finance Department. In fact, as a general rule, it considers that the Government's method of enforcing laws is lax and perfunctory. The laws themselves are good enough, but the fashion of putting them into operation does not produce commensurate results.

Judges Baba, Nakanokoji, and Kasaka, who were despatched last year on a tour of judicial inspection in America and England, have now returned to Japan. They are said to report that judicial procedure in the places visited by them differs greatly from that of Japan. They do not say very much about the United States. What appears to have struck them most forcibly during their three months' sojourn in that country was the fact that men occupying seats on the bench sometimes practise as advocates. Such a custom is obviously open to abuses, but the American people have absolute confidence in the integrity of their judges, and no suspicion of corrupt practices seems to occur to them. With regard to England, four months spent there showed the travellers that the Japanese Bench has no conception of the rapidity with which the British tribunals work. Sometimes a magistrate disposes of as many as 40 or 50 minor cases in a day, and yet the public is disposed to complain of want of expedition. It appears to be thought impossible that the occupants of the bench can err, however rapidly they work. The travellers have come back convinced that great room for improvement exists in Japan.

The Russo-Chinese School at Sapporo has been suddenly closed under somewhat peculiar circumstances. The School was started in 1895, and after a time became fairly prosperous. Twenty students have already graduated from it, and a hundred were studying there at the time of its closing. On the 15th instant, a formal ceremony of closure was held, when the principal, Mr. Nakano Jiro, made a remarkable speech. Having read aloud the Imperial Rescript of 1895, announcing the retrocession of Liaotung, and having explained that the establishment of the school dated from that event, he proceeded to speak of injurious rumours circulated with the object of showing that the founders of the institution did not really seek to promote educational facilities, but were mainly actuated by mercenary motives: in other words, that they had abused their position to obtain large grants of land in Hokkaido. He frankly admitted that grants of land had been obtai ned, just as they were obtainable by any Japanese subject desiring to undertake works of reclamation. But he denied altogether that there had been any mercenary motives. The whole profit obtained from the land had been devoted, he said, to the support of the school, for which purpose the directors had expended eighty thousand *yen*. So long as these injurious rumours were confined to irresponsible sources, no notice had been taken of them; but when the Chief of the Hokkaido Administration, Baron Sonoda, credited and repeated the stories, the directors felt that their only course was to close the school. He assured his audience, however, that arrangements had been made so as prevent the students from suffering any inconvenience.

LAW CONCERNING CONTAGIOUS DISEASE.

The following is a brief translation from the *Official Gazette* of a law for granting special allowances to persons engaged in the prevention of contagious diseases or treatment of patients suffering from such diseases:—

Art. I.—In case any officer of rank not above that of *Hannin* is attacked by a contagious disease and suffers death in consequence, while engaged in enforcing the preventive measures or giving treatment in connection with the malady, he shall be entitled to special allowances according to the provisions of this law.

Art. II.—Special allowances shall be of four kinds, as enumerated below:—

1. **For medical treatment.**
2. **For subsistence.**
3. **For funerals.**
4. **For the support of the family of the deceased.**

Art. III.—Officials attacked by the malady shall be granted expenses for medical treatment, and, when they have recovered, special allowances for subsistence, while, in the case of their death, funeral expenses shall be allowed their family.

Art. V.—Expenses for medical treatment shall not exceed 3 *yen* a day; allowances for subsistence shall be one half the amount to be granted to the deceased's family; the funeral expenses shall correspond in amount to one month's salary of the deceased.

AN ACCUSATION AGAINST FRANCE.

A GREAT deal of rancour has been stirred up in England by the writing of a section of the French press in connexion with the South-African war, but we were not prepared for a rejoinder so intemperate and, we think, unreasonable as that which appears in a recent number of the leading Hongkong journal. In the course of an editorial article which betrays considerable irritation, our contemporary says :—

We have all from time to time been made aware of certain mysterious telegrams arriving in China, which have professed to report some dire disaster as having been undergone by British arms in Africa. By the British community these have been treated with contempt which in each case has been justified by subsequent information. It is only recently that the time, source, and intention of these lying telegrams has (sic) become manifest, and circumstances have seemed to indicate that those that have been made public indicate but a small portion of the whole which have been concocted in Paris and carefully sent to the French Legation in Peking, where they have by underground channels found their way to the Tsungli Yamen. From the Tsungli Yamen in turn they have been carefully sent to the provinces, with the suggestion that as England was hopelessly defeated in Africa there was no further need to pay any attention to her requests, and the time was come when an end could be made to all Englishmen in China.

The writer goes on to say that to these rumours of British disasters and to the consequent contempt inspired for England are due the recent outrages in Shantung, of which British missionaries were the first victims; the beating of a missionary in the capital of Yunnan; the murderous attack upon the Burmah Boundary Commission, and the troubles that Mr. PRITCHARD MORGAN experienced in connexion with his mining enterprises in Korea. It is really startling to find that a newspaper of standing places credit in such a monstrous canard. That false rumours about affairs in South Africa have been circulated in Paris, as they have also in Berlin, St. Petersburg, and even New York, can not be denied. That kind of thing happens at all times of exciting public incidents. But in truth a man must be deliriously suspicious to imagine that the Authorities in Paris would concoct mendacious news and telegraph it to the French Legation in Peking, and that the Legation would convey it by underground channels to the Tsung-li Yamen. To entertain such a suspicion seems to us only one degree better than the suspected crime. We in Japan have had daily opportunity of examining the telegrams forwarded from Paris to French officials in the Far East. We know that they have been invariably accurate, unbiassed, and free from sensational exaggeration, and we have to express gratitude for the receipt of such valuable information at a time of keen interest and anxiety. Happily there are not many Englishmen so silly as to believe a story of the kind that has deluded the Hongkong journal, and there are still fewer, we trust, capable of persuading themselves that the officials of the French Legation in Peking could be guilty of conduct so contemptible.

Not the least striking part of our colonial contemporary's article is an expression of naïve inability to understand why the French people should harbour any feelings of umbrage towards England. The French in Hongkong, we imagine, would point to this very article as a not insufficient reason. And has our contemporary forgotten the Dreyfus case? Has it also forgotten the Fashoda incident? The intemperate and contemptuous criticism of which France was the object for month after month at the hands of the leading English journals in connexion with Dreyfus must have created a feeling of bitter resentment, to which the Fashoda incident contributed not a little. Really we must expect that if we sit in self-righteous judgment upon our neighbours, they will sometimes resent our censorship.

THE RIGHTS AND WRONGS OF THE SOUTH-AFRICAN STRUGGLE.

IN connexion with correspondence recently published in these columns, we have been asked to make as clear and succinct a statement as possible of the rights and wrongs of the South-African war, so as to assist the foreign and Japanese public in the Far East to form a judgment. We need scarcely say that the subject is one of which we have no special knowledge. The best we could do, therefore, would be to prepare a *résumé* of arguments marshalled by others, and we confess that with the story of the struggle written before our eyes in letters of blood, we have not confidence in our ability to be impartial. But there has just come into our hands a copy of the *Montreal Weekly Witness*, containing an article by the Hon. JOHN S. SEYMOUR, late United States Commissioner of Patents, and Legal Representative before the State Department of the Americans in the Transvaal. This article, being from the pen of an American citizen, that is to say, a man removed beyond the reach of the passions which naturally sway the minds of Englishmen at such a crisis of their country's career, seems worthy of trust, and we therefore reproduce it this morning on another page. By way of supplement we add the following from the *Christian Guardian*, showing how Canadian Christians view the question :—

Frank Leslie's *Popular Monthly* for February has a well illustrated article on "The Fighting Boers," which will repay perusal. A couple of extracts will be found of special interest.

"One of the secrets of the Great Trek was a determination on the part of the Boers to establish a system of slavery, which in British territory is forbidden. The treatment of the blacks by the Boers is a tragic story of injustice and cruelty. In Johannesburg and Pretoria to-day a black man is not permitted to walk on the sidewalk; he must keep to the middle of the street, with the oxen and the horses. If sent on an errand, which makes it necessary for him to enter a building, he must crouch as he hurries from the gutter to the store or stairway to which he is bound.

"One day, in my office in Johannesburg, the door was pushed open by a Kaffir, prone on the floor, dragging himself by his elbows. Thinking he was wounded, I rose to assist him. He grinned, and handed me a letter. It was from a government official, and the Kaffir was merely an apprentice messenger delivering a public document. I made him get up and take a chair while I answered the message. When I gave him the note he slunk away, trembling, and much mystified. Afterwards I spoke to the Boer official about the episode. He protested that I had done very wrong. 'I always kick them as they go out,' he explained; 'then they know who is the superior.'

"Another law prohibits Kaffirs from whistling or singing in the streets; and as the spirit of the the black man, however much he is oppressed, finds expression in melody, this statute is constantly violated; and for their musical indiscretion Kaffirs are dragged in great numbers to jail, and beaten mercilessly *en route*. The Boers explain that this law was passed to suppress the exasperating independence and jubilant bravado of the blacks, and to instruct them in the ways of true humanity."

"The present conflict in Africa is not a mere quarrel concerning the rights of a few thousand aliens. That condition is, of course, involved, but the fundamental issue is, whether the world is large enough to permit an ignorant band of indolent vagrant hunters to hoard vast and fruitful lands which they will not develop. A law of nations and of evolution is at test—the survival of the fittest. There is no room in all the earth, the British say, for hermit states, and the nation that buries its talent shall lose it.

"Shall Africa become a new empire for the spread of modern civilization, or shall a few thousand half-savage plainsmen be permitted to arrest the march of humanity? That is the question Britain is attempting to answer with her guns. It is not a seizing of Naboth's vineyard. It is a war against fanatic semi-barbarians, ruled by an autocrat determined to crush out in South Africa every modern principle of freedom."

INJUDICIOUS BOASTING.

By the light of our latest telegrams the utterances of Dr. Leyds in Berlin at the end of January read curiously :—

Dr. Leyds, who came to Berlin in order to be present at the diplomatic dinner given by Prince Hohenlohe on the occasion of the Emperor's birthday, was received by Count von Bulow on Saturday morning.

In connexion with his visit to Berlin the *Lokalanseiger* publishes an interview with Dr Leyds. The agent of the Transvaal Government denied that his visit, which would extend over a few days, had any political objects. He had come to Berlin to attend the Chancellor's dinner and for no other purpose. The war would go on. All that was said about attempts to bring about interference was pure invention. The Transvaal had no need to appeal to any one; the war was going on splendidly, and would, he hoped, continue to do so. Questioned as to possible conditions of peace, Dr. Leyds expressed the opinion that England would have to restore to the Republics a considerable portion of the territory she had formerly taken from them. A guarantee would have to be given that the Cape Dutch who have joined the forces of the Republics should not have one hair of their heads touched. As a matter of course the two Republics would have to be recognized as completely independent. The suggestion that England would strain every nerve before accepting such terms was met by the retort that such troops as the Militia would not be able to effect much where the Regulars had failed.

Replying to criticisms on the Boer generalship, Dr. Leyds declared that Ladysmith, Kimberley, and Mafeking were merely so many prisons for the English troops, who so long as they were not formally captured had to live on their own provisions instead of consuming those of the Boers. As regards other points in the conduct of the campaign, the Boers were following their own tactics, which were adapted to the nature of the country and would lead to further successes.

General regret will be felt at the news that Lieut. David J. Keswick, of the 12th Lancers, the second son of Mr. Wm Keswick, M.P., of Messrs Jardine, Matheson & Co., was killed in the recent fighting in the Free State at the age of 24, having had several narrow escapes previously. His older brother, Mr. Henry Keswick, is now on his way to South Africa—*N.C. Daily News.*

THE CHILDREN'S CONCERT.

The Tonic Sol-fa concert and miscellaneous entertainment given at the Public Hall on Tuesday evening as a benefit to Mrs. E. S. Patton by her pupils will probably prove the last of a most enjoyable series. It was therefore pleasing to see the splendid support accorded the veteran instructress, as well as to notice that the high standard set up in previous years was not in any way lowered. The number of voices in the choir was sadly diminished, but the work which the little band accomplished was of considerable merit and well deserved the applause evoked. The pianoforte selections were also very good. Miss C. Schwabe was as amazingly precocious as ever, her solo from Ascher's "Les Gouttes d'eau" being rendered in the manner of a pianist twice her age. We have not space to go into details of every item, but room must be found for a few appreciatory words of the clever dancing of Master Colin Hutchison. His Highland Fling was given with great verve and had to be repeated. In the second part Mr. S. H. Somerton sang Kipling's "Absent Minded Beggar" to Sir Arthur Sullivan's setting. It pleased the audience immensely. Immediately after this, eight of Mrs. Patton's advanced pupils entered and took their places for the "Bellamy Lancers"—a most amusing burlesque, being veritably a dance "Looking Backward." The item was loudly applauded. The third and, to many the prettiest, part opened with a Minuet de la Cour by Miss M. Fox and Master M. Apcar, Miss D. Dunlop, and Master C. Hutchison, dressed in the pretty costumes of the Georgian period, with 28 other young ladies as a background. This was an exceptionally pleasing diversion. Miss Evelyn Gillet's song and dance "So Shy," was another pretty item that the audience wished to have repeated. A clever left-handed piece on two pianos by Miss N. Schwabe and Miss A. Diack evoked much applause. Then followed a capital selection of Indian Club swinging by Misses S. and A. Favre-Brandt, W. Mitchell, E. Gillett, D. Dinsdale, M. Hoskyn, R. Stornebrink, and C. Schwabe. Part of this had to be repeated, the graceful movements of the little ladies being most pleasing to watch. A midget dressed in the uniform of Uncle Sam's army, Master M. Apcar, then gave a stirring rendering of "The Leader of de Company B," and was recalled for his effort. As a grand *finale* 32 young ladies went through the pretty evolutions of a Wreath Dance arranged by their instructress. This also drew forth a generous outburst of applause. During the evening Mrs. Patton was presented with several very beautiful floral offerings by the members of her dancing classes, and of the Choral Society, who also acknowledged, in a similar manner, the kind assistance given by Miss N. Schwabe as accompanist to the choir.

After the presentations, Mrs. Patton thanked the audience for the honour they had done the Children's Concert by according it such a full attendance on the occasion of her benefit, and then announced that to her great regret the concert of that evening would be the last, as, owing to the great diminution of members, there appeared to be no alternative but to disband the Society of which she had been the President and Musical Directress since the year 1890. It had been a matter of some difficulty last year to give the annual concert with only twenty-three members, many of whom had only recently joined; and almost immediately afterwards no fewer than ten had left, with two exceptions, to go either to England or America. Thus the number was reduced to only thirteen, and it would have been impossible to give the concert of that evening had it not been supplemented by a variety entertainment. And as notice has been received of seven more of the senior members leaving Yokohama during the present year, the Society will virtually cease to exist. Up to the present time, even when things were at their very worst, and the component parts of the choir had changed again and again, with ever-diminishing numbers, there had always been a residuum of trained voices to support new and inexperienced members, but now all these were leaving, and there were none to replace them. A Juvenile Tonic Sol-fa choir differed from other children's choirs in that it necessitated a previous musical training, for instead of members being admitted for their good voices and a facility for singing by ear only, admission to even an elementary choir could only be gained by certificates involving on an average two seasons of steady musical study in many different branches, and if parents could not see the advantage of such a musical foundation for their childrens' education, it was not Mrs. Patton's place to force it upon them. This was the tenth occasion on which she had shown the public what could be done by Tonic Sol-fa, if the materials were given her, but without the children of course nothing could be done. During the whole of last season not a single pupil had offered for a class to qualify them for admission to the choir, and although this season by dint of some trouble on the part of parents who wished their children to learn, a class of eleven out of the whole community was got together, they were all children not exceeding eight years of age, and many much younger, and it would be a long time before they could fill the places of the retiring members, and, in the meantime, the back-bone of the Society was gone. While deploring the necessity for disbanding the Society, Mrs. Patton dwelt with satisfaction upon the fact that during its existence more than a hundred young people had passed through it with musical credentials that would gain them admission to any Musical Society or Choir in any part of the world, and what they had gained as children they could never lose in after-life. With regard to her educational work in Yokohama since the year 1889, when she arrived a perfect stranger with only one letter of introduction, Mrs. Patton was content to leave the verdict to the parents who had entrusted their children to her for a musical education. And with regard to the teaching of dancing, although that was usually considered derogatory to a music teacher, Mrs. Patton held a different opinion, as it had always been her aim to elevate dancing to the level of music, by insisting upon her pupils adopting the most refined style only, making her instruction in the one art act beneficially upon the other; with what success she would leave to the judgment of those present that evening. It was impossible to say how many more years of teaching lay before her at her age, but she could assure her supporters that so long as she had health and strength for her work, she would always do her best, as heretofore. Perhaps in the course of ten years' educational work of many and various kinds, her energetic temperament, combined with an over-blunt sincerity of speech, may have had the effect of making some few enemies, but if so, she was sure they were far out-numbered by the many friends who had given her their support that night, to whom she tendered personally her most grateful thanks, as well as those of the Juvenile Choral Society for the patronage they had always given it, and for the kindness with which they had ever regarded the children's efforts to please them.

PROGRAMME.

PART I.

1—Pianoforte Duet.—(in unison on 3 pianos) Marche Militaire "Parade Review."
Misses N. Schwabe, and M. Stornebrink, M. and C. Merriman, A. and F. Diack.

2—Vocal Duet.—"Spring, Gentle Spring."
Soprano—Miss A. Favre-Brandt.
Alto—Miss C. Schwabe.

3—Two-part Song.—(unaccompanied)—"The Message of the Rose."—Arranged by Mrs. Patton.
Sopranos—Misses E. Gillett, W. Mitchell, F. Diack, R. Stornebrink, & A. Favre-Brandt.
Altos—Misses G. Booth, S. Favre-Brandt, C. Merriman, and C. Schwabe.

4—Piano-forte Solo.—"Les Gouttes D'eau."—Miss C. Schwabe. [Ascher.

5—Vocal Galop.—(in two parts) "Le Fin du Bal."—Arranged by Mrs. Patton.
By the members of the Juvenile Tonic Sol-fa Choral Society.

6—Highland Fling.—(in character).
By Special Request,
Master Colin Hutchison.

7—Chorus in Union.—"The Toy Band."
(with Instrumental Accompaniment.)
By the members of the Juvenile Tonic Sol-fa Choral Society.

PART II.

8—By special request, Mr. S. H. Somerton has kindly consented to sing, for the first time in Yokohama, Sir Arthur Sullivan's musical setting of "The Absent-minded Beggar."

9—The Bellamy Lancers.—(A novelty never before produced in Yokohama.)
By 8 of Mrs. Patton's Advanced Pupils.

PART III.

10—Minuet de la Cour.—(By special request).
By Miss M. Fox, and Master M. Apcar, Miss D. Dunlop, and Master C. Hutchison in character, and 28 pupils of Mrs. Patton's combined classes.

11—Song and Dance.—"So Shy" (in character).
Miss Evelyn Gillett.

12—Left-handed Piece on 2 pianos.—"Comme Gentil" Sydney Smith (first time).
Miss N. Schwabe and Miss A. Diack.

13—Exhibition of Indian Clubs (first time).
Misses S. and A. Favre-Brandt, W. Mitchell, E. Gillett, D. Dinsdale, M. Hoskyn, R. Stornebrink, and C. Schwabe.

14—Song.—"The Leader of de Company B" (in character.)
Master M. Apcar.

15—Finale.—Wreath Dance.
By 32 pupils of Mrs. Patton's combined classes.

CONCERT.

A concert was given on Monday evening in the vestibule of the Public Hall in aid of the orphans of the Convent of the Soeurs de la Communauté du St. Enfant Jesus, 83, Bluff, an institution which, on account of its unostentatious usefulness, deserves the support of charitably disposed persons of all classes and sects. A pleasant little programme had been arranged, the ladies who took part in the musical selections being chiefly pupils of Miss Orth. They all acquitted themselves creditably. Miss Lloyd Thomas and Mrs. Herb both sang nicely, and the violin and 'cello solos of Mr. O. Fehling and Mr. E. C. Davis were also most acceptable items. Mr. G. G. Brady kindly gave a recitation, "Mr. Montpelier's Recitation," in his own inimitable style. Programme:—

PART I.

1.—Ouverture (2 Pianos)..."Dame Blanche" Boieldieu.
Miss Erna Grosser, Misses Sophie and Adele Favre Brandt, and Miss Orth.

2.—Vocal Solo....."From out Thine Eyes" Franz Reis.
Miss Lloyd Thomas.

3.—Piano Solo..."Impromptu" .....T. Schubert.
Miss Ch. Carst.

4.—Cello Solo....."Romanze"....G. Golterman.
Mr. E. C. Davis.

5.—Recitation..."Mr. Montpelier's Recitation."
Mr. G. G. Brady.

PART II.

1.—Symphonie in A Minor (2 Pianos) "Andante" —"Allegro".....Mendelssohn.
Mrs. Strauss, Misses Orth, Carst, and Tripler.

2.—Vocal Solo..."Perche Piangi".....Gounod.
Mrs. F. C. Herb.

3.—Piano Solo... "Impromptu".....Chopin.
Miss Orth.

4.—Violin Solo....."Berceuse".....Simon.
Mr. O. Fehling.

5.—Two Pianos..."Tannhäuser".....Wagner.
Misses Meier, Eldridge, Morse, and Orth.

THE JAPAN ANNUAL CONFERENCE OF THE METHODIST EPISCOPAL CHURCH.

The members of the last conference chose Aoyama, Tokyo, as the place to convene the 17th Annual Conference. By Tuesday evening nearly all the Ministers were present and assigned to their respective places of entertainment. All the representatives of the Women's Foreign Missionary Society have arrived, and are holding their sessions in the Girls' School.

Digitized by Google
Original from CORNELL UNIVERSITY

The first conference meeting was held on Tuesday evening at 7 p.m. The missionary sermon was delivered by Rev. Hirata. The service was well attended, and much missionary spirit was manifested.

The second meeting was convened at 9 o'clock a.m. on Wednesday in Goucher Hall. Rev. J. Soper, D.D., administered the Sacrament of the Lord's Supper, assisted by the presiding elders of the conference.

The organization of the conference was taken up at 10 o'clock a.m. Rev. J. Soper, the secretary of the 16th Conference, called the roll. Fifty-one members responded to their names. As there was no bishop present to preside, it was necessary that a presiding officer should be supplied either by an appointment of the bishop in charge, or, if the bishop fails to make an appointment the Conference elects one of its members to be president. Since the Rev. G. F. Draper had been requested by Bishop Cranston to preside, he was conducted to the chair by the Rev. J. Soper amid hearty applause. The following officers were elected:—Secretaries, C. W. Hewitt, and K. Nakada; Assistant Secretaries, R. P. Alexander and K. Shiratori; Statistical Secretaries, W. S. Worden, M.D., and Iinuma; Treasurer, W. S. Worden; Conference reporters, A. M. Brooks and T. Namae.

The time fixed for receiving fraternal delegates from other churches is from 10.30 to 11 o'clock, a.m.

K. Shiratori and K. Naruse were requested to convey the sympathy of the conference to Rev. Z. Kawano of Kawagowa.

The reports from two districts were given, Hakodate by Rev. J. W. Wadman, P.E., and Nagoya by Rev. S. Ogata, P.E. Their reports were accepted and the character of the pastors of the districts were passed.

The Anniversary of the Home Missionary and the Church Extension Societies met in Goucher Hall at 7 p.m. on Wednesday. The reports were exceedingly interesting and showed active work and good results. The Home Missionary Society has expended about 400 *yen* in executing its work. This had been collected from the church members alone. The Church Extension Society assists poor congregations to provide houses of worship by granting loans without interest for a term of years.—*Communicated.*

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom).

PIETY AND BIGOTRY.

To the Editor of the "Japan Mail."

Sir,—In to-day's issue of your valuable paper you give a letter of President Kruger's as a sample of the bigotry characteristic of that old energetic politician. But instead of simply stating your judgment, you prefer to say that Oom Paul's "letters have about them a ring of the celebrated despatches of the Kaiser's grandfather, the Emperor William." I think, however, that there can be no comparison between the pious modesty with which the victorious King announced his successes to his Queen, and utterances like those quoted by you from Kruger's letters. In order to convince you of that, I have taken the trouble of copying all despatches from the French battlefields that contain any allusion to God or divine interference. You will see from the enclosed slips that there are six passages of this nature: two despatched after the first victories at Weissenburg and Woerth, two in connection with the conclusion of an armistice and peace, and two more on special occasions in the midst of the operations. They are all so moderate in tone that I can hardly understand how anyone who is not an Atheist could find fault with these exclamations on religious grounds. For the sake of illustration, I take the liberty of translating one or two: "God be praised for this first glorious deed of our arms" or (after the unexpected capture of the Emperor who seven weeks previously had demanded a humiliating letter of apology):—"What a turn of events through God's guidance." Still more creditable for the glorious victor is his deep emotion at the end of hostilities, while a phrase like "Thanks to God," added to the news of the occupation of Orleans without bloodshed, is, perhaps, of little importance.

I am almost certain, Mr. Editor, that it would not have occurred to you to place Kruger's letter on the same level with "the celebrated despatches," if you had refreshed your memory about the latter; and, therefore, I have not thought it amiss to lay the accompanying abstracts before you.

I am, Sir, Yours faithfully, H.H.

August 4th, 1870.

An die Königin Augusta, Berlin:—Unter Fritzen's Augen heute einen glänzenden, aber blutigen Sieg erfochten durch Stürmung von Weissenburg und der dahinter liegenden Geisberges. Unser V. und XI. Corps und II. Bayerischer Armee-Corps fochten. Feind in Flucht, 500 unverwunderte Gefangene, eine Kanone, und das Zeltlager in unsern Händen. Divisions-General Douay todt, von uns General von Kirchback leicht gestreift. Mein Regiment und 58er starke Verluste. Gott sei gepriesen für diese erste glorreiche Waffenthat. Er helfe werter!

WILHELM.

Woerth, August 6th, 1870.

Welches Glück dieser neue grosse Sieg durch Fritz. Preise Gott für seine Gnade! Gewonnen einige 30 Geschütze, 2 Adler, 6 Mitrailleusen, 4,000 Gefangene. MacMahon war verstärkt aus der Hauptarmee. Es solle Victoria geschossen werden.

WILHELM.

Sedan, 2 Sept., 1870.

Die Capitulation, wodurch die ganze Armee in Sedan kriegsgefangen, ist soeben mit dem General Wimpffen geschlossen, der an Stelle des verwundeten Marschall MacMahon das Commando führte.

Der Kaiser hat nur sich selbst mir übergeben, da er der Commando nicht führte und Alles der Regentschaft in Paris überlässt.

Seinen Aufenthalt werde Ich bestimmen, nachdem Ich ihn gesprochen habe in einem Rendezvous, das sofort stattfindet.

Welch eine Wendung durch Gotter Führung.

WILHELM.

Versailles, 5 Dec., 1870.

Orleans ist noch in dieser Nacht besetzt worden, also ohne Sturm, Gott sei gedankt!

WILHELM.

Versailles, 29 Januar, 1871.

Gestern Abend ist ein dreiwöchentlicher Waffenstillstand unterzeichnet worden, Linie und Mobile werden Kriegsgefangen und in Paris interniert. Garde nationale sédentaire übernimmt die Aufrechterhaltung der Ordnung. Wir besetzen alle Forts. Paris bleibt verniert und darf sich verpfleyen, wenn die Waffen ausgeliefert siud.

Eine Constituante wird nach Bordeaux in 14 Tagen berufen. Die Armeen in freien Felde behalten ihre resp. Landstrecken besetzt mit Neutralitäts-zonen zwischen sich.

Das ist der erste segensvolle Lohn für den Patriotismus, den Heldenmuth und die schweren Opfer. Ich danke Gott für diese neue Gnade; möge der Friede bald folgen.

WILHELM.

Versailles, 26 Februar, 1871.

Mit tief bewegtem Herzen, mit Dankbarkeit gegen Gotter Gnade zeige ich Dir an, dass so eben die Friedenspraeliminarien unterzeichnet sind. Nun ist noch die Einwilligung der National-Versammlung in Bordeaux abzuwarten.

WILHELM.

A fire occurred on the N.Y.K. *Otaru Maru*, on Friday afternoon about 2 p.m. The fire was extinguished at 4 p.m. by the Harbour Police Brigade. It occurred in No. 1 hold and goods to the value of 5,000 *yen* were destroyed.

THE BOOKSHELF.

The Yangtse Valley and Beyond, by Mrs. J. F. Bishop (Isabella L. Bird), F.R.G.S., London, John Murray; Yokohama, Messrs. Kelly and Walsh, Ltd.

In many ways Mrs. Bishop is the most remarkable woman of the time. As an intrepid traveller, an accomplished geographer, and a keen observer of men and things she has few equals, while from a strictly literary point of view her work has, ever since the publication of "Unbeaten Tracks in Japan," shown a steady advance, until we have in the book under notice a perfect model of what a book of travels ought to be. Mrs. Bishop's two volumes on Korea seemed to indicate the high-water level of her achievements as a traveller and writer; and yet the present work—the record of a journey undertaken for recreation and not with the object of book-writing—is fully up to that standard. Indeed, being more fortunate with her camera in China than in the Hermit Kingdom, "The Yangtze Valley and Beyond" has the advantage of numerous artistic photographic reproductions, which, after all, often tell their story at a glance more vividly than pages of description.

Mrs. Bishop's journey began at Shanghai, and we have an interesting and candid account of "The Model Settlement" and its inhabitants. Hangchow, Hankow, and Ichang next receive adequate treatment, politically, commercially, and socially. Making the passage of the Upper Yangtze with its magnificent gorges—familiar to English readers in Mr. Little's graphic pages—in a native boat, she then struck inland from a point on the great river between Ichang and passing out of Chinese territory, entered the wild, but hospitable, region peopled by the semi-independent Mantze on the western border of Szechuen. Thence she found her way back *vid* Chengtu to the Yangtze, down which she returned to Shanghai. The volume describing this remarkable journey is a bulky one of 550 pages. We cannot quote, however great the temptation. One must go to the book itself to realise the wonder-land, comparatively so near to us, and yet shut out by a world of prejudice on the part of the people,—much more difficult to overcome than its physical barriers, extraordinary as these undoubtedly are. A strong anti-foreign feeling assailed Mrs. Bishop wherever she set foot in China proper. Her escort consisted of only a Chinese servant and a few chair coolies; nevertheless, howling mobs followed her in the larger cities to the inns, which they attempted to invade, and more than once she narrowly escaped with life. It is pleasant to record that a very different experience awaited the adventurous traveller on ascending the valley of the Siao Ho, a western branch of the Min, and reaching the mountainous borderland lying between China proper and Tibet. Though not traversed for the first time by the foot of the foreigner, we think this is the first detailed account of that remote portion of China ever published. There, too, Mrs. Bishop was in her element. As she says: "Climbing the Peh-teo-shan spur by a long series of rocky, broken zigzags, cut on its side through a hazel wood, and reaching an altitude of about 9270 feet in advance of my men, I felt the joy of a 'born traveller' as I watched the mules with their picturesque Mantze muleteer, the eleven men no longer staggering under burdens, but jumping, laughing, and singing. . . . The two soldiers in their rags, and myself the worst ragamuffin of all." There were many such Elysian moments in this grand "Beyond." Among the many characteristics of Mantze life noted by Mrs. Bishop, none is more interesting than the position of woman, who stands on a perfect equality with man, and shares his interests and amusements everywhere.

We cannot take leave of this fascinating volume without touching on the inevitable question of the future of China. Mrs. Bishop is no believer in its "break-up," if the great European Powers will only help to sustain the

Digitized by Google Original from CORNELL UNIVERSITY

authority of the central Government and thereby prevent local risings and possible disintegrations. Any other policy, including that of the much talked-of "spheres of influence" would result in disaster. "Commercial and industrial energy is not decaying; the vast fleets of junks are not rotting in harbours and reaches; industry, thrift, resourcefulness, and the complete organisation of labour and commerce, meet the traveller at every turn. Mercantile credit stands high, contracts are kept, labour is docile, teachable, and intelligent, its earnings are secure, and, on the whole, law and order prevail."

The "Hongkong Daily Press" Chronicle and Directory for 1900; Daily Press Office, Hongkong. Yokohama: Messrs. Kelly and Walsh.

THIS useful publication shows an increase in bulk, due to the appearance for the first time of the Regulations for Foreign Companies in Japan, Harbour Regulations for Japan, the Treaty between Russia and Siam, 1899, and the Treaty between Russia and Great Britain regarding their respective spheres of influence in China. To the Directory proper are added Tsin-tau, occupying four pages; Wei-hai-wei, over three pages; Port Arthur, two pages; Peitaiho, two pages; also Talienwan; three new ports in Korea, Yochow, and Santu (Funingfu), as well as a description of and directory for the East Coast of Sumatra. There is an increase of 2,500 names to the alpabetical list and an entirely new postal guide of 32 pages. The growth of this useful book of reference indicates strikingly the progress made by European communities in the Far East. It was started in 1863, when it gave 3,008 names; in 1870 it had 4,510; in 1880, 8,204; in 1890, 15,520, while this year its alphabetical list contains 18,563 names. The information regarding Japan, as far as we have tested it, is reliable—much more so than some of the local publications of the kind, which are marked by anything but accuracy—and altogether the book is an entire credit to the office which issues it.

INEQUALITY OF TRADE.

Although a detailed trade return for March is not yet forthcoming, the figures for imports and exports from the 1st to the 15th instant are said to have reached 6,335,122 *yen* and 1,196,886 *yen* respectively, the former exceeding the latter by 5,626,764 *yen*. As to specie the figures for the two items amounted to 1,812,471 and 47,613 *yen* respectively, the excess in exports being 1,764,853 *yen*. It is to be understood, however, that these calculations refer only to the two ports, Yokohama and Kobe, and in the case of the latter prominent staples only were taken into account. The above figures, together with the totals for January and February, indicate an excess in imports to the extent of 22,875,188 *yen*, and an excess of 8,159 207 *yen* in the export of specie. Such a phenomenon has scarcely been experienced, and cannot but be regarded, remarks a vernacular paper, as an unmistakable sign of the unsatisfactory state of the country's commerce.

This inequality of trade seems to have affected the money market throughout the empire. The Bank of Japan is supposed to be the first to suffer from the exodus of 8 million *yen* of specie. Its specie reserve, which had aggregated 109 millions of *yen* approximately in the beginning of the year, has now fallen to 102 millions. Should trade continue in its present channel for any length of time a still further decrease of its reserves will be inevitable. The money market is at present quiet, but, the tea and silk season being at hand, the demand for loans is likely to increase shortly, and bankers will be freely called upon. The Bank of Japan will find it necessary to increase the scale of interest as a means of preventing exodus of specie, simultaneously with the adoption of measures for the raising of a domestic loan. The increase of interest is now under contemplation by some of the influential banks in Tokyo and Osaka.

THE YOKOHAMA SPECIE BANK.

At a general meeting of shareholders recently held in Yokohama, Mr. Soma, President of the Specie Bank, said he considered it an honour to be able to address the 40th general meeting of shareholders and to submit for their approval a statement of accounts for the latter half of 1899, marking the close of the first period originally fixed for the Bank's operations. The trade of Japan at the beginning of the period under review was dull, but by August or September the trade in raw silk textiles suddenly revived with the increasing prosperity of markets in Europe and America, while there was an extraordinary demand for raw cotton. The price of rice began now to rise, and all branches of trade steadily improved. The money market seemed to have undergone a complete change, when, in consequence of the outbreak of war between England and the Transvaal, the rates of interest rose considerably in London, and the pernicious effects of this were felt all over the world. In Japan the necessity of caution was recognised by the Nippon Ginko and other prominent banks, and in November the rate of interest was raised. The measure, however, could hardly check the demand for loans, which continued to increase until the end of the year. Turning to the foreign trade he might observe that although exports had reached 215 million *yen* approximately in consequence of brisk sales of silk, yarns, copper, and rice, and of a remarkable decrease in imports of various descriptions, yet an extraordinary increase in raw cotton, which seemed to have aggregated 225 millions of *yen*, had produced an excess of imports over exports by upwards of 5 millions. As for specie and bullion the exports and imports for the whole year amounted to 11,170 000 and 20,160,000 *yen* respectively, the latter exceeding the former by almost 9 millions; but when they come to compare the respective figures for the latter half of the year, they would find that there was an increase of about 6 millions in exports. Reviewing the general condition of the money markets abroad it would be remembered that the rate of discount adopted by the Bank of England, which did not exceed 3 per cent. at the beginning of the year under review, was raised to 6 per cent. at the close of the year, while the general market rate rose from a minimum of 2.2 per cent, to a maximum of 7 per cent. This extraordinary rise was of course attributable to the war and the uneasiness created among capitalists. Simultaneously the production of gold in the Transvaal almost if not entirely ceased; the National Banks of various countries in Europe raised their rate of interest in order to counteract the policy of England in absorbing all available specie; the inauguration by the Indian Government of a peculiar gold standard contributed to the demand for the yellow metal; and all these circumstances, together with the tightening of the money market in America, brought about the abnormal appreciation of interest in England remarked on. Yet apart from these considerations there seemed to have existed a more general cause of appreciation, and that was no other than the recent development of commerce and industry. This remark, however, was not only applicable to England, but also to all the countries of Europe. It was true that the appreciation of interest had brought about a corresponding depreciation in the value of bonds and shares, so much so that in America panic was caused in the share market. Nevertheless, such phenomena must all be regarded as partial, and not general in character, the commerce and industry in Europe and America having on the whole made steady progress. It was also true that India had increased the export of cotton to Japan, As for China, the trade seemed to have been normal. With regard to exchange rates to Europe and America he might mention that in spite of the general rise in interest in the west and the frequency of remittances resulting from an excess in imports, the scale had fallen to a certain extent; bills payable in London at sight being discounted at from 2s. 1⅛d. to 2s. ⅝d. and those for Shanghai at rates varying from 78¼, to 77¼ *taels*, while the quotations of silver bullion in London stood at 26 13/16d. as a minimum rate and 27 1/16d. as a maximum, and underwent no serious fluctuations. Transactions in silk, extending over the whole season, had to be settled before the close of the year, and accordingly the remittances dealt with by the bank on account of exports were suddenly increased, while those relating to imports did not, owing to large importations of raw cotton, fall short of the amount recorded for previous years. These and other facts had enabled the bank to make steady progress in its business, and to secure most satisfactory results. A word about the declaration of special dividends. Looking back, it might be perceived that, although the Bank had not yet been very long in existence, it had frequently fallen into serious embarrassment on account of extraordinary fluctuations and unexpected failures experienced in connection with trade, so that at one time its existence was threatened. In April, 1883, a resolution was passed calling for radical reform, and, liberal protection being afforded by Government, the President succeeded in saving the bank from complete ruin. Since then the foundations of the bank had been strengthened with years, and its business was steadily and satisfactorily conducted. They now found it highly prosperous in the twentieth year after its organization. The bank had not only devoted its energies at all times to increasing its reserve funds, but, whenever it had occasion to realize a large amount of profit, set aside a portion of the same to supply as far as possible the value of public bonds in its possession.

The last half-year's profits being ample, he considered it expedient to appropriate some three million *yen* for special dividends. He had to congratulate them upon the success the bank hadsecured during the first period originally fixed for its operations; at the same time bearing in mind that the bank's responsibility in regard to the State as well as to trade would be incalculably greater in future. The bank's capital now amounted to 24 million *yen*, nearly double the original amount of 13 millions, and if calls for the 1st period on the third issue new shares were completed the total paid up capital would reach 18 millions. Such being the case, he might venture to state that it would perhaps be difficult to maintain the present rate of dividends in future with respect to the increased capital. No accurate forecast could be made, but he must ask them to bear in mind those circumstances. Lastly, the third issue new shares decided upon at a special general meeting in September last were all accepted by shareholders actually on the list on the 30th December. The matter of converting the bank's out-office into branches, as well as establishing a new branch at Newchang, having been sanctioned by the Minister of Finance at the end of last year, the nomenclature was changed from the 1st of January this year. Business was opened at Newchang from the 4th of the same month.

POST OFFICE BANK REGULATIONS.

The regulations for deposits in postage stamps have been published in the *Official Gazette*, and came into operation from the 16th instant. They consist of the following five articles:—

Art. I.—By "deposits in postage stamps" are to be understood such amounts of money as are saved and deposited with Post Office banks by means of postage stamps.

Art. II.—The amount of deposit in postage stamps must not exceed one *yen* per monthor each individual.

Art. III.—Any person desirous of making a deposit in postage stamps shall affix or paste the stamps on the form provided for the purpose, and present the same at any Post Office Savings Bank or Agency.

[Note.—Any person who is already provided with a passbook for postal deposits is required to forward the same with the paper referred to].

Digitized by Google Original from CORNELL UNIVERSITY

Art. IV.—In case any person is found to have made deposits beyond the limit specified in Article II., the amount of excess shall be returned to him in postage stamps.

Art. V.—Forms for affixing postage stamps may be obtained at the various Post and Telegraph Offices, Post Offices, and Postal agencies, where deposits are received.

NOTIFICATION OF THE NAVAL DEPARTMENT.

The Naval Department recently issued a notice to the effect that as torpedoes and mines are to be placed as mentioned below, on account of the forthcoming grand naval manœuvres, the passage or anchorage of ships, and fishing operations, should be suspended for 18 days from the 29th March to the 15th April in the case of Sections specified in Paragraphs from 1 to 7, and for 29 days from the 29th March to the 26th April in the case of other sections. With regard to places mentioned in Paragraph 7, however, no objection will be raised to the passage of ships.

SECTIONS WHERE MINES AND TORPEDOES ARE TO BE PLACED.

I.—Mouth of Tokyo Bay.
1. For a distance of 1,200 yards from Hatayamasaki on the line connecting that place with the third naval fort.

II.—Mouth of Yokosuka Bay.
1. A line west of the northern end of Natsushima, ½ N.W.W.
2. A line north-west from the northern end of Natsushima.
3. A line south-west from the north-western end of Hohajima.

The area of the sea surrounded by the above three lines. A red buoy will be placed at each point of connection between the 3rd and the 1st and 2nd lines.

III.—Entrance of Omura Habour in Hizen.
1. Lines connected by the following buoys:—
Innermost buoy—west by ¾ N.W.W. from the surveying post on Kompira Hill lying east by ¾ E.S.E. from the signal at Kogozaki.
Central buoy—west by ¾ N.W.W. from the surveying post on Kompira Hill lying east by ¾ south-east from the signal post at Kogozaki.
Outermost buoy—east by ¼ north-east from the Banshozaki; east by south from Shirose.
2. A line drawn south by ¾ E.S.E., from the Innermost Buoy.
3. A line drawn to the south-east of the Outermost Buoy.

IV.—Entrance of Asaumi Harbour in Tsushima.
1. A point 400 metres south-east of the centre of a line between the Uran promontory and Hitoyezaki.
2. A point 400 metres north-west of the centre of a line between Uran promontory and Hitoyezaki.
3. A point 400 metres south-east of Hitoyezaki.
4. A point 400 metres north-west of Hitoyesaki.

The area of sea contained by lines connecting the above four points.

V.—The mouth of Kurose port in Asaumi, Tsushima.
1. The channel between Myobanjima and Hentajima.

VI.—Kasho Strait in Nagasaki Port.
1. A line connecting Onnajima with Umenoki promontory in Kashato.
2. A line connecting Onnajima with a sign post at Tozo.
3. A line drawn direct north from the Tozo post.

The area of sea contained by the above three lines.

VII.—Kasho Strait at the entrance of Nagasaki harbour.
1. Aqueduct between Onnajima and Fukabori-mura.

VIII.—Nasami Strait in Hiroshima Bay.
1. A line connecting the two western ends of Shokokujin-jima and Onasami-jima.
2. A line connecting the eastern end of Shokokujin-jima with the western end of Nishi Nomi-jima.
3. A line drawn directly south of the eastern extremity of Onasami.

The area of sea contained by the above three lines.

IX.—Hayase Strait in Hiroshima harbour.
1. A line drawn directly south of the south-eastern extremity of East Nomi-shima.
2. A line drawn to the east and west, intercepting a space of 1 nautical mile and 8 chains directly to the south of the south-eastern extremity of East Nomi-shima.

The area of sea contained by these two lines.

AN APPEAL.

In the conflagration at Furo cho last Friday morning, which consumed the Gospel Society Hall, the Yokohama Blind School was burned out for the second time within eight months. Since the fire of August last the school had found temporary quarters in this Hall. Now its books and other belongings have been lost again. To replace them and keep up the usual running expenses, hiring and furnishing a house, etc., makes the burden so heavy that it is found necessary to appeal to the generosity of the community which has so kindly aided, at other times, this effort for the enlightenment of so afflicted a class.

The school is a Christian institution, but unsectarian. Efficient teachers have been engaged, and if permanent quarters are obtained the work of the school will be increasingly successful.

Contributions may be sent to Mrs. Mira E. Draper, No. 222-B Bluff, or Mrs. C. W. Van Petten, No. 221 Bluff.

BANK OF JAPAN.

BANKING ACCOUNT.

On Saturday, March 3rd:—

DR.	Yen.
Share capital fully paid-up	30,000,000
Reserve fund and other liabilities to shareholders	15,362,908

NEWS OF THE WEEK.

The Singapore papers praise the performance of "The Geisha" by the Dallas Opera Company.

The Governor of Formosa reports to the Home Department that one new case of plague occurred on the 16th inst. at Taipeh, and six new cases and one death on the 17th inst. at Tainan.

The Committee in charge of the Charity Hospital in Negishi wish to thank the Amateur Theatrical Company for the gift of *yen* forty-three and 56 *sen* (43.56), received by them in aid of the funds of the hospital.

The crews of the Japanese otter-hunting ships *Kato*, *Junten*, and *No. 1 Tsushima* left Shinagawa for the north on the 17th inst. The usual complement has hitherto been 20 men per ship, but this year the crew is increased to 30 men.

Mr. Winston Churchill's first novel "Savrola," has been tolerably well reviewed. The young war correspondent has depicted the political intrigues and revolution in the imaginary Republic of Laurania, throwing in lots of fighting, epigrams and political maxims, the latter evidently gathered from his experience in England. The book was mainly written in 1897.

The will of the late Philip D. Armour, Jr., disposes of property valued at $8,000,000, $6,800,000 in personal property and the remainder in real estate. One-third of the estate is left to the widow, May E. Armour, and two-thirds is given in trust to three executors for the two surviving sons of the testator, Leslie and Philip D.

From the *Kobe Herald* we learn that the following telegrams have passed between the Irishmen of Kobe and Lord Roberts:—

Kobe, March 18.

"Kobe Irishmen congratulations Saint Patrick's Day."

"Bloemfontein, March 18, 3.40 p.m.

I appreciate very much your kind message. Roberts."

Mr. Milton Rathbun, a New York business man of considerable means, on Feb. 26th concluded a thirty-five-day fast, undertaken with the hope of improving his health. He subsisted during the entire period on water, and his weight fell away from 207 to 164 pounds. He took food only when he began to weaken and there was danger of his health giving away. During the entire period he lost but one day from business.

The stories from Cape Nome, remarks the *San Francisco Chronicle*, show that the history of the Klondike rush will be repeated, with the prospect of more suffering than attended the early arrivals at Dawson. The Nome district and the districts north of it will probably give a few miners large fortunes, but thousands who have had no experience in mining will spend more in their search for treasure than they will ever get from the gulches and beaches along Behring Sea.

Colonel Jouaust, President of the Dreyfus Court-Martial, who, is believed to have voted, for the acquittal of Dreyfus, has been placed on the Retired list. An interviewer asked him whether, now that he was released from his military oath, he would satisfy public curiosity, stating how he recorded his vote. "No," he replied, "and I wish to be entirely forgotten. Let me enjoy tranquillity in the remaining years of my life. My only wish is to devote myself to bicycling and gardening."

Industrial activity and the increase in wages in the United Kingdom have recently attracted hordes of Continental labour. In January alone, about 4,000 emigrants arrived, a large increase on the average. The *Globe* remarks:—"When the present wave of industrial prosperity is succeeded by a wave of adversity, we shall have

Digitized by Google Original from CORNELL UNIVERSITY

on our hands a multitude of foreigners, eagerly competing for the bread which ought by right to nourish the native-born. We have no legislative machinery for sifting out pauper aliens, and returning them to their native country, as they have in the United States."

AMERICAN NOTES.

The Senate Committee on Commerce has authorized a favourable report upon Senator Gallinger's bill providing for the appointment of a commission to make an investigation of the trade relations between the United States and China and Japan, as recommended by the President in his last annual message.

Under a plan prepared in 1898 by the International Geodetic Association, which went into effect on January 1 of the current year, a systematic study is to be made of the variation of latitude. The plan proposed involves the maintenance of four stations or observatories on the parallel of latitude thirty-nine degrees, eight minutes, and ten seconds, and the places chosen for observations are all within 500 feet of this line. They are as follows: Mizusawa, Japan; Carloforte, Italy; Gaithersburg, Maryland, and Ukiah, California. The plan involves the making of observations on the same stars at each of the stations, and thus reducing the errors to a minimum.—New York *Evening Post*.

Mr. Henry C. Ide, who will be one of the new Philippine Commissioners, is one of the leading lawyers of Vermont and 56 years old. In 1891 he was appointed commissioner on behalf of the United States to act with the commissioners from England and Germany to settle the land troubles in Samoa. Upon his arrival there he was chosen chairman of the Commission, and rendered valuable service for over a year. His appointment as Chief Justice of Samoa came primarily from the German Government. It was then sent to the British Government for approval and finally to the United States Government. The German Government was pleased with Mr. Ide's previous labours in Samoa and recognized his work in this way.

Mr. H. C. Frick has brought a suit against the Carnegie Steel Company to secure the share he claims in the profits and stock of the concern. It appears from the papers in the suit that the net profits of the company in 1899 were $21,000,000, and that the profits this year would be $40,000 000; that Mr. Carnegie's 58 per cent. interest in the company was worth supporting shore batteries, mines, and torpedoes would be included. Taking into consideration the guns at Corregidor, El Fraile, and other forts at the entrance of the bay and those at Manila and Cavite, and the torpedoes and mines in the bay and entrance to it, was contended by counsel for Admiral Dewey that the enemy's force was superior to the vessels of the United States. The Government insisted that the statute failed to provide for the contingency of co-operation of the land batteries with the fleet destroyed, and the court is powerless to supply the omission. It is understood that the counsel for Admiral Dewey will take an appeal to the Supreme Court of the United States. Under the present decision Admiral Dewey is personally entitled to $9,570.

Dr. Leslie E. Keeley, the inventor of the "Keeley cure for the liquor habit," died in Los Angeles, Cal., on Feb. 21. Dr. Keeley was 68 years of age. He leaves a widow, but no children. The estate is valued at $1,000,000.

The United States Court of Claims rendered an opinion on the claim of Admiral Dewey, his officers and men for naval bounty under section 4,635 of the revised statutes, for the destruction of the Spanish fleet in Manila Bay, May 1, 1898, the court holding that the claimants have a right to recover $100 for each person on board the enemy's ships. This decision is upon the basis that the Admiral's command was superior to the Spanish fleet, excluding the shore batteries, the torpedoes and the mines in Manila bay. Admiral Dewey's claim was for $200 for each man belonging to the enemy's fleet, including the supporting shore batteries, mines, and torpedoes. The principal question involved in the case was whether, in determining the enemy's force, the $157 950,000. The property is valued by Mr. Carnegie at $500,000,000. "What a monstrous and wicked lie the plea for the protection of our infant industries appears to be in the light of these revelations!" says the New York *Times* (Dem).

THE TRUTH ABOUT THE TRANSVAAL.

(By the Hon. John S. Seymour, Late United States Commissioner of Patents, and Legal Representative before the State Department of the Americans in the Transvaal.)

To state what the Transvaal war is about, it is necessary to clear away sundry misapprehensions. Mr. F. V. Engelenberg, editor of the Pretoria *Volksstem*, in a recent article in the *North American Review*, states that were it not for the gold industry the Boers would be enjoying the rest and peace which they have longed for and deserved; that it was an agitation in behalf of the native negro population which drove the Boer beyond the boundaries of Cape Colony in 1836; that the Uitlander question is only a mask for a financiers' plot or a piece of exchange jobbery; that, as it has steadily kept pace with the gold output, it was caused by the gold interest; that the Transvaal is to the present gold seekers and to most of the Uitlanders only a temporary land of exile, which they endure only for the sake of gold; that from the earliest days of the gold fields they knew that the South African Republic was an oligarchy, and that the dynamite monopoly existed; that the agitation against them is unfair, and kept up by men who refuse to listen to the voice of righteousness or be guided by any noble impulse.

Mr. Bourke Cochran, in a letter to President McKinley, on Aug. 24, 1899, seems to assert in substance that the cause of the unrest is the claim of England to control, at the point of the bayonet, the electoral franchise in the Transvaal, a country which he calls admittedly independent.

All defences of the Boers that have come to my notice suppress facts and distort the history of the Transvaal. That country is represented as being a compact, self-governed republic of sturdy people who, for the love of liberty, left the Cape Colony for Natal and the Orange Free State, and, when this place came under the control of the British, moved farther on across the Vaal river, there to set up their own republic beyond the claims of British sovereignty; that they despised the rich deposits of gold, and would much prefer they had never been found in their country; that those who seek it are intruders, if not criminal trespassers, and that they have encroached more and more upon the natural rights of the Boers in the Transvaal, until they now demand that the country shall be practically surrendered to them by such unwarrantable extension of the franchise as would give them practical control of it without delay.

In order to form a just opinion, it is necessary to know the facts. The Boers were not oppressed in the Cape Colony, nor were they dissatisfied with their state. They were not treated differently from other whites. They did not leave in 1835 in order to found a republic based on freedom, but because of the British abolition of slavery throughout the colonies by the act of Aug. 7, 1833, although, with the British respect for vested rights, compensation was made to slave owners. The Boers were slave holders in Cape Colony, and resented this as an invasion of their rights, and for this reason left Cape Colony and went north to Natal and the Orange Free State, and, when British influence extended thither and broke up the serfdom to which they there subjected the natives, they again moved north to the present Transvaal for the same reason.

But in all these migrations they never went outside the British domains, which in those days nominally extended to the twenty-fifth parallel of latitude, within which the Boer State, as then planted, was situated. Whenever in contract with the British they derived recognition of their semi independence from them, it was always on the condition that slavery should not be tolerated, either in its manifest form or in any form of apprenticeship, the practical equivalent of slavery when imposed upon native races.

To-day, the reason why there is no negro slavery in the Transvaal is because in the various conventions with Great Britain, from the Sand River in 1852 to the London Convention of 1884, there was contained a direct prohibition of it. The Boers have always oppressed the natives, have had frequent wars with them, and have inflicted brutal injustice upon them. Once in the temporary absence of the great Livingstone a band of Boers sacked his village and carried the natives off into slavery.

John Martineau said:—The native African races were, in their estimation, Canaanities, and they, as the chosen people, might go forth, the Bible in one hand and an ox whip in the other, to extirpate them or to employ them as hewers of wood or drawers of water, . . . and from that time to this the Act of Emancipation has been looked upon by a large section of the Dutch population as a wrong done to them for which there was no justification.

This Boer dulness to the sense of justice is traditional with them. Another manifestation of it was the selfish, narrow despotism with which Holland had treated the Cape Dutch, prohibiting them from trading on their own account, compelling them to sell their produce to the Dutch East India Company at a fixed price, and subjecting them to the caprice of the home government.

The annexation of the Transvaal to the British colonial domain in 1877 was not accomplished by force, but grew out of the treatment of the natives, against which the Boers were but poorly equipped successfully to contend. The payment of taxes had ceased, salaries were in arrears, the interest on the public debt was unpaid, there was no public credit, the authority of law was frequently challenged by armed bands, the treacherous murder of friendly natives, men and women, is set forth with such detail and on such evidence as renders belief in these atrocities imperative, and at the same time shows the want of will, if not the want of power, in the existing Boer Government to stop it.

Forty square miles of country had been overrun by the natives, and every house burned just before the annexation. There was much reason to believe that Cetewayo, who had most of his forces on the borders, would have swept the country up to Pretoria itself, had it not been taken over by the British.

Whether at first the Boers honestly acquiesced in the annexation or whether only the more conservative and property-owning class were favourable to it, is difficult to make out. There was open acquiescence in it by many who secretly protested against it; there was intrigue and subterfuge; there was finally war against the British in 1881, and defeat for the handful of British soldiers; and under the Gladstone Government, by the Convention of Pretoria in that year, the Transvaal was granted a measure of independence, subject to imperial control as regards foreign relations and certain domestic matters, its relations with native tribes, both within and without, and the payment of the public debt.

The commission appointed on the part of Her Majesty's Government to settle the terms of peace with the Boers had various meetings with the representatives of the Boers, among whom was Mr. Kruger himself. At the conference of May 10, 1881, at Newcastle, the question of the equality of treatment among the white inhabitants of the Transvaal was the occasion of a direct assurance by Mr. Kruger that before annexation British subjects had complete freedom of trade throughout the Transvaal, and were on the same footing as the burghers; that there was not the slightest difference; that there would be no objection to that continuing; that there would be equal protection for everybody and equal privileges, and that there was and would be no difference as regards burgher (elector's) rights. That this promise was made is also shown by Mr. Kruger's denial that it had been broken and his assertion to a representative of the London *Times* on Sept. 28 last that he had always been ready to treat the new immigrants on an equality with the old burghers, but they always refused.

This distinct pledge of equality voluntarily given by Mr. Kruger when taking part in the settlement of the terms of peace in 1881 was repeated by Mr. Gladstone on the floor of the House of Commons, as being the foundation on which the grant of qualified independence was made. It became, therefore, as the true consideration in a deed, not necessary to be expressed, but subsisting in fact, or else the whole grant might fall to the ground or might be avoided.

The revision of the treaty in 1884, was a hasty work, and furnished ground for controversy; but the British Government, in the day and time of it, steadfastly refused to regard the

Digitized by Google Original from CORNELL UNIVERSITY

new convention as an agreement between two equal contracting parties, and as a result refused to admit any proposal for arbitration, and refused to renounce suzerainty.

Nor are the unfranchised a body of intruders, or careless of their obligations to the country, or of their duties as citizens, nor have many the intention to return to their own country after making a fortune.

The origin of the conference that revised the treaty, in 1884, was a letter from the Boer Government, asking Her Majesty's Government (Mr. Chamberlain says these are the exact words) —'Not the abolition of the suzerainty, but some restriction of the extent of the suzerainty' A subsequent attempt to submit to Lord Derby a treaty, in the introduction of which the Boers claimed to be an independent state, was refused consideration, and returned to them.

The Boers have not been altogether indifferent to the gold, which, though discovered in 1886, on the Witwatersrand, was yet known to be in the country by more or less clear indications years before. The Boer finances were in a desperate situation, and in 1886 Mr. Kruger declared his intention of encouraging the mining industry. He sent experts to examine the Rand and proclaimed it a gold field in his report. In September of that year he marked off a township, appointed a mining commissioner, and held a sale of building sites which brought in £13,000 sterling. This was the founding of Johannesberg. In January following the government held other sales which realized £40,000 sterling. A public proclamation was made inviting immigration. Those who responded came, therefore, by express invitation, derived their titles by public government sales or through purchases of a private character of lands from Boer residents and burghers, sanctioned by public law, and in the clearest manner it is established not only that equality was promised them, but that the right to equal terms inheres in the facts.

Johannesburg had the experience of new mining towns—promotions, speculation, fanciful claims, extraordinary expansion of values, and the inevitable collapse; but from 1890 onward gold mining was taken up by a different class. It was prosecuted on scientific lines by capital conservatively invested, and rights became fixed there as elsewhere in settled communities. The increase of immigration in this case was not a surprise to the Boers, but was clearly foreseen, invited, and provided for. Then there followed the elaborate restrictions upon the rights of these inhabitants, until in place of guaranteed equality of treatment there has been fabricated the most inequitable scheme of inequality that is anywhere known in the world.

Inhabitants not of Boer origin, no matter how able, intelligent, or patriotic, nor what their fixed interests in the country may be, could not obtain the franchise within fourteen years. None can obtain it unless he has a considerable property qualification, is registered from the time he came there, has renounced his allegiance to his own country two years before he is to receive the right to vote in the Transvaal, is a member of a Protestant church, and has taken an oath of allegiance that is repellant to him. But the Kruger regime provides for the full franchise for Boer boys at the age of sixteen, without a property qualification. Another singular modification of the system has hitherto passed without notice. All qualifications can be waived by a mere vote of the burghers, and a body of electors taken in by the back stairs without possessing any of the qualifications, as though the door were left open to swamp in number the most intelligent whites by introducing arbitrarily a great number by Boer selection.

But the franchise is not the real question involved in this dispute. It has been sought by the unenfranchised as a means of redressing grievances, and not as an end in itself. Had the Boers governed well, there would have been no demand for the franchise, and yet, everywhere, fairness demands for civilized man the right to participate in the government of the country in which he casts his lot, and where his household gods have been set up, as soon as time has proved his intention. No inhabitant of the Transvaal asks for the franchise without renouncing his allegiance to his own country, without having resided in the Transvaal for five years, without swearing allegiance to that country, or without complying with the property qualification. These terms are more strict than are required of Boers when settling in the State of New York, or in any New England State, or in the United States, or in England.

Nor by this just extension of the franchise was the country to be delivered over to their control. It was entirely acceptable to them that their representation should be by districts of much greater population that the rural regions where the Boers predominate, as a result of which the Uitlander representatives in the first Raad could in no case be more than six in a chamber consisting of twenty-four members. The means, therefore, for the redress of their grievances by their own efforts would be the slow work of convincing an adverse majority of the inherent fairness of their claims. The proposal involved no danger to the independence of the country.

The cause of the present unrest in the Transvaal lies back of the franchise. It is in the incapacity of the Boers for self-government, their want of recognition of the rights of man, their hostile and mischievous legislation in things that concern fundamental rights, in their blindness to those obligations upon every civilized state to embody justice and equity in all their institutions, and to make possible in the hearts of men the allegiance which cannot be imposed upon them by mere law. In the words of Mr. Balfour, "An oligarchy is in power there, aggravated by corruption."

Monopolies subsist there. The alien law is grievous; the press law is an instrument for poisoning or suppressing public opinion; there is an illicit liquor traffic, dangerous in a high degree where the majority are native blacks; there are educational disadvantages, legal and sanitary maladministration, an incompetent police, uncertainty in the law, and dependence of the courts on the caprice and will of the government.

In the shifty Boer diplomacy that has been the amazement of the world for the last few months, nothing is more confusing than the proposals which President Kruger has brought forward. All may be characterized as professing to give what they in reality withold. An interview with Mr. Kruger, published on Sept. 15, represents him as saying:—

"I have tried all along to place the aliens in the Transvaal on the same footing politically as the burghers. . . . . I have wanted to let them have the same political rigts, but they would not avail themselves of this. Roughly, there are more than 50,000 aliens who have been more than seven years, and who have registered, thus being eligible to the franchise, yet of the British subjects who have availed themselves of it, the chief part have been the Africanders and not not English-born. This," he says, "shows that the British in the Transvaal do not want the franchise."

But the franchise to which the 50,000 are eligible is not the full burgher right to vote, but only for members of the second Raad—a mere talking chamber cunningly devised by Mr. Kruger to give the unenfranchised the semblance of their just right, while at the same time he withholds the reality.

The wrong which strikes home is the existence of a fort at Johannesburg, commanding not the entrance into the country, but its places of business and its largest population. This is armed with rapid-fire guns of the best class, and is kept absolutely secret from the unenfranchised, who are themselves forbidden to carry arms in their own defence. It is manned by Boers, commands the town, and could in a half hour sweep the entire population out of existence. This fort was built almost wholly out of taxes unjustly levied upon the very industry which its guns command. The votes for it were taken in a body in which the unenfranchised had no representation. It commands in great part the very 50,000 that Mr. Kruger speaks of as registered and entitled to the suffrage, if they would only take it. There are no Boers to speak of in Johannesburg. The contracts for the erection of this fort were given out long before the Jameson raid, and its proposed construction was one of the causes that led to that event.

Our own Declaration of Independence condemned George III. because he refused to pass laws for the accommodation of large districts of people unless those people would relinquish the right of representation in the legislature, a right inestimable to them, and formidable to tyrants only.

"He has endeavoured to prevent the population of these states; for that purpose obstructing the laws for naturalization of foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of new appropriations of lands.

"He has obstructed the administration of justice by refusing his assent to laws for establishing judiciary powers.

"He has made judges dependent on his will alone for the tenure of their offices, and the amount and payment of their salaries."

The Boer police is on a level with the despotism that controls it. It has committed numberless atrocities, and when brought to book in court, juries have rendered farcical verdicts. Our Declaration of Independence dealt with a similar situation and condemned the king for protecting his forces in any murders which they should commit on the inhabitants of these states.

"For imposing taxes on us without our consent.

"For depriving us in many cases of the benefits of trial by jury.

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundations on such principles, and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness."

Had the Boer ruled wisely, or if not wisely, had he with an approach to equity foreborne to establish inequality between great classes, there would have been no unrest in the Transvaal. Even now should the intoxication of success in the preliminary conflict of arms be succeeded by the sobering and severer lessons inevitable in the latter stages, and, instructed by these stern teachers, should the Boer grant equality of right to all civilized men within his borders, peace would be possible, and it might be that a measure of self-government would still be entrusted to the Transvaal.

Had this been done on the petition of its disaffected and outraged inhabitants, all threat to the independence of the Transvaal would have been impossible. As in Switzerland the French, Germans, and Italians enjoy absolute equality and, diverse as they are in origin and traditions, have achieved a unity of spirit in behalf of their institutions which is the marvel and admiration of the world, so in the Transvaal diversity rightly recognized would have been and might still be a source of strength and safety under the fostering care of just government.

President Steyn, of the Orange Free State, has a heavy responsibility for this war. The proclamation issued by him on Oct. 14, three days after the outbreak of hostilities, contains grave untruth. He speaks of the injustice done his kith and kin, when the fact is that it is his kith and kin who are doing the injustice to others. He speaks of the annexation conspiracy, when the historical fact is that the Orange Free State has enjoyed independence by the grant and proclamation of Great Britain ever since 1854 without encroachment. In the Orange Free State Uitlander and Boers enjoy the same rights, and give thus a standing refutation to those who claim that the same equality of rights would be mischievous in the Transvaal.

The proclamation of President Steyn is a masterpiece in *suggestio falsi* as well as in *suppressio veri* and will deprive him of the confidence of mankind in the sincerity of his pretended efforts to avert war. There is justification for the charge that he is the Iago of the tragedy, and is blinded to the claim of justice by his inordinate ambition to be prominent in a great South African republic, if republic that may be called which would bring his race into power by denying equal rights to the other whites in the manner in which the Transvaal has maintained the Boer supremacy.

But there is another reason why Americans should cordially oppose the unjust Boers, and as cordially support the claims of Great Britain.

There were in the Transvaal over 3,000 American citizens, more than 1,000 of whom are of military age, and most of whom are qualified to be electors under any fair naturalization laws. They have resided in the Transvaal for from three to thirteen years, are identified with its interests, and are fitted to take part in its political life. They have observed strict neutrality in all the agitation preceding hostilities, and so long as they remained in the Transvaal they were obedient to the law; they have sought only by the just presentation of their case in discussion and in the lawful cultivation of public opinion to obtain that improvement of their situation which ought to be freely accorded civilized men in every part of the earth. It is not a crime to go to any country in the intelligent and enlightened prosecution of self-interest in the proper way, in obedience to law, and with a willingness to assume all the obligations of citizenship. Yet American citizens have suffered from the same injustice that other Uitlanders have suffered from, in the redress of which Great Britain is engaged in a war of unknown and illimitable extent.

Digitized by Google Original from CORNELL UNIVERSITY

They have laid their petition for the redress of grievances before the government of Pretoria along with other Uitlanders in the same situation, only to have the petition ignored. They have presented to the government at Washington their request that a representation be made direct to the government at Pretoria looking to the voluntary grant of the reforms sought by the Uitlanders in the matter of the franchise, of fair taxation, of the repeal of the press law, of the alien expulsion law; that they might be granted the right to hold public meetings, the right to be free from the threat of force by the overhanging fort at Johannesburg, and the enactment of laws looking to the equality of status between all civilised inhabitants resident in the country five years, to the end that the deep-seated unrest might be allayed and the cause of irritation between different races of the population removed.

The claim of these American citizens for the restoration in the Transvaal of fair conditions is a claim so just, and therefore so forceful, that a way will be found to convey to the government at Pretoria their wish, or else the removal of these grievances by a war unjustly declared by the Transvaal will be the second deep obligation to Great Britain which this country has incurred in two years.

But, apart from this, England's uniform protection for her subjects in distant parts of the world challenges our admiration. She once expended £13,000,000 in a war with Abyssinia for the sake of one missionary.

The present war was declared by the Transvaal under circumstances which compel the belief that all the negotiation which has been agitating diplomacy and the peace of the world for the last six months was idle, and that war was inevitable from the start. The unenfranchised could not accept permanent inferiority; the Boers never intended to grant the promised equality. The war began by the invasion of British colonial territory, and not by the aggressive act of Great Britain. The outbreak of hostilities found Great Britain unprepared for war, and therefore not open to the charge of having brought it on; and back of this was the claim of Great Britain merely for equal rights to all civilized men with the solemn assurance that no attack on the independence of the Transvaal was made or threatened or intended. In a just view of the case, however much we may incline toward the weaker state, the intelligent sympathy of mankind must go to the side of right, and not the fanatical race whose call upon the Almighty is in behalf of oppression, corruption, and injustice.

TELEGRAMS.

(Reuter's Special Service.)

THE BOER WAR.

Shanghai, March 16.

Cronje and the bulk of the prisoners have sailed for St. Helena.

General Warren's Division after embarking has landed again at Durban.

President Steyn has proclaimed Kroonstadt as the capital of the Orange Free State.

Lord Salisbury's reply has evoked bitter resentment in Pretoria, but has been received calmly on the continent of Europe.

The forces of Clement at Norval's Pont, of Gatacre at Bethulie, and Brabant at Aliwal North are joining hands. The Boers occupy several strong entrenched positions with guns at the junction of the Drakensberg and Biggarsberg ranges.

Lord Roberts received a tremendous ovation in Bloemfontein.

Mr. Delcassé, French Minister of Foreign Affairs, speaking in the Senate, said that after Great Britain's public reply to President Kruger's telegram the Powers could not intervene.

Mr. Balfour, speaking in the Commons, said that Lord Salisbury had thanked America for the friendly tone of the communications in which President McKinley had said that he should be glad to aid in any friendly manner in restoring peace, but that Lord Salisbury had stated that the Government did not propose to accept the intervention of any Power. This statement was received with loud and prolonged cheering.

Shanghai, March 17.

Gatacre has crossed the Orange River and occupied Bethulie.

Pole-Carew, with 2,000 of the Guards, two guns, and a few mounted infantry, has left Bloemfontein to join Gatacre and Clements. Pole-Carew has passed Bethany unopposed.

Brabant and Clements have crossed the Orange River and established themselves on the southern bank.

The Mayor of Simondstown, in presenting an address to the Naval Brigade thanking them for the services rendered by them at Ladysmith, referred to the presence at the ceremony of several Malay priests who were desirous of testifying their devotion to the Queen and country.

Sir F. Carrington and staff have sailed to take command of the Rhodesian field force to prevent the Boers from trekking northward.

Shanghai, March 18.

Pole-Carew has arrived at Springfontein, therefore Bloemfontein is practically in railway communication with Cape Town.

Gatacre's scouts have entered Springfontein and his column is advancing.

It is estimated that three-quarters of the Free Staters are returning to their farms.

The rebels are flocking in to surrender at Barkley East, Ladygrey and Herschel.

Shanghai, March 18.

Pole-Carew has reached Norval's Pont.

Gatacre's scouts have seized two engines and 40 trucks and a quantity of ammunition, with several prisoners.

Lord Dundonald has reconnoitred the Free State border, and found the Boers in force at Van Reenen's, Tintwa, and De Beers passes.

Shanghai, March 19.

Reuter's agent writes from Lobatsi, under date of the 12th inst., that the railway and telegraph have been taken at Pitsani, 25 miles north of Mafeking, and that the relief of the place is expected at any moment.

Disorderly scenes occurred in Dublin in connection with the inaugural procession. The Lord Mayor's carriage was stoned and the windows were broken owing to his proposing an address of welcome to the Queen. The police restrained the crowd with difficulty.

Shanghai, March 19.

The departure of the transports with the Free Staters for St. Helena has been countermanded. It is probable that the Transvaalers will go instead. Violent quarelling between the Free State and Transvaal prisoners is incessant.

Shanghai, March 20.

The fighting is constant and severe at Mafeking. The British and the Boer trenches are in the closest proximity. Both sides are using dynamite and hand grenades freely. Various reports indicate that the besiegers have been reinforced.

The constitution of Methuen's force is unknown. It is believed to consist largely of Colonial horsemen from Kimberley. Methuen reached Warrenton on the 15th in time to prevent the bridge from being completely destroyed and to secure a pont on the Vaal River.

General Sir Wm. Stephen Alexander Lockhart, G.C.B., K.C.S.I., Commander-in-Chief in India, has died at Calcutta.

Shanghai, March 20.

General White has arrived at Cape Town in a state of ill-health. He sails for England on Wednesday.

Mr. St. John Brodrick, replying in the House of Commons to a question regarding rumours emanating from America that an anarchical outbreak is apprehended in China, said that the Government will continue to take the necessary steps to protect British interests.

Sir M. Hicks Beach states that the total applications for the war loan were 335½ million pounds sterling.

Kitchener has occupied Prieska, the Transvaalers escaping across the river. Thirty-three prisoners, 200 stands of arms, and some supplies and explosives were captured.

President Steyn threatens to shoot as a traitor any burgher undertaking not to fight us.

The plague is raging in Calcutta and Patna.

Shanghai, March 21.

Sir Alfred Milner, accompanied by his military and private secretaries, has left Capetown by special train. His destination is secret.

France and Germany are manifesting anxiety in consequence of the recurrence of Transvaal threats to explode the mines at Johannesburg. It is thought that this may lead to joint representations to Kruger.

British cavalry from Bloemfontein and Springfontein are endeavouring to intercept Olivier's commando, which is retreating from Aliwal North on Kroonstad.

Mr. Wyndham, speaking in the House of Commons, said that it is understood that Mr. Chamberlain intends to issue a proclamation dealing with the question of the wanton destruction of property by the Boers.

The Boers yesterday exploded the railway bridge between Bloemfontein and Brandfort.

Lord Kitchener has arrived at Prieska.

Shanghai, March 22.

At a meeting of the shareholders of the Agra Bank, it was resolved to go into voluntary liquidation.

There was desultory firing throughout Sunday across the Vaal river at Warrenton. The enemy concentrated his attention and forces on the task of guarding the pont. On the arrival of a British battery the enemy retired to Christiana.

The rebels around Prieska have begun to surrender.

(Telegrams Received at the Legation of France in Tokyo.)

Saigon, March 16.

Lord Roberts has entered Bloemfontein, and has hoisted the British flag over the palace abandoned by Steyn. Everything is calm. The mayor went to meet Lord Roberts and handed him the keys of the administrative bureaux.

Saigon, March 17.

The French Minister of Foreign Affairs, M. Delcassé, in answer to a question addressed to him in the Senate, said that, England having publicly refused the independence of the Transvaal, intervention

Digitized by Google Original from CORNELL UNIVERSITY

by the Powers had become impossible. He added that France remained attached to her traditions of generosity, but that she had to consider her interests, and that she would applaud and second the initiative of other Powers.

Saigon, March 19.

Roberts telegraphs that numbers of Boers are giving up their arms. Communications are re-established between Bloemfontien and Norval's Pont.

Saigon, March 20.

The High Council of War assembled this morning. The President of the Republic, the President of the Council of Ministers, and the Ministers of War and the Navy were present.

The English are consolidating their positions in the Orange Free State. The Boers continue their retreat towards the north.

Saigon, March 22.

Skirmishes have taken place on the banks of the Vaal river at Warrenton.

The number of deaths from plague in Bengal during last week was 4,725.

(By Special Arrangement with the "Jiji Shimpo")

Söul, March 19.

The borrowing of 300,000 *yen* from the Russian Government has been abandoned and three millions will be borrowed instead.

(By Special Arrangement with the "Nichi Nichi Shimbun.")

Söul, March 16.

It is stated that Russia has obtained from Korea the privilege of cutting timber in several districts for the purposes of the Siberian Railway, and that the Korean Household Department, last night, received a sum of 300,000 *yen* for the concession. There is also a rumour that a Russian subject is to be employed in the capacity of Adviser to the Household Department.

Söul, March 19.

H.E. Mr. Alexieff, Governor of the Liaotung Peninsula, arrived in Söul on the 17th instant, and will have audience of the Emperor to-day.

The statement that the Korean Government is about to borrow 300,000 *yen* from the Russian Government is only an idle rumour.

[The Convention between Russia and Japan pledges each Power not to give pecuniary assistance to Korea.—Ed. *J.M.*]

Söul, March 20.

The mining concession has been definitely granted to Mr. Pritchard Morgan for a term of 25 years, 25 per cent. of the output to be paid to the Korean Government.

Söul, March 21.

The projectors of the Söul-Fusan Railway were received in audience by the Emperor to-day.

THE GREAT ASSAULTS ON LADYSMITH.

A GRAPHIC DESCRIPTION.

London, Feb. 24.

Few more brilliant stories have been written than the three-column account in the *Standard* from Ladysmith of the terrific assault upon that camp by the Boers on January 6th. Many of the details told by the *Standard* correspondent are intensely interesting. First of all, he gives a lucid explanation of the mysterious way in which the Boers managed to get so close before they were discovered.

"At 7 o'clock on Friday night," he writes, "500 picked Boers rode from the laager behind Bulwana, and, fording the river, came to a kopje south of Caesar's Camp. They then bivouacked until 1 o'clock in the morning, when they crept cautiously along the ravine and across Fourie's Spruit. Avoiding our pickets and patrols, one section moved up the ravine to the eastern shoulder and climbed silently up the slope in the fold of the hill. Another company moved along the boulder-strewn ascent toward the plateau on the south. Three or four thousand were in reserve among the kopjes and broken ground. They were ready to assist the storming parties and to occupy the hills in force as soon as their comrades secured a footing.

In the attack upon Caesar's Camp, one party of 50 Boers, seeking to make good their retreat, were overtaken by the Border Mounted Rifles and escaped for the moment by declaring that they were the town guard. This trick was, however, becoming too stale and every man was shot down as he came into the open. The Boers, as I have repeatedly said, appear to think that the white flag is a legitimate weapon of offence and may be used as a cloak for any treachery. A Boer officer, with a dozen armed followers, advanced up the hill with a white flag and shouted that they were coming to surrender; when called upon to drop their weapons they made it clear that their intention was not to surrender, but one of treachery. When, after many hours of fierce fighting, the Boers were almost repulsed from Caesar's Camp, a storm came to aid them in their dire extremity. The volleying musketry of hail and the moan of thunder added a dreadful note to the cannonade and sheets of flooding rain turned the spruits into raging torrents and the plains into lakes. To see 50 yards through this blinding shower was impossible. Seizing the moment, the Boers pushed forward another force from behind Bulwana. But they did not get beyond the kopje east of Caesar's Camp, where our Naval gun threw a few shells into their midst. The storming party made a dash down the hill-side, hoping to find protection in the storm. Many were shot in their flight, while others flung themselves into the river and were swept out of sight This rush brought the fight at Caesar's Camp to a close amid a fusillade that almost drowned the thunder."

But it was at Wagon Hill where the most dramatic features of the assault occurred. Of this, the correspondent says:—

"Col. Edwards was leading his men into position to the east of Wagon Hill, when a bullet struck him in the shoulder. Though robbed of their leader at a critical moment, the Light Horse never wavered. Creeping forward to points that seemed least exposed to the devastating fire from the front of the hill, they fought manfully, often within 20 and even 10 yards of their enemy. This duel went on four hours without any manifest sign of advantage on either side, though men were falling on every hand. Major Bowen called for volunteers among the 60th Rifles. Only half-a-dozen came forward, and with this handful of gallant heroes the brave officer dashed at a strong position held by the enemy. Not a man lived to tell the story of their valour. Lieutenant Todd, with 25 men, made another gallant charge. Thus the fight wavered through the long and anxious hours of the morning. At noon the Devons came to the rescue. The Gordons, having no officer, were again falling back, but rallied to the call of Major Miller-Walnutt, whose gigantic figure was soon at the head of a desperate charge. The enemy left the emplacement, and, rushing up the western ascent, took cover among the rocks. Their presence here was not less dangerous, and another effort was made to dislodge them. A subaltern was in charge of a working party of Sappers, Lieutenant Digby Jones, a youth of 22, who had already won fame by the destruction of the howitzer on Surprise Hill. When the enemy first appeared on the crest of Wagon Hill, Lieuten. Digby Jones engaged the storming party in a sangar on the west front. Driven from that position, he had been conspicuous throughout the engagement for acts of heroism that attracted the notice of Colonel Hamilton, who had decided to recommend him for the Victoria Cross. Collecting a mixed company of Sappers, Rifles, and Highlanders, he led them against the new position held by the enemy. As they dashed up the narrow path, the Boers, never imagining that men could display such reckless courage, called upon them to throw up their hands. Bullet and bayonet convinced them of their error, and the position was ours.

But fate was holding the shears over the head of an heroic life. An hour or two afterwards, when we had at a great sacrifice reconquered the western limit of the hill, Lieutenant Digby Jones was in the gun emplacement with Major Miller-Walnutt and one or two men. The enemy had been driven back, yet maintained a searching fire, and, having received strong reinforcements, was preparing for another advance. Suddenly, three or four great dark shadows were cast over the parapet, in which there were no loopholes. Von Wyk, leader of the Harrismith Commando, Field Cornet de Villiers, and another brave Boer, were making their last desperate charge. Major Miller-Walnutt shot his man, and fell himself from a bullet aimed at the back of his head. A corporal of the Sappers slew de Villiers, whose bandolier was almost filled with explosive bullets. Lieutenant Digby Jones, running out of the emplacement, shot the Commandant, von Wyk, before he himself ended a short hero's career with a Mauser bullet in the throat. His young and brave comrade, Lieutenant Dennis, fell a moment afterward while going to the aid of the wounded.

The hard-fought fight was nearly over. Our men were again on the summit of the hill, and the Hotchkiss gun of the Natal Naval Volunteers was no longer in jeopardy. But there remained a small and gallant band of Boers, who either would not or could not retire. They were hidden among some rocks about 30 yards from the brow of the hill. Their fire was deadly in its searching accuracy. One man alone is credited with having shot no fewer than five officers.

Colonel Hamilton asked Colonel Parke whether anything could be done to remove them. 'A charge,' suggested the Commander of the Devons. The order was given and the three companies went forward with a cheer across the open shot-swept ground. Lieutenant Field led his company first, then came Captain Lafone, and upon his heels Lieutenant Masterson. The enemy did not wait to receive the cold steel, but threw themselves over the hill in headlong flight, trusting to speed and the flooding sheet of rain.

Lieutenant Masterson, having to return with a message, tumbled into a sangar with ten wounds upon his body. Captain Lafone and Lieutenant Field fell victims to a cross-fire while the Boers were in flight.

The battle was over. For sixteen hours it had raged and the very heavens had been shaken with the roar of cannon and the rattle of musketry. Ladysmith had not fallen. The enemy had been repulsed on every side, and the tale of their dead, east, west, south, and north, was heavy beyond anything that they had suffered in Natal. Night drew a sable cloak over the slain and we waited anxiously till dawn, to count the dead, and to rescue the wounded.

GAME No. 574.

A FINE "BLACKBURNE."

The following game, from Mr. Blackburne's "Games of Chess," is, says *The Westminster Gazette*, interesting from the fact that on this occasion originated the beautiful variation of leaving a Rook *en prise* for the attack. Tschigorin is very fond of this variation, and played it successfully on various occasions, notably at the Hastings Tournament against Pillsbury:

KING'S GAMBIT DECLINED.

White.—Blackburne. Black—Anderssen.

20 P Kt4	P R3	41 BxKt ch	RxB
21 Kt K2	P Kt4	42 Q K8 ch	Resigns

Mr. Blackburne says that the variation commencing with 10 Q to Kt 3 occurred to him on the spur of the moment, and took Professor Anderssen by surprise. He did not venture upon Kt takes P ch and Kt takes R, as he naturally assumed Mr. Blackburne had sprung upon him a variation well considered beforehand. The capture of the Rook, however, is not an unalloyed pleasure either, as Black is subjected to a most violent attack, in which White can temporarily disregard the absence of the Queen's Rook. Black had a good enough game afterwards; but he compromised it with the advance of the K Kt and Q Kt Pawns, and White manœuvred very skilfully against his formidable opponent. The latter part of the game, commencing with 28 Q to R 7, is well worth careful study. He cleverly pinned Black's Kt at K sq, drew off Black's Queen from the defence by threatening 36 B to Kt 5 ch, and brought his Bishop into play by force after 37 Q to R 8. The game was then easily won.

YOKOHAMA: SATURDAY, MARCH 31ST, 1900.

BIRTHS.

On the 25th instant, at No. 112-A, Bluff, Yokohama, the wife of ROBERT WADDELL BORTHWICK, of a Daughter.

March 27th, at 52, Tsukiji, Tokyo, the wife of the Rev. WILLIAM PENGELLEY BUNCOMBE, of a daughter.

SUMMARY OF NEWS.

THE Yokohama Choral Society's Concert on Wednesday was an artistic success.

TROUBLE seems to be looming up in Korea over Russia's demands at Masampho.

THE Yokohama Rowing season opens this afternoon with a procession by the members of the Y.A.R.C.

FIRE broke out on the 25th inst., at Hakata station on the Kiushiu railway and one engine was destroyed.

LADY WHITE, wife of General Sir George White, has been invested by the Queen with the Order of the Crown of India.

PROF. WRIGHTS' lecture on Greenland and glaciers at the Yokohama Literary Society last week was greatly appreciated.

THE news from South Africa is mainly concerned with skitmishes this week. General Joubert has succumbed to a stomach complaint.

THE annual meeting of the Yokohama Foreign Chamber of Commerce was held on Wednesday. A most interesting report was presented and fully discussed.

A MAN was killed on Wednesday at the railway crossing at Uchidacho by the 11.30 o'clock down train from Tokyo. Nothing on his person gave any clue as to his identity.

IT will interest chess players to hear that Herr Emanuel Lasker has graduated as doctor of philosophy at the Erlangen University. A dissertation on a mathematical subject gave him his degree.

THE new twin-screw first class cruiser *Argonaut* is to be commissioned in April to relieve the *Undaunted* on this station. The *Argonaut* is of 11,000 tons and has 18,000 I.H.P. She is designed as a very fast cruiser of about 23 knots an hour.

THE dream of the angler of once more fishing for salmon in the Thames is rapidly approaching the day of realisation. In a trout hatchery on the tributary Colne, near Uxbridge, a number of young salmon have hatched out, and are said to be doing well, and 25,000 trout eggs have just been put down in a private hatchery at Staines.

THE mail brings confirmation of the news of the sudden and unexpected death of Mr. H. R. Mair in Chicago, on the 28th Feb. Mr Mair left Japan but a few weeks ago to take charge of the Chicago office of Messrs. Hunt & Co., and his sudden cutting-off in the very spring-time of life will bring sorrow to many in Japan as well as to his family in the old country.

THE daughter of Yamamoto Kichinosuke, living at Horaicho Ichome, Yokohama, was robbed of a watch on Wednesday afternoon in Motomachi while watching a passing procession. She immediately reported the matter to the Police at Kotobukicho and the would-be robber dropped the watch through a window of the Police Station the same night.

ONE of the most extraordinary features of the South African war is noted in the fact that while President Steyn of the Orange Free State is in arms against Great Britain his wife is residing at Aberdeen, Scotland, with relatives. It was also stated just before war was declared that President Steyn transferred all of his private fortune to the care of a London banker and the statement has never been challenged.

MR. PERCIVAL LOWELL, the American astronomer, well-known for his observations at Flagstaff, Arizona, and his views on the planet Mars, and in Japan for his epigrams and sublime self-sufficiency, has gone to Europe to observe the Solar eclipse in May. His telescope and camera are probably the finest ever used the purpose. Mr. A E. Douglass, his colleague, will observe the eclipse in Georgia, United States.

A FIRE broke out in the goods shed, Kata Machi Station, Osaka, on the Kansai Railway, on Sunday, and destroyed the shed, which measured 80 *ken* by 4 *ken*, and four goods vans. A strong wind was blowing at the time and the goods in the shed were totally destroyed. The loss of goods alone is estimated at 200,000 *yen*. The fire occurred through the wetting of lime in the building and the ignition of kerosene stored near it.

ACTING Secretary Meiklejohn has sent to the House of Representatives a statement of expenditures by the War Department covering the military operations in the Philippines, including outstanding liabilities, from May 1st, 1898, to November 1st, 1899. The total is given at $48,928,060, the principal items being: Quartermaster's department, $25,715 901, of which $17,136,894 is for army transportation; subsistence department, $8,950,000; medical department, $1,206,137; pay department, $10,833,134; ordnance department, $1,866,239.

AT the last meeting of the General Committee of the Hongkong Chamber of Commerce, the Acting Secretary (Mr. F. Henderson) read a letter from Mr. W. F. Wenyon, dated 14th Feb., 1900, referring to the rapid progress now being made with the Tariff revision in China and suggesting that the Hongkong Chamber of Commerce approach Her Imperial Majesty's Government through the Associated Chambers of Commerce in England with a view to securing that the proposed new Tariff for China should be submitted before acceptance to the Chambers of Commerce at Hongkong and Shanghai.

THE Bishop of Moosonee, Dr. Newnham, believes that he has authentic news to communicate of Herr Andrée. Writing to Mr. H. K. Crees, of Ilminster, from Fort Churchill, Hudson's Bay, on October 1, the Bishop says that two Eskimo, coming from the Far North, have reported that two white men "had come down from the sky in a balloon," the remains of which the tellers of the story had seen, and that they had been murdered on reaching the earth. Dr. Newnham gives credit to the narrative, but says that he has not time to make full inquiry.

GENERAL the Marquis de Gallifet, French Minister of War, has been very critically ill, with a severe attack of pleurisy. The General's illness was greatly aggravated by feebleness, which is the result of years of suffering, induced by the fact that since the Franco-Prussian war he has had to be contented with a silver covering for a part of his abdomen. Though after the terrible wounds he received at the battle of Sedan his life was saved by a remarkable surgical operation, he never regained robust health. For more than a quarter of a century he has been a physical wreck, yet by sheer force of will held his place in the army and remained a leader in France's eventful history of the last three decades.

MR. ANDREW COATS, whose death is announced at the age of eighty-five, was the last of the four brothers who built up the great business of Messrs. J. and P. Coats. Their father, James Coats, commenced his business life as a Paisley weaver, and, being an enterprising man, he, in 1826, set up in his own garden a small factory for the making of thread. From such humble beginnings the business has now grown into perhaps the largest manufacturing concern in the world, its capitalised value being to-day nearly thirty millions sterling. Andrew Coats went to America in 1856 to extend the business, and when he returned in 1880 three-fourths of the firm's operations were represented by its United States trade.

THE WAR.

Monday, March 26.

Evidently the Transvaalers are very anxious to prevent the British from crossing the Vaal at Warrenton. The reason is obvious: once the Vaal is crossed, the invasion of the Transvaal itself from the West becomes comparatively feasible. Indeed, Mafeking would probably be one of the best bases for an army marching to the attack of Pretoria, since the distance is only 160 miles and there are no serious obstacles until the neighbourhood of the Transvaal capital is reached. There is probably a strong Boer force on the north of the Vaal near Warrenton. The corps sent northward from Maggersfontein by Cronje when he himself retired towards Bloemfontein is doubtless assembled on the Vaal with Christiana for headquarters. Methuen will therefore defer his march northward until he has a fully sufficient body of troops under his command, and we shall ultimately hear, in all probability, that, after relieving Mafeking—if he arrives in time to do so, which now looks very problematical—he will turn eastward against Pretoria. Lord Roberts may be expected to undertake the duty of marching direct towards Winburg and Kroonstad, but the task will be very difficult, for 25 miles beyond Brandford the country becomes mountainous and well suited to the Boers' style of fighting. If however, Roberts has a sufficiently large force, he can turn the enemy's right flank on the Winburg line of defences. But Kroonstad can not be reached from any direction without forcing hilly positions which the Boers will have had plenty of time to entrench thoroughly. In that respect Steyn has well chosen his new capital. From Kopje Alleen on the south of Kroonstad to Gats Rand on the north of Potchefstroom, including the crossing of the Vaal, many a bloody fight may have to be fought. It is for that reason that we look to see a flanking movement on a large scale undertaken from the Vryburg-Mafeking line, and the same forecast is probably inducing the Boers to oppose the passage of the Vaal at Warrenton with the utmost obstinacy. Granting, even, that Methuen effects the crossing of the river without much delay, his progress to Mafeking along a line of railway within easy striking distance of the Transvaal border would be a very hazardous operation, unless he prefaces it by dealing some crushing blows to the Boers at Christiana and other positions in the south-western quarter of the Transvaal. In some respects the work before him resembles that which he had to undertake on his first advance to relieve Kimberley. Many excellent defensive positions are available for the Boers between Kimberley and Mafeking. The passage of the Vaal; the hilly march from Taungs to Moeding; the crossing of the Maritsana and its network of tributaries at Rietfontein—all these operations may be rendered very arduous. It would be perilous were Methuen to commence his northward movement with less than thirty thousand men, and, as a considerable force must be left in Kimberley, it is easy to understand the delay now taking place. It is not impossible that the column which fought at Driefontein may have been intended ultimately to cöoperate with Methuen by marching against Christiana, but we suspect rather that its object was to open the road to Winburg.

As to the rumour that Gatacre has met with a serious reverse near Bethulie, news showing it to be false will probably have been received before this is in print. Several days have passed since Gatacre entered Bethulie, and in the meanwhile Springfontein, Smithfield, and Rouxville have been occupied. The three last lie northward of Bethulie, and it is out of the question, we think, that Olivier can have remained in the neighbourhood of Bethulie. Besides, his head-quarters were at Aliwal North, not Bethulie, and his natural line of retreat would be *viâ* Rouxville, Smithfield, De Wet's Dorp, and Thaba N'chu, leaving Bethulie far to the West.

It will be seen that, as we foresaw, French has moved from Bloemfontein to Thaba N'chu, which lies at the crossing of the roads that lead to Winburg on the north, Ladybrand on the east, and De Wet's Dorp on the South. If Olivier has not yet passed Thaba N'chu, his retreat upon Winburg and Kroonstad is probably intercepted. But it is possible that he chose a still more easterly line of march, from Rouxville to Wepener and thence to Ladybrand; that is to say, the road leading along the border of Basuto Land. French will probably push on to Ladybrand, unless his scouts get into touch with Olivier in the neighbourhood of Thaba N'chu.

No explanation is yet forthcoming of the singular telegram that Kruger and Steyn have issued conflicting proclamations. That an announcement from Milner of the annexation of the Free State has elicited a counter-announcement from the two Presidents seems more likely; yet that, too, is scarcely credible. The British are not yet in possession of the Free State, and we can not conceive that Milner would declare the annexation of territory not fully occupied. We are disposed to think that the story is untrue, and that no such proclamations have been issued.

Olivier, in his retreat from Aliwal North, seems to have taken the extreme easterly road along the borders of Basuto Land. Probably he marched from Rouxville to Zastren, thence to Wepener, and thence to Ladybrand. This last place is due east of Bloemfontein, at a distance of about 80 miles, and Thaba Nchu, which French has reached with the cavalry division, is mid-way between the two. Winburg is doubtless Olivier's base of supplies, and his position with French on his flank is decidedly dangerous. However, the district within the quadrilateral having at its four corners (counting from west round by east) Thaba Nchu, Ladybrand, Ficksburg, and Winburg, is hilly and difficult. French will not find it easy to operate there. The movement we should expect from Roberts is the march of a strong column from Kimberley *viâ* Boshof and Bull Fontein, debouching direct upon the Winburg Road, and turning the positions of the Boers at Brandfort on the Modder and of Olivier at Ladybrand. Transport, however, must present a tremendous obstacle to movements of that kind. Meanwhile it looks as though the Boers had already commenced a system of guerilla warfare. If so, Roberts' plan will doubtless be to strike direct at their capital towns.

JAPAN AND RUSSIA.

Wednesday, Mar. 28.

Tokyo newspapers again show some disquiet with reference to Russo-Japanese relations. Telegrams are said to have been received indicating that Russia has preferred a demand for a lease of land at Masampo or at some other convenient position; that the proposition is advanced by Admiral Hildebrand, and that a formidable display of Naval force is employed to support it. The *Nichi Nichi Shimbun* has an article which, without making any definite allusion to this subject, is evidently connected with it. A comparison is drawn between the methods of Europeans and Japanese in dealing with Chinese and Koreans, the writer's conclusion being that the Japanese allow themselves to be deluded by the smiles and tears of their neighbours, whereas the European diplomatist pays no attention whatever to such displays of emotion, but insists on getting what he wants whatever the reluctance shown by the other side. In short, the *Nichi Nichi's* view is that a Japanese official would be better qualified for dealing with the Chinese or the Koreans if common ties of literature and of traditions did not dispose him to treat them with a degree of consideration and credence which they do not receive from an Occidental diplomatist. The *Nippon* discusses the same subject in a more direct manner. It contrasts Russia's doings in the Far East with her sayings at the Hague Conference, and is evidently disposed to classify the latter as *oni no nembutsu* (demon's prayers). It inquires, with a show of naïvete, what need Russia can have of a special port in Korean waters, since there are plenty of good harbours, all available for her ships in time of peace, between Vladivostock and Port Arthur. It calls attention to her proceedings at Chol-yeng-to and now at Masampo, and altogether it discusses the situation in a tone which is not pacific.

Friday, March 30.

The leading Japanese newspapers all write about Korean complications. They show some excitement, but, on the whole, treat the affair more moderately than is their wont. The *Nippon*, of course, takes a strong line. It declines to believe that recent meetings of Cabinet Ministers were for any purpose other than to discuss the Korean situation, and it shows even a disposition to connect the naval manœuvres with Russia's doings in the peninsula. The *Kokumin* and the *Yomiuri* are concerned chiefly about the fact that the public is not more fully informed. Both point to England's method of publishing Blue Books and answering questions in Parliament, and both agree that though diplomatic honey manufactured in glass hives may sometimes be of inferior quality, the general approval thus secured for the process is invaluable. The *Asahi* considers that Russia has shown herself arbitrary and overbearing with reference to the Masampo affair, but it is careful to distinguish between the lawful and the unlawful aspects of the case. Korea's treaties confer on foreigners the privilege of owning land in and around the settlements, within fixed limits. If Russia's proposals do not exceed those limits, no objection can be raised though her manner of advancing them be a little peremptory. Great interest attaches to England's attitude. England has sacrificed many of her interests in

Digitized by Google Original from CORNELL UNIVERSITY

various parts of the world for the purpose of placating foreign Powers and preventing them from interfering with her prosecution of the war in South Africa. It may be that she will adopt a similar policy with regard to this Korean problem. But when she gave up Port Hamilton, she obtained Russia's assurances that there should be no encroachment thereafter upon Korean territory, and if she pleases, she can now insist on having those assurances carried out. (The *Asahi* does not state the facts quite accurately. Russia certainly gave assurances, but they were given to China not to England direct). The *Chugai Shogyo* departs from its usually well balanced tone and displays considerable excitement. It finds that menacing clouds are rolling up on the political horizon, and is greatly dissatisfied to perceive, as it thinks it has perceived, that Japan is adopting an attitude of retreat. At first, it says, Mr. Hayashi, Japanese Representative in Soul, took a strong tone, and M. Pablov showed himself correspondingly yielding, while the Korean Government, on its part, replied to Russia's demands in a clear and conclusive manner. But now Mr. Hayashi has suddenly become as gentle as he was formerly resolute and the evil results are apparent in Russia's aggressiveness and Korea's vacillation. The *Jiji Shimpo* is conspicuously moderate. It finds that the matter is simply one of a coaling station, and it seems to hint that the best solution is for Japan to obtain some counter-concession so as to preserve the balance. The *Nichi Nichi Shimbun* preserves silence.

It will be observed that the vernacular press is, to a great extent, groping in the dark. None of the journals seems to know clearly what Russia has asked for or what answer Korea has given. The only telegraphic news relating to the Soul Government's attitude indicates that Korea is disposed to follow Japan's lead, and is therefore waiting until her neighbour declares herself. It may be taken for granted, however, that Russia has undoubtedly asked for a coaling-station site outside the limits of the Settlement at Masampo. Some say that she has supplemented her application by a corollary in the sense that a site on an island near Fusan will suit her as well as Masampo, but as to that there is some uncertainty. It must be confessed that international affairs since the Hague Conference have furnished a curious commentary on the purpose for which that august body was convened.

THE CRIMINAL CODE.

Saturday, March 24.

The amendments embodied in the new draft of the Criminal Code which will be submitted for the approval of the Diet next session have been the subject of much discussion. The *Nippon* evidently proposes to give a detailed digest of them and it will doubtless prove of considerable interest to our readers. The first and most important alteration is that the classification of offences is reduced from three to two. Instead of major and minor crimes and delicts, there are to be only major and minor crimes. This, of course, has the effect of giving larger discretionary power to the judge. For example, a woman driven desperate by poverty, ties her child on her back and throws herself into a river. The child is drowned and the mother saved. According to the Code as it stands, this unhappy woman, who deserves sympathy rather than punishment, can not escape with a lighter sentence than 12 years' imprisonment with hard labour. But the amended Code would enable the judge to dismiss her with an admonition. On the other hand, the limits of punishment are now the same for a petty larceny and a burglary. A man that steals an old towel may be sentenced to any term of imprisonment from 2 months to 4 years, and the same is true of a house-breaker who gets away with big plunder. That defect would be altered by the revised Code. Then again, the Code does not contain any provisions with reference to crimes committed by, or against, foreign imperial or royal personages in Japan, or crimes committed by diplomatic or consular officials. The revisions deal with this subject. They deny extraterritorial rights to foreign imperial or royal personages in Japan; guarantee such rights to diplomatic personages, and make them a matter of reciprocity in the case of consular personages. For example, a criminal like Tsuda Sanzo would not be liable to any punishment greater than that prescribed for a murderous assault on a common individual.

Another important change proposed by the revisors is to invest judges with competence to postpone for two years or less the execution of all sentences not exceeding six months' imprisonment. This reform is based on the facts, first, that whatever precautions may be adopted as to separate cells and so forth, imprisonment exercises a distinctly demoralizing effect, the result being that persons who have once undergone punishment are proportionately likely to commit fresh crimes; secondly, that the prejudice against prisoners who have served their time being very strong among the general public, they find it almost impossible to procure employment, and are thus driven to repeat their violations of the law. The revisors suggest, therefore, that a man found guilty of an offence not entailing more than six months' imprisonment, should have a probationary period to show his repentance by good conduct, and that his sentence should be remitted if his behaviour justifies such leniency.

Crimes of treason have also been revised. The present law is very severe in that respect. It bears the marks of the alarm into which the country was thrown by the Satsuma rebellion of 1877. It condemns promoters and accessories alike to death, and it includes unachieved crimes in the same category with achieved. Under the revised code the crime of treason would not exist in the eyes of the law unless some form of military organization were employed by the conspirators. All other cases would be treated as mere breaches of the peace, and a clear distinction will be drawn between crimes contemplated and crimes committed.

Tuesday, March 27.

Continuing its analysis of the amendments proposed in the Criminal Code, the *Chiuo* points out that the scope of the law for protecting officials against insult and obstruction in the discharge of their duties is to be largely extended. In the present Code the officials mentioned are *kwanri* only; that is to say, officials of the Central Government. But the revised code will include local officials, members of the Diet, and even policemen. A most interesting innovation is that protection against insult is to be granted to corporate bodies, namely, Departments of State and the Houses of the Diet. The operation of such a provision will be strange in practice. People will have to consider carefully before they accuse a Department of being useless or corrupt, and before they inveigh against the Houses of the Diet, as has been the fashion lately. Another important change is that the law against bribery is extended from officials of the Central Government, who are alone indicated in the existing Code, to local officials and members of the Diet. The penalty also is to be increased, its superior limit becoming 3 years' imprisonment with hard labour, instead of 1 year's major imprisonment as at present.

Persons who give bribes are to be held equally guilty with those that receive them, but will escape punishment by voluntary confession; a provision intended to facilitate the obtaining of proof.

The section relating to numerous offences (*susai guhatsu*) has undergone revision. According to the present Code, the most serious of several offenses is taken as the basis for determining a penalty, and the Court has power to increase the punishment by one degree—*i.e.*, one-fourth—in consideration of other crimes simultaneously charged. The revision proposes that the punishment may be doubled in extreme cases.

With regard to second offenses, the present law enacts that a crime committed at any time after the passing of sentence by a Court of first instance, shall be treated as a repeated offense. The revised Code postpones the time until the actual enforcement of the sentence passed by the first tribunal. It will follow that crimes committed during the probationary period allowed by the revised Code would not rank as second offenses.

The law of assault and battery also is extended in its scope. Any injury however slight done to the person (*shintai shogai*) will be classable as assault, and punishable with imprisonment. But apparently the revisors have not thought it necessary to include menaces in the category of assaults. It will still be possible for a man to shake his fist in another's face, or make other demonstrations of physical violence, provided that he does not carry them into actual practice. That is a grave defect in the Code, we think.

Wednesday, March 28.

One of the points which gave rise to much discussion was whether the punishment for adultery should remain as it is, or whether it would not be better to eliminate the clauses relating to it, and to trust to the penalty of divorce and social outlawing. Evidently revision in that sense would confer practical immunity on men, for Japanese law does not confer the right of divorce on a wife because of the criminal conduct of her husband. The revisors therefore decided against removing the clauses, but, on the other hand, they came to the conclusion that extenuating circumstances should not be admitted as a plea in justification of an assault committed by a husband who discovers the flagrant delict. We necessarily curtail the accounts given of the debate on this unsavoury subject.

A distinctly commendable amendment

Digitized by Google Original from CORNELL UNIVERSITY

relates to imprisonment in default of payment of a fine. At present one day's imprisonment is inflicted per one *yen* from the date when the sentence takes effect. The new idea is that a man's ability to pay a fine should be considered beforehand, and that if his assets warrant distraint, that method of collecting the fine should be resorted to, instead of putting the State to the expense of supporting the defaulter in prison. If, on the other hand, it is found that no assets are forthcoming, then punishment by fine should not be resorted to.

The superior limit of the penalty for fraud and theft is also to be increased, if the revisions be accepted, from 4 years to 10 years' imprisonment. Considering the wide range of crime covered by these terms "fraud and theft" (*sagi setto*) it appears inadequate that the range of penalty should be as narrow as it is at present, namely, 2 months to 4 years.

It appears that there was much discussionas to the propriety of preserving the distinction between man-slaughter(*kosatsu*) and wilful murder (*bosatsu*), but the Committee finally decided on retaining it. They increased the penalty for producing abortion, but excluded attempted suicide from the list of penal offences. They also devoted considerable attention to the subject of offences committed by minors, the result of their deliberations being that a child under 10 should not be held accountable from a criminal point of view, and that between the ages of 10 and 14, the treatment of an offender should depend on his capacity to understand the nature of his act.

MICHAEL DAVITT.

It would be an excellent thing if a great many of the Irish Nationalists followed the example of Michael Davitt and betook themselves to the Transvaal. The South African Republic offers a sufficiently wide field for their seditious agitation, and not only would the United Kingdom be happier for their absence, but the welfare of their own country also would be materially promoted. England treats these professional agitators on the principle that is scientifically followed with regard to noxious gases. The latter are rendered innocuous by ample dilution with atmospheric air, and the former lose their virulence by being suffered to froth and fume in the open. Michael Davitt we believe to be an honourable though greatly misguided gentleman. The passage of others to the Boer ranks would be much more welcome. But perhaps the precedent may prove attractive. If so, the South-African War will not be without its blessings.

PROFESSOR WRIGHT.

Professor Wright is to lecture in the Educational Society's Hall on the 31st instant at 2 p.m. He lectured at the Young Men's Association on the afternoon of the 28th, but, according to accounts published by vernacular journals, the lecture was not very successful. The learned Professor, at the outset of his address, spoke so much about Christianity that his audience gradually thinned, and finally became so small that he concluded the lecture without touching upon scientific questions.

THE CAMPHOR MONOPOLY.

We have now an explanation of the reason why Mr. Yokoyama Magoichiro did not obtain the camphor concession in Formosa, and why it fell to Messrs. Samuel Samuel and Company, though their bid was not so favourable. Mr. Yokoyama abandoned the field. He put in his tender and then quitted Formosa, so that the day went against him by default. The privilege to be competed for was the right of selling in foreign markets all the camphor —from 3 million to 5 million catties— produced in Formosa, which was to be purchased from the Japanese authorities at an average of 90 *yen* per picul— namely, 95 *yen* for first-class camphor and 85 *yen* for second class—, and the successful tenderer was to be the one that undertook to dispose of the camphor at the lowest rates in Hongkong and London. Three conditions had to be satisfied; first, a deposit of 1,800,000 *yen* worth (face value) of public securities; secondly, a deposit of 100,000 *yen* in cash or marketable securities; and thirdly, an engagement not to sell the whole of the camphor to one person. Messrs. Samuel Samuel and Company's tender is said to have been that they would place the camphor on the Hongkong market at 102.378 *yen* and 94.323 *yen*, for first-class and second-class respectively, and on the London market at 107.843 *yen* and 99.702 *yen*, whereas Mr. Yokoyama offered to do the work some five *yen* more cheaply. The suggestion is that Mr. Yokoyama discovered, in good time, that the terms he offered would involve a loss. The area of the camphor forests in Formosa is said to be 2,920,000 acres.

Telegrams from Taipeh announce that Messrs. Samuel Samuel & Company have secured the contract for the camphor monopoly in Formosa. It is difficult to understand exactly what has been the course of the proceedings. According to the intelligence published in Tokyo, Mr. Yokoyama Magoichiro's tender seemed at one moment to offer the best terms, but whereas he named 102 *yen* per picul as the average price at which the camphor would be furnished to the Government, Messrs. Samuel Samuel & Company indicated 102 *yen* as the price of semi-refined camphor and 94 *yen* as the price of the crude vegetable. After mature consideration, therefore, the Governor decided to give the concession to Messrs. Samuel Samuel and Company. These are the broad facts, but there is also a fringe of rumour. As to Mr. Yokoyama, for example, it is alleged that he acted without full reference to the numerous merchants whom he represented, and that they are extremely dissatisfied with his method of procedure. As to Messrs. Samuel Samuel and Company, the story is that, in answer to a proposal from Kobe foreign merchants to form a syndicate, Messrs. Samuel Samuel and Company's Yokohama agent declared that his firm did not think it worth while to bid for the concession; that his reply discouraged the Kobe men, and that his final action took them entirely by surprise so that they are now vehemently remonstrating. We venture, on our own authority, to pronounce the latter tale quite unfounded. The Kobe foreign merchants are not likely to have showed themselves so inept. If they thought the concession valuable, they would not have been deterred by Messrs. Samuel Samuel and Company's indifference, and most assuredly the latter's agent would never have adopted the underhand course attributed to him. The circulation of such a story by vernacular newspapers warns us that the reports of corruption and crooked dealing constantly ventilated by them must be largely discounted.

Tokyo journals state that the reason why Mr. Yokoyama withdrew his tender for the Camphor Monopoly was an apprehension that the enterprise threatened to assume overwhelming proportions. The successful tenderer has not only to lodge security to the extent of 1,800,000 *yen* and guarantee money amounting to 100,000 *yen*, but also must be prepared to take over, at any moment, camphor to the value of 1½ million *yen*, now lying in the Government's warehouses. In short, a capital of nearly 3½ million *yen* is required immediately, and Messrs. Samuel Samuel and Company are the only firm who showed themselves ready to face this lively music without "turning a hair." Another difficulty is that the security has to take the form of Formosan Loan Bonds, and no one seems quite sure whether these bonds—which have not yet been put on the market—will be a paying or a losing speculation. Altogether it is a big enterprise and the big folks have got it. "Unto him that hath." Mr. Yokoyama, however, continues to be abused. It is now alleged that the foreigners whom he represented—Messrs. Morse and Kahn—were not consulted before he decided to "step down"; that they are very irate, and that they intend to sue him for compensation—a most unlikely story. Our contemporaries add that the Government of Formosa buys the crude camphor at 35 *yen* per picul from the natives, and will now sell it for 85 *yen*, thus clearing a profit of 50 *yen*. The foreign markets are pretty well supplied at the moment, but their stocks will soon be exhausted, and the concessionaires have a fine prospect before them. At the rate of 5 million catties per annum, there is a supply for 8 years in sight in Formosa, and it can be made perpetual by planting. The camphor tree requires 50 years to mature. America's plantations will have to grow for 37 years longer before they begin to yield.

FOREIGN SETTLEMENTS IN CHINA.

The Foreign Settlements in China are now presenting a curious object to the Peking Government. They may be said to be the nurseries of sedition. There is obviously some rebellious organization in China at present. We have no means of knowing what its dimensions are. It may be formidable or it may be contemptible. As to its existence, however, no doubt can be entertained. This organization has addressed more than one circular letter to foreign newspapers published in the Settlements as well as in the adjacent colonies, and the document, though outspokenly seditious, has been published verbatim by the journals receiving it. Further, some of the leaders of the seditious movement have found asylum within the limits of the Foreign Settlements, and the Chinese Authorities are powerless to effect their arrest without consular warrants which can not be obtained. Thus, in a word, the Settlements and the adjacent colonies not only offer a safe refuge

Digitized by Google Original from CORNELL UNIVERSITY

to Chinese subjects plotting against the Chinese Government, but also supply public organs for the ventilation of the plotters' ideas. It happens that we are all in sympathy with the plotters. The ends they have in view would greatly benefit their country. They are, in fact, endeavouring to obtain the practical recognition of principles which Occidental peoples endorse heartily and have long advocated as essential to China's well-being. But in the eyes of Chinese officialdom, they are simply rebels; radical, pestilential agitators whose apprehension and punishment are most desirable in the interests of public peace. The Chinese Government, therefore, must find in the events of the time a new reason for regretting that foreign intercourse was ever forced upon the country. We daresay, also, that at seasons like the present the rulers of the Middle Kingdom wish heartily that neither a Confucius nor a Mencius had existed. For Confucius constructively, and Mencius in the least equivocal terms, laid down the doctrine that a monarch's only title to hold power is based on his usefulness to his subjects, and that these have an inalienable right to depose him so soon as his acts and enactments are seen to inure to public injury. There must be thousands upon thousands of devout Confucianists in China who are fully persuaded that to join a movement for the overthrow of the Empress Dowager would be in accordance with the highest moral laws, and it can not be imagined that this conception is weakened by the epithets which certain foreign local journals apply to the Imperial lady.

A COMMENT ON CHRISTIANITY.

The *Mainichi Shimbun* has a remarkable article on the subject of Christianity; an article which steers a middle course, with much cleverness, between condemnation and approval. The writer sets out by asserting that the want of religious principles is beginning to be very keenly felt in Japan, and that many eyes are consequently turning towards Christianity. But he then proceeds to attack the methods of Christian propagandism in this country, and to suggest that, unless they are changed, the foreign faith has no prospect of gaining a strong footing. Briefly summed up, his contention is that Japanese Christianity is in a dependent condition. Buddhism owed its prosperity in the past chiefly to the patronage of the Court and the nobility, and its present attempts to obtain State recognition are therefore a natural outcome of its history and traditions. Christianity, on the contrary, claims to be free, having no connexion with the powers that be, and not relying on them in any way. Yet there is no element of independence about Japanese Christianity. It depends entirely on the foreign missionary societies. Without the aid they give to it, it could not stand for a moment. The churches are built, the schools endowed, with foreign money, and in consequence of that condition of dependence the Christian communities are obliged to bow to the dictation of men who are often narrow-minded, bigoted and intolerant. Until Christianity can assert its freedom, the writer in the *Mainichi* has no hope of its success in Japan.

KOREA.

The operation of surveying the Söul-Fusan line has commenced, and will be finished, it is expected, by the end of August. In the meanwhile, some arrangements will be effected, we presume, for obtaining the necessary capital—15 million *yen*.

The Korean Government is said to have requested the Japanese not to increase the number of post-offices in Korea. Probably our readers remember that the post-office service of Korea is under Japanese management. Korea, apparently, does not desire progress under such circumstances.

A telegram published by the *Asahi* says that Russia has applied to Korea for the lease of a considerable area of land about a *ri* outside the limits of the foreign settlement at Masampo, and has accompanied the application with a statement that if the land can not be given, the island of Ka-tök-to should be substituted. Ka-tök—or Ka-dök—is an island of considerable size, situated a little to the west of Fusan and to the north-east of Quelpart. Of course, if Russia is really seeking to obtain a territorial concession from Korea outside the limits of the settlements, she can not be said to be observing the terms of her convention with Japan.

Tokyo journals says that the expenses incurred by Mr. Pritchard Morgan in obtaining the concession of the Uensan gold mine have been very heavy. He spent about 200,000 *yen* upon the officials in Söul, beside distributing large sums among the local officials in the district. The staff engaged is also very costly—a chief engineer at thirty thousand *yen* annually; an assistant engineer at 750 *yen* per month; 120 Japanese miners at 30 *yen* monthly, and about 200 Chinese at stiff daily wages. We read, however, that he is not at all discouraged by these expensive preliminaries, and that he expects to make a fine thing out of the enterprise. The mine has long been regarded as one of the richest in Korea.

According to a Tokyo contemporary, the number of Chinese settlers in Korea is about 3,500; namely, 1,500 in Söul; 1,500 in Chemulpo, and some 500 elsewhere. Yet they manage to do a larger part of the country's foreign trade in imports than the Japanese. These figures are given.

	Exports. To Japan. Yen.	To China. Yen.
1897	1,638,000	357,000
1898	1,379,000	1,097,000
	Imports. By Japanese Merchants. Yen.	By Chinese Merchants. Yen.
1897	1,785,000	1,921,000
1898	4,389,000	4,389,000

It will be observed that even in exports the Chinese are overtaking the Japanese.

Korea seems to be in a somewhat restless condition. She is understood to have refused the application of the Japanese Naval Department for permission to establish wireless telegraphic stations on the islands round her coasts, and rumours, apparently trustworthy, indicate that she is anxious to remove her service of posts from Japanese hands. Concerning wireless telegraphy, her reply is said to have been of the stereotyped form, namely, that, as she intended to establish stations on her own account, she did not wish to entrust the business to anyone else. But of course she has not the smallest intention of establishing such stations, at all events within any period that can be now foreseen. The two acts taken in conjunction would appear to indicate a disposition to shake off Japanese connexion, and the inference is that Japan's influence is not supreme at present in Söul, or that some hostile adviser has intervened. As to the reports about a loan from the Russian Government, we do not consider them worthy of credence, seeing that the Russo-Japanese Convention forbids either of the contracting parties to give financial assistance to Korea.

A ceremony in commemoration of the death of Kim Okkyun is to be held at the temple Shinjo-ji, in the Komei suburb of Tokyo on the 28th instant. It appears that Kim's head is buried there. The story, as told by the *Jiji Shimpo*, is curious. After Kim's assassination in Shanghai, his corpse was placed in a coffin which bore the inscription, "The arch traitor and lawless Kim Okkyun," and by order of the Viceroy Li, the coffin was placed on board the Chinese war-ship *Soko*—now in Japan's possession—and forwarded to Chemulpo. The Korean Government ordered that the body should be subjected to sextuple dismemberment and the parts exposed. A Japanese merchant in Söul, who had been a great friend of the unfortunate reformer, bribed the soldiers who had charge of the head, and despatched it secretly to Kai Gunji, Kim's great partisan and supporter in Tokyo. Complaints were made by Korea, and Mr. Kai had to undergo several police examinations. Finally, seeing imminent danger that a search of his house would be ordered, he decided that the head must be interred. The first idea was to bury it in the Aoyama cemetery, but ultimately the temple Shinjo-ji was chosen as more secluded and less likely to be suspected. Then followed the war with China, and the time has now come, in the opinion of Kim's friends, to disclose the truth about his head. So there will be a public ceremony on the 28th instant and a large attendance is expected.

The minor journals of Tokyo write in very emphatic terms about Russia's doings in Korea. They are themselves quite persuaded that Japan must show a firm front and they represent the Government as not less resolute. One writer alleges that the Japanese nation is an unit in this matter. There are differences of opinion, he says, as to whether the general foreign policy of the country should be positive or negative, and as to whether her armaments should be increased or diminished. But even among the advocates of a negative policy and small armaments, not a man is to be found who advocates Japan's self-effacement in Korea. All are agreed that she must assert the influence and maintain the position she has acquired there. Therefore the Government may be assured that it has the nation at its back, and if, under such circumstances, it fails to satisfy the country's expectations, the consequences will be on the head of the Ministry alone.

If one considers this sort of language quietly, it is nothing more or less than in-

Digitized by Google Original from CORNELL UNIVERSITY

citing to a breach of the peace. Were it addressed to a body of politicians within a State with reference to some special purpose pursued by them, we should call it seditious. But international relations are governed by a special code of morality, or immorality; and the press knows how to take advantage of the fact. Newspapers have nearly succeeded in converting public opinion into an instrument on which they can play in any key they please. They have made the world emotional, and we seem to be coming to a time when a few pressmen will have it in their power to set in motion a wave of passion more destructive than an invasion of Huns or Saracens.

CEMETERIES IN TOKYO.

A very curious subject is discussed by the *Fiji Shimpo*. It is that Tokyo threatens to become a city of the dead. In former times, there was a restriction on the length of time during which a grave might be monopolized by the same corpse. If 20 or 30 years elapsed without the friends or relatives of the deceased bestowing any care on the tomb, it became a *muyen no haka* (neglected grave), and might be used for interring some one else. Of course, so long as the sepulchre received loving tendance, it continued to be perpetually consecrated to the memory of the person buried there. A great number of graves became available for second sepultures under that system, and the city managed to dispose of its dead without inconvenience. But in 1873, the Government issued a notification forbidding the use of old graves for fresh burials and fixing nine places as cemeteries where interments might be made without cremation. The remains of cremated bodies—a mere handful of ashes—might always be buried within the precincts of the city, but where cremation was not practised, a suburban cemetery had to be used. The Shin Sect of Buddhists have always been eminently practical in the matter of sepulture. They invariably cremate, and a small portion of the calcined ashes, enclosed in an urn, is sent to the Sect's principal temple in Kyoto for permanent preservation. Even the Japanese, however, have not become universally reconciled to cremation. Great numbers still prefer to bury their dead in coffins. The result is that all the available space in the suburbs is being rapidly absorbed, as the following table shows :—

Name of Cemetery.	Area already appropriated for graves. *tsubo.*	Area remaining available. *tsubo.*
Aoyama.....	36.224	825
Tateyama	1.683	1 003
Fukagawa.....	953	704
Yanaka	19,029	0
Somei	9,911	2,215
Zoshigaya	1,223	2,628
Kameido	472	983
Hashiba	554	?
Hanezawa.....	?	1,780

The cost of land at present is 6 *yen* per *tsubo* in first-class positions; 3 *yen* in second-class; 1.50 *yen* in third-class, and 0.60 *yen* in fourth-class. It is also laid down that not more than 16 *tsubo* shall be allotted for a first-class grave, 8 for a second-class, and 4 for a third-class; but these limits are often exceeded. The average death rate for the past three years in Tokyo has been 30,598, and if each burial required one half of a *tsubo* (a space 6ft. × 3ft.), it is obvious that in the course of a century the city would be completely surrounded by cemeteries. Evidently the matter is worthy of serious consideration. We may mention that the section of the Aoyama cemetery set aside for foreign use is now virtually filled. The remaining space is not sufficient for more than two or three graves. Last autumn the price of a plot was doubled in view of the narrowing accommodation: from 13.30 *yen* it became 26.60 *yen*.

THE GOLD STANDARD BILL.

As we expected, the Senate of the United States did not object to insert the amendment proposed by the Committee on the Gold Standard Bill, in the sense that the Act is not intended to place any obstacles in the way of accomplishing international bimetallism by the concurrent action of the leading commercial nations. But the Senate did emphatically refuse to endorse Mr. Chandler's amendment authorizing the President to appoint commissioners to any international conference in the interest of bimetallism. In short, the Senate's attitude towards silver may be said to have been deferentially distant. There was no intention of tabooing the white metal, but neither was there any intention of doing anything to promote its rehabilitation. It appears, none the less, that there are 28 senators who would approve the free and unlimited coinage of silver. But there are 47 who seem to think that the white metal's day is over. This Bill will not fail to drive another nail into the silver coffin. Its gist is that the gold dollar receives positive recognition as the standard unit of value in American currency, and that a redemption fund is provided for keeping all forms of United States money at parity. We have not lost our faith in silver, but we rejoice that America has at length emerged from the financial uncertainty of the past few years.

THE LAW AGAINST THE USE OF TOBACCO BY MINORS.

We recently quoted from vernacular contemporaries a statement that the Minister of Education proposed to issue an Instruction with reference to the manner of enforcing the Anti-tobacco Law in schools of elementary or middle grade. The Instruction has now appeared. It is to the effect that all students in such schools, without reference to age, should be forbidden to use tobacco in any form. The Law says that no youth of less than 20 years shall use tobacco; the Minister says that, whether a youth has or has not attained the age of 20, he must not smoke so long as he is at an officially recognised school of middle grade or lower. In short, the Minister goes beyond the Law, for the sake of facilitating its enforcement. Evidently it would have been possible for the Educational Department to interdict the use of tobacco by students in officially recognised schools, without waiting for the passage of any law by the Diet, and, as a matter of fact, smoking has always been prohibited at Primary Schools, we believe. But before extending the principle to Middle Schools, the Minister waited apparently to have it legally adopted.

JAPAN'S FOREIGN TRADE.

It is wisely pointed out by the *Kokumin Shimbun* that economists trouble themselves in vain who draw gloomy inferences from the course of the country's foreign commerce, and would have some official measures adopted for correcting the balance of trade. Trade finds its own level. If people want to buy at one time, they want to sell at another, and instead of building theories upon the total figures shown in the customs returns, the only intelligent plan is to analyse the figures, and thus discover whether they really represent an ultimate outflow of specie. For example, it is sufficiently alarming to learn that during the first two months of the current yeor, imports exceeded exports by twenty-three million *yen*, and specie left the country to the amount of 8 millions. But when the facts are examined more closely, it is found that they are not so unfavourable. The *Kokumin* divides the imports into articles for consumption and articles for manufacture. It includes rice and beans in the latter, which is a method of classification we do not understand. Be that as it may, however, the figures are these :—

IMPORT OF ARTICLES FOR CONSUMPTION, DURING JANUARY AND FEBRUARY.

1900	20,619,506 Yen.
1899	9,206,584 Yen.
Difference.....	11,412,922 Yen.

IMPORT OF ARTICLES FOR MANUFACTURE, DURING JANUARY AND FEBRUARY.

1900	25,603,629 Yen.
1899	14,909,572 Yen.
Difference.....	10,694,057 Yen.

If we assume that the excess of imports in the latter category will ultimately have the effect of augmenting exports to more than a corresponding amount—a fair assumption—, all grounds for uneasiness disappear. Besides, the barley crop this spring promises to be exceptionally fine, and as silk sold well last year, there are no stocks of any magnitude on hand, and a good season may be expected. Much depends, of course, on the rice crop. If it is plentiful, a factor powerful to redress the balance of trade is at once called into operation.

GUIDES.

The Governor of Kanagawa has issued a body of regulations for the control of guides. They are to form an association to which no person may be admitted without due precautions, and they are to be subject to fine or detention if they misbehave themselves. The fine is small —50 *sen* to 1.90 *yen*—and the detention is for a very limited period—1 day to 10 days—, but it is not beyond the range of possibility that the Governor may effect some improvement by the system, the prime idea of which is to place a responsible body of men between the travelling public and the rabble of guides. We have not, for our own part, much faith in official attempts to bring the conduct of guides within the range of any moral code. The remedy lies with the people employing them and with the hotel-keepers, especially the latter. The hotel-keepers can easily discover the true character of the guides frequenting their premises, and if they resolutely refused to countenance any one unworthy of confidence, there would soon be an improvement. Why should not the pro-

Digitized by Google Original from CORNELL UNIVERSITY

moters of the new Kyoto Hotel make this a special feature of their programme? Kyoto, above all the cities of Japan, is the place where tourists will be most likely to look for guides, and they would find a great inducement to visit a hotel where they could be sure of obtaining honest guides.

LAND TENURE.

The *Official Gazette* promulgates the modifications passed by the Diet with reference to the law of superficies. According to the Civil Code, all land-tenure of unfixed period, existing at the time of the operation of the Code, would be regarded as indeterminate superficies, and as such would be subject to limitation by order of a Court of law, the limits being 20 years and 50 years. There are, however, many farmers in Japan who would suffer seriously from the working of this arrangement. They are men that have been in occupation from generation to generation on the understanding of perpetual tenure, and have come to regard themselves as owners of the surface of the land tilled by them; land which, in many instances, owes its arable properties entirely to their labour. To protect such persons against injustice, the Diet passed an amendment of the Code in the sense that these titles should remain undisturbed for fifty years, and that, at the expiration of that period, the owner could not resume the land without paying fair compensation to the tenant, while the tenant, on his side, would be entitled to secure the fee simple on payment of a reasonable price, it being further provided that such action on the part of either owner or tenant must be taken within the course of a year from the expiration of the 50-year period. This amendment has now received Imperial sanction and been duly promulgated.

Another provision promulgated with regard to land-tenure is that all lands occupied prior to the operation of the Code, for purposes of factory building or the growing of trees or bamboos, shall be regarded as held under the title of superficies.

VISCOUNT AOKI.

In his speech at the recent meeting of the Japan Trading Association, Viscount Aoki took for his subject the necessity of developing the country's industries. There had been great progress, he admitted, during the past ten years, but he wanted to see much more. He wanted to see the whole suburbs of Tokyo bristling with tall factory chimnies. Japan's sales to China illustrated his meaning. With the exception of cotton yarns they were insignificant. One of the great obstacles to development was division of capital and of labour. Everything was on a petty scale. There was as yet no effective idea of employing capital economically. Combination and cöoperation were the great needs of the time. In this respect the nation did not seem to have advanced far beyond the conceptions and customs of the age of Hideyoshi.

Mr. Okura Kihachiro, who was among the audience, remarked that other obstacles existed to the development of industry, namely, vexatious rules and regulations, and official obstruction. The Viscount replied that such obstacles could always be removed by proper representations.

THE POWERS AND CHINA.

We attach no credence to the statement conveyed by telegram from London that the Powers are consulting for joint action towards China in consequence of the unsettled state of affairs around Tientsin. Japan would certainly have been approached had any such consultation been in progress, but we cannot discover that she has received any intimation. Meanwhile, although there was much cause for uneasiness a short time ago with reference to possible disturbances in the Tientsin district, things seem to have quieted down somewhat, and if the Powers did not think it necessary to intervene a fortnight ago, there is no apparent reason why they should abandon their attitude of reserve now.

GERMANS AND THE WAR.

We have published two letters from Germans in Natal, protesting against the idea that they are hostile to the British, and showing, on the contrary, that many of them are serving in the local British forces. In connexion with this subject, London journals reproduce an extract from a letter published in the *Standard*. The writer is a German merchant who has been established in Japan for a quarter of a century. He says:—"Please rest assured that all sensible German business men are desirous of a speedy victory for the British arms. We are not so ungrateful as to forget the services that England has rendered to the trade of all nations in the Far East."

THE TOYO KISEN KAISHA.

The Oriental S.S. Company (*Toyo Kisen Kaisha*) has just held its half-yearly regular meeting, when the following accounts were passed:—

	Yen.
Profits for the half-year	168,733
Brought over from previous account	8,211
Total	176,944
To Legal Reserve	8,440
Dividend (10 per cent. per annum)	162,500
Carried to next account	6,004
Total	176,944

This company is certainly to be congratulated on being able to pay a dividend at the rate of 10 per cent. The subsidy, of course, has much to do with that result.

AMERICAN SOLDIERS.

The Welcome Society (*Kihin-kori*) has taken a thoughtful step. Experience shows that the American troops returning from the Philippines at the time of their relief, look forward with much pleasure to visiting Japan, and devote the brief period of their stay here to travelling about and sight-seeing. The Welcome Society has therefore consulted the six principal railway companies as to the feasibility of issuing excursion tickets to the soldiers at a reduction of 20 per cent., and the Companies having agreed, an intimation of the fact has been made to Head Quarters in Manila.

A Nagasaki paper states that a Lieutenant from the German cruiser *Irene* was recently fined twenty *yen* by the local District Court for contravening the regulations regarding sketching at the port.

MISCELLANEOUS TOPICS.

H.I.H. Prince Kanin arrived safely in Marseilles on the 24th instant.

The line-of-battle ship *Asaki* had her public trials on the 23rd instant, with most successful results. She is now at Southampton.

The Osaka Shosen Kaisha has bought out the Kyoritsu Kisen Kaisha, whose steamers ply between Atsuta and Yokkaichi in Owari Bay.

A new political magazine called the *Migi* (Right) is to be published from April 1st. The editors are said to be Messrs. Iwata and Uyeno.

Baron Iwasaki Hisaya, in deference to a wish entertained by his late grandmother, has presented a sum of ten thousand *yen* to the Tokyo Orphanage.

The heavy rain and strong wind on the 24th instant caused a flood in the Sekigahara district, the result being a temporary interruption of the service of trains on the Tokaido railway.

A large beer-brewing association has been formed at Nagasaki by foreigners and Japanese in combination. It has a capital of half a million *yen*, and its head quarters are to be at Isahaya.

A telegram from Bombay says that the cotton-spinning industry is in an unhappy condition. Twenty mills have stopped working altogether, and several of the others have reduced their hours.

The Asiatic Society (*Ajia Kyokai*), of which Viscount Enomoto is President, has been amalgamated with the East Asian Literary Union (*Tōa Dōbun-Kai*), under the presidency of Prince Konoye.

The United States Government has sent an expert to conduct investigations into the origin of the Plague, in conjunction with Dr. Kitasato. This step has been taken in consequence of the appearance of the disease in the Philippines.

The four districts, Hongo, Kanda, Nihon-bashi, and Kyo-bashi, being now fully supplied from the new Water Works of Tokyo, the removal of the old wooden pipes has been commenced, and will be finished, it is said, by the 30th of June.

The losses suffered by 3,670 Japanese subjects in connexion with the sanitary measures of the Hawaiian Authorities are said to have been 620,000 *yen*, and the losses of the Chinese residents are believed to have been two or three times as large. Hawaii, therefore, has a very heavy account against her.

Asama-yama showed great activity on the 25th instant. It emitted loud rumblings and volumes of smoke three times within brief intervals, namely, at 3.30 a.m., at 4 a.m., and at 7 a.m. Showers of ashes were carried to a great distance, and it is thought that the earthquake felt in Tokyo at the same time was due to the activity of the volcano.

It is stated that another trust has been organized. This time foreign firms are the promoters. All kinds of iron are to be controlled, and it is believed that there will be no difficulty in bringing the whole of the Japanese dealers into the ring. Certainly the fashion is running to trusts.

Original from CORNELL UNIVERSITY

Cō-operative associations on the part of consumers would seem to be a necessary rejoinder.

Lady Nakayama, whose condition was so critical for a long time, and who was raised to the Second Class of the First Official Grade when her illness assumed a dangerous complexion, seems to have entirely recovered. She has visited the Emperor and Empress, and has distributed the usual tokens of gratitude to her friends.

A certain Mr. Urabe Jiutaro, Lieutenant of Gendarmes, has made quite a sensation by the wholesale character of his forgeries, falsifications and defalcations. He has forged public documents and private documents and has purloined large sums of money. A sentence of 7 years' imprisonment with hard labour has been pronounced on him by court martial.

The Bank of Formosa held its first general meeting in Tokyo on the 24th instant. The following accounts were passed:—

	YEN.
Gross Profits	207,475
Expenses	203,926
Net Profit	3,549
Reserve against Losses	300
Reserve for equalizing dividends	100
To net account	3,149

News from Yunnan is to the effect that much excitement has been caused by the British soldiers' attack on a Chinese fort, when over 80 of the garrison were killed. It would appear from the statements now circulated that the British soldiers were not directed by officers, but that the affair was the result of ill-feeling between them and the Chinese. That version, however, is difficult to credit. The facts must soon be known.

A noted leader of the Formosan insurgents, Kan Taishi by name (according to Japanese pronunciation) has been arrested at Amoy, where he was living in disguise. He had been "wanted" for about a year, during the course of which he killed a Japanese constable and a Chinese detective who endeavoured to apprehend him. His final arrest was not unattended by bloodshed, for the Chinese detective who assisted in tracing him met his death subsequently at the hands of Kan's confederates.

There has been much talk lately about the deterioration of Japanese morals. The *Asahi* extends the complaint to Japanese brains. It says that there is no real intellectual activity anywhere except, perhaps, in military and naval circles. For a time, appearances suggested that something bright would be effected in the line of medical research, but that hope has been disappointed. The remedy suggested by our contemporary is foreign travel. Contact with the busy mind of the Occident is the best way, it thinks, to sharpen Japanese wits.

The condition of the great actor Danjuro is not satisfactory. He does not progress towards recovery as rapidly as was reported two or three days ago. The exact nature of his ailment is not stated, but the general impression is that he has been attacked by influenza. Doctors Baelz and Hashimoto are in attendance, so he is in the best hands. The effect of his sudden illness was to cause an immense loss to all the restaurants connected with the theatre. So soon as the news went abroad that Danjuro's part in the play would be taken by his understudy, the public turned its back on the theatre.

The earthquake in Fukui Prefecture on the 22nd instant seems to have been very severe. Between 1 a.m. and 5 a.m. there were seven shocks. The second is said to have been the most destructive. Six people were injured, one severely; two houses were overthrown, fifty-eight injured, and there were several breakages of embankments and land-slips. The exact locality was Imatate. It is said that the earthquake was heralded by a tremendous detonation.

The purchase of the Kyoritsu Kisen Kaisha by the Osaka Kisen Kaisha is said to have become an accomplished fact, the sum paid by the former being 150,000 *yen*. The steamers of the Kyoritsu Kaisha have been plying in the Bay of Owari Evidently the competition has proved too much for the company. It has to wind up its affairs, and the directors expect to be able to return to the shareholders 26 or 27 *yen* on each 50-*yen* share.

The kerosene wells discovered in the provinces of Tokachi and Iburi in Hokkaido are said to be very promising. During his recent visit to the northern island, Mr. Okura Kihachiro convinced himself, by personal inspection, that the wells can be worked successfully. He considered it wise, however, to despatch competent experts whose report will be awaited before any definite step is taken towards developing the wells. In the hands of the Okura firm, the enterprise will assume large dimensions.

The little island of Kozu, which forms one of the Seven Islands of Izu, seems to be in a state of great tribulation. Last year 340 houses were destroyed by fire out of the 417 in which the population of 1,928 persons were living. The Emperor gave a sum of 500 *yen* for the relief of the sufferers, and the Tokyo municipality contributed 1,500 *yen*, but those sums were soon expended, and, as the people lost many of their boats and nearly all their farming gear, their distress is very sharp. They have sent a deputation to Tokyo to seek further assistance.

Mr. Sone, Minister of Agriculture and Commerce, has been telling the tea-men that their manner of employing the subsidy granted to them by the Treasury is not calculated to encourage a continuation of the assistance. The amount of the grant is 70,000 *yen* annually, and it is to continue for 7 years dating from 1897. The reason for giving the subsidy was that, Japanese tea-men being threatened with dangerous competition on the part of India and Ceylon, the Government thought it well to assist them in endeavouring to extend their markets. But three years' experience indicates that they have not applied the money to any really useful purpose.

It is stated that a hundred Japanese subjects residing in Vancouver, applied for permission to go to South Africa with the intention of fighting on the British side. Being refused on the ground of their foreign origin, they took out papers of British nationality. Fifty of them are said to have served with the colours in their own country. We reproduce the story as it is going the rounds of the vernacular press, but though there may be some truth in the assertion that an application was made, it is obvious that the assumption of British nationality at a moment's notice is a *canard*; nothing of the kind could be done.

News is published of a strike at the Sado Mine, the property of the Mitsu Bishi Company. The men are understood to complain that whereas munificent rewards have been given to the officers in charge, no increase of wages has been made to the miners; and further, that their ration of rice having been reduced, they find themselves insufficiently fed. Six hundred of them threaten to cease work on these grounds, but the execution of their intention has been deferred in consequence of assurances given to them by the overseer. The well-known generosity of the Mitsu Bishi Company to all serving under them makes it difficult to believe that the Sado miners have any real grievance.

The Liberals have issued a manifesto in which they claim credit for passing a number of useful measures last session. They have not yet accomplished their full purpose, they say, but they look to achieve it next session, and meanwhile they think that the country's domestic affairs may be considered to be in a satisfactory condition. As to foreign affairs, they consider that a country's foreign politics should be directed by the united strength of the nation at large, and should not be a subject for party interference. Therefore in the last session they limited themselves to asking questions, and did not introduce any resolution or engage in any debate.

Mr. Morita, of the Foreign Office in Tokyo, has returned from attending the Contagious Diseases Prevention Conference in Brussels, and has given an account of the proceedings to a vernacular contemporary. The subject is so unsavoury that we refrain from publishing details. The gist of the matter is that the Conference could not come to any decision with regard to the main question—that of licensing or forbidding the social evil. All the delegates except the American and the English were in favour of licensing, but the opposition of the two representatives of Anglo-Saxondom was so vehement that the Conference deemed it wiser not to carry the matter to the vote. Thus the resolutions adopted did not extend beyond recommending improved means of prevention.

Another trust has been formed in Osaka. It includes the dealers in sheet glass. They believe that they can easily obtain command of the whole trade, since the stock handled annually does not exceed twenty thousand or thirty thousand boxes. One difficulty presents itself, however; namely, that seven or eight thousand boxes are in the hands of foreign dealers in Kobe, who may be indisposed to join the combination. The promoters of the trust think that if the foreigners attempt to undersell them, an effectual remedy will lie in refusing to deal with any one that stands aloof. Probably that device will be successful, but it is evident that if foreign merchants can afford to undersell the trust, then no necessity

Digitized by Google Original from CORNELL UNIVERSITY

exists for the latter's formation. The unhappy consumer looks on, meanwhile, in consternation. Owing to the operation of causes which may be natural, the cost of living has doubled in Japan during the past 20 years, and now the situation is to be rendered still more intolerable by artificial factors.

The *Jiji* and the *Nichi Nichi* combine to urge the advisability of increasing official salaries. Diplomatic officials especially are in an evil plight. Men who are sent abroad as Ministers receive, in addition to their regular pay, service allowances (*kimpo*) varying from nine thousand to twenty-two thousand *yen* annually, and Secretaries of Legation get from seven to twelve thousand. These allowances, though much smaller than those of foreign officials similarly circumstanced, are still a great help. But Foreign-office officials in Japan have nothing beyond their paltry salaries, and are consequently quite unable to entertain or to go into society. The *Jiji* thinks that they should receive twice as much as they have at present, but if that he difficult, an increase of 50 per cent at any rate should be granted.

Titles of nobility have always been treated with extreme contempt by the *Jiji Shimpo*. That fact fits rather clumsily into the context of an article now published by our contemporary, in which it finds fault with the Government for not granting more numerous and more honourable patents of nobility to private individuals. A very few barons have been created among mercantile magnates, but the *Jiji* considers that the title of Baron does not amount to a distinction, being generally regarded as altogether insignificant. It would have the Government distribute titles with a free hand and accept large subscriptions for public purposes from the grantees. We do not understand this bizarre article. Possibly its intention is to bring the whole institution of nobility into ridicule.

The *Jiji Shimpo* writes strongly in favour of increasing the salaries of officials. It says that, in view of the great appreciation of commodities in recent years, the emoluments of officials are now quite inadequate, especially in the upper ranks. A Minister of State can not possibly live on six thousand *yen* a year. It is true that his stipend is supplemented by a grant from the Imperial Household, but in spite of that assistance he can not avoid making debts unless he is a man of private means. The elder statesmen of the *Meiji* era have managed, in the course of long years, to amass fortunes which render them more or less independent, but the young men, without anything beyond their pay, must either run into debt or refuse high appointments. One result is that only the dregs of the people —*urinokori no hakidame* (unsaleable remnants of the ash-heap) is the pithy expression used by our contemporary — continue in the Government service. All the clever men betake themselves to other walks of life.

The temple at Yeko-in, where the great wrestling matches take place in the spring of every year, is the burial place of all whose corpses are not claimed by friends or relatives. It may be said that the temple was erected over the bodies of 108,000 citizens of Tokyo who lost their lives in the terrible conflagration of the *Meireki* era (1655-57). Its cemetery received an addition of twenty-five thousand corpses after the *Ansei* earthquake (1855), so that it is indeed a place of sad associations. There is no endowment. The priests used to obtain means of support by the *takuhatsu* process; that is to say, going from door to door, beating a wooden gong, and begging alms. But that resource is forbidden by the *Meiji* Government, and the circumstances of Yeko-in have now become much embarrassed. We read that a project is on foot to undertake an extensive scheme of repairs for which public subscriptions will be widely sought. Such a scheme is surely deserving of official aid, to say nothing of private charity. Very likely the estimate of lives lost in the two great calamities is exaggerated, but even if the accepted totals be divided by two, the quotient is sufficiently terrible.

The Nippon Yusen Kaisha has made arrangements which will greatly facilitate the shipping of goods from Tokyo for foreign countries. Hitherto the rule has been that all goods intended for shipment at Yokohama must be delivered at the Company's offices in Tokyo four days before the date fixed for the vessel's departure. That interval will henceforth be shortened to three days. Moreover, it is understood that the company will charge itself with the duty not only of carrying the goods from Tokyo, and putting them on board in Yokohama, but also with that of passing them through the customs. It will, in short, do shipping agents' work as well as that of over-sea transport, and the charge for these various services will be only 1 *yen* per ton of miscellaneous cargo. Further, the barges employed for carrying goods from Tokyo will be, as far as possible, of the kind known as *daruma-bune* (i.e., decked boats of foreign build), the *gorki-bune* (open boats of Japanese build) being employed only for packages of great weight or of a dangerous character. Where special consular certificates have to be obtained for cargo going to the United States, the shippers will be charged the actual out-of-pocket expenses, in addition to the above rate of 1 *yen* per ton. We take these facts from a Tokyo contemporary.

The Japanese Government, not content with working through its Consul in Hawaii, has addressed a very strong remonstrance to the Government in Washington, through Mr. Komura, with reference to the indiscriminate embargo imposed on imports from Japan by the Hawaiian Authorities. Without attempting to make any distinctions, the Hawaiian Administration ordered that entry should be refused to all goods coming from Eastern ports, and it speedily resulted that the Japanese community found itself embarrassed for daily necessaries of life. The Foreign Office in Tokyo does not raise any question whatever about goods justly subject to exclusion on the ground of danger of contagion. Its complaint is that no discrimination whatever was exercised, and that articles against which no sanitary objections could be properly raised, were included in the veto. Since this step was adopted by Tokyo the Hawaiian Government has instituted a much more rational system. It now divides imports into three classes; first, those that do not present any danger on medical grounds; secondly, those that are dangerous in respect of their wrappings; and thirdly, those that are dangerous in themselves. If that classification be intelligently applied, there will be no further grounds of protest. But it must be confessed that the Hawaiian Authorities, in their treatment of this matter, have shown more panic than discretion.

There has been quite a complicated disturbance at the First High School in Tokyo. The boarders, disgusted with the provisions supplied by the purveyors, conceived the idea of protesting in a novel fashion. They formed a "big-eaters club," and essayed to punish the purveyors by eating enormous quantities of food. Under the circumstances, relations became strained—and probably other things also —, so that, on the 14th instant, some dispute arising during dinner, the students began to play projectiles with the utensils, and in the course of a rain of something like a hundred cups and platters, one of the waiters sustained injuries that necessitated his retirement to hospital. A charge of assault and battery would have been laid before the tribunals of law had not the faculty of the school succeeded in temporarily smoothing matters over. But the students were implacable. They came to their meals provided with bread of their own buying and declined to eat anything set before them by the purveyors. Finally, the latter's services were dispensed with, a result which they greatly resented on the ground of unfairness. Thirty of them, encountering two of the students' ringleaders outside the compound, proceeded to wreak vengeance on the lads. But the latter escaped into the school, obtained reinforcements, sallied out against their foes, and would have put them ignominiously to flight had not a posse of carpenters and plasterers joined the fray. In the sequel the police had to be summoned. Such is the journalistic account. It will probably be found to be much exaggerated.

"*LIFE & LETTERS OF EDWARD BICKERSTETH.*" *

A biography is in one sense melancholy reading: it renews feelings of sorrow which time had softened. The better the biography, the sadder its effect upon a reader who had the privilege of its subject's acquaintance. We have experienced this vividly in perusing the "Life and Letters of Bishop Bickersteth;" compiled and published by his brother, the Rev. S. Bickersteth, Vicar of Lewisham. That is, perhaps, the best tribute we can pay to the work: it brings us once more into fellow-ship with this intensely earnest, zealous Christian, whose eleven years of work in Japan exercised an influence, probably indelible, upon the history of the country's moral progress. Edward Bickersteth's type is not the outcome of education, example, or observation. *Non fit sed nascitur.* It is singular to observe how such men are irresistibly drawn to the work of gospel propagandism in strange lands. Bickersteth's career started with large promise. He acquitted himself admirably at school, obtained a first class at Cambridge, was elected to a fellowship at Pembroke, and might have reasonably reckoned on a happy, pro-

* London: Sampson Low, Marston and Company. Yokohama: Messrs. Kelly and Walsh.

Digitized by Google Original from CORNELL UNIVERSITY

sperous, and even brilliant career in his own country. He nevertheless became imbued from the outset with the idea of a mission to India, and through his enthusiastic efforts there was ultimately organized the celebrated "Cambridge Mission" to Delhi. Five years of work in India, strenuous and unremitting work, sowed the seeds of a malady that ultimately killed him. Returning to England on leave, he made vain efforts to completely recover his health and finally accepted the living of Framlingham in Suffolk. It was a post which ought to have satisfied a man of only thirty-two—a parish with a population of 3,000 in a charming district, with a stipend of £1,350. But Bickersteth never had a moment's full contentment. His heart yearned perpetually for the toilsome life in India, the exile from home, the unremitting labour, the exhausting climate, and the comfortless existence. He would have gone back to Delhi to brave a fate that menaced him only too clearly had he not been invited to accept the Bishopric of South Tokyo. If there be such a thing as destiny its hand seems to be discernible in this case.

From the first he appears to have proposed to himself the purpose of preaching by acts rather than by speech. His object was to live so that by his example men might be drawn to the Cross. There have been and there are many such men in Japan. Pulpit eloquence or power of exegesis may be given to them or denied to them, but they breathe around them an atmosphere of truth and charity which can not fail to influence many for good. Edward Bickersteth certainly fulfilled that ideal. He was gifted, too, with a keen, luminous intellect which he devoted perpetually and exclusively to the object of his life, the saving of souls. It is interesting to learn, as one does constructively, from the many clever and beautiful letters of his contained in this biography, how possible it is for a man of the highest moral endowments to banish from his mind almost every thought unconnected with religion and the saving of souls. There is certainly no other subject that will endure the same unswerving concentration. One is disposed to imagine that there may be such a thing as the abuse even of Christianity, and that excessive absorption in it may produce narrowness. But there was not anything of that kind in Edward Bickersteth. The genial, sympathetic side of his nature remained always fresh and receptive. It presents itself to us under many aspects in this biography.

Of course, one of the features of the work is that it furnishes, incidentally, a valuable chapter of the history of missionary enterprise in Japan. Bishop Bickersteth quickly discerned the peculiar conditions to be dealt with in Tokyo. "There is," he wrote to his father, the Bishop of Exeter, "the most curious difference between the people of this country and India. Here foreigners can only suggest and guide; in India they rule; so that even by missionaries, not to say Bishops, continual care has to be taken not to offend Japanese susceptibilities. They have not yet realized this in Salisbury Square, and send out pages of regulations for native churches. In one case, where a missionary unwisely took them in his hand and said that this was the plan agreed upon for their organization in England, the whole thing was promptly rejected with the offer of monetary help which was attached to its acceptance. Wiser men are bringing them to much the same point by suggestion and guidance." We should like to feel assured that his perception was equally accurate in other directions, but the wish seems to have coloured his judgment when, in conjunction with Bishop Williams, he wrote to the Bishops of the Anglican Communion, "here the hope almost reaches certainty that it is the divine purpose to grant to adequate efforts on the part of the Church a new Christian nation." We hesitate to speak in the opposite sense, but we are constrained to admit that the signs do not yet seem to point as Bishop Bickersteth read them fourteen years ago. He took the right road, however, when he organized the *Nippon Sei Kōkwai*, on an independent basis, and he did well to raise his voice against the prejudice that leads some people to condemn the educational form of missionary work:—"Any plan which directs the forces which they (the educational departments of Japan) control in right channels, is worthy of consideration. Among such plans I unhesitatingly count the acceptance by sincere and consistent men and women of educational posts under the Government. Let them count the cost beforehand—in Japan probable loneliness, the uncertainty of tenure, and the limitation (which must be loyally adhered to) which obliges them not to teach doctrinal Christianity during school hours. Still if, notwithstanding all these disadvantages, they are prepared to throw themselves enthusiastically on the one hand into the work of secular education, and on the other into the opportunities, indirect though they be, of making known the truth which these posts afford, then I believe such eductionalists are to be counted among real and effective allies of the regular missionary staff. * * * Some English Churchmen, I gather, are suspicious of this mode of work, as if in it the claims of truth were subordinated to those of secular science. This fear is groundless, provided the teacher is possessed by a sincere and earnest desire for the salvation of those under his charge." He is genuinely appreciative of the work done by social influence also. He calls the late Mrs. Kirkes' house "a centre of manifold influence for highest good among the upper classes, which could be set moving by no other means, and by one else in like manner, so far as I am aware." These words we read with special satisfaction. Very few foreigners know, or can know, the impression Mrs. Kirkes produced among the Japanese. Were the knowledge better disseminated, she would have found more faithful imitators.

We should like to repeat the outlines of the story of how Bishop Bickersteth carried out his idea of community missions in Japan, and how he succeeded in attracting to Tokyo several university graduates who are now working patiently and zealously in Japan. But for these and many other points of interest we must refer our readers to the book itself.

The Yokohama Agent of the Chartered Bank of India, Australia and China, on Thursday received telegraphic advice from the London Office that at the approaching meeting of shareholders of this Bank the Directors will recommend a dividend for the half year ended 31st December last at the rate of 10 per cent. per annum free of Income Tax, placing £25,000 to the Reserve Fund, which will then stand at £525,000, writing £10,000 off Premises Account, and carrying forward £13,250.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

In the *Shakai Zasshi* Dr. Katō Hiroyuki writes on the difficulties attending social reform. These he treats under three headings.

I. Reform is difficult because it is impossible to decide accurately as to what direction it should take. In other branches of knowledge theories may be tested by experiments and the results produced by certain causes made quite clear. But there can be no experimenting with society as a whole. History, ethnology, and anthropology all contribute something to our knowledge of the various stages through which society passes on its way to a higher plane, but none of these branches of knowledge give us the reason for things happening as they do. They tell as that feudalism is a stage through which all nations have to pass. But of the why and wherefore of this they tell us nothing. The rise and fall of empires are recorded, but the real causes of these events remain obscure. We may well ask what has kept China together during a period of nearly 5,000 years? Its rulers have changed, but the nation has held together. What are the social laws that have insured this end? It is not easy to answer such a question. Those who aim at consolidating empires are working in the dark and may be compared to Chinese quacks trying this and that remedy with little idea as to the effects likely to be produced.

II. Reform of society is difficult because the would-be reformers are part of the body they wish to reform, and are in a large measure subject to conditions which to a great extent preclude reform. Men will not adopt theories even that militate against comfort-giving beliefs. As Huxley remarked, the Darwinian theory of evolution was totally condemned without a hearing by a large number of scholars, because it seemed to them to detract from the dignity of the human race. If people are thus obstinate about theories, they are still more obdurate when asked to change the practices to which they are accustomed.

III. There is a method of improving society which, could it be followed, would no doubt yield good results. Nature obtains strong types by allowing the weak to die off. Throughout her dominions, where she is not interfered with by man, the fittest survive. But man considers it his duty as a moral being to keep the diseased alive as long as possible. Moreover, his laws sanction the production of diseased offspring. Crime and disease are allowed to reproduce themselves at will. No Government dreams of interfering, and thus, however much grand talk there may be about the reform of society, the difficulty of effecting anything tangible and permanent is insuperable, and it is just as well to recognise this.

* * *

The *Shakai Zasshi* publishes the following statistics bearing on insanity in Japan. They are taken from the 1898 report of the Sugamo Lunatic Asylum. The total inmates numbered 399; 327 of whom were *heimin* and 52 *shisoku*, the pedigree of 20 being uncertain. There were 12 women among the above. Divided according to religion, the numbers were 16 Shintoists, 356 Buddhists, 3 Christians, and 24 who be-

Digitized by Google Original from CORNELL UNIVERSITY

longed to no sect. Among cases of violent madness there were 55 married, and 62 single, persons. Among inmates whose lunacy was traced to drink there were 24 married and only one single. The cases of lunacy proceeding from melancholia stood at 5 married and 3 unmarried.

* * *

The *Tenchijin* has an article on the various types of female beauty in Japan. After quoting a few very pointless verses which profess to give the difference between Osaka, Kyōtō, and Tōkyō beauties, the essayist states it to be his conviction that the present race of Japanese is the result of intermarriages between Koreans, Malays, and Ainos. But careful analysis has shown a marked difference in the female countenance according to districts. There are three distinct types. (1) There is that of the Chūgoku and the Hokuriku; (2) that of Kyūshū, Shikoku, and Kinai; (3) and that of Tosan, Kwantō, and Tōhoku. That these types are recognised by people generally is shown by the phrases in everyday use to describe various casts of countenance. For example, the beautiful women of Chūgoku and Kinai are spoken of as having *Kuge-kawo* (Court-nobles faces) or *Tenjin-gawo* (the faces of goddesses or fairies). But there are those who fail to appreciate the long square faces of the Chūgoku women, and they have embodied their sentiment in the term sometimes applied to them *o-hira no nagaimo* (like a yam in a shallow bowl). This type of countenance is very noticeable in Korea among all classes of people. Its distinctive features are crooked eyebrows and enlarged cheeks, and a certain ovalness of shape. This face in Japanese is described as *urisane-gao*. Length of face used always to be an essential quality in female beauty. It is quite clear that this type of countenance came from Korea. It was for many centuries the only recognised classical type. The great painters in the Tokugawa era in representing goddesses followed no other model. Extreme slimness of figure and whiteness of skin were always considered essential to female beauty. (2) According to Chinese history the Kyūshū and Shikoku women have invariably been distinguished for plumpness. They are compared to eggs and the coin called *koban*. Their faces are described as bright, gay, and attractive. Thick eyebrows, double edges to the eyelids, very black eyeballs are prominent features of this class of beauty. (3) This type is to a large extent the result of the blending of the two described above. But as far as Tōkyō belles are concerned, a peculiar shape of eye, called *ichō-me* (an eye like the seed of the Ginkgo biloba) is indispensable to beauty. It has to be borne in mind that under the old Bakufu it was the practice of the Edo *samurai* to marry Kyōtō women; hence the proverb *Azuma otoko ni Kyō onna*. Among Azuma women there were in the Gempei age few known as beauties with the exception of Oiso-no-tora and one or two more. This was owing to the fact that at that time Azuma had developed no distinct type. This development may be said to have begun after the fall of the Kamakura Government. Comparing type 1 with type 3, in length of nose and thinness of lip the Chūgoku women excel, but in eyes and eyebrows they are inferior to the Azuma belles. It will be remembered that in the poem which celebrates the beauty of a daughter of a well-known Edo merchant the very title of the poem draws attention to the superiority of her eyes. The title is *Itoya no musume wa me de korosu*. (The daughter of the Ito business-house kills with her eyes). These Tōkyō female eyes are said to glitter like varnish and their value to a woman is considered to be practically priceless, as the popular expression *me sen ryō* indicates. As regards the future, we may expect to see type 1 gradually extinguished by types 2 and 3. Such are the conclusions reached by the essayist, whose remarks we have greatly curtailed.

* * *

A full report of Mr. Shimada Saburō's address on "History" delivered at the 10th Anniversary of the Historical Society a few weeks ago appears in the *Shigaku Zasshi*. The main purport of the speech can be briefly stated. Mr. Shimada contends that no absolutely trust-worthy history can be written in ages when there is no freedom of speech allowed. It is a recognised fact that most of the Japanese history that has come down to us has been cooked. It was supposed to be one of the duties of a loyal servant to suppress and hide as far as possible the faults and weaknesses of his master. Each family that came into power dictated what was to be written and what suppressed. Another characteristic of ancient history is the entire absence of details bearing on the lives of the people. The impression one gets in perusing Japanese annals is that history exists for the benefit of the Government. Facts bearing on the industries, the agriculture and the commerce of our ancestors are extremely hard to obtain. The Tokugawa historians cared for none of these things. Then the practice which we borrowed from China of using historical materials for the purpose of teaching morals has led to a great many abuses. Facts have been twisted to suit the purposes of the moralist. Then it is only recently that we have fully realised that in order to explain fully the course of events in one's own country it is necessary to know what has taken place in other countries. To understand the foreign policy of Spain and Portugal at the beginning of the Tokugawa era helps one immensely in interpreting the action of the early Shōguns. To come to more recent times, it was only the other day that we were told by the British Minister of a fact that most historians have entirely overlooked, namely, that at one time at the beginning of the *Meiji* era France was within an inch of siding with the Bakufu against England. Had that taken place, there is no saying what might have followed. The situation was fraught with danger to Japan's independence as an Eastern state. It is thus seen that no thorough understanding of the internal affairs of a country is possible without a knowledge of those foreign affairs that are intimately connected with them. It is only in recent times that we have been in possession of the requisite materials and the requisite liberty for compiling full and reliable history.

* * *

The editor of the *Taiyō* publishes some remarks of Count Okuma made at an interview with the Count bearing on the tastes and peculiarities of several of Japan's leading statesmen. No statesman, said Count Okuma, has spent so much money and time over landscape gardening as I. I have been thirty years at it and still there is plenty of room for improvement. Neither Count Inoue nor Marquis Itō has any such garden. Marquis Yamagata has a fairly good house in Kyōto, but has done next to nothing in the way of making a garden, for which there is little room. It is the way with Chōshū men to amuse themselves with verse-making and other learned pursuits. They are fond of small rooms, 6 or 8 mats, which they fill with all kinds of rare specimens of art. Count Itō, though a Chōshū man, seems to have inherited none of their tastes. Of the attachment to Cha-no-yu ceremonies, and floral arrangement he has none. In house building the Chōshū people are far ahead of the Satsuma folk. The ideas of the latter are very primitive and even their best town houses would pass for country houses in Chōshū. Marquis Itō seems to have inherited something from both provinces. He is careless as to execution. He will build a house in half the time that most people take over it, but it is always lacking in finish. What Marquis Itō takes a month over will occupy Count Inoue for three years. The latter displays great taste in all he undertakes. Count Okuma went on to speak of Marquis Ito's disagreement with Kido and Okubo and concluded by expressing the opinion that physically and mentally Marquis Itō shows signs of age, notwithstanding a certain kind of activity displayed by him.

* * *

In the *Kyōiku Kōhō* appears Mr. Katō Takaaki's address entitled *Eikoku Jinshi* (人士) *no Kifu* (The Ways of an English Gentleman) as delivered at the Kyōiku Club some weeks ago. We give a brief epitome of the opinions expressed by Mr. Katō on this occasion. Mr. Katō has an exceptionally good knowledge of the English language and is thoroughly conversant with Occidental usages, and his position as Japan's representative for some years in London gave him many opportunities of studying English life. These are the conclusions he reached:—(1) The English are an order-loving, law-abiding people. (2) They hold truth and justice in high esteem. (3) Character goes for everything among the English. People are judged more by their manners than by their dress. Some Japanese suppose that a certain roughness of manner is part of foreign ways. Nothing could be further from the truth as far as England is concerned. The term gentleman in England has a meaning which no one attaches to our word *shinshi*, which is applied frequently to persons whose conduct is highly vulgar. (4) The English are a business-loving people, who think highly of positions of trust in all ranks of life. There is the greatest contrast in this particular to what we see in Japan, where the sense of responsibility among all classes is very weak. (5) There is in England a readiness to combine efforts in business undertakings of magnitude, such as is lacking here. Of course, the scarcity of money in Japan may be one reason for the discrepancy. (6) The English are a hard-working people. From early years there is displayed an intense earnestness in the race of life. Competition of course renders this necessary, but people delight in work in a way that is unknown in Japan. (7) There is an absence of useless ceremony in England. When people meet they do not go through a tenth of the forms required by Japanese etiquette,

Digitized by Google Original from CORNELL UNIVERSITY

but feelings of respect for others and real friendship are far more prevalent in England than in Japan. In Japan we are polite to people we know, but extremely impolite to the public generally. In a crowd in England there is far more consideration for women and children than there would be in Japan. (8) In England the spirit of honesty is very strong. The people as a whole may be said to be subject to a code of honour which is strictly observed. In this country it seems the rule to expect people to be dishonest. Hence in the Criminal Code there are laws bearing on a great variety of dishonest transactions. Among them there is one referring to the appropriation of government money, as though the appearance of rogues among officials were anticipated. In England people trust each other so much that on arrival at a railway station a man has only to go and claim his luggage and it is handed over to him. This system would never work in Japan. Thieving would be universal, but English railways have been conducted without any system of checks for several decades, and there is no talk of change. One dishonest act in England ruins a man for life, and few are those who for the sake of a few shillings care to run such a serious risk. (9) There is one quality of the English which seems to me very enviable. It is the practical way in which they settle matters. They place little confidence in academical discussion of business matters. Here we can never do anything without constructing a number of theories bearing on it and making endless rules. The English arrive at an understanding among themselves as to what should be done, and set about it with promptness. With them public opinion rules the day, and everything has to bow to public convenience and utility. (10) The English can teach us a lesson in letter writing. Most of their business is transacted by means of letters. But the practice of letter-writing adds much pleasure to their lives. Even their women describe their journeys with great vividness and minuteness. This practice is little known in this country, where there seems to be a great aversion to letter writing. To come to what I consider English defects, among them the most conspicuous perhaps is self-admiration. They have an idea that they are the first nation in the world in every respect. Their army they have hitherto considered to be equal to any possessed by their rivals. They are now finding out their mistake. . . . In my opinion there is much that we may learn from the English. Some say that, having entered the comity of Western nations, we do not need to sit at the feet of any of these nations, that we have a position of our own which we must carefully maintain. But is this actually so? Is it not more true to say that the position has still to be made?

* * *

A writer in the *Nihonjin* contends that the early development of Japanese young men and women is to be regarded as a weakness, as it implies early decay of mental and physical powers. In the opinion of the writer we are quoting it has been caused by the absence of suitable amusements for the young in Japan. In the West boys are kept young by their interest in games and sport of all kinds, but here a young lad is found playing chess or checkers in a most serious fashion, his one aim being to be like his elders as soon as possible. Then school teachers have in times past attached little importance to recreations calculated to keep students young.

* * *

Judging from his own confessions in the *Tōkyō Dokuritsu Zasshi* Mr. Uchimura, the editor of that magazine, must be a very difficult man to get on with. Under the heading of "Intercourse with" Foreigners," he tells us that while in Niigata he was at war with no less than 11 missionaries at one time, and that subsequently when he became editor of the *Yorodzu Chōhō* he was engaged day after day in attacking his foreign contemporaries, but that as a result of all his campaigns he has not made a single foreign friend. Hence he has given foreigners up in despair as an impracticable class of people. Mr. Uchimura regards a Japanese Minister of Foreign Affairs with pity, as a man who has assigned to him an impossible task. The typical Japanese, Mr. Uchimura thinks, has no inclination to qualify himself to compete with foreigners on equal terms. He is content to accept a subordinate position. Hence it is that any minister who tries to win a place for his country in the counsels of western countries finds that when put to the test his fellow-countrymen do not come up to the mark.

* * *

The *Tenchijin* publishes a full report of Prince Konoye's speech at the Kwazoku Kai-Kan, entitled, "My Observations in Europe, America and China," delivered some weeks ago, which has already been briefly commented on in these columns. This is what the Prince has to say about the Japanese in Hawaii and elsewhere:—The Japanese employed there are very numerous, but they are entirely without political influence or representation. The treatment they receive from their employers differs little from that enjoyed by horses or oxen. A few have tried to settle on their earnings and become owners of land, but their capital is insufficient. It is true to say that our nationals are slaves to the white man in Hawaii. . . . Passing on to San Francisco, I found 3,000 Japanese settled there. It is said that there are some 5,000 in the whole of California. But most of these are very low class. There are some 40 or 50 gentlemen connected with Japanese steamship companies and Japanese banks, and the usual consular officers, but beyond this the Japanese community is pretty well made up of penniless students, labourers and loafers. Most of the students there have an idea that they can while earning a living qualify themselves to become great merchants like Iwasaki or even ministers of state. They are to be seen cleaning windows and doing other menial work, but they do not as a rule give satisfaction to their employers and are constantly changing masters. . . . . I visited Cliff House, the great swimming place. At the entrance I found the following notice, "No Japanese allowed to swim here." Asking the reason of this I was told that some time ago a Japanese bathing there when beneath the water seized a lady's foot, and that she reported the matter to the Committee who made the above rule. . . . There are a large number of Japanese prostitutes in San Francisco. There has been a great deal of unwise agitation over this subject, in which Japanese have done their country's cause more harm than good. The Japanese newspaper in San Francisco even went so far as to propose a raid on the Japanese prostitute quarter of the town. Since there are hundreds and thousands of prostitutes belonging to other nationalities in the city there is no occasion for taking steps to make Japanese prostitutes so conspicuous. In New York on the whole I found fewer low class Japanese, and in England, in addition to being fewer than those in America, the Japanese are more select, and I heard nothing damaging to their reputation. In Germany Japanese residents consist of students only. In Constantinople I found a Japanese merchant doing a good business. In Eastern ports like Singapore, Hongkong and Shanghai our people are getting to be very numerous and our better classes are well represented. This is a very hopeful sign.

* * *

Dr. Ariga announces in the *Gwaikō Jihō* the publication of a new work on International Law by Dr. Thomas Alfred Walker and also several translations of foreign works on the same subject.

A book entitled *Kinsei tokuiku Shiden*, A History of Modern Moral Education, has just been published by the Kaihatsusha, Mitoshiro-chō, Kanda, Tōkyō, of which Mr. Adachi Ritsuyen is the author. This is by far the largest work of the kind that has appeared for some time. It gives a most exhaustive account of all the systems of morality prevalent in Japan in the Tokugawa era. And it contains lives of all Japan's great moral teachers, having no less than 66 biographies in addition to minute histories of ethical theories.

Under the title of *Tansei Keisaigaku* the late Mr. Garst's writings on the "Single Tax" have been collected and published in Japanese by Mr. Kuribara Ryōichi.

* * *

A writer in the *Sekai no Nihon* tries to show that gold is the controlling power in all international relations. The facts of history are all twisted so as to serve the purpose of the theory elaborated. We are informed that England's struggle with France at the beginning of the century was all for money*; that Germany manages to keep Russia from molesting her by lending her money; that the alliance of France and Russia is based on financial considerations, Russia being anxious to float her loans in France at advantageous rates; that the Greco-Turkey war was terminated on account of pecuniary considerations; that gold is the real cause of the Transvaal war, and that even America and Russia will eventually be brought together by America supplying the capital that Russia so much needs. The gist of the article goes to show that the whole world is corrupt and that there is no such thing as fighting for principles or in the defence of indubitable rights that have been violated. The writer has put on some very pessimistic spectacles, but this kind of article finds great favour with a certain class of Japanese readers, who complacently contrast all this Occidental sordidity with their own uniform integrity.

* The writer is perhaps not aware that the Peninsular War alone cost England more than £100,000,000, money that still forms part of her national debt. And England derived no pecuniary benefit from that war.—(Writer of the *Summary*.)

We have to announce the issue of the following new magazines.

The *Gengogaku Zasshi*, a monthly, published its first number on February 15th. It is issued by the Fuzambō, Kanda, Tōkyō. Its object is to aid the study of language by publishing specimens of all kinds of literature. It also prints papers prepared by the members of the University Gengogaku Kenkyūkai. Being purely philological, it is said that it supplies a long-felt want.

The *Kokon Bungaku* (Ancient and Modern Literature) dates from February 3rd last. It is a monthly, and sells at 20 *sen* a copy. It seems to be of conservative tendency and to be chiefly expository in character. The first number contains verses of various kinds, and in future numbers it is announced that questions on literary subjects will be fully answered.

The *Dai Nippon*, a new monthly, selling at 15 *sen* per copy, in the matter of get up is a very superior publication. It has a few pages printed in English. Dr. Matsumoto Kumpei is the editor, and the magazine is issued by the Nichi-bei Shōkōkai. A publication bearing the same name, now defunct, was noticed by us several months ago. The present magazine aims at being thoroughly up to date and is well supplied with matter. If it succeeds in keeping up to the level of the first number it ought to take a high rank among monthlies. It discusses commerce, industry, finance, literature, and other subjects.

The *Jichi Kikwan* (Local Government Organ) discusses municipal affairs generally. It proceeds from a small office in Iidamachi, Kōjimachi-Ku, Tōkyō. It prints legal decisions on municipal affairs and aims at acquainting its readers with existing laws and the mode of administering them. Dr. Ume is said to be connected with this publication, which sells at 10 *sen* a copy.

The *Himeyuri*, like the *Nihon Fujin*, of which Miss Shimoda Utako is editress, discusses questions connected with female education and women's home life.

* * *

Professor Nishimura Shigeki contributes a very long article to the *Taiyō* on the everlasting question of orthographic reform. He is dead against any change. He enumerates all the advantages to be gained by the use of the characters and requests the agitators for reform to cease arguing and to endeavour to demonstrate to the public the practicability of their schemes by composing and printing either in *Kana* or Romaji the following classes of composition (1) An Imperial edict. (2) Laws. (3) Terse, classical sayings such as were uttered by Confucius and Mencius. (4) Argumentative articles such as shall prove convincing to the readers (5) Discussion of subtle points in philosophy. (6) Exact statements on any branch of science, such as chemistry (7) Epitaphs. If they can succeed in making themselves intelligible and in satisfying the public, then Chinese characters will disappear of themselves. But how will they get over the difficulty of homonyms? And what is to become of all our old literature? Is it to be rewritten in the new style? No; says Mr. Nishimura; the reform proposed is too sweeping. But what it is possible to effect that we should do at once. Ideographs should be divided into those in general use for everyday purposes and those only employed in the discussion of special subjects, that is into technical ideographs and non-technical ideographs. The latter only should be used in elementary schools. Then, in the case of ideographs that contain a large number of strokes, substitutes should be found for them or abbreviations adopted. In teaching handwriting, only the *gyōsho* form of character should be used. *Hiragana* should only be written in one form. Japanese words in preference to Chinese should be employed as much as possible. The Education Department should decide on the words to be used in text-books, and the adoption of these books in all elementary schools should be compulsory. All laws, government orders, and the like should be written in the language adopted for school text-books. In order to effect this change new text-books and an exhaustive dictionary should be compiled. As regards the Chinese used for special subjects, I am not in favour of interfering with the liberty of those engaged in teaching these subjects, says Mr. Nishimura. It is in general education that the pressure of the present system is felt, and this pressure can be relieved effectually by the adoption of the above plan.

THE LATE MR. CONSUL-GENERAL JOHN F. GOWEY.

FUNERAL CEREMONY.

The preliminary services in connection with the funeral of the late American Consul-General, Mr. J. F. Gowey, were held on Saturday afternoon at the Union Church, Yokohama. The remains have been embalmed, and are being kept at the American Naval Hospital preparatory to being taken to the United States. The final service and interment will take place at Olympia, Washington.

The weather on Saturday afternoon was of the most dismal description, the rain pelting down shortly before the commencement of the service, but as there was no formal *cortège* the inconvenience was not greatly felt. The attendance at the Church was extremely large, many officials and members of the diplomatic corps in Tokyo, the Consular body, the City and Prefectural magnates, and military and naval men helping to swell the very representative gathering of Yokohama residents. There was also a strong body of Masons present, but, though the deceased was a prominent member of the Craft, they did not assist officially in the mournful ceremony. The chief mourners were Mrs. Gowey and her son, Mr. F. M. Gowey, who arrived from Korea two or three days ago. At the top of the aisle sat the members of the United States Legation and Consular staffs, a number of American naval and military officers and British naval officers, in uniform; Japanese officials and officers also in uniform; and the officials of the various Legations and Consulates in ceremonial dress. The coffin, which was placed in front of the organ, was covered with the American flag, and with a great number of wreaths and crosses from friends and public bodies. Above the organ were placed the American and Japanese national flags. The service was conducted in accordance with the ritual of the American Episcopal Church, which is practically identical with that of the Church of England. Bishop McKim and the Rev. George Wallace were the officiating clergy. The hymns used were Newman's beautiful "Lead, kindly Light," and "O Paradise," and Mr. J. T. Griffin, who presided at the organ, played the Dead March from "Saul" at the close of the service. The funeral arrangements were made by Mr. Holgate.

Among those present were: The United States Minister, Hon. A. E. Buck; the British Minister, Sir E. Satow; the Russian Minister, Baron Rosen; the Italian Minister, Count Orfini; Mr. Li Sheng Toh, Envoy Extraordinary and Minister Plenipotentiary of H.I.M. the Emperor of China, Mr. L. Ching Kow, Secretary of Legation, Mr. Tseng Hai, Interpreter; Mr. Tsou Chung Ching, Chinese Consul-General at Yokohama, and Mr. Shen Tseng Sung, Secretary; the Secretary of the Korean Legation, Mr. Pak Yong Wha; the Portuguese Chargé d'Affaires, Senor de Freitas; Mr. Hobart-Hampden, H.B.M. Vice-Consul; Mr J. McLean, United States Acting Consul; Mr. G. H. Scidmore, United States Deputy Consul; Dr. Ritter, Swiss Consul; Mr. Ratare, French Consul; Mr. T. Wassilieff, Russian Vice-Consul; Chevalier Cassati, Italian Consulate; Mr. Coates, German Consul General, Mr. Hagen, Vice-Consul, and Dr. Ohrt; the Chevalier de Wapenaert, Belgian Consul; Mr. J. de Reuss, Dutch Consul; Mr. J. H. Jewett, Danish Consul; the Chilian Consul; the Brazilian Consul; Mr. Jeblitscka, Austrian Consul; Mr. C. D. Moss; Mr. E. A. Griffiths, late British Consul at Tainan; H.E. Governor Asada, of Kanagawa Prefecture, and Kencho officials; Judge Nagamo Tokiichiro, and Judge Nakamura of the Tokyo Chiho Saibansho; Mr. Watanabe Nobu, President of the Chiho Saibansho, Chief Procurator Kosaka, and Procurator Tsutsumi; Mr. T. Kuroiwa, Inspector General of Police, Kanagawa Ken; Mr. Aoki, Director of Posts and Telegraphs; Mr. Umeda, Mayor of Yokohama; Mr. Ikariyama, Superintendent, Kagacho Police Station; Mr. S. Tojo, Chief of Yokohama Taxation Office; Mr. S. Saito, Director of the Revenue Bureau; Rear-Admiral Mori, I.J.N., Director of the Harbour Office; Commander S. Amano, I.J.N., Assistant Harbour Master; Mr. Kanetake Ooura, Prefect of Police; Mr. Akiyama, Mr. E. Yamada; and Mr. Mayeda, President of the Tokyo Chiho Saibansho; Inspector Kashiwabara Seiichiro, of Tokyo; Mr. Ozawa; and other prominent Japanese; the Marquis Nembrini de Gonzaga, Naval officers from the U.S.S. *Oregon* and *Albatross* and the German cruiser *Hertha*, &c.

The following resolution has been passed by the Executive Committee of the American Asiatic Society:—

The executive committee of the American Asiatic Association of Japan, desiring to give some expression of the consideration and esteem in which the late Consul General, the Honourable John F. Gowey, was held, hereby resolves:—

That we, expressing the sentiment of all those who were associated with him in this community, mourn most deeply the loss of one so highly respected and trusted as a public officer, a counsellor, and a friend.

That we are mindful of the noble example, the just, upright, loyal, true, and genial qualities which characterized him in all his relations with his fellow men.

That we shall long cherish his memory on account of these and other virtues he freely, though modestly, manifested among us during his comparatively short residence here.

That our sympathy is hereby extended to the family and relatives of the deceased, trusting that God will give them all needed comfort.

That we recognize in the sad circumstance of his death the ruling of a mysterious Providence, but we bow in humble submission to the acts of an infinite wisdom.

That a copy of these resolutions be sent to the family of the deceased, that they be published in the local and State of Washington papers, and recorded upon our minutes.

James R. Morse,
President.

Geo. H. Scidmore,
Acting Secretary and Treasurer.

Dated, Yokohama, March 14th, 1900.

Sympathetic references to the late Mr. Consul-General Gowey were made by the Rev. E. C. Irwine in the course of his sermon at the morning service of the congregation of Christ Church on Sunday.

The British steamer *Energia*, which went ashore in the Obrea Channel and was floated in January last, has since been repaired at the Mitsu Bishi Dockyard. The vessel on March 25th sailed for Hongkong.

YOKOHAMA FOREIGN CHAMBER OF COMMERCE.

ANNUAL MEETING.

The annual meeting of the Yokohama Foreign Chamber of Commerce was held on Thursday afternoon at Keil's Building. Mr. W. F. Mitchell presided over a fairly large attendance.

THE REPORT.

The following report was submitted to the meeting:—

REPORT OF THE YOKOHAMA FOREIGN CHAMBER OF COMMERCE, FOR THE YEAR 1899.

The Meeting is called in accordance with Rule 15, for the purpose of receiving the Report of the Committee with a statement of Accounts, to elect a Committee for the ensuing year, and for general purposes.

Minutes of the last meeting have been circulated among the Members for approval.

Since the last general meeting of the Chamber, Treaty revision has become an accomplished fact. The Central Government have given Foreigners an assurance that under their jurisdiction Foreign Trade and Interests will be protected.

The change was ushered in by very friendly overtures on the part of the Local Officials, who have shown a desire to extend their courteous consideration to any points relating to the new order of things which may not be very clear. These advances have been very much appreciated on the part of the Community.

Arbitration.—The proposal submitted to the Japanese Chambers of Commerce in Tokyo and Yokohama has not resulted in a favourable termination, both bodies having declined to come to an agreement on the subject, on the ground that a Foreign Chamber of Commerce is not an Institution recognised by the Government. Your Committee regard this decision as a misfortune, because a mutual system of settling disputes such as obtains in other Countries would undoubtedly tend to the development of trade and deter litigation.

A Form of Contract for the Import trade, submitted at the last general meeting, has also been refused as unacceptable to Japanese Merchants, and the proposal has been dropped.

Certificates of Origin.—Representations were made to the Authorities before the new regulation came into force and a promise was given by them to treat the question in a liberal spirit, but so far the production of a Certificate of Origin has been strictly enforced and no excuse for delay admitted.

Importers are, in consequence, put to great inconvenience and loss. As a result of the Chamber having received several complaints, steps will be taken to again bring the matter before the Government.

Bonded Warehouses.—The attention of the Authorities has been called to the fact that goods unclaimed on arrival by consignees which are placed in the Customs Bonded Warehouses are delivered upon application to anybody who pays the Duty, without proof of Ownership. As this may lead to abuse and serious loss, it is hoped that some steps will be taken to remedy it.

Tiffin Hour.—A proposal has been circulated amongst Members of the Chamber suggesting that the time should commence from 12 30, instead of noon as heretofore, as, in view of the altered conditions of trade, it is desirable that the break in the middle of the day should be of shorter duration. This proposal has met with the approval of a majority, and it is hoped that an unanimous decision on the subject may be come to at this meeting, as well as the question of early closing on Saturday.

Mr. W. B. Walter.—The Committee wish to express their regret at this gentleman's impending departure from Japan, and to place on record their appreciation of the many services which he has rendered the Chamber during his long residence at this port, both as Chairman and in working on the Committee.

Secretary.—Mr. J. E. Beale has been appointed to fill the place of the late Mr. O. Keil.

From the Customs returns, the principal articles of the Export Trade show an increase of 27,092,780 yen over 1898. This is almost entirely due to the growth of the Silk trade, Raw Silk being responsible for an increase of over 20,000,000 yen, and Silk Manufactured Goods for nearly 5,000,000 yen. Copper export has increased to the extent of another million yen, the other items of export remaining practically about the same as in the previous year:

	1899. Yen.	1898. Yen.
Silk Piece goods	20,060,470	15,721,400
Waste Silk.....	3 153.450	2.171,700
Tea	5,407.200	5,389,400
Copper.....	4,226 880	3,203.000
Tobacco	28,780	18 600
Rice	57.140	17,300
Fish Oil	456.440	336 500

The Rice crop of 1898-99 was, as anticipated, a bumper one, and to some extent compensated for the poor harvest of the previous season.

The Import of this article was almost entirely stopped, as the native production was not only sufficient to meet the consumption, but allowed of an export of say 140.000 tons, besides carrying forward a surplus to the next year.

The crop of 1899-1900 is said to be a fair average of the previous 7 years, but a decrease of 16 ½ per cent. as compared with the preceding one.

EXPORTS.

Raw Silk.—The season treated in this report is from the 1st of January to 31st Dec., 1899. The export figures for 1899 show an increase of 12 per cent in the quantity exported, and of no less than 15 per cent. in the total value, which, as declared at the Customs, amount to be about 10 to 15 per cent. larger than the previous one, more "seed" having been laid down for rearing than in any previous year, and, the weather having been all that could have been desired for the growth of mulberry trees, leaf was plentiful and cheap everywhere.

The following are the figures of Export for the past two years:—

	America Bales.	Europe Bales	Total Bales	Value Yen.	Average Value per Bale Yen.
1899...	36.893	20.754	57.647	62,617 720	1.009
1898...	28 717	18,641	47.358	42,047.400	887

Japanese direct exporters shipped during the past year 16,237 bales.

It is very much to be regretted that the complaints referred to in our last report as to irregularity in size, and want of cleanliness of the thread, still existed to a large extent during this season. The high prices ruling on the Yokohama market, which left Reelers a large profit, naturally hurried the production of Silk without paying the necessary attention to any improvement in quality. The practice of bringing inferior cocoons into the Shinshiu district and mixing them with better cocoons still exists, and many Filatures, which up to now had maintained an established reputation, have suffered in consequence.

It will be seen from the above figures, that, whilst the export to the United States of America shows an increase of 8,176 bales on the previous season, the export to Europe is only 2,113 bales larger than the year before. This is principally due to the extremely high prices ruling here during the latter part of the year, which obliged European consumption to favour Italian and Chinese Silks, these being materially cheaper than the product of Japan.

The year commenced with No. 1, Filatures, 13/15, 14-16, being quoted at yen 960 to yen 970, with an active market resulting from a large demand from home quarters; the unsold stock then amounting to only 8,934 piculs. The activity continued during February, March, and April, with a further marked advance in prices, these reaching in April yen 1,180 to yen, 1,190, for No. 1 Filature, and the unsold stock having been reduced to 877 piculs by the end of that month. The chief feature during this period was a strong demand for native looms, which absorbed large quantities of the already impoverished stock. The advance was further stimulated by heavy speculations on the native Silk Exchange, where business shortly after was temporarily suspended pending the settlement of the difficulties which had arisen between the different parties operating thereon. The month of May was devoid of special interest, very little business being done, and prices declining under the depressing influence of Japanese spinners, who, in anticipation of a large crop, looked forward to buying their cocoons at the lowest possible price. The market for new Silk opened in the first half of June at yen 1,040 for No. 1 Filature 13/15, 14/16, but, during the latter part of the month, prices advanced in consequence of a good demand, especially from Europe. Following the example of the Chinese, the Japanese dealers then made large forward contracts with Europeans, and it was reported that about 5,000 native bales had thus been contracted for delivery up to September and October. The first part of the month of July brought a heavy decline in prices, caused mainly by the desire of sellers to realise at once their profits; but during the latter part of this month the market became again very active everything offering in fine-sized Filatures being taken up at advancing prices. This activity continued during the month of August, but slackened, however, during the month of September, and caused a decline of yen 40 to yen 50. During the months October and November extraordinary activity reigned in this market; nearly everything available was bought up for Europe and America, and prices advanced by leap and bounds. By the end of November the market was entirely in the hands of Japanese speculators, foreign buyers being quite unable to do any legitimate business. At the Silk Exchange yen 1,400 and upward had been paid for No. 1 Filatures for January delivery, thus establishing an advance of yen 350 per picul on the opening prices of the season. This state of affairs continued up to the middle of December, when a slight reaction set in, and prices by the end of the month declined to yen 1,300, without, however, attracting much attention from buyers. The unsold stock then amounted to 6,820 piculs against 12,096 at the end of December, 1898.

Waste Silk.—At the beginning of 1899 the position of the market was as follows:—

Stock, 5,200 piculs against 8,000 piculs in 1898, *i.e.*, 2,800 less. Prices were:

Oshio Noshi	Yen 105/115
Joshio Noshi.....	65/70
Kikai Kibiso.....	80/90

Since then prices improved regularly with a very good demand, and the result is that this season ends with one of the smallest stocks ever seen, namely, 2,700 piculs, mostly inferior stuff.

The first arrivals came on the market earlier than usual and fetched comparatively higher prices, as from the beginning of this season there was a good demand which lasted till the end of November, and this in spite of the steady advance of prices. During December there was not much doing, but the year closed without any noticeable effect on the rates ruling. The year 1900 started with:—

	Yen.
Oshio Noshi.....	175/185
Joshio Noshi	130/140
Kiaki Kibizzos	160/175

This is equal to an advance of 80 per cent. on the prices ruling in January 1899.

During the year 1899 the export of Waste Silk was 32.532 piculs, as follow:—

	Piculs.	Composed of	Piculs.
Marseilles	18.200	Noshitos ...	11.895
Switzerland ...	5 934	Kibizzos ...	20,220
London	1.389	Pierced Cocoons ...	153
America	438	Sundries ...	264
Other parts ...	6.571		
Total	32.532	Total	32 532

Silk Piece Goods.—The trade for the year 1899 has been unprecedented, both as regards the quantity of material exported, and the sharp advance in prices, which have reached a hitherto unrecorded level.

Digitized by Google Original from CORNELL UNIVERSITY

The activity with which 1898 closed was resumed early in the year, demand from both Europe and America being well sustained. Stocks were low, and in their anxiety to secure a share of the few suitable parcels on offer, buyers entered into keen competition, which drove prices up fully 10 per cent. within the first three weeks. A rise in exchange, coupled with a temporary withdrawal of French demand, then checked the upward movement, but before the month closed the increased activity of the New York market, supported by a local movement in Raw Silk, strengthened rates again, and February opened amid some excitement, competition developing into a scramble for the rapidly diminishing stock of first-grade material. With but little moderation, the strong demand was sustained throughout the month, trade being seriously curtailed by the insufficiency of supplies. To meet this deficiency to some extent the weavers resorted to various ill-advised practices by which their well-nigh exhausted stock of silk thread could be replenished, one of the most injurious devices consisting of the employment of Chinese Raw Silk for organzine purposes. In many instances warps were made up with alternate Japanese and Chinese threads, which naturally produced a streaky cloth, decidedly detrimental to the reputation of *Habutai* in the home markets. March saw no abatement in the enquiries for all lines of Silk Piece Goods, which were readily taken up at constantly increasing rates. With the advent of the "spring reeling" further supplies of thread were obtainable, and the weavers were better able to keep pace with the demand. Early in April, however, the heavy orders from the consuming markets could not be met quickly enough, competition again became very keen, and prices were affected accordingly, a rise of 10 per cent. being recorded within one week. The dangerously high level thus established was subject to some reaction, but the New York market appeared ready to follow the rise, and before the end of April prices were again on the upward track. French buyers seemed rather more cautious, and directly the American demand became less excited, prices drooped, the relapse developing appreciably towards the end of May. Early in June, however a smart revival again occurred, and rates responded to the pressure by bounding upward. European buyers led in the movement, and prices were strengthened by the fairly heavy contracts placed for forward delivery. The prospect of a large Silk crop had no adverse effect, the general anticipation being that the increased supply would be readily absorbed. The native dealers shared in the expectation that Silk would be dearer, and were at one time very chary about booking contracts. Early in July, however matters appeared fairly settled and considerable business was transacted for forward delivery, the most noteworthy feature being the strong demand for *Twills*, the supplies for which were practically controlled for four months in advance, *i.e.* to the 15th November. During the early days of July, supplies of plain material failed to keep pace with demand but the American buyers withdrew from the field and the European shippers had the market to themselves. The month closed without prices showing any weakening tendency, and as the anticipated decline (for which some of them had evidently been waiting), did not develope, the New York operators again entered the market and took up the lead in the renewed buying movement. August brought a relapse, which was accentuated by the disquieting complications which affected the European trade about the middle of the month. Buyers held off for a couple of weeks, but the opening of September saw a clearance in the French political horizon and a return of confidence on the local market. Prices soon recovered from their drooping tendency, although Raw Silk still suffered from the withdrawal of European support. Towards the middle of the month, reports of serious damage by floods in the province of Yechizen caused some anxiety locally, and rates were influenced by the fear that supplies would be affected thereby. Considerable damage undoubtedly resulted from the excessive rains, but (as usual) the reports were grossly exaggerated and had but little effect on the home markets. In October, however, another sharp buying movement set in, the Americans being the first to renew operations, in which the French soon joined. Prices again moved upward, notwithstanding the weakening tendency of Raw Silk. *Twills* were once more in great request, and hardened appreciably, especially towards the end of the month, which closed in considerable excitement. Prices were springing up wildly, denoting the presence of speculation rather than of steady trade, and the weavers fanned the flame by raising the alarm that the supplies of *Hamatsuktes*, etc., would not prove equal to the demand, although Raw Silk for export purposes was plentiful. At one time in October stocks of thread in Fukui had certainly reached a very low ebb, but the scarcity was tided over. Demand from both New York and Lyons continued steady for the first few days of November, the New York buyers being very ready to follow the upward movement in prices. About the middle of the month the French demand appreciably slackened, but American enquiry was well maintained, and the weavers again reported that their stocks of thread would not stand the strain much longer. Prices were driven up at an unhealthy pace, until several of the staple lines were in the neighbourhood of yen 13.00 per 100 *momme*. Here they stayed for a brief period, but before December came rates looked unsteady, and the last month of the year witnessed a decided downward movement. The dealers up-country gradually developed their annual desire to convert their stocks into cash before the year closed, but their efforts to unload were met by a very unresponsive attitude on the part of foreign buyers. The British-Boer embroglio soon completely shut off demand from Europe, the American market followed suit, and the efforts of the local dealers to encourage business by offering to make reasonable concessions in prices failed to tempt buyers. At first the natives boasted that they could afford to wait until the new year should bring a revival of demand, but the tightness of money, coupled with the cautious policy of the banks, soon created some anxiety, and as the tension intensified the stock holders became decidedly uncomfortable. An investigation showed that fully 50,000 pieces (almost exclusively of low grade material) were in stock, and unless some financial assistance were forthcoming many of the dealers would succumb to the pressure of the banks. Finally, an appeal was made to the Government, a deputation being sent to Tokyo to present a petition for a loan with which to tide over the end of the year, After some little delay, the required assistance was forthcoming, and the year closed on a quiet and unpromising market. The natives insisted that the New Year was bound to bring prosperity, and looked for a resumption of activity early in January, talking loudly about the probability of supplies being very low (especially during the winter months), and similar prognostications by which they hope to induce the foreigner to operate. The load of 50,000 pieces of defective material, however, is an unpleasantly realistic bugbear, and if the South African trouble is prolonged we shall doubtless see but little activity in *Habutai*, and a downward movement in prices. European quotations are fully 10 per cent. below those current locally, and although the Indian market is taking up some of the lower grade light-weights, the quantities thus absorbed are not sufficiently large to materially influence the situation. Certainly the scarcity of good quality will affect prices directly there is an indication of a returning demand from the home markets, but for the moment Europeans appear to have lost interest in *Habutai* and Americans have sufficient to meet their immediate requirements.

Briefly reviewed, therefore, the past year shows a period of excited activity for the first eleven months, during which prices advanced over 50 per cent., only to drop fully 10 per cent. during the month now closing. The total number of pieces exported shows an increase of 5 per cent. (say 400,000 pieces); local stocks are heavy, but almost exclusively of poor grade material, while demand from all quarters has fallen to a minimum, and the prospect is now promising.

The above *résume* refers principally to the light-weight grades of *Habutai* and *Twills* manufactured in the Yechizen and Kaga districts. The heavier weaves produced in Joshiu have not been subject to the same violent fluctuations, but have steadily advanced in value, and the year closes with practically exhausted stocks, and prices nominally steady at the highest point touched.

The regrettable lack of commercial integrity which is so frequently manifested in Japanese trade was made exceptionally apparent during the months of October and November, when heavy contracts for *Twills* fell due. The weavers could not withstand the temptation to sell the goods at current rates (and thus secure from 10 to 15 per cent.), rather than deliver them in execution of their engagements. Serious friction resulted between the foreign shippers and the local dealers, but the methods of attempting to obtain redress are of so lengthy and tedious a character that no definite steps appear to have been taken in the matter. Another point calling for comment is furnished by the report of a quantity of seriously-loaded or otherwise adulterated material having been shipped recently to the European market. This matter is being investigated by the native Guild, and it is to be hoped that a point so vital to the interests of the trade will receive the attention it merits.

Handkerchiefs.—The year has not been noteworthy in this line of industry. Probably the increased cost of material seriously effected the saleability of ordinary lines, and the total decrease in the quantity exported is over 184,000 dozen (say 16 per cent.). The shipments to the Continent show an advance on last year's records, but, with the exception of Australia, other consuming markets have appreciably fallen off. September, October, and November saw a fair amount of activity locally, but the other nine months of the year were normal, the only incident worth mention being the disastrous fire in Yokohama in August, which was reported to have destroyed some local stocks and temporarily disorganised some branches of the trade.

Tea.—The market was opened on the 26th April by the purchase of a few small parcels at yen 35 to yen 40 per picul. A steady business was done on this basis till the 5th May, when supplies began to come in freely and heavy buying commenced at gradually declining prices. The quality, both of leaf and cup, through the season, has been poor, especially the second and third pickings. Grades just above the standard were in strong demand throughout the season and realized relatively high prices. The trade with Canada has been dull and dragging, which may be accounted for by the large shipments of low grades at the end of the previous season in anticipation of a duty being placed on Teas by the Canadian Government last spring, but no tax was imposed. The trade in Japan Teas is apparently suffering in Canada from the competition of Ceylon and Indian growers. Ceylon Green Teas are now making their appearance in Canada and will be vigorously pushed, and the future of Japans in that market can only be regarded with apprehension.

Copper.—The high range of prices throughout 1899, together with the effect of large contracts entered into during 1898 for delivery in the following year, have greatly stimulated the copper production of Japan, resulting in an export of

1899.....21,135 Tons, against 1898.....16,300 Tons

Prices early in the year advanced from £60 to about £69 per ton, and later to £75/£76, but the diminution of consumption in Europe and America, consequent upon these extreme rates, caused a decline; and by the end of December values had fallen to £69/£70 per ton.

Digitized by Google Original from CORNELL UNIVERSITY

Fish Oil.—The year under review opened with very small stocks, which were disposed of at high rates. Owing to a large Summer catch, which netted about 4,000 tons, prices declined to Y.5.50 per picul. Later, in consequence of good native consumption and a regular demand for export, values recovered again to Y.6.00, at which figure the remainder of the Summer catch was disposed of.

The October catch was very short, and, the Winter catch proving a complete failure, the small lot offering fetched up to Y.6.50.

The new year opens again with very insignificant stocks.

Tobacco.—The export of Tobacco has declined yearly, owing to the fact that merchants are obliged to send employés and money into the country to buy from farmers. This increases the price to about 30 per cent. on the upset price by the Government Monopoly Office, consequently Tobacco becomes too high by the time it reaches Europe, although a few qualities are desired owing to colour.

In consequence of high prices, European manufacturers have turned their attention to other growths and other markets, where they are able to buy superior qualities at low figures. It is, therefore, suggested that merchants should be allowed to purchase their requirements from the Monopoly Office direct, in which case the trade would no doubt revive.

The Monopoly Authorities having sent a commission to Europe and America, in order to ascertain how the monopoly is working there, possibly when they return some changes may be made, not only in Export, but also in Import, and it would be desirable in the interests of the public at large that merchants should be permitted to import for manufacturers the exact quality needed. At present two or three firms have been appointed agents for importing, which the manufacturers report is most unsatisfactory, as they are unable to procure the right quality at the lowest price.

IMPORTS.

Raw Cotton.—The past year has been noticeable for the steady growth in the importance of American Cotton, owing principally to the fact that it has been comparatively cheaper than Indian and China staples. The shipping arrangements from Bombay proved to be totally inadequate, and serious loss to those engaged in the trade resulted from the long delays caused by the failure of the Japan Cotton Spinners' Association to provide the necessary tonnage.

Cotton from the United States was also delayed in many cases, owing to the short supply of tonnage, due to the chartering by the U. S. Government of several Pacific liners.

The year opened with quotations at

Yen 20 00 for American Middling
,, 18.00 for Broach
,, 19.50 for China

from which time values steadily advanced until the end of August.

During July and August, fairly large quantities of New Crop Middling were contracted for at Y.18 50 to Y.19.50; but by the end of September the reports as to both the Indian and American crops began to be alarming, and an advance set in all round; until, at the close of the year, quotations stood at

Yen 25.50 for American Middling
,, 23.50 for Broach
,, 25 50 for China

with a rising tendency.

The total imports of Cotton into Yokohama during the year were 237,504 Piculs of all kinds.

The special landing place for Cotton at Yokohama has helped very considerably, to curtail the time occupied in handling cargo after discharge.

The Cotton Spinning Industry has had a more successful year than the previous one. The average rate of profit has been abou: yen 1.10 per spindle, while the reserve funds were also increased.

Towards the close, however, the position became unfavorable, owing to the non-delivery of considerable quantities of Cotton contracted for at the beginning of the season, coupled with a rapid and abnormal rise in price, a rise which has only been very partially met by the advance in the market for native spinnings.

Short time—in some cases actual stoppage—appears to be inevitable, as even if the Mills were able to obtain adequate supplies of raw material they could not afford to spin at the rates ruling for Yarns on the Osaka market.

Cotton Yarn.—The condition of the Import trade in Cotton Yarn has improved in some respects during the year. A rising market, with better clearances, has given a fair profit both to Importers and Dealers.

Yarns made from Egyptian cotton—both Plain and Gassed—still hold their own with consumers here; and a good average trade has been done in them.

Yarns made from American fibre have also received some benefit from various exceptional cause; but the outlook for the future predicts that Japan will depend on her own mills for this class of Yarn, and that the consumption of Lancashire spinning will further decrease.

Generally speaking, dealers have been cautious and have not overbought. But the prices which were reached at the end of Dec. 1899 (with the prospect of a further strong advance in the first few months of 1900) must restrict business—for Japan is not sufficiently wealthy to follow the abnormal values which a huge speculation in Europe and America may dictate.

Prices to the end of May remained fairly steady, and then a gentle advance commenced with a fair amount of business, although values here lagged behind the equivalent of prices current in Manchester. This state of things continued until August, when trade improved, and by the middle of September a large business had been done, American sorts sharing in the benefit as Japanese spinners were caught short of raw material and holders were thus able to clear off some old stocks of Lancashire spinnings. By this time (Sept.) speculators in Europe and America had got hold of Cotton, and nothing could be obtained in Yarn from Manchester but "long delivery" and "high prices."

This state of things existed until the close of the year when Gassed 2/80 (which stood at Yen 90 per picul on 1st January) were quoted at Yen 116 on 31st December, with every prospect of a further rise in the New Year.

The comparative total imports in piculs are as under:—

1899.	1898.	1897.	1896.
48,529	100,395	92,044	113,046

Grey Shirtings.—The trade followed its usual course: heavy contracts for future delivery were made in the first quarter of the year, and smaller purchases of the same nature in the autumn The remainder of the year saw little else than hand-to-mouth dealings in stock lots.

Prices have advanced in sympathy with Yarns, although hardly to the same extent; and the year closed dull with a poor outlook, dealers professing their inability to pay present values.

The market here shows a tendency to leave ordinary cloth made from American staple in favour of finer fabrics woven from Egyptian fibre. These goods arrive under various names: Gassed Shirtings, Grey Cambrics, etc., and have become an important factor in the business of this port.

The comparative tolal import in pieces is as follows:—

1899.	1898.	1897.	1896.
589,603	852,630	700,309	804 900

T-Cloths are defunct: the native looms now supply all that are required.

Indigo Shirtings.—Figures show a considerable falling off and the article seems to have become of lesser importance.

Indigo Blue Cambrics.—Imports show a decrease of 95,000 Pieces compared with 1898. It looks probable that these goods will disappear in another year or so from among the list of Imports.

White Shirtings.—These goods have continued in good demand, and the heavy stocks carried over from last year have now gone into consumption. Imports during 1899 are only less than the average of the preceding three years by 390,835 yds.

Cotton Prints.—Consumption of these is increasing, the deliveries being 53,000 pieces in excess of 1898.

Cotton Italians and Sateens. — Doubtless owing to the high cost of Union Italians, more demand was experienced for these goods, and deliveries show an increase of 22,000 Pcs. compared with the previous year. Fair contracts were entered into towards the close of the year for arrival during 1900. Buyers are paying more attention to the "Mercerised" cloths, and it looks as if these would usurp the place hitherto occupied by the common to medium Woollen Italians.

Turkey Reds.—Trade in these has again been disappointing. Deliveries are less by 7,000 pieces than in 1898. The year closed with heavy stocks, for which there was no demand. There appears to be a tendency on the part of the Japanese to substitute more costly fabrics for the purposes they formerly used Turkey Red.

Cotton Velvets —There has been a good demand during the twelve months, and the off take exceeds the previous year by 2,000 Pieces.

Imports have been on a much smaller scale, and the heavy Stocks brought forward from 1898 have been reduced to 8,400 Pieces.

Victoria Lawns.—A larger business has been transacted than in the previous year.

Flannels (Woollen).—There has been a great falling off in the trade in these, the Imports showing a decrease when compared with 1898 of 68,851 Pieces.

Printed Cotton Flannels continue to be favored very much by buyers, which accounts for the considerable falling off of imports in Woollen Flannels.

Here again the high home costs have doubtless checked business.

A good business continues in both Plain and Printed Cotton Flannels.

Black Woollen Italians.—Imports show a falling off of 20,000 Pieces as compared with the previous year, but deliveries show an increase of 8,230 Pieces. Business in these cloths has been restricted by the constant advances during the year in home costs.

Local values rose about 25 per cent during the twelve months, but at the close of the year were still considerably below the parity of Bradford cost.

Woollen Cloth.—The trade in this appears to have revived and the Imports for the year years were more than double that of the preceding year, and this notwithstanding higher tariff and considerably higher prices in Europe. Dealers turn their attention more to the better class of goods than the low Cloths that used to monopolize the trade, and fancy Coatings of all kinds would figure largely in the statistics if separate details were available for them. The year closed with small stocks, and buyers have since been freely contracting for the autumn demand at prices very much higher than last Season, in spite of the great advance in the raw material in the centres of production.

Mousselines.—Trade has been satisfactory throughout the year, and in spite of a rise in price of about 35 per cent, which has taken place during the period under review, the consumption has in no way diminished.

Remaining stocks at the beginning of the year and subsequent arrivals have found ready buyers, and supplies now on hand must be rather below the average. The native weaving establishments have so far favourably progressed, gradually increasing their production, and within a few years will probably hamper considerably foreign imports.

Blankets.—Business in the ordinary scarlet continues to decrease. The Japanese Mills now turn out large quantities of Scarlet and also all kinds of Fancy Blanket Rugs.

+=Increase ;—=Decrease in 1899 against 1898.

Metals.—Bar Iron. The excessive Imports during 1898 resulted in a much diminished trade during 1899, Imports being 50 per cent. less in quantity and 36 per cent. less in value; the greatest diminution occurred during the first six months. The closing months of the year saw greater activity, but stocks in native hands are still too large for the requirements of the country.

Pig Iron.—For the first time in many years a decrease is shown in the Import of Pig Iron, the figures for this district being about 5,700 tons against about 20,000 tons in 1898, while the figures for all Japan were :—

	Tons.	Value Yen.
1896	38.725	739 555
1897	43.295	934,010
1898	62,898	1.381,442
1899	27,028	965.543

During 1897 and 1898 quantities of Pig Iron were imported from America but did not meet with a ready sale owing to the prejudices of buyers. The stocks have, however, been cleared off, partly for consumption in Japan and partly by reshipment to the United States, where a profitable market was found in consequence of the rapid increase in values.

During the past year, Pig Iron has been imported from China, and the quality is said to compare favourably with English Iron while the cost is lower. The production of native Pig Iron has largely increased, and the industry has been a very profitable one for those concerned. The Imperial Steel Foundry will shortly be producing Pig Iron, and until their works are so far advanced as to require it for manufacturing finished materials Japan will be practically independent of imported Pig Iron.

Plates and Sheets.—The local Imports show an increase of about 40 per cent. in quantity on 1898, while the value is more than double.

Galvanized Flat and Corrugated Sheets.—Total Imports to Japan have increased by about 30 per cent. in quantity and about 65 per cent. in value.

The increased Import is not more than sufficient to keep pace with the increased requirements, but the high costs ruling during the past few months have made buyers pause and stocks have accumulated in native hands.

Wire Nails have been imported largely in excess of requirements, local imports being 164,980 kegs against 108,070, while total imports to Japan were about 389,000 kegs against about 240,000 kegs in 1898. The Tokyo factory, though not a financial success, continues in operation. Taking this production into consideration, the imports during 1899 have been about 50 per cent. over actual requirements and the year closes with few buyers and discouraging prices.

Tin Plates.—The weight of Imports during the year is about the same as in 1898 but the value is about 30 per cent. greater.

Kerosene.—Arrivals of all descriptions during the year show a considerable falling off. the figures being 2.458.080 cases against 3,020,991 cases in 1898. This diminution is due to large stocks which were imported in anticipation of the increase in duty.

Deliveries are very close to those of the previous year showing an advance of only 2,011 cases. The figures were as follow :

American	1,920,157
Russian	1,177 473
Total	2.797,630

American Oil shows an increase of 61,344 cases and Russian of 72,792 cases over the previous year. while Langkat, which contributed 132,125 cases to the total in 1898, has entirely disappeared from this market.

By taking into account the fact that the production of native Oil has considerably increased, it shows that the demand for Refined Oil in this country is still a growing one, in spite of the large increase in the use of the electric light in most of the principal cities of the empire.

Prices during the period under review showed a rising tendency, the lowest point for American being yen 2.19 and the highest 3.10; Russian Oil, lowest point yen 2,15, and the highest 3.05; Russian Tank Oil in bulk, lowest point 2.70, and the highest 2 40.

Japanese Oil in the Echigo District.—As the industry is carried on by private individuals as well as regularl constituted companies, it is somewhat difficult to obtain a reliable business record of the output. Up to 1898 the total quantity was estimated at 600,000 cases per annum, but since that date there has been a considerable augmentation, and it is now computed to have reached 1,500,000 cases.

The principal district for the sale of this Oil is Kwansai, or the South West of the Island, which is in direct communication, but as the production increases the Oil finds its way to other markets, notably Tokyo. It is expected that considerable developments will take place, and that the figures already cited will be much larger in the near future.

Brown Sugar.—The difficulties in Manila tended to make supplies from the Philippines erratic and small, and generally a higher range of prices ruled than during the previous season. The Takow Crop, favoured by absence of Import Duty, continues to find a ready market in Japan, and a large proportion of this Sugar is now of a much better grade than used to come here and which was formerly diverted to the North of China. The trade, as mentioned in last year's Report, continues to be principally in the hands of Chinese and Japanese, the latter buying direct from the foreign firms established in Formosa. Formosa has also supplied small quantities of a low grade White Sugar, handmade.

White Refined Sugar.—The import to Yokohama for the past year shows a heavy reduction on that of 1898, the difference, some 800,000 piculs, being partly due to the higher rates of import duty imposed since the first of January 1899, in anticipation of which large supplies were received in the latter part of 1898.

A considerable portion of the receipts have been of North German and Hungarian Beet Sugars. The Japanese refineries at Osaka and Tokyo have increased their output of late, which to some extent accounts for the lessened demand for imported refined.

In previous years regular shipments of Refined Sugar used to come here from a Refinery in Canada, but the new Tariff has effectually stopped these, as Canada, not having joined the Tariff Convention, has to pay the Statutory Rates on any of her goods, and the difference in the two rates on Sugar is yen 1.001 picul, or approximately 12 per cent.

America and Canada.—Trade with these countries, especially the former, shows a marked advance. Shipments from Pacific Coast ports are growing rapidly, as is evidenced by the fact that although seven regular lines of Steamers are now in operation shippers complain of a want of tonnage. This would doubtless be remedied by the S.S. Co.'s were there an equal demand for space on the outward voyage from China and Japan.

IMPORTS FOR ALL JAPAN.

The past twelve months have been remarkable for the rapid, continuous, and world-wide advance in the prices of the chief staples of commerce. These increased costs have not yet affected the value of imports to Japan to their full extent, owing to the system of forward contracts upon which the trade is so largely conducted, but still they form an appreciable factor in considering the values shown by the Customs, especially during the latter half of the year.

The increase in price having been continuous, it follows that every purchase resulted favourably for the buyer, and the past year must have given very satisfactory results to every Japanese dealer in imported goods.

The Foreign importer has shared in this prosperity, but only to a limited extent, owing to the preponderance of contracts in advance. The gain to him has come in the form of prompt clearances of all arrivals, the opportunity for enforcing the delivery of former contracts, and effecting the sale of old stocks. The advance in price was not followed to any extent in its earlier stages, but as the forward movement gained strength in European markets, Japanese buyers, encouraged by the profits they were reaping on earlier contracts, purchased very freely during the closing months of the year for arrivals in 1900.

The year's trade has therefore been satisfactory from an individual point of view, but the total figures reveal the fact that the backward tendency shown in the report for 1898 continues to be a feature of Japan's trade, and that in a year when commerce and industry in the principal countries of the world has been advancing by leaps and bounds, there is an actual falling off in the share carried on by Japan, even after taking into consideration the difference resulting from the diminished import of Rice.

In comparing the statistics of the Import trade for 1899 with those of previous years, it is necessary to bear in mind, not only the general advance in prices, but the changes brought about by the operation of the new tariff, which came into force on the first day of the year. Formerly, duty was levied on the cost of goods, but under the new system it is levied upon the cost laid down in Japan. Further, the quantities of all textiles are now entered by the square yard instead of the lineal yard.

These differences do not affect the statistics of the whole trade, as those goods coming in duty free, such as Raw Cotton, Wool, Rice, Beans, etc., are probably entered at the Customs on the same basis as in previous years. Taking these matters into consideration, and basing calculations upon those items where the difference can be accurately estimated, it seems reasonable to conclude that about 20,000,000 *yen* should be deducted from the total figure for 1896, in order to make a fair comparison with the previous year. The figures for the past eight years will therefore be :—

1892	71,324.776
1893	88,257.172
1894	117,481.995
1895	129,260,578
1896	171.674,474
1897	219.300.772
1898	277,270,723
1899	220,050,983

IMPORT OF FOOD STUFFS.

The chiefs decrease in the year's trade is to be found in this group of articles. Rice has decreased owing to abundant harvests at home; Sugar and Flour, partly owing to the increased tariffs, and partly owing to large imports in 1898, to avoid those tariffs. The actual consumption of both these articles is increasing.

IMPORT OF MACHINERY AND RAILWAY MATERIAL

The decline in industrial enterprise, which really set in during 1896, but did not show in the returns of imports until 1898, is more evident in the following figures :—

	1899. Yen.	1898. Yen.
Railway Material ...	58.199	625.671
Rails	435.054	2,631,721
Locomotives and Rolling Stock ...	2,649.746	5.434.568

Materials for Bridges and Buildings ...	not specified	not specified
	24.156,786	12,888,831

IMPORT OF MATERIALS FOR MANUFACTURES.

Much of the machinery imported in previous years came into operation this year and the result is shown in a larger import of Raw Materials. The diminishing imports of Cotton Yarn are, of course, partly accounted for by the competition of the native mills, which are also now largely engaged in manufacturing for export to China. Some of the increase shown in this group must also be ascribed to the measure of protection afforded by the new tariff, for instance, in the case of Woolens.

The items mentioned in the above tables account for about 85 per cent. of the import trade, and the figures have been taken from monthly and annual returns of the foreign trade of the Empire, as compiled by the Department of Finance.

The stationary tendency of Japan's share in the commerce of the world is a matter well worth serious consideration. Probably there are several reasons, but the principal ones appear to be :

The inability of the nation to increase those productions suitable for export.

Tho unwillingness of the people to give privileges and benefits to foreigners, which, by encouraging the flow of capital to Japan, would enrich the country, indirectly pay for the excess of imports, and check that export of gold which threatens the stability of the country's finance.

It is true that the exports for 1899 show a satisfactory increase, when compared with 1898, but this is due to two accidental causes :

The large advance in prices, and

The consequent rushing forward of all available exports, for which the next year will have to suffer.

Taking these facts into consideration, it would appear probable that Japan has, for the time being, reached the limit of her exportable products, and as commerce is, in its first principles, a system of barter, the nation which has no exports will not obtain imports, unless it has something else to offer as an equivalent.

Speaking generally, the industries of Japan depend upon manual labour. The opportunities afforded by Foreign trade, the introduction of Railways, Steamships, etc., etc., appear to have absorbed the surplus workers, with the result that laborers have demanded and obtained an increasing rate of wages. At the same time, there is a tendency to carelessness and independence of the kind which results in the turning out of poor and unsatisfactory work, with an actual diminution in the product of the individual worker. As a consequence, the labour of Japan, while still cheap, according to Western ideas of remuneration, is not cheap when considered in relation to the output, and in many ways the cost for a given result is greater in Japan than in Europe or America.

The expensive nature of this reliance upon supposedly cheap labour, instead of upon the labour-saving inventions of the age, is easily illustrated. The cost of travelling from place to place in one of Japan's large cities is greater than either New York or London. The cost of transporting merchandise is greater than in Europe or America, and is further increased by the delays which often occur, and which result in cargo from Yokohama destined for points in Tokyo, less than 20 miles away, being over a week *en route*.

When the proportionate wealth of the people and their ability to pay these high charges is considered, the disadvantages under which Japan now labours in her competition with the world can easily be estimated. This competition is growing fast. The establishment of Spinning Mills in China is already progressing, and the imposition of even a small protective tariff would deprive Japan of her market for Yarns. The coal trade is threatened by the mining concessions recently granted by China to Europeans. The looms of the West are now producing mercerised cottons, nearly resembling silk while being more serviceable, and thus the piece silks produced in Japan will have a serious competitor unless the quality can be made more even and reliable than it is at present.

The future growth of Japan's trade depends largely upon the introduction of labour-saving appliances and machinery upon a large and extended scale, and this brings us to the second point namely, the unwillingness of the people to give privileges and benefits to foreigners; the apparent inability to recognize that capital cannot be introduced without allowing the owners to direct it, and to share liberally in the results; the necessity of showing in every way that the interests of such investors will be guarded and prompt redress given for any injuries.

The nation recognizes that something is lacking in order to enable them to maintain the progress of former years, and for sometime past have expressed their desire to welcome foreign capital. But there is no idea of making sacrifices in order to bring this about. So far, it is an idea of the individual, who sees direct personal gain to himself, as, for instance, the land-owner, who would like to dispose of his land at two or three times its proper value or the shareholder who would prefer a large market for his investments.

Any suggestion that foreign capital should reap more than an ordinary interest on its investment, or should be controlled by its own-

Digitized by Google Original from CORNELL UNIVERSITY

ers, is looked upon as a direct injury to the country.

The establishment of any industry in Japan by foreigners, even though it pays the latter a good profit, is of far greater and more lasting benefit to the people as a whole; they receive the large disbursements of the capital, and gain at the same time a knowledge of Western methods at their very doors, affording practical object lessons in a far better way than those gained by their efforts to establish their own undertakings. It is impossible not to admire these efforts, often made in the face of difficulties arising from lack of money and experience, as well as the fact that the workmen are untrained.

In America, the growing cities vie with one another in their efforts to attract industries to their districts. Free land, free water, freedom from local taxes, for a period of years, are very general; oftentimes the assurance of a certain amount of City work, and occasionally the payment of an actual cash bonus are offered by communities which realize that Capital must have inducements, and that the local disbursements of any industry benefit the district as a whole, and in doing so, tend to the benefit of the individual.

Probably no country in the world has made more rapid and actual industrial progress, during the past 10 years, than Russia, and it has been accomplished by recognizing the fact that, if capital is desired, it must be treated liberally.

The duty on machinery has been specially remitted, French, German, and latterly American companies, have been give privileges and concessions, and have been further induced to establish their works in Russia, by the guarantee of a certain amount of Government work on favourable terms. The result is that Russia, which a few years ago was considered a purely agricultural country, is now rapidly coming to the front as a manufacturing country.

The principles are the same in both instances. The country or district, as a whole, makes the sacrifice and receives the reward. The capitalist is allowed to follow his own methods in his own way, and however large his profits may be, it is recognized that they do not detract from the distinctly greater benefits derived by the surrounding people from the establishment of large, well-managed and enterprising industries in their midst.

There will be no great flow of capital to Japan until these same broad and liberal principles are adopted, and the sooner the idea of great individual benefits for themselves without a corresponding reward to the foreign capitalist is exchanged for a more liberal attitude, the easier it will be for Japan to advance, commercially, politically, and socially.

We have only to look back 40 years to recognize the great progress made by Japan, and the fact that this has been largely accomplished on their own initiative, is a tribute to the energy and enterprise of the people, but in considering the advance already made, there is a tendency to overlook the fact that the recent ratio of progress in some Western countries has been even greater than that of Japan, and that advantage should be taken of the outside means for advancement, which are available.

Freights.—The Conference of Steamship Owners in the London and Continental trade has been maintained, and an advance of 5/- per ton established, Rates closing at 45/ for general cargo and 40/- per B Class. Waste Silk yen 25 per 40 cubic feet.

New York via Suez.—Rates throughout the year have been influenced by competition of the Pacific Lines, the highest point touched being 27/6 per ton of 40 cubic feet.

America and Canada via Pacific.—There has been keen competition for Cargo between the rival Companies, and rates by this route, which have never been lower, must have proved most unremunerative, Tea being 65/100c. per lb. and measurement Cargo $9 per ton of 40ft. to New York and Overland points.

Exchange.—Reviewing the year 1899, Exchange opened on the 4th January at T.T. 2/0⅝ and 4 m/s. credits 2/1½, rising almost at once to 2/0⅝ and 1/1⅝, at which they remained almost steady until March, then falling to 2/0½ and 2/0⅜ respectively.

In April rates rose to 2/0⅝ and 2/1, at which they remained practically without fluctuation until the latter part of August, when they fell to 2/0⅜ and 2/0¼, gradually drooping until the end of the year when 2/0¼ was touched for T.T.

The most important feature of the year was the large exodus of gold from this country to both British India and America.

During the Autumn a large silk business was done and the prices obtained had hitherto been unheard of.

The membership of the Chamber now totals 93 against 87 in the previous year.

YOKOHAMA FOREIGN CHAMBER OF COMMERCE.

E. & O. E.

Examined and found correct, March 28th, 1900.

J. E. BEALE, Secretary.

P. C. POTTS,
W. G. MACVICAR, } Auditors.

Yokohama, March 28th, 1900.

The CHAIRMAN, in commenting on the report, referred to the paragraph calling attention to irregularity in size and want of cleanliness in silk filatures, which he said was a very unfortunate condition and one which would undoubtedly tell against the development of the export trade of Japan. Regarding the paragraph referring "to the regrettable lack of commercial integrity so frequently manifested in Japanese trade," he said special attention had been called to the matters in question in the hope that some steps might be taken by Japanese suppliers to prevent a recurrence of them, as not only did such a state of things seriously interfere with the operations of the export houses, but it would inevitably react upon the export of the article, which, instead of becoming an increasing one, as it had been hitherto, might probably decrease. With regard to tobacco, the trade in that article, as they would observe from the statistics, had very much fallen off, a fact which, as explained in the paragraph referring to it was due to the Government monopoly, and to the system which at present prevailed which was of such a character that it made it extremely difficult to deal in the article. Those firms which were interested hoped some steps would be taken whereby a means might be provided of buying direct from Government Agents instead of having to send buyers into the country to negotiate with the holders there. These were the principal points with regard to the export trade. After a few passing references to the report on the import trade, Mr. Mitchell referred to the table of fluctuations in currency, observing that the currency having now been placed on a gold basis, the variations in exchange had not been very violent. At the same time there had been a distinct drop between the beginning of 1899, (lowest and highest rates for January 2/0 13/16 and 2/0 15/16) and the end of the year (lowest and highest rates for December 2/0 7/16 and 2/0⅜),

Digitized by Google
Original from CORNELL UNIVERSITY

and since the latter date the course of exchange had unfortunately been still downward. Referring to the statement of accounts Mr. Mitchell called attention to the fact that in 1898 the Chamber commenced with a balance of *yen* 1.63, and they closed 1899 with a debit balance of *yen* 117 81. This deficiency properly speaking should not have come into the year 1899. Owing to the unfortunate decease of Mr. O. Keil the accounts were not found to be in perfect condition and some of the amounts which should have been debited to 1898 had come into 1899. The results of the year were better than the previous one although there was an apparent deficit.

On the motion of Mr. LINDSLEY, seconded by Mr. STROME the accounts were passed.

THE TIFFIN HOUR.

The CHAIRMAN then called attention to the paragraph in the report referring to the alteration of the tiffin hour. He said the Committee offered the proposal merely in the form of a suggestion for the consideration of the members of the Chamber. They suggested whether it was not advisable in view of the existing circumstances and the changing conditions of trade to alter the tiffin hour from 12 to 12.30. As a matter of course each member would be entitled to follow his own inclinations, but the Committee wished to gauge the general opinion on the desirability of the step. A circular sent round with the view of ascertaining the opinions of the members had resulted in 93 replies. Forty voted for 12.30 and for a Saturday half-holiday if possible. It was customary at present for some offices to close on Saturday's and others not to do so. He thought that in many instances the keeping open of offices on Saturday was not necessary; it was more a question of custom than anything else. To close them whenever practicable would be desirable in order to allow the juniors time for healthy recreation which they were sometimes denied. As he had said, 40 voted in favour of the change to 12.30, 26 were in favour of leaving the matter to the discretion of individual employers, and 11 were in favour of no change; the remainder expressed no opinion.

Mr. FLINT KILBY supported the proposal. He said in any business centre in the world a tiffin hour extending over two hours would be met with derision. When he first came here the time allotted was one hour. When people began to live on the Bluff it extended to an hour and a half, and now it had grown to two hours. It was very inconvenient if one could only count on seeing people up to 12 o'clock; it made business hours very short. He thought the Saturday half-holiday very desirable; juniors were entitled to look on Saturday as a half-holiday whenever it was practicable to let them have it. He would propose that the Chamber recommend the adoption of 12.30 as the recognised hour for tiffin, and also the observance of Saturday afternoon as a half-holiday whenever possible.

Mr. JAMES DODDS said he was quite in accord with the remarks made by Mr. Kilby, and he would second the proposal.

The motion was carried *nem con.*

SILK.

Mr. W. B. WALTER, referring to the paragraph in the report with regard to the mixed quality of silk, said this was such an important matter that it would almost appear desirable that the Chamber should take some further steps in the matter. He would suggest that the incoming Committee might perhaps address the different Japanese Chambers of Commerce or merchants in the silk districts drawing very strongly to their attention the necessity of improving the quality of the silk. More care and integrity would greatly improve the value of the export, and would also give greater confidence than now existed, and without which there was danger of a falling off in the trade. The custom of mixing was very objectionable.

The CHAIRMAN—This is merely a suggestion for the incoming Committee?

Mr. WALTER—Exactly.

The CHAIRMAN said it would be a useful matter to take up, as silk was one of the most important articles of export from Japan, and the better the quality reached the better were the chances of trade.

THE CANADIAN PACIFIC MAIL ROUTE.

Referring to another matter, Mr. WALTER said he understood that the mail contract which existed between the British Government, the Canadian Government, and the Canadian Pacific Railway Company came to an end some time next year. This contract had greatly improved the mail service, and had enabled them to get letters from Europe within from 25 to 30 days, whereas before 35 to 38 days was the usual time. The service had been highly appreciated in Japan, and it would be probably useful if some representations were made from that Chamber to the Postmaster General of England, and also the Government of Canada, setting forth the usefulness of the service and the extent to which the commercial community in Japan were indebted to it. The matter might be worth the attention of the Committee. The Committee had been kind enough to make mention of his name in the report. He thanked them most heartily, and assured them that after the long connection he had with the members of that Chamber it was with great regret that he saw the connection severed. He could only hope that he might have the pleasure of meeting members in Europe and renewing their long acquaintance (applause).

The CHAIRMAN said with regard to the mail contract they would all fully endorse Mr. Walter's remarks as to the great improvement in the delivery of mail matter. The distance in time between that country and America and Europe had been reduced by the reliable and regular service which had been established by the Canadian Pacific Railway Company, and he thought he could say that it would be a subject of great regret to all if it were to be discontinued (hear, hear).

Mr. FLINT KILBY spoke at some length on the question, but his remarks were not completely audible from the reporters' table. He was understood to lay stress on the regularity of the service and the fact of the Canadian Pacific being the shortest trans-Pacific to Europe. He pointed out that the other trans-Pacific mail lines were subsidised by their respective Governments and argued that it was to the interests of Great Britain and also of the commercial community of the Far East that the Canadian service should be efficiently supported. For passengers, for letters, and especially for parcels the Canadian route offered great advantages. It enabled samples of shipments from Europe to arrive practically 30 days before the goods arrived, which was a very great advantage. Mr. KILBY dwelt on the changes which had taken place in the Pacific trade during his own recollection. When he first came to Japan there was one steamer a month, which occupied 30 days in transit; now there were the services of the San Diego, Pacific Mail, Occidental and Oriental, Toyo Kisen Kaisha, Northern Pacific, and Nippon Yusen Kaisha lines, and numbers of outside steamers. The nature of the trade, too, had greatly changed. Twenty-seven years ago the cargo from the other side was practically *nil*. He thought the Canadian Pacific service might very advantageously be extended, and he would therefore propose that in view of the advantages of the quick trans-Pacific mail service *via* Vancouver it was desirable that the present mail contract between H.B.M.'s Government of Canada and the Canadian Pacific Railway be renewed, and that additional steamers should be added to the fleet in order to arrange for a fortnightly service throughout the year if possible, the continuance and extension of the service being of great importance to the well being of trade in the Far East.

Mr. LINDSLEY seconded the motion.

Mr. BUDD pointed out that there was some inconvenience attaching to the departure of the mail from London on Friday, as many things which were made up at the end of the week could not be forwarded. Was it not possible to make representations with a view to the selection of Friday night or Saturday morning? That would be very advantageous to Japan and North China.

Mr. LINDSLEY suggested that the matter might be met by representations to the C. P. R. headquarters.

Mr. BUDD, in reply to the Chairman, said he did not wish to submit a proposition. He merely made a suggestion to the Committee.

Mr. Flint Kilby's motion was then put and carried.

THE REPORT ADOPTED.

The report was then formally adopted on the proposition of Mr. HUTCHISON, seconded by Mr. BENT.

COMMITTEE.

The CHAIRMAN then introduced the next item of business—the election of a Committee for the ensuing year. He said the retiring Committee consisted of himself, Messrs. Kilby, Robison, Mollison, Holm, Middleton, Woolley, Dodds, and Budd. Mr. Robison and Mr. Mollison had left Japan, and Messrs. C. V. Sale and J. Kern had replaced them. Mr. Budd wished to withdraw, and he (the Chairman) must also retire, as he was leaving shortly. He thought it was very desirable that there should be someone to represent the banking interest, and he would suggest Mr. Baker.

Mr. BENT suggested Mr. Jackson.

The CHAIRMAN said Mr. Jackson had been asked on a previous occasion and had declined to act. Of course he (the Chairman) could not say whether he would do so now.

A ballot was taken and resulted as follow:—Mr. Flint Kilby, Mr. James Dodds, Mr. Alf. Woolley, Mr. H. J. Holm, Mr. Baker, Mr. Lindsley, Mr. C. V. Sale, Mr. J. D. Hutchison, Mr. Kern.

LEGAL ADVISERS

The CHAIRMAN mentioned that Messrs. Lowder and Akiyama had offered their services as legal advisers to the Chamber without payment of any retaining fee, and had offered to give advice on any matters of minor importance free of charge. Of course if any question demanding time and consideration arose a regular barrister's fee would be charged. Occasions might arise when the advice of a competent resident barrister would be necessary, and as the acceptance of the offer did not bind the Chamber to any expenditure he should be disposed to recommend closing with it. Messrs. Lowder and Akiyama, he might mention, had already given an opinion on one point without making any charge. He would propose that the Chamber retain Messrs. Lowder and Akiyama as legal advisers.

Mr. HOLM seconded and the motion was carried.

THE BANK CLEARING HOUSE.

Mr. HOLM referred to the closing of the Bank Clearing House at 2 o'clock, which he said was quite an unusual hour, and was exceedingly inconvenient, as it was almost impossible to pay in a cheque in the afternoon in time to go through the clearing house the same day. He would suggest that the foreign banks should see whether the hours during which the clearing house was open could not be extended a little.

The CHAIRMAN—Do you make that a proposal?

Mr. HOLM—I think it will be sufficient if it goes on the minutes.

COMPLIMENTARY.

Mr. FLINT KILBY proposed a hearty vote of thanks to the Chairman, and expressed the hope that they would soon see him back among them.

Mr. DODDS seconded.

The CHAIRMAN suitably acknowledged the compliment, and acknowledged in warm terms the help which Mr. Flint Kilby had afforded him, and the interest he took in the affairs of the Chamber. He also proposed a vote of thanks to the Auditors, and to Mr. Sale for his very able report upon the import trade throughout Japan.

Mr. KILBY seconded and the motion was carried. The meeting then terminated.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom).

SOUTH AFRICA.

To the Editor of the "Japan Mail"

Sir,—I have always admired the calm and unprejudiced spirit in which you have commented on current events here and abroad. In spite of your own statement that you have no confidence in your ability to be impartial in the matter of this South African War, one has a right to expect something much better in its defence that such a quotation as that from John S. Seymour, to say nothing of that from the *Christian Guardian* of Canada. I am surprised that you should suggest that the former could be an impartial witness when you yourself say he is the "Legal Representative before the State Department of the Americans in the Transvaal." In other words, he is a paid advocate, and undoubtedly, to judge by the communication you quote, he is trying hard to earn his salary. I have read his communication with great care and it is as unfair and one-sided a plea as he could well make. He simply perverts history all the way through; notably in his account of the great trek of 1835, the seizure of the Transvaal by the British in 1877, and the character of the Convention of 1884. If a man wants to know the facts in a great law case he will naturally look to the decision of the judge rather than to the plea set up by one of the lawyers in the case. The place to get the facts about the Boers and the British in South Africa is the standard histories of Geo. M. Theal and James Bryce and not advocate Seymour.

As for the quotation from the *Christian Guardian* the case is worse. It must be painful to Christian people to read such a passage. There is certainly not much of the spirit of the Sermon on the Mount about it. One part especially struck me: "One day in my office, in Johannesburg, the door was pushed open by a Kaffir, prone on the floor, dragging himself by his elbows. Thinking he was wounded, I rose to assist him. He grinned and handed me a letter. It was from a government official and the Kaffir was merely an apprentice messenger delivering a public document." I would really like to know, Sir, if you believe that. To me it seems that prejudice will hardly account for believing such "rot" as that—it calls for a credulity simply amazing. But the grossness of the passage from the *Christian Guardian* in which the Boers are referred to as "an ignorant band of vagrant hunters" and "a few thousand half civilized plainsmen" and "fanatic semi barbarians" is a very good illustration of that lack of a just, sympathetic, or charitable spirit which characterized the relations of the British to the Boers ever since they made a conquest of Cape Colony some hundred years since. Nothing can be said about the Boers that British are not gullible enough to believe.

It is doubtful, however, whether both prejudice and gullibility will suffice to account for the readiness with which the alleged great "South African Conspiracy" is seized upon as a fact, believed, and paraded before the world to blacken the Boer and justify the unrighteous war. There has been without doubt a great deal of conspiracy in connection with South Africa, but the only ones of which we have proof are those of the Chartered Company which resulted in the Jameson raid, and the conspiracy of the Uitlanders to assist Jameson to overthrow the Republic. It has now been proven by the Hawksley letters that Chamberlain was himself a party to this plot which culminated in an actual attack on a friendly State. British jingoes throughout the world were bitterly disappointed that the Jameson raid failed, and many openly expressed their feelings, but now we have these same people working themselves into a fine frenzy over an imaginary great South African Conspiracy among the Dutch.

This war is unnecessary. It can accomplish nothing which time and good-will would not have accomplished. It is wholly unjust. Even if the alleged wrongs of the Uitlanders were as bad as they are stated to have been—and what fair-minded person can doubt they are greatly exaggerated—they do not constitute a just cause for war. Commercial greed and official plotting on the part of the British, and intense distrust of the British Government and jealousy of the very semblance of liberty on the part of the Boers, is the real explanation of how this war arose. As to the causes they lie farther back.

I am sorry, Sir, that this war has to trust for its justification and defence to the *Christian Guardian*—with emphasis on the Christian—John A. Seymour, the paid advocate, and your recent correspondents "Canadian," and the writer who, with unconscious humour, signed himself "Fair Play." For my own part I can't understand why any Englishman should desire to justify the conduct of his country in a case like this. The more unrighteous the act the greater the anxiety and the more sophistical and the more specious does the reasoning of the doer become. That is the result of having a conscience. England is one of the rare countries whose people have a conscience and the day of reckoning will surely come when the frothy jingoes of 1899-1900 will take their place in the public memory along with the jingoes of 1776-1783, and the criminal aggression of Chamberlain and his tools which endangered, and possibly lost South Africa to the British Empire will be classed with that criminal aggression of George III. and Lord North which lost to her the American Colonies. It is impossible to believe that the conscience of England is at rest, and this is the rational explanation of the anxiety to assign a plausible reason for this unjustifiable attempt to destroy a brave little people, their nearest of blood kin in all Europe.

Yours truly, JUSTICE.

[Does our correspondent forget who began the war? Does he mean to say that England did? Does he think that England could have remained quiet when her territories were invaded by the Boers? He is wrong, if he will pardon us for saying so, when he asserts that the Hawksley letters prove Chamberlain to have been a party to any plot. A British Royal Commission, and more recently the House of Commons, have passed judgment on that matter.—Ed. *J. M.*]

CHORAL SOCIETY'S CONCERT.

In many respects the concert given by the Yokohama Choral Society in the Public Hall on Wednesday evening was a decided advance upon the opening performance of the season, and Mr. W. Karl Vincent, the conductor, is to be heartily congratulated on the result of his indefatigable industry and unwearying patience. Could he but strengthen the male portion of his choir by the addition of some half-score tenors and bass singers he would have little left to desire. But even with the scanty materials at hand he has achieved wonders, the *timbre* and tone as well as the training of the voices showing a marked advance upon the standard reached six months ago.

"The Ballad of Carmilhan" belongs to that series of pretty narrative poems which Longfellow strung together under the title of "Tales of a Wayside Inn." It deals with the legend of a ghostly spectre ship—a ship of the dead—called the "Carmilhan," which

> . . . haunts the Atlantic north and south,
> But mostly the mid sea,
> Where three great rocks lie bleak and bare
> Like furnace chimneys in the air,
> And are called the Chimneys Three.

The skipper of the *Valdemar*, then lying at anchor at Stralsund, by the Baltic, scoffs at the yarn and declares that should he meet the "Carmilhan"

> He would run her down, although he ran
> Right into Eternity.

The jolly sailor puts to sea and in the midst of the Atlantic is caught by a storm: when this is at its height the "Carmilhan" appears and close behind her the Chimneys Three. The vessel is doomed and only a cabin-boy lives to tell the tale.

Longfellow's poem has found a happy interpreter in Mr. A. D. Arnott. He has entered into the spirit of the eerie theme and produced a work, which, since its production at the Crystal Palace a few years ago, has steadily grown in public favour. Though not to be compared with the productions of the great masters of melody of the last century, the "Ballad of Carmilhan" comes well within the ranks of the second class. The cantata, in fact, is a good example of the modern romantic English school, and the composer appears to lean to the Schumanesque traditions rather than to those of Mendelssohn. To Mr. S. H. Somerton fell the work of the Narrator, and despite his recent severe cold, the singer did full justice to the music set for the baritone, particularly in "The jolly skipper;" "The lovely moon climbs up the sky;" and "All on board the Valdemar." Of the chorus work we have already spoken. The best, perhaps, after the opening, were the stanzas describing the approach of the storm and the shipwreck, while the closing chorus, telling of the saving of the Cabin-boy through the agency of the "Klaboterman," went exceedingly well. Particularly effective was the rendering of the descriptive passage, "There was a feeling of suspense"—a piece of realistic writing of high dramatic order. The effect upon the audience was quite creepy, for one almost felt the approach of the ship of doom.

Hearty thanks are due to Mrs. McIvor for her excellent service at the piano. The instrument at her disposal was sadly inadequate for a room so large as the Public Hall, and could scarcely be expected to adequately sustain such a work as this cantata, but she triumphed over these obstacles and brought out much of the beauty of the score.

The second part opened with a breezy chorus by *Goodhart*, "Earl Haldan's Daughter," which went very well, indeed; as did also King's "Sands o' Dee"; but of the smaller pieces those by Faning, "The Miller's Wooing" and "The Song of the Vikings" (both warm favourites at home) were the most acceptable as they were decidedly the more scholarly. Mrs. Payne's song, "Jong-Dieterich," *Georg Henschel*, was a very welcome contribution and was loudly applauded. The "Fantasie" arranged by Liszt for the pianoforte gave Mr. W. Karl Vincent another opportunity for displaying his versatility and wonderful command of the instrument, and the house clamoured for more. Mr. Somerton, not fatigued by his earlier exertions, also sang in excellent taste "Come now! for Vengeance haste I," an air from *Donisetti's* "Lucrezia Borgia.' Apart from the musical items was a recitation by Mr. G. G. Brady, "The Lifeboat," which was declaimed in capital style.

Altogether it was a most pleasant evening. A rather slim house assembled, but those present showed no lack of appreciation.

LAW CASE.

In the Yokohama Chiho Saibansho on Tuesday the case of Mr. H. Watanabe, of Otaru, Hokkaido, against Mr. W. S. Stone, came on for hearing before Judge Fujise. Plaintiff was represented by Messrs. Matsunaga and Shigeno and defendant by Messrs. Akiyama and Inouye. According to plaintiff he entered into a contract with defendant for the supply of 300,000 railway sleepers to be delivered at Otaru and Muroran. It was agreed that 100,000 sleepers should be delivered in March and a similar number in April, 1899, 60,000 in May, and 40,000 in June. Defendant, however, failed to take delivery within the stipulated period, and plaintiff thereby incurred an extra outlay. The plaintiff claimed the return of a cheque for *yen* 4 000 deposited with defendant as security, and also payment of *yen* 1,828.66. The hearing was adjourned.

IN AND AROUND BOSTON.

(WRITTEN FOR THE "JAPAN MAIL.")

Since my last the Thanksgiving and the Christmas Holidays have come and gone. The former, I presume, is observed more heartily and more generally here than anywhere else in the world, although it is now recognized in every American community at home and abroad.

It is interesting to note the relation in which the two holidays stand to each other. As a season of pure joyousness and care-free pleasure-making, Christmas unquestionably takes the lead; and this, from the nature of the case, makes it the favourite season of the young. As a family institution, including the young and old, and relating to family reunions, Thanks-giving, in New England, at least, is still far ahead of all other seasons. It was the writer's privilege to attend one of these characteristic family reunions when children and grand-children numbering over forty met in the old home-stead to join with the head of the house in the customary joys of the day. As to religious services, while they are now very generally held on both days, I am inclined to think that Christmas is the favourite in Roman Catholic and Episcopal Churches, while Thanksgiving is observed more largely by other Protestant denominations.

What has impressed me most is the large amount of benevolent work done at both seasons. The Salvation Army fed thousands in Boston and New York, and doubtless in many other cities, and literally scores of societies vied with each other in making the time one of joy to the less prosperous part of society. The care shown by employers for their employes was simply wonderful. One firm, for example, gave a turkey to every employe young and old, numbering hundreds in all. More than one society started out with the purpose that no family in the city should go unremembered. The inmates of hospitals, asylums, and penal institutions of various kinds—none of them were forgotten.

Whatever may be the truth in regard to the Church, the gospel of good-will is certainly being preached widely in this community. For example, here is an extract from the report of one of many organizations. I omit the part referring to directly religious work and give only the philanthropic part of it:—

Employment secured for 426 persons.
7,879 garments given to the poor.
Pecuniary aid afforded to 1,335 families.
37,370 street car tickets and 3 820 harbour tickets distributed.
6,338 persons enjoyed a day's vacation or a visit in the country.
913 families remembered at Thanksgiving.

Who can estimate the happy influence of such work carried on as it is year after year?

I write this in Princeton, the highest town in Massachusetts. A few miles west of this and in plain sight in the town of Rutland is a State institution for the treatment of consumption. It was located where it is because of the elevation and the pure, dry air. The chief peculiarity in the treatment is that even through the cold winter the patients are most of the time without fire. They rise about 8 and have heat (52°) while at breakfast. Then the heat is drawn off and the windows opened till luncheon, which they take in warmed rooms after which the heat is again taken off. In the evening again for an hour a temperature of 52° is granted them and from 9 till 8 the next morning the windows are all open and the heat withdrawn.

They feed them well, three full meals and three lunches besides, and of course abundance of clothing is a necessity, but the main reliance is on the cold—and they claim remarkable results, over sixty per cent. of all the patients received.

This manner of living does not seem greatly different from that of an ordinary Japanese house. Might not some elevated spot be found with comparatively dry air where this method of treatment could be tried?

I see that the discussion of the "Century question" has reached even to Japan. It still rages here, though it shows signs of moderating. Viewed as a numerical problem the concensus of opinion coincides with that of the *Mail*. But when we go deeper and ask—"Have 1900 years elapsed since Christ was born?" a new element enters the discussion. The fact that our era was undoubtedly fixed four or five years too late makes it clear that more than 1900 years have fled since the Advent. While, therefore, we should regard this as the last year of the 19th century, it is unquestionably true that we have already entered upon the twentieth century since Our Lord was born.

The latest catalogues of the ten leading American Universities show their respective registration figures as follows: Harvard, 5250; Columbia, 3729; Michigan, 3346, Yale, 2688; Pennsylvania, 2651; Cornell, 2645; Wisconsin, 2025; Chicago, 1680; Princeton 1194, and Johns Hopkins, 632. Harvard also has the largest academic department with 1897 men, Cornell leads in scientific students with 795. Columbia's registration in medicine, graduate schools, and teachers' courses is greatest, having 767, 383, and 356 students respectively.

To many readers the greatest surprises in the above will be Columbia and Michigan. What the future of these institutions will be it would be hard to prophesy. So many of them have recently inaugurated young men as presidents that we may confidently look for great progress all along the line. Harvard's plan to welcome a large number of Cuban teachers to her summer schools is but one instance of this.

M. L. G.

LAW CONCERNING TELEGRAPHS AND TELEPHONES.

The following are the most important articles of this law:—

Art. I.—Public telegraphs and telephones shall be exclusively under the supervision and control of the Government.

Art. II.—Telegraphs or telephones of the nature specified below may be established as private undertakings in accordance with the provisions of the Imperial Ordinance:—

1. Wires for private use in a residence or compound.

2. Wires in connection with railways or other enterprises which require the exclusive use of telegraphs or telephones.

3. Wires provided in a City, District, Town, or Village for the management of its public affairs, or for securing communication between its public offices and those of an adjacent district, or for connecting such offices in a District or Town with the Central Authorities.

4. Wires for the exclusive use of a private individual for the transmission of telegraphic messages in connection with a Government telegraph office.

5. Wires for the exclusive use of a single individual or for professional purposes within a City, District, Town, or Village alone, or in conjunction with an adjacent district, or in places where means of telegraphic or telephonic communication exist, but where the method specified in Paragraph 4 is considered unsuitable.

Art. III.—The Minister of State concerned may cause the aforesaid telegraphs or telephones to be used for public messages, or for messages relating to military affairs of great importance.

Art. IV.—The Minister of State concerned may, if he deems it necessary for the public welfare, decide the limits of a message, or suspend or restrict messages.

Art. IX.—The Government reserves the right of using a portion of a railway station or station buildings for purposes of telegraphs or telephones. It may also issue orders, if deemed necessary, for the construction of new, or the alteration of old buildings.

Art. XI.—Articles exclusively employed in the transmission of telegraphic and or telephonic messages shall in no case be distrained. Neither shall taxes in any form be levied on them.

Art. XV.—Telegrams that cannot be delivered to the addressee shall be advertised, but in case the same are not claimed within 30 days from the date of such advertisement, they shall be destroyed.

Art. XVI.—The telegraphic authorities may, if they deem it necessary, demand the explanation of secret words or private marks in a telegram, and, in case the sender refuses to comply with the demand, the telegram will be rejected.

Art. XXVII.—Any person establishing telegraphic or telephonic communication without sanction, or failing to discontinue it within the period specified by the authorities after the withdrawal of such sanction, shall be liable to a fine of not less than 5 *yen* and not more than 100 *yen*, besides confiscation of the wire and apparatus used.

Art. XXIX.—Violation of Articles III. and IX. shall be punishable by a fine of not less than 5 *yen* or more than 500 *yen*.

Art. XXXI.—Any person encroaching upon the secrecy of messages dealt with at any telegraph or telephone office shall be liable to major imprisonment for a term of not less than 1 month and not more than 1 year, together with a fine not exceeding 20 *yen*. If such offences are committed by persons in the service of telegraph or telephone offices, the penalty shall be aggravated by one degree.

Art. XXXII.—Any person attempting to evade by fraudulent means the charges or fees for telegraphic or telephonic messages shall be liable to a fine not exceeding 100 *yen*.

Art. XXXIII.—Any person transmitting a fraudulent telegram or telegrams with a view to making profit for himself or others, or inflicting injury upon others, shall be liable to major imprisonment for a term of not less than 1 month and not more than 5 years, and to a fine not exceeding 50 *yen*.

Art. XXXV.—Any person who without substantial reason opens, damages, conceals, or throws away telegrams passing through the telegraph offices, or delivers the same to persons other than those to whom they are addressed, or any person who knowingly receives telegrams not addressed to him or obstructs their transmission or delivery, shall be liable to major imprisonment for a term of nor less than 1 month or more than 2 years, in addition to a fine of not exceeding 20 *yen*.

Art.—XXXVI.—Any employe refusing to transmit messages or causing delay in their delivery without substantial reason, shall be liable to a fine of from 4 to 40 *yen*.

Art. XXXVII.—Any person damaging telegraph or telephone wires, or apparatus, or buildings, or obstructing the transmission of messages, shall be liable to major imprisonment for a term of not less than 1 month and not more than 5 years, in addition to a fine not exceeding 50 *yen*.

Art. XXXVIII.—Any person obstructing the repairs or laying of telegraph or telephone wires, or impeding surveying or inspecting operations, shall be punishable by major imprisonment for a term of not less than 1 month or more than 2 years, and a fine not exceeding 20 *yen*.

Art. XL.—Any person anchoring a ship, or engaging in fishing or gathering sea-weeds, or taking sand within the limits allotted to submarine telegraph or telephone cables, or any person tieing a boat or raft to the signs indicating the number of these cables, or damaging such signs, shall be liable to a fine of not less than 5 or more than 100 *yen*.

Art. XLII.—In case offences specified in the foregoing articles are committed by the agents or employer of a juridical person, or by other persons concerned, in regard to the occupation or business of such juridical person, the penal provisions shall be applied to the juridical person. In cases, however, where sentences of imprisonment are provided, they shall be commuted to a fine not exceeding 300 *yen*. In the

Digitized by Google Original from CORNELL UNIVERSITY

prosecution of juridical persons their representatives shall be regarded as defendants.

Art. XLVI.—These regulations shall come into operation from the 1st of October in the 33rd year of *Meji* (1900).

Art. XLVII.—Any person who prior to the promulgation of this Law has obtained permission for the establishment of private telegraphic or telephonic communication in accordance with the Telegraphic Regulations, must apply for a fresh licence according to the provisions of the Ordinance.

TELEGRAMS.

(Reuter's Special Service.)

THE BOER WAR.

Shanghai, March 23.

Chamberlain has telegraphed to the Australian Governments that the War Office offers 114 commissions in the infantry and artillery to Australians.

Apparently some negotiations are proceeding. It is said that communications are passing between London and Pretoria. Milner's whereabouts is unknown. It is assumed that he is at Bloemfontein, where it is believed that parleying is also going on.

All the Powers have now answered the Boer appeal in the negative.

Gatacre and Brabant are sending flying columns in all directions. There is practically no opposition.

A temporary bridge is fast being built at Norvals Pont.

The British have occupied Rouxville and Smithfield.

Later.

Reuter learns that there have been no negotiations between London and Pretoria since Salisbury's reply to Kruger. The only correspondence refers to the treatment of the wounded and prisoners. The parleying at Bloemfontein refers purely to local matters.

Clements is marching towards Bloemfontein via Philippolis and Fauresmith.

A large Boer force from Mafeking is advancing against Lobatsi.

Shanghai, March 25.

Clery has recovered, and has assumed command of Lyttleton's Division, Lyttleton taking command of the Ladysmith Division.

Lord Kitchener is returning from Prieska to Bloemfontein.

Lord Roberts reports that the country to the southward of Bloemfontein is generally settling. The people are bringing in supplies. The movements of the troops in the Western districts are being attended with good results.

Shanghai, March 24.

Milner has arrived at Colesberg from the northward, and has proceeded to Stormberg.

The Times correspondent telegraphs from Bloemfontein that Kruger has issued a proclamation annexing the Free State and that Steyn has issued a counter-proclamation declaring the Free State intact.

[Note.—The telegram reaches us in the above form, but we imagine that the words have been transposed by accident, and that the proclamation annexing the Free State has been issued by Milner and the counter-proclamation by Kruger and Steyn.—Ed. *J.M.*]

The Times correspondent wires under date of the 22nd that the date of the departure of the Mafeking column from Kimberley is still unfixed.

French has arrived at Thaba Nchu. Further artillery firing across the River at Warrenton took place on the 21st and 22nd inst. The British scouts approaching the river were met by a hot musketry fire and were unable to retire until darkness set in.

The rising in Griqualand seems to be collapsing.

The *Times* correspondent telegraphs from Buluwayo under date of the 19th that after a sharp artillery duel on the 16th, at 2,000 yards range, Plumer retired from Lobatsi under cover of the darkness to Crocodile Pools.

Later.

Roberts telegraphs from Bloemfontein under date of the 24th that on the 23rd inst. Capt Lygon, of the Grenadier Guards, Captain Trotter, of the same Regiment, and Captain Codrington, of the Coldstreams, rode unescorted eight miles beyond the camp on the Modder River, and were fired on by the Boers. Captain Lygon was killed and the others were severely wounded.

General Woodgate has died of his wounds.

Shanghai, March 26.

Heavy rain at Warrenton has caused a flood of the Vaal river which may possibly delay operations there.

The Prince of Wales is to visit Paris for the Exhibition in April as the guest of the French Government.

Reuter's agent at Durban learns authentically that the Boer leaders, though knowing defeat to be inevitable, believe that they will be able to stand for six months, when they are convinced that foreign intervention will secure favourable terms for them. They rely on Germany and America. Wolmarans' deputation has gone to Europe with this object.

Four hundred Transvaalers have re-occupied Griquatown. A force has left Kimberley to expel them. It is reported that all the loyalists in Griquatown are imprisoned.

Clements has occupied Philippolis and read Roberts' proclamation to the assembled burghers, many of whom surrendered their arms and took oath not to participate farther in the War. The Landrost and sheriff were re-instated und erBritish authority.

Shanghai, March 27.

Field-Marshal Sir Donald Stewart is dead.

The checks encountered by both the relieving forces are causing much anxiety as to the fate of Mafeking. The latest news from that place is dated the 14th, when the Boers resumed activity after a week of comparative quiet.

The Times' correspondent telegraphs from Rouxville that Olivier with a strong force and 15 guns is moving on the north of Ladybrand.

The *Daily Chronicle's* correspondent, telegraphing from Bloemfontein, says that marauding bands of the enemy are raiding the farms of the disarmed burghers on the northward.

The Crown Prince of Japan landed at Marseilles on Saturday.

[Note.—This part of the message refers, of course, to H I H. Prince Kan-in, who is visiting the Paris Exhibition as his country's representative.—Ed. *J.M.*]

Later.

Wyndham states that 276 commissions are to be given to the colonies and 50 placed at the disposal of Roberts.

It is said that the Powers are arranging concerted action in consequence of the disturbed state of the country around Tientsin.

Shanghai, March 28.

The censorship is now very stringent. There is little news from the front, and practically nothing from Natal.

It is believed that Roberts will not advance until he is satisfied that his rear is secure. Meanwhile he is accumulating campaigning stores, notably boots and warm clothing.

French, with the Cavalry Division, has returned to Bloemfontein. He had no fighting, but numbers of burghers submitted.

The Channel Squadron is to remain in Dublin Bay throughout the Queen's stay in Ireland.

The fourth New Zealand contingent of 440 men has sailed.

The Imperial Australian Bushmen are rapidly organising, and will sail in the middle of April.

Shanghai, March 28.

Typhoid is raging among the prisoners on the transports at Simondstown.

Michael Davitt has arrived at Lourenzo Marques and is going to the Transvaal.

Reuters' correspondent telegraphing from Maseru on Monday, says that Col. Pilcher with a small force occupied, that morning, Ladybrand, driving in the Boer outposts. Large numbers of the enemy then attacked the British, who retreated after capturing the Landrost. The British casualties were three wounded; the Boers ten. It is believed that the Boers desire to hold the British in check while they save a convoy of wagons.

Shanghai, March 29.

It is officially announced that the total British casualties, including the sick, up to March 24, were over 19,000.

Lord Roberts is going to Cape Town to meet his wife. A forward movement is improbable for a month.

Colonel Clements has occupied Fauresmith and Jaggersfontein.

Sir Afred Milner is in Bloemfontein.

The Australian Prime Ministers have telegraphed jointly to Mr. Chamberlain that it is undesirable to conclude peace except on terms of absolute British supremacy in South Africa.

Reuter's agent telegraphs from Lorenzo Marques that Joubert is dead.

Pilcherd's reconnaissance captured the Landrost of Ladybrand before retiring. A strong force of Boers, presumed to be Olivier's command, subsequently occupied strong positions in the neighbourhood. It is believed that their retreat towards Kroonstad has been intercepted and that a battle is imminent.

Later.

Joubert died of stomach complaint. Delarey is ill and Smuts commands the Transvaal forces.

Crowther, not Olivier, reoccupied Ladybrand. It is believed that Olivier is beyond pursuit.

The *Terrible* has sailed for China.

An official statement from St. Petersburg is to the effect that the Russian Squadron on the Korean coast has sailed for Port Arthur.

Digitized by Google Original from CORNELL UNIVERSITY

Reuter telegraphs from Mafeking under date of the 16th that the investment is still relaxed, the enemy being concentrated on the north to oppose Plumer. There is sufficient food, but rations will shortly have to be reduced.

(Telegrams Received at the Legation of France in Tokyo.)

Saigon, March 23.

The morale of the Boers at Kroonstad is excellent. They await the battle with confidence. Kruger and Steyn are exhorting them to fight to the end for their liberty.

Only 1,000 men of the two Republics have been killed since the commencement of the war.

Saigon, March 24.

It is announced from Kimberley that several engagements have taken place near Warrenton.

The Boers have beaten the English in the neighbourhood of Lobatsi.

A rumour is current that Commander Olivier has beaten and captured General Gatacre near Bethulie.

Later.

The news of the capture of Gatacre by the Boers is not confirmed.

Saigon, March 26.

Baron Christiani has been pardoned and set at liberty.

[M. le Baron Christiani was condemned, in June, 1899, to four years' imprisonment in the sequel of the scandal on the Auteuil Race Course, when he assaulted the President of the Republic.—Ed. *J. M.*]

Saigon, March 27.

Mr. Ritchie, President of the Board of Trade, speaking at a banquet, formally denied the evil intentions towards France which certain journals had attributed to England after the termination of the war in South Africa.

Saigon, March 28.

The Chamber of Deputies, by a vote of 285 to 239, has declared confidence in the Government in connection with a question relating to the recent troubles in Martinique. The ministerial journals consider that the situation of the Cabinet is consolidated for a long time.

The official inauguration of the Universal Exhibition will take place on the 14th April.

M. Morel, Vice-Governor of the Bank of France, has been named Governor of the Crédit Foncier of France in place of M. Labeyrie, who has been named President of the Court of Accounts, President Boulanger being removed.

Saigon, March 29.

The Chamber of Deputies has commenced the discussion of a project of law relating to a Colonial Army.

All the Boers from the south of the Orange Free State have succeeded in gaining the north and are concentrated at Kroonstad.

(By Special Arrangement with the "Jiji Shimpo.")

Söul, March 29.

The Russian representative yesterday had audience of the Emperor to press his previously preferred demands for a lease of land at Masampo.

Later.

A Russian squadron has been sent to Chemulpo apparently in connection with the demand for an island, but the facts, being kept secret by the Court, cannot be ascertained.

Later.

The Russian Representative and Minister Hayashi are negotiating. Minister Hayashi is to have a meeting with the Minister of Foreign Affairs this afternoon. The affair seems likely to become a serious question.

Later.

Russia is not seeking to acquire an island, but is only endeavouring to procure a lease of land at Masampo.

Later.

The Russian Minister has informed the Japanese representative that Russia's action is not intended to impair the interests of Japan or to disturb the peace.

Later.

Three Russian ships are anchored at Chemulpo and four more have been sent for from Port Arthur to make a demonstration.

(By Special Arrangement with the "Nichi Nichi Shimbun.")

Söul, March 29.

The Russian Minister has preferred a demand for an area of land at Masampo, but for various reasons the Korean Government appears indisposed to concede the demand.

It appears that the Emperor has not yet definitely fixed the date of his visit to the naval manœuvres, but the 10th of April will probably be the time. Among the preparations for His Majesty's reception an electric illumination of the ships is mentioned.

17 Castles	B B3	34 R QK-4	P K5

and White resigned.

(a) Bad, as it enables Black to turn a defensive opening into an attack.

(b) 5—P to K B 4 is the only move to maintain the centre.

(c) This needlessly loses a Pawn.

(d) Forcing exchanges in view of his advantage for the end game. 14—Kt to B5 would have been strong, for White dare not Castle on account of Kt takes B and B to Kt 4.

(e) Better was P to B 3.

(f) If 22—P to K Kt 4—B takes R, 23—P takes R—B to K 7, &c.

(g) 22—R to R 4 was better.

(h) White might have improved his game here by 24—P to K Kt 4—R takes Kt, 25—K to Kt 2—R to B 4. 26—P takes R B to B 7 (ch), 27—K to Kt 3—Kt P takes P, and the game is about even.

(i) Weak. His game was 26—Kt to Kt 5—R to B 7, 27—P to R 3, with the better game.

(j) This move, which should have been played much earlier, forces the game.

17 RxR	R K	37 B Kt5	Q Q3(g)
18 RxRch	KKtxR	38 QxKt	Q Kt6ch
19 Q K3	QKt B3	39 K B-q	QxPch
20 Kt B5	K B-q	40 K K-q	
21 P KKt4	Kt Ktsq		

and Black resigned.

(a) We are very glad to see it. Tschigorin's move of 2—Q to K—2, although it has led to many interesting games, has not on the whole met with sufficient success to warrant its continuance, especially when, as in the present case, no doubt an opponent comes evidently prepared for the variation. Under such circumstances to persevere with one particular line of play would show an infirmity of mind rather than firmness of conviction.

(b) The best continuation. A strong player should not wish for anything better than a fair development with equal chances. If he is the better player he will win.

(c) Better than B takes Kt. The game of repeating the opponent's moves cannot long be continued with advantage. Obviously Black has already suffered, for White has two Bishops against his one, and Kt to R 4 followed by Kt to B 5 holds out good promise for the future.

(d) Though Black all along showed that a draw would be good enough for him, White without any apparent effort, but merely by the quiet force of sound play, has gained the ascendancy, and Black's repetition of moves now would only help White to futher develop his game.

(e) A mistake at last.

(f) Misfortunes never come singly; White threatened B to Kt 5 also P to Kt 5 (if K to B sq).

(g) It was a lost hope. It is easy to be seen that White can get away from the series of checks.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 7TH, 1900.

SUMMARY OF NEWS.

CAMBRIDGE won the Varsity boat-race last Saturday by twenty lengths.

QUEEN VICTORIA had an enthusiastic welcome when entering Dublin this week.

ADMIRAL DEWEY has consented to stand for the Presidency of the United States.

THE Japanese Government has decided to station a second-class Consul at Masampo.

MOUNT ASAMA has been erupting again and residents in the neighbourhood are greatly frightened.

THE U.S. cruiser *Brooklyn* arrived here from Manila on Tuesday afternoon and exchanged the usual salutes.

MR. H. J. HOLM, of the firm of Illies & Co., has been elected Chairman of the International Committee of Yokohama.

THE Government has purchased silver weighing five thousand *kwamme* (41,666 lbs.) for purposes of subsidiary coinage.

THE *Tokyo Maru*, of the N. Y. K., has been wrecked in the gulf of Pechili while on a voyage form Chefoo to Tientsin.

REAR-ADMIRAL Bruce was received in audience by the Emperor of Japan on the 31st ultimo, and Captain C. L. Ottley, R.N., the Naval Attaché of H.B.M. Legation, was presented at the same time.

THE Danish cruiser *Valkyrien*, with Prince Waldemar, was to leave Nagasaki for Hongkong direct on the morning of the 5th inst.

ACCORDING to a recent Imperial edict, Li Hnng-chang, Viceroy of Canton, is to be held responsible if any trouble takes place in South China.

THE Boers have ambushed a British force near Bloemfontein Water-works and captured two batteries of artillery, besides killing a number of men.

TELEGRAMS from the Transvaal speak of the demoralization of the burghers, but that President Kruger will make one last fight before surrendering.

THE beautiful weather of the past few days has hurried forward the Spring, and the cherry groves in and around Yokohama are one mass of lovely bloom.

MR. CHIKAKAZU KUWADA, who recently resigned the post of Superintending Judge of the Yokohama Local Court has now established himself as a lawyer.

H.I.H. Prince the Wales, while on the way to Denmark, was shot at by a man at Brussels station. The man fired two shots but hurt nobody in the Prince's carriage

THE subscriptions to the British War Funds have been so liberal that the widow of every soldier killed in the war in South Africa will receive a pension of at least 10s. per week for life.

THE recent discovery of the tea-plant growing wild in Cambodia, says a French contemporary, encourages the hope that tea of as good quality as that of Ceylon can be grown there.

A FARMER named Seizo, aged 69, of Kitakatanomura, Kanagawa Ken, hanged himself in a barn on the farm, on Saturday morning last. It is believed that the deceased was insane at the time.

FOR 11 days from to-day, bicycle riders will be prohibited from riding in the Public Garden at Yokohama, owing to the large numbers of visitors flocking there to view the cherry blossoms.

SURRENDERS of Philippine insurgents have, says the *Manila Times*, been quickened by the American authorities giving a reward of $30 for every serviceable rifle delivered up by an insurgent on surrendering.

THE second section of the foreign-settlement land at Masampo has just been put up to public auction. Details as to the building have not yet been obtained. Masampo is said be one of the finest anchorages in the Far East.

THE Directors of the Yangtsze Insurance Association, Limited, have decided to recommend a dividend of 20%, equal to $12 per share, to shareholders, and to place $34,000 to credit of reserve fund, which will then amount to $550,000.

A PARLIAMENTARY return shows that the street-railway mileage in the United Kingdom increased during 1899 only 58 miles. Total gross receipts, however, were £319,476 larger than in 1898, and the number of passengers carried increased 66,334,705, or 9½ per cent.

A FIRE occurred in Kawasakicho Shichome, Kobe, on Monday night, resulting in the destruction of three houses and damage to sixteen more. The body of a man, who is believed to have originated the fire, was found among the *debris* after the flames were extinguished.

AN explosion of fire-damp took place on the 31st ultimo in a coal mine at Michine in Fukuoka Prefecture. There is some obscurity about the casualties. The Governor's first report spoke of a hundred persons missing, but his second telegram tells of only 3 killed and 1 wounded.

THE *China Mail* notes as an interesting fact that at a private farewell dinner given to Sir Thomas Jackson at the Hongkong Club the other day, the terms of residence in the East of the twenty-four gentlemen present aggregated 684 years, thus giving an average of 28 years per man. Not a bad showing that.

A JAPANESE named Tanaka Kingoro (42) accompanied by sixteen young girls and boys went out in a small fishing boat for a trip from Ota on the 3rd inst. At about 10 a.m. the boat was upset near Kanagawa fort, but the occupants were fortunately rescued by a boat lowered from a foreign sailing ship anchored near.

THE *Niroku Shimpo* states that the Government, having recognised the necessity of better means of telegraphic communication, contemplates establishing a number of receiving offices in the most important districts of Tokyo and Osaka. It is expected that the new arrangement will shortly be carried into effect.

THERE appears to be some difficulty about the Chiksan mine in Korea. Telegrams received in Tokyo say that the Söul Government has refused the Japanese Representative's application for the concession, on the hackneyed ground that the Household Department itself intends to work the mine. But a Japanese, Mr. Fukuzawa, is already working it, we have always understood.

THE Nagasaki Customs authorities have decided to reclaim the shore in front of the Chinese Consulate, to the extent of 4,000 *tsubo*, for the purpose of establishing a large warehouse for the storage of imported goods. Tenders for the reclamation will be called for at the beginning of April. It is estimated that the work will cost about 80,600 *yen*.

MANILA papers show that there is still a considerable amount of fighting in South Luzon. In some places the natives have besieged isolated American garrisons, inflicting some losses. A month ago a band of armed ladrones raided Santa Ana, a suburb of Manila, and carried off a lot of loot. Aguinaldo is reported to be skulking among the Igorotti villages of Luzon.

A PIETERMARITZBURG dispatch states that the Boer Treasury is commandeering gold to the value of £200,000 every month from the mines, and 15,000 "Kruger" sovereigns are coined monthly. For silver coins they are making imitation English florins, dated 1895 and 1896. The die used is imperfect, as the tail of the 9 is thick at the end. Two hundred pounds' worth of this money was put in circulation in Delagoa Bay last month.

THE report of the China Sugar Refining Co., Ld., for 1899 shows a net loss on the working of $38,099, which sum the General Agents, Messrs, Jardine, Matheson & Co., themselves pass to the credit of Profit and Loss Account, thus starting the account without a debit on the 1st of January. A final dividend of $5 a share, making $7 for the year, is to be paid out of the Equalisation of Dividends fund.

A TELEGRAM in *L'Avenir du Tonkin* says:—The Americans contemplate uniting by rail New York and Buenos Ayres. Some idea of this enormous line may be formed from the fact that its length will be at least 16,364 kilometres (10,000 miles). The total expense is estimated at 847 millions, exclusive of superstructural work and rolling-stock. This railway will cross Mexico, the Central American republics, Columbia, Equador, Peru and Bolivia, to terminate at Buenos Ayres.

SOUTH AFRICA.

Tuesday, April 3.

The public knew nothing about Methuen's having been sent with a body of mounted troops into the Barkly West district until the news came that he had been recalled. But it has been possible, ever since the Boers' intention became known of offering resolute resistance to the passage of the Vaal at Warrenton, that Lord Roberts would sends troops across the River in the neighbourhood of Barkly, and move against the right flank of the Boers at Fourteen Streams. At Warrenton the Vaal takes a sudden bend southward through a distance of 36 miles, running all the while in British territory. Eastward of Warrenton it begins to be the southern boundary of the Transvaal. If the Boers, who have their head-quarters at Christiana, 20 miles eastward of Warrenton on the banks of the Vaal, are bent upon holding Warrenton resolutely, they can scarcely be in sufficient force to guard the River as far south as Barkly, and an obvious plan for the British would be to effect a crossing somewhere in the neighbourhood of Barkly, if not at Barkly itself, where there is a pont. Barkly is only 20 miles from Kimberley. What inference should be based, therefore, on Methuen's recall from the former place? This we think:— Roberts at Warrenton has a problem to solve somewhat similar to Buller's problem at Colenso. The Majemanchu Hills, which lie on the north of the Vaal between Barkly West and Warrenton, offer fine defensive positions, which could scarcely be forced without considerable loss. Looking at the strategy hitherto pursued by Roberts, and considering, also, the plan which seems to offer greatest advantages, what we expect to hear is that he has sent a column across the Vaal at some point between Christiana and Bloemhof; that is to say, at a point on the east of Warrenton. The Boers at the latter place are in a very dangerous position, strategically speaking. The south-western corner of the Transvaal forms an acute-angled wedge held between the Orange Free State on the south and Cape Colony on the west. Warrenton is at the angle of the wedge. Hence, if a British column crosses the Vaal in the neighbourhood of Bloemhof, it immediately cuts the communications between Warrenton and Pretoria. The situation thus created for the Boers would be worse than the situation even for Cronje's command when French's cavalry rode across the Maggersfontein-Bloemfontein route. It is 75 miles from Warrenton to Bloemhof and the whole country on each side of the Vaal is an extensive plain until Bloemhof itself is reached, when a solitary eminence rises on the south of the Vaal. The only question is water-supply. Cavalry can not move quickly in a region without water and these plains on the south of the Vaal appear to be very deficient in that respect.

Thursday, April 5.

We can not but admire the Boers. Their recent ride from Ladybrand to Thaba Nchu, and their subsequent operations against Broadwood's column were really a very brilliant operation. Certainly it is only 30 miles from Ladybrand to Thaba Nchu, and a body of well-mounted men could easily do the distance in a night without exhausting their horses. But Broadwood's column also consisted entirely of mounted men, and the Boers must therefore have brought against him an overwhelming force or their enterprise would have been hazardous in the extreme. Moreover, Thaba Nchu is only 30 miles from Bloemfontein, so the Boers had to do quickly what they had come to do, or they might count on being confronted by a strong column from Bloemfontein. What they had come to do was to cut the Water-works, and they accomplished it. Of course, as they have been driven back, no serious mischief has been done, for the site of the intake having been recovered by the British, the work of repairs can not be very difficult. But it was a fine *coup* on the part of the Boers, look at it how we may. The capture of the guns and the baggage was probably an unanticipated incident: the Boers discovered the retiring convoy, and their knowledge of the country enabled them to repeat the manœuvre which they have often practised successfully against our men—so often, indeed, that no such ordinary explanation as neglect of proper scouting will account for these reiterated disasters. It is evident, we think, that, under certain topographical conditions, the Boers move with rapidity and manœuvre with cleverness such as render them incredibly dangerous whenever they are attacking an inferior force. The country in the neighbourhood of Thaba Nchu is eminently suited to their tactics. The Modder has its head waters in that region, and between its source near De Wet's Dorp and the point where it crosses the Bloemfontein-Brandfort road—15 miles north of Bloemfontein—it receives a number of tributaries, pouring their waters down through deep gullies. Crossing one of these the convoy was doubtless ambushed. The guns have been recovered and the Boers driven back, but they made a brilliant dash and accomplished a great deal of harm. The fact is that the Ladybrand region is particularly accessible to the Boers. It is within striking distance of the men massed in the Drakenburg range on and near Van Reenen's Pass. The railway brings them thence *viâ* Harrismith to Bethlehem, and from Bethelem they can proceed *viâ* Ficksburg to Ladybrand. A column pursuing them along that *route* would have Winburg on its left flank, and might easily be cut off. What would effectually consolidate the British position in the Free State would be the march of Buller's force from Natal across the passes, for an attack upon Kroonstad and Winburg, but it is not likely that Roberts will sanction any attempt of that kind until he is ready to make a forward movement himself.

THE GREAT HUNT.

The great hunting expedition to Fujiyama has ended in a fiasco. Thousands of sportsmen repaired to the scene, and the total bag was three deer and half-a-dozen hares. The caricaturists of Tokyo find in the incident splendid materials for their brush. The weather is said to have been execrable—rain, sleet and hail, while in Tokyo and Yokohama we were enjoying the genial warmth and sunshine of premature spring. But it would appear that the chief cause of failure was the unwillingness of the people of the vicinity to see the district denuded of game. They argued that a battue of such dimensions would inevitably kill or maim everything in the nature of boar, stag or hare, and they accordingly did some driving on their own account before the sportsmen got to work. Their argument was that animals will return to haunts from which they have been peacefully driven, whereas they can not return from the grave. The planners and promoters of the expedition are now the most unpopular men in the nation, and the innkeepers alone make merry.

THE RUSSO-KOREAN COMPLICATION.

Monday, April 2.

The vernacular press has almost ceased to write about the Masampo affair. One newspaper alludes to it incidentally as a mere postprandial discussion. In fact, there is an obvious disposition to treat the incident lightly, which is somewhat surprising, for the acquisition of a coaling station—in other words, of a naval station—by Russia on the southern coast of Korea must be regarded by all thoughtful persons as an event of capital importance. The only thing to be said is that Korea has not yet made the desired concession. If she chooses to stand firm, there is not the smallest chance of Russia's proceeding to extremities. Oriental Powers owe much of the encroachments they suffer to their own excessive timidity. No special inspiration of courage is needed to withstand aggressions which an independent Western State would not endure for one instant. If a great Occidental Power carried, even cap in hand, a proposal to another Power for a lease of territory whereon to establish a naval station, the latter Power would inevitably consider that it had been gravely insulted. Civilized international intercourse is not put to such uses. Korea, feeble and insignificant as her capacity for resistance may be, has only to say "no," and to persist in saying "no." Russia will not fire a shot in support of an application which has no basis other than her own convenience. Besides, the Korean Government has to remember that the malady of encroachment is contagious. Civilized States recognise it to be a malady, and endeavour to avert its first appearance. But their civilization does not extend to stamping it out when it has once asserted itself. We have seen a striking example in recent times. Germany fell a victim to the malady at Kiao-chou. Russia forthwith succumbed at Liaotung. Great Britain followed suit at Wei-hai-wei. France was stricken by the sickness in the south, and Italy is striving to be allowed to catch it at San-mun. History will repeat itself in Korea's case if she accedes to Russia's proposal. Japan will certainly come forward with a demand of her own—a *demand* in Japan's case, for although the first comer has to request, the second can plead a right based on the precedent established by the first. England will follow, and it is very likely that Germany will bring up the rear. Why not? If Korea surrenders herself to the dissecting knife, all will consider themselves entitled to a slice. This is the epilogue of the drama acted last year at the Hague.

Meanwhile the land for which Russia has applied is said to be at Chepho, on the coast opposite to the island of Kōje—a splendid port, it is alleged. Doubtless it has been intelligently chosen.

The *Nichi Nichi Shimbun* has a powerful article deprecating journalistic excitement. It observes with regret that there is a tendency on the part of Japanese pressmen to yield to insular prejudice and to take a dangerously narrow view of the outside world and its doings. No valid reason exists why Japan and Russia should not live on amicable terms, and preserve each her own interests without impairing the interests of the other. This, we presume, is the *Nichi Nichi's* contribution to the discussion of the Masampo problem. It is to be desired that all newspapers were equally moderate. But what is to be done with a journal which, like one of our Yokohama contemporaries, infers that we are on the eve of war because a rumour is circulated that the Japanese Government has ordered a re-

Digitized by Google Original from CORNELL UNIVERSITY

measurement of the ships forming the mercantile marine? *O sancta simplicitas.*

In the eminently moderate columns of the *Kokumin Shimbun* there is a communication from a St. Petersburg correspondent, signing himself "Tosui." He must be very well aware of the character of the journal to which he addresses himself as correspondent, and we take it, therefore, that he weighed his words well before committing them to the public through such a medium. He sets out by saying that in the primers used in Russian Schools, Manchuria and Korea are shown as falling within the area of Russia's "sphere of influence." Thus every Russian youth is brought up to believe that Korea virtually belongs to Russia, and that it ought to belong to her. The correspondent then recounts a conversation recently held by him with a Russian staff officer. The latter informed him, with absolute frankness, that Russia believes Japan to be bent upon getting possession of Korea and Manchuria and driving Russia back to the Baikal. "Tosui" contended in vain against such a theory. The officer refused to be convinced, and further made it quite clear that Russia must have Korea and that she intends to have it.

The Progressists know their own mind at all events. They have held a meeting and passed a resolution to the effect that it is a condition of vital importance to Japan's existence (*seison-jo no kitsuyo joken*) that Korea should be assisted to preserve her independence and that no foreign Power should be allowed to "stretch itself across" important parts of her territory (*yōchi ni hakyō suru*). In pursuance of that principle, the Party proposes to unite with fellow-thinkers, whether enrolled in the Progressist ranks or not. A committee is also to be appointed for the purpose of investigating political questions, and it has been decided, on the motion of Mr. Ozaki Yukio, that the Party will devote its strength to furthering the work of the Committee rather than to enrolling new members. Attached to the above resolution was a statement of reasons, in which it is explained that Russia's aggressive action is not an affair of recent origin, but that, inasmuch as the relations between her and Japan have been regulated by convention, there devolve upon both Powers special obligations to abstain from encroachments and to base their procedure upon a clear understanding. A deputation consisting of Mr. Kono Hironaka and Mr. Kato (M.) waited on the Prime Minister and on Viscount Katsura to expound these views. They did not find Marquis Yamagata but they were received by the Minister of War.

Tuesday, April 3.

The news that the Masampo complication has been amicably settled is naturally received with much satisfaction in Japan. There is, however, some uncertainty about the exact terms of the arrangement. The *Jiji Shimpo's* correspondent telegraphs that the land acquired by Russia is with in 10 Korean *li* of the Settlement boundaries; that is to say, well within treaty limits. The *Asahi's* correspondent wires that it is absolutely within the settlement. Concerning its own intelligence the *Jiji* observes that the privilege of acquiring land within a certain radius of a foreign settlement has never been questioned in any country; whereas the *Asahi*, commenting on the intelligence published in its own columns, naturally fails to see how the issue can be called a compromise, seeing that Russia always had the right to procure land within the limits of the Settlement, and that, consequently, if she has abandoned her proposal for Rampo and substituted a Settlement lot, she must be said to have yielded ground altogether. The *Yomiuri's* correspondent also telegraphs that the new lot is within the Settlement. But the *Yomiuri* is most entertaining. It insists that this arrangement is a mere piece of luck, Japanese statesmanship had no part whatever in bringing it about. "Oh! for a policy," sighs the *Yomiuri*, "and a statesman to carry it out." But it is plain that what our contemporary wants is the statesman of its own choosing, not the policy. Prejudice certainly attains its extreme limits when a newspaper, though the results that it advocates are attained, refuses to acknowledge that there has been any merit shown in attaining them. That is the frankest conceivable confession of a creed of persons not principles.

Concerning the facts of the case, we do not think that any of the papers from which we have quoted are absolutely correct. The *Jiji* is certainly right when it says that the land accepted by Russia as an alternative is within 10 *li* (3⅓ miles) of the boundaries of the foreign settlement, but we do not understand its assertion that the acquisition of land in such a position by foreigners is permitted by every country. It never was permitted by Japan. However, in Korea's case the British Treaty secures for British subjects the privilege of buying land within a certain radius beyond the Settlements. Hence it follows that what Russia has now agreed to do, she might have done at any moment under the most-favoured-nation clause. In that respect the *Asahi Shimbun's* comment is just, but the *Asahi* and the *Yomiuri* are both mistaken when they allege that the land is within the Settlement at Masampo. The only comment remaining to be made is that if there be nothing behind this method of arranging the complication, Russia has shown a very praiseworthy mood.

Thursday, April 5.

The conservative leader, Viscount Tani, has expressed himself very emphatically with regard to the Masampo question. Evidently it does not seem to him a matter of prime importance where the land obtained by Russia is situated, whether inside or outside treaty limits. What he thinks of is the purpose to which she proposes to apply it. He has not the slightest doubt that she intends to convert her new acquisition into a naval station which will constitute the link necessary for joining Vladivostock and Port Arthur, and also the *point d'appui* needed for swallowing up Korea. But while thus seeming to attribute sinister designs to Russia, Viscount Tani is exceedingly frank about the doings of his own country also. Looking at Japan's attitude from the Russian point of view, he finds that her large increase of armaments and her general policy in the peninsula can not fail to impress Russia with the notion that this empire aims at the acquisition of Korea, and he opines that there is no cause for surprise if the Northern Power takes steps to thwart that purpose. Viscount Tani has always been an enemy of military and naval expansion, and he takes this opportunity of emphasizing his views. He does not go so far as to say, however, whether Russia would have remained quiescent had not Japan armed. But, he does repeat his frequent assertion that Japan is powerless without money. People talk of Russian finances being embarrassed, but Russia has a war chest upon the contents of which she never encroaches in ordinary times. Hence she is always pecuniarily equipped for fighting, which is very far from being the case with Japan. We need scarcely say that Viscount Tani concludes with a dismal reference to the state of the country's foreign trade, the preponderance of imports, and the alarmist prediction that the basis of the gold standard will soon be shaken.

It appears to cause the *Hochi Shimbun* intense chagrin that Viscount Aoki has scored heavily over the Masampo incident, and that even the chorus of revilers who used to talk of him as *munō* (incompetent) are now driven to confess that he is decidedly *yunō* (competent). The *Hochi* cannot endure such a signal reversal of its frequent verdict. It has accordingly sent its familiars into the highways and byways to hunt for a new missile, and they have found one in the shape of a cock-and-bull story about the wife of a certain Secretary of a foreign Legation, who nearly rode over a translator of the Foreign Office in the streets of Tokyo, who, on demanding the name of the endangerer of his life, was met by a peremptory demand for his own card by the fair equestrian, who subsequently complained through her Minister to Viscount Aoki, who, being unable to induce the translator to apologise, went and apologised himself, to the great humiliation of Japan and to the lowering of her international prestige. Alas! The poor *Hochi*! To such expedients is it driven! Heaven has not gifted everyone with ability to be a critic of foreign politics, but without rising to that eminence a newspaper editor may at least be expected to understand the rules of common courtesy.

The *Chuuo Shimbun* has a rather mysterious note, eulogizing England's action with regard to the Masampo affair. The mystery consists in the fact that our contemporary leaves us quite in the dark as to what England did. We gather that she was dignified and imperturbable, but that her officials kept their eyes every widely open, and that every move made by Russia was most carefully telegraphed to the Government in London. It is pleasant to find that the *Chiuo* is satisfied, but we wish that it would have enabled us to share its satisfaction by being a little more explicit about facts.

In the course of a discussion on the spinning industry, the *Yomiuri* refers to the trade in yarns with Korea. It remarks that yarns constitute the most important staple of export to Soul, as they comprise more than half the amount of goods exported to Korea from Japan. Notwithstanding the fact that the appreciation of yarns in the interior of Japan directly affects the Korean market, demand for them increases day by day. It is said that as present the Settsu spinning company secures the largest amount in the exports to Korea, in spite of the price having risen from 53 *yen* to 55 *yen*. Two other companies, the Okayama and Hirano, have entered into competition in the Korean trade, but failed to overtake their rival in Settsu. Cotton shirtings are also in brisk demand in Korea, but the trade is entirely in the hands of the Chinese, and it was not until recently that the "Deer" brand shirtings were exported by the Japanese, who are now reported to be doing considerable business in this direction. English manufactures are chiefly used by the upper, cotton stuffs by the middle, classes, but the Japanese exports are utilized by both. This fact alone, our contemporary thinks, is sufficient to inspire hope for the future development of trade with Korea.

THE "YOKOHAMA MARU."

The *Asahi* reports that the Nippon Yusen Kaisha's steamer *Yokohama Maru*, while *en route* from Bakan (Shimonoseki) to Korea, sustained some injury to her machinery, and was unable to continue her voyage. She has been replaced by another vessel.

GOLD IN HOKKAIDO.

It really seems as though the discovery of gold in Hokkaido were likely to prove an event of capital importance. According to the latest accounts, no less than four large districts are auriferous, Oshima, Hitaka, Ishikari and Teshiwo. By the *Jiji Shimpo* the total length of river-beds containing gold dust is put at 3,500 miles, and the total productive area, at 1¾ million acres. There are, of course, differences in the relative richness of the various deposits, but that a large tract will repay exploitation can scarcely be doubted. The Japanese evidently believe in the prospects of the place. It was discovered in 1898, and the following year saw about seven thousand persons at work, whereas forty thousand are expected to participate this season. It is admitted that 1,700 lbs. of gold were obtained last year, but the general impression is that 2,500 lbs. would be nearer the true figure. The best results thus far recorded have been on the Usatan and Pechang branches of the Tambetsu River, and on the Panke and Toimaki branches of the Horobetsu River. Nuggets weighing over half a pound have been found, but such chances are rare, though fragments from one-fifth to one-half of an ounce are said to be common enough. The managers of the Bank of Japan have held a meeting to consider the best plan for preventing the gold from leaving Japan, and their decision will probably be the establishment of agencies for buying the metal *in loco*. The discovery of this auriferous district may prove of very great value to Japan. It is said that, at present, the methods of working are often very defective. Common labourers, with no experience whatever, are digging without any supervision, the result being that they not only fail to extract more than a fraction of the gold available, but also render large areas unsuitable for subsequent exploitation.

A company has been formed by some foreigners in Yokohama. They are said to have acquired a space measuring 37 acres for a sum of 7,000 *yen*, an extraordinarily cheap bargain if the land be auriferous. An expert has been engaged from California, and all the necessary arrangements have been completed for commencing operations. This Company appears to be working entirely without Japanese participation. It will, of course, have Japanese assistance. In fact, we happen to know that it has been fortunate enough to secure the services of two thoroughly trustworthy Japanese *employés*. But the partners seem to be all foreigners. We doubt the wisdom of that arrangement. Experience shows that it is exceedingly difficult for foreigners to conduct in Japan, entirely on their own account, any enterprise requiring the employment of Japanese labour. It is, of course, incalculably valuable to have operations directed by a skilled expert, but labour troubles may at any moment wreck the most promising undertaking.

THE ECUMENICAL CONFERENCE.

The Ecumenical Conference on Foreign Missions will be opened in Carnegie Hall, New York, on April 21st. There are to be about two thousand delegates. It is the first general conference of the kind that has been held in America. Ex-President Harrison will be Honorary President, and men of note are expected from all parts of the world. Japan is to be represented by the Rev. M. L. Gordon D.D. M.D., the Rev. J. L. Dearing and the Rev. Julius Soper, D.D. One of the special features of the conference will be the Missionary Exhibit. "Germany and England," says the circular of the Press Committee of the Conference, "already have very complete Missionary Museums, but America is as yet deficient in this respect. Now, however, material is being gathered from every mission land in order vividly to present, through the eye, the social and moral conditions of the people among whom the missionaries are labouring. It will be the endeavour also to make it as far as possible a Progressive Exhibit, showing the results of a hundred years of missionary effort. It will combine a Library and a Museum, and will comprise publications of all kinds—books, Bibles, magazines from the field—in English and many other languages; maps and charts, pictures, models, curios in dress and workmanship, and objects of religious worship, such as idols and fetiches,—all intended to illustrate the actual surroundings of the missionary in his work. It is hoped that this Exhibit, which, by the way, will be permanent and not vanish with the Conference, may prove not only popular but helpful in arousing intelligent interest in missionary fields and work."

THE SHARE MARKET.

There has been a heavy fall in the market prices of various securities. For example:—

Security.	Paid up. Yen.	Price on Mar. 1st. Yen.	Price on Mar. 3rd. Yen.
Bank of Japan.....	200	430	427
Specie Bank	100	220	174
Tanko Railway	50	96	86.30
Kobu Railway.....	45	117	110
Japan Railway.....	50	74.30	69.80
Kwansei Railway ...	50	48.80	42.20
Sanyo Railway	47	55.60	52.60
Kyushu Railway	50	62	55.70
Fifteenth Bank.....	100	107	104
Industrial Bank	50	68.30	67.90
Yusen Kaisha	50	67.50	65.20
Meiji Life Insurance...	100	175	172
Tokyo Electric Light...	50	54	50.50
Nippon Beer.....	40	102	100
Toyo Kisen Kaisha...	25	29	26.40

This drop in prices, which is said to be causing some anxiety to the various banks that have advanced money against such securities—though the fall can not possibly have swallowed up the margins—, is apparently attributed by some economists to the flourishing condition of the import trade. Their line of reasoning is that the volume of currency has been reduced owing to the withdrawal of notes which have been exchanged for gold to send abroad, and that the diminution of volume has brought about a fall of securities. We wonder whether persons arguing in that manner take the trouble to think carefully about the processes leading to the results they discuss. How does it follow that because *A* goes to the Treasury and exchanges a certain number of notes for gold in order to purchase foreign commodities of which he has need, *B* becomes less willing to purchase securities which *C* offers for sale? The quantitative economists reply that if *A* did not buy foreign goods, there would be so much more money in the home market seeking investment, and securities would consequently rise. But the men who reason in that way are the very persons who have hitherto been in the habit of telling us that the currency is redundant, and that the extraordinarily high range of prices of commodities at present is due to that redundancy. They ought, then, to welcome a withdrawal of fifteen or twenty million *yen* from circulation, and they ought to be able to show that if the withdrawal has affected securities, it has also affected the prices of commodities. But there has not been the smallest fall in the prices of commodities: appreciation goes on steadily. However, apart from questions of that nature we rejoice to see that this depreciation of securities is giving a further impulse to the solution of the land-ownership problem. In short, whenever pecuniary pressure is felt in Japan, there is an inclination to turn to foreign capital, and a corresponding recognition of the fact that to deny the privilege of land-ownership to foreigners is to place an obstacle in the way of the advent of foreign capital.

THE FORMOSA CAMPHOR.

A new interpretation is assigned by the *Jiji Shimpo* to Mr. Yokoyama's somewhat inexplicable conduct in retreating incontinently from the field of the camphor-farm competition after having put in a tender far lower than that of any one else. The explanation is that Messrs. Samuel Samuel & Company were able to demonstrate to Mr. Yokoyama the certainty that in making such a proposal he was inviting heavy loss, since the work could not possibly be done on the terms contemplated in his tender. Instead of engaging in such a rash speculation, the wiser plan would be to combine with Messrs. Samuel Samuel & Company. That point of view commended itself to Mr. Yokoyama, and as he represented Mr. J. R. Morse and Mr. Kahn, it results that the camphor business goes into the hands of an English, an American, a French and a Japanese firm, in combination. That is an excellent arrangement, no doubt. After all, since the price to be paid to the Formosan Authorities was absolutely fixed, no matter into what hands the privilege of selling abroad fell, it is only the foreign consumer whose interests are impaired by this substitution of coalition for competition, and probably the foreign consumer does not greatly care whether he pays three half-pennies per pound more or less for his camphor. As for the Formosan Authorities, we do not know whether the statements made by Tokyo journals are correct, but if there is really a difference of 50 *yen* per picul between the price at which the camphor is obtained from the stills and the price at which it is sold to the coalition of merchants, then the local government's yearly profit on, say, four million catties, will be two million *yen*; a very pretty item of revenue.

The stories published about the camphor-farm competition in Formosa are now declared to have been all mistaken. It is denied that a combination has been effected between the men whom Mr. Yokoyama represented and Messrs. Samuel Samuel & Company. A very much more prosaic explanation is offered, namely, that Mr. Yokoyama erred in his estimate of the cost of transport, and that discovering the error after he had submitted his tender, he applied for permission to amend the figures, but as the Authorities declined to grant his application, there was nothing for it except to withdraw. This account of the affair is attributed to the Japanese clerk of Messrs. Samuel Samuel & Company, the successful tenderers. A great number of competitors were expected to enter the field, but at the end only three appeared upon the scene. Their tenders were as follows:—

		First-class Camphor. *yen* per picul.	Second-class Camphor. *yen* per picul.
The Beikoku Boyeki Shokai. (Mr. Yokoyama)	Hongkong	101.90	94.23
	London	104.25	95.95
Messrs Samuel Samuel & Company...	Hongkong	102.378	94.23
	London	107.843	99.70
Messrs Mitsui and Company	Hongkong	103.19	95.47
	London	109.39	104.53

If this account be correct, Messrs. Samuel Samuel and Company do not share the work with any one.

Digitized by Google Original from CORNELL UNIVERSITY

THE COLONIZATION OF HOKKAIDO.

The island of Yezo measures 37,500 square miles and has a population of 500,000, or about 13 persons per square mile. It is, in fact, equal to one-fourth of the total area of Japan—excluding Formosa and the Pescadores—, and its total population does not exceed that of the little prefecture of Nara. The *Jimmin*, noting these facts, urges that greater encouragement should be given to immigrants, by contributing funds from the local treasuries and by obtaining special rates for them over railways and by steamboats. It is difficult to endorse the former part of this suggestion. Transport companies might find it worth their while to assist persons emigrating from Japan proper, since the larger the colony in Hokkaido the more extensive will the traffic become between that island and the mainland. But there is no apparently logical reason for saddling the localities with outlays on such an account. The colonizing of Hokkaido should be a matter of private enterprise only. The country has already devoted great sums to constructing roads and railways. In the days of the *Kaitakushi*, an annual appropriation of a million *yen* was paid over to that bureau, without query as to the intended distination of the money or scrutiny as to its ultimate employment. Many critics have undertaken to assert that the system was a mistake. We do not think so. It appears to us that the colonization of Hokkaido would have remained a comparatively unaccomplished fact had not the *Kaitakushi* existed, whatever may be said about the wisdom of some of the works undertaken by Count Kuroda's bureau. Excellent and most tempting terms are now offered to settlers. They can obtain land at almost nominal rates—rates so low that if Hokkaido offers any genuine inducements to agriculturists, the land ought to be taken up rapidly. It is alleged that there has been much abuse of this privilege. Capitalists have succeeded in getting possession of great tracts which they do not cultivate, holding them merely for speculative purposes. The regulations forbid that. They provide that the work of reclamation must be begun within a year from the date of granting the concession. But a regulation of that kind is always easy to elude. The law can not undertake to define what is exactly meant by reclamation. Putting up a few yards of fence or hoeing a square metre of land satisfies the letter of the regulation. But if abuses of that kind are proving a genuine obstacle, then there need not be much anxiety about the future of the island. Were there no demand for land, the doings of the speculator would not provoke complaint, and, for the rest, the speculator himself may be trusted to employ means of encouraging immigration since his venture must otherwise fail.

ONE YEN NOTES.

Complaints are heard from all parts of the empire, says a vernacular paper, with regard to the withdrawal of the one *yen* note from circulation, a step now contemplated by the Government. The authorities seem to think the inconvenience resulting from the adoption of such a measure will be only temporary, but the fact is likely to prove contrary to expectation. Should the one *yen* paper be withdrawn there would be no intermediate currency between 50 *sen* and 5 *yen*, and the inconvenience of this would most serious. So long as the Bank of Japan is provided with 4 millions of silver reserves no cause for anxiety or apprehension can exist with regard to the present note system.

DOMESTIC POLITICS.

If the *Jiji Shimpo* be rightly informed—and it generally is—a strong movement is on foot to obtain some seats in the Cabinet for the leaders of the Liberal Party. That would be a very natural development, seeing that the Cabinet has now received the loyal support of the Party for nearly two years. The Liberals can scarcely be expected to cōoperate permanently without enjoying any reward for their good will. But the trouble is, we imagine, that their admission to the Cabinet would involve the complete re-construction of the latter. Marquis Yamagata is very unlikely to remain at the head of the Ministry if he has to part with some of the colleagues who have worked with him. From his point of view, such a step would amount to sacrificing fellow-Ministers on the altar of political expediency, and he is the last man in Japan to agree to anything of that nature. If the administrative machinery were not working smoothly, if any bungles had been made, or if divergences of opinion with regard to important problems had manifested themselves among the members of the Cabinet, a recasting of the portfolios could be understood. Not only, however, is the administrative sky perfectly clear, but it is also illumined by a very signal success in foreign affairs. It can not even be said that the Cabinet has refused to adopt the Liberals' views on any serious topic. Thus the proposed change assumes the character solely of a concession to personal ambitions. One can not but admire the curious facility with which politicians swallow their own doctrines when self-interest dictates that feat. In past years the shibboleth of the party leaders used to be "down with favoritism (*jojitsu*)!" The great abuse of the time, according to their view, was that persons were considered, rather than merits, in making official appointments. Would not the projected re-casting of the Cabinet be a flagrant concession to this very *jojitsu*?

THE PEERS AND BRIBERY.

When the Religions' Bill came up for final discussion in the House of Peers, our readers doubtless remember that rumours were suddenly circulated to the effect that the Buddhist agitators had employed bribes to procure the rejection of the measure. Subsequently the story was elaborated by adding details to the effect that the Buddhists were much embarrased to find the means of making good their promises. Viscount Tani alluded to these rumours when addressing the House during the debate on the Bill, and Mr. Hirata, Chief Secretary of the Cabinet, expressed his conviction that nothing of the kind could have occurred in the Upper House, where the members had always been distinguished for disinterested discharge of legislative functions. The *Tokyo Asahi*, however, did not confine itself to vague statements. It named four members of the House, and declared emphatically that they had received bribes. We refrain, of course, from following our contemporary's example, but we may say that two of the men indicated are peers and two are commoners. Apparently these gentlemen were not disposed to vindicate themselves publicly against the newspaper charge. They probably shared the theory commonly entertained in Japanese society that a newspaper is not worth contradicting—a theory which tends not a little to keep the newspapers in their present comparatively degraded rank. But the *Mokuyo-kai* (Thursday Society)—one of the associations formed by members of the House of Peers—, to which the accused belong, was not prepared to treat such explicit accusations with indifference. It caused investigations to be undertaken, and their result is said to have lent so much colour to the *Asahi's* charge that the association directed the four men to clear their reputation or to resign their membership of the *Mokuyo-kai*. It is stated that, in consequence of this decision, legal proceedings are about to be instituted against the *Asahi*, and, we need scarcely add, the trial seems to be looked forward to with keen interest by a certain section of the public.

THE "TOKYO MARU."

The Japan Mail S. S. Company's *Tokyo Maru* (2,194 tons gross), commanded by Captain Jones, met with a serious accident this week. She arrived at Chefoo from Kobe, *viâ* ports, on the 31st of March, and resumed her voyage for Tientsin on the following day. Apparently she was caught in one of the thick fogs common in the Gulf of Petchili at this season, for she ran on the Miao-tao rocks. The injury received was so extensive that her fore-hold and the engine-room filled almost immediately. Four passengers seem to have been lost, two Chinese and two Japanese. The latter are Mr. Kawamata Harukata, who was engaged in collecting materials for a history, and Mr. Shiba Kiroku, a representative of a weaving company. The Nippon Yusen Kaisha at once sent the *Fushiki Maru* and the *Echigo Maru* to the assistance of the stranded steamer. At first she was supposed to be a hopeless case but later advices showed that if the weather continues fine, she might possibly be floated.

A NEW TAX.

Commenting upon the financial condition of the country, the *Niroku Shimpo* says that in spite of the fact that the revenue was over 100 millions *yen* in the 28th year of *Meiji*, and 200 millions in the 30th year, and is now about 300 millions, the Government have had to make every possible reduction in Departmental expenditures, and yet an increase of expenditure is absolutely necessary for the proper development of the country. Increasing taxation must therefore be adopted, despite the unpopularity which such a measure will bring the administration. Recourse may be had to something like a poll-tax. The rate contemplated is 5 *yen* for a family of five, 3.50 *yen* for a family of three, and 3 *yen* for a family of two. The smaller the number of a family, the greater the proportionate amount of income. By this means it is estimated that a revenue of at least 45 million *yen* may be realized. The scheme, though fraught with difficulty, may, our contemporary adds, prove highly advantageous to the country.

JAPANESE RAILWAY ENTERPRISE.

Railway enterprises in Japan appear to be developing very slowly of late, remarks the *Keizai Zasshi*. According to recent statistics the only new lines constructed between October last and January of this year are the following :—

Railway.	Section.	Miles.	Chains.
Bisei	Hagiwara-Ichinomiya	3	3
Iyo	Hiraikawa-Yokokawara	3	69
Nara	Nara-Kyoshiu	1	5
Government.	Shirosawa-Odate	4	6
„	Miyei-Kami Furano	9	74
„	Ruru-Wasamu	8	31
Boso	Ichinomiya-Ohara	8	68
Tokushima...	Kawashima-Yamazaki	3	72
Kiushiu	Udo-Sankakn	15	26
Karatsu	Iwaki-Hobara	3	40
Total		61	64

MISCELLANEOUS TOPICS.

The *Iwate*, one of Japan's new first-class cruisers (9,500 tons) was successfuly launched at Lord Armstrong's on the 29th March. It is expected that she will be ready to sail for Japan in the month of November.

The line-of-battle ship *Shikishima* left Singapore on the 29th March *en route* for Japan.

The torpedo-destroyer *Oboro* left Colombo for Singapore on the 28th March.

We read in Tokyo journals that a special court is to be opened in Hawaii for the purpose of hearing complaints arising out of the results of the recent sanitary measures of the Authorities. Each person claiming damages will have to submit an exact statement and furnish evidence of his losses. The Court will have a very long session if that system be pursued, and many of the sufferers will have to abandon all hope of obtaining redress.

It is stated that the International Law Society of Japan (*Kokusai-ho Gakkai*) has decided to bring out a dictionary of international legal terms, adopting the equivalents given by Mr. Ariga. The original terms are to be in French with English added occasionally. That, in our opinion, is a very great mistake. For one Japanese that can read French, there are thirty or forty that can read English. The compilers of the dictionary will be deliberately addressing themselves to a small audience when they might appeal to a large.

A rumour has recently been current to the effect that Viscount Yoshikawa being desirous of resigning the portfolio of Communications owing to ill-health, his place would probably be taken by Baron Suyematsu. It is now stated, however, that the story is groundless. We may mention, also, that there is again some irresponsible talk of Cabinet changes, based apparently on an interview that has taken place between the Prime Minister and the Business Committee of the Liberal Party. This gossip seems to be quite unworthy of credence.

The Japanese are carrying on experiments industriously in wireless telegraphy. A station has been erected within the confines of the Naval Department in Tsukiji and another at Haneda. The Communications Department, also, is preparing to establish communication by this system with the Seven Islands of Izu, Mikomoto-jima being the island chosen for the purpose. It is stated that the Military Authorities regard these proceedings as too slow, and are about to conduct experiments on their own account.

The condition of Asama-yama is said to be causing much uneasiness. It has behaved with such violence of late that the attention of geologists has been closely directed to it, and they have diagnosed a state of affairs which has added to the feeling of alarm. On the 31st of March, the volcano emitted a deafening roar, and thereafter during two or three hours dense volumes of smoke obscured the sky and ashes fell as thick as hail. An impression seems to prevail that the mountain may at any moment become dangerous to those living in the vicinity, and it is alleged that many people are making preparations to remove themselves and their belongings at a moment's notice. We take these details from the *Chuo Shimbun*. They may be sensational to a large extent. We hope so.

It is objected by the *Asahi Shimbun* that the Inland Sea is not wisely selected as the place for the first manœuvres connected with the mobilization of the Navy. The argument advanced is that the Navy would not find itself engaged in the Inland Sea unless Japan's first line of defenses had been forced, and that the wiser plan would be to choose a place such that the experience gained there might be likely to be of value at the beginning of a campaign. Our contemporary hints very plainly that the original intention was to select Korean waters, but that a change of programme was made in deference to Russian susceptibilities. These are points which scarcely warrant outside criticism. The Government must be trusted to arrive at the most prudent decision.

According to latest investigations of the Finance Department, the amount of tobacco to be collected this year at the sixty-six monopoly offices in the empire was estimated at 13,327,627 *kwan*, of which over 2 million *kwan* were received up to the beginning of last month. It is supposed that the actual amount will by far exceed this forecast, and the districts where leaf to the amount of from 300,000 to 700,000 *kwan* is likely to be received, will be Nagoya, Hadano, Fuchiu, Moki, Takayana, Miharu, Iwai, Kumamoto, Toriyama, Mito, Ikeda, Sukagawa, and Ota. The highest value for the finest tobacco in the country is fixed, according to the *Nippon*, at from 2.60 *yen* to 2.80 *yen* per *kwan*. The leaf produced in Kokubu and Demizu alone is said to be qualified for such a valuation, even the best tobacco in other districts being quoted at a little under or a little over 1 *yen*. As for the lowest class, the quotation does not exceed 20 *sen*. The Government seems to be contemplating fixing the rate for the 33rd year at 2.50 *yen* for first class leaf and 14 or 15 *sen* for the lowest, the scale on the whole being reduced as compared with the previous year. With reference to the above subject the *Jimmin* states that arrangements are being made to appoint the *Meiji* bank as the financial organ of the tobacconists, increasing its capital from 250,000 *yen* to 1 million *yen*, which amount is exclusively to be subscribed by tobacco dealers in Tokyo.

The total sum received for advertisements by various Japanese newspapers and magazines is said to be 2,300,000 *yen* annually, which is nearly equal to the receipts of the Government for telegrams. The figure seems tolerably large, but is not more than one-tenth of the figure for the United States.

Some one, high in authority, is said to have suggested that the best way to settle the Masampo complication would be to obtain from Korea a guarantee that Russia should not be allowed to use the land for military or naval purposes. The *Asahi* vehemently assails that temporizing politician, and wishes to know how on earth Korea could be expected to fulfil such a pledge. It strikes us that the *Asahi* is tilting at a wind-mill.

Mr. Pritchard Morgan has had to subscribe to some thirty-five conditions in order to obtain his concession for gold mining at Uensan. It is necessary that he should commence operations within two years from the time of signing the agreement, which proviso can not trouble him as he seems to have commenced even before the signature. He is permitted to exploit the mine during 25 years from the date of beginning work, and he has to pay to the Korean Government one-fourth of the profits, in two installments yearly, one in June and one in December. The area of the concession is 150 square miles—namely 15 miles long by 10 miles wide. That should suffice for 25 years' occupation.

A telegram from Söul says that there has been much trouble in connexion with the Street Electric Railway. It is worked by an American citizen, Mr. Colbran, under the guarantee of the Imperial Household Department. Mr. Colbran claims that there is a loss of 1,800 *yen* monthly on the operations. He recently called upon the Department to make good the loss and take over the line, and, at the same time, he pressed for concessions of the electric lighting and the telephone service, as means of recouping himself. The *Shogyo Shimpo*, from which we take the details, adds that the Department has borrowed a sum of 250,000 *yen* from the First Bank—which has a branch in Söul—and has taken over the railway. The state of affairs in Söul must be peculiar if a street electric railway does not pay.

The question of Wedding gifts for the Crown Prince and Princess has been settled by the Household Department. All Japanese from the Second Grade of the Sixth Rank and upwards are to send their presents direct to the Minister of the Imperial Household, and persons of lower ranks must do so thorough the local officials. Foreigners are to send, if they desire to do so, though the Minister of State for Foreign Affairs. Individuals or associations are equally at liberty to tender gifts; but it is provided that all presents must be sent by the day of the wedding, though a statement of the intended gift will suffice should not the article itself be ready. The officials charged with the duty of receiving the gifts (*kempin*) will not be responsible for the costs of carriage.

The *Yomiuri* approves highly of the strong and uncompromising resolution passed by the Progressists with regard to the Masampo affair. It considers that unless some decisive steps are taken to bring about a clear understanding between Japan and Russia in the Korean matter, the relations between this country and Russia will presently drift into the condition of the Japanese-Chinese relations two years ago, or the Anglo-Transvaal relations last summer. In order to effect such an understanding it counsels application to England and America, with the view, apparently, of inducing them to become indirect parties to the new convention between Japan and Russia. It should be remarked that our contemporary's article is vague as to the exact purpose to which the cöoperation of England and America should be put, but the interpretation we have here given seems to be correct.

The *Jimmin* (Liberal organ) has a peculiar article. It blames the Government for persistently keeping the public in the dark with respect to foreign policy, and contends that such a course not only tends to engender needless alarm. but also deprives the country's statesmen of the intelligent support of public opinion. That complaint, however, is not novel or strange. What we find interesting is a doubt expressed by our contemporary concerning the purpose of Russia's Masampo proposals. If they are for warlike purposes, the *Jimmin* contends that they should be opposed resolutely. If they are for commercial purposes, they need not provoke resentment in Japan. Does the *Jimmin* really imagine that there can be any question as to that point? Where is the trade that Russia wants to promote? And how could it possibly find an outlet at Masampo unless the Eagle flies over the whole peninsula?

It is stated that the faculty of the Medical College in the Imperial University are preparing a celebration in honour of the completion of Dr. Baelz' twenty-fifth year of service in Japan. As a matter of fact, the time will not be ripe until 1901, but Dr. Baelz proposes to go to Europe for a holiday this summer, and his return to Japan will be subsequent to the date of his quarter-of-a-century anniversary. We gather, therefore, that it is thought better to held the celebration before the eminent physician's departure; a wise resolve. We do not think that any other foreigner has made such a mark in this country as Dr. Baelz, and it is pleasant to see the desire of the Japanese to do him honour.

The annual meeting of Local Governors commenced at the Home Department on the 2nd instant. There was a time when these meetings attracted attention, being regarded as the embryo of parliamentary institutions in Japan. But after the organization of local assemblies in 1878, the *Chiho-kan Kwai-gi* fell to the rank of a mere official function. They nevertheless serve an important purpose—that of helping to unify the

Digitized by Google Original from CORNELL UNIVERSITY

systems of material and moral progress throughout the country. Marquis Saigo, Minister of State for Home Affairs, addressed the Governors on Monday. The gist of his speech was that they should devote their energies to carrying out the various new laws and regulations in such a manner as to insure really practical results, for laws, however excellent, were a mere empty form unless their application was imbued with a spirit of intelligence.

According to statistics published in the *Nichi Nichi*, the number of Exchanges of various kinds in the empire exceeds 117 and the gross amount of their capital reaches 8,928,000 *yen*, while the numbers of brokers is no less than 1,550. Of the amount of capital above mentioned, 5,923,247 *yen* is paid up, while 1,809.500 *yen* represents the value of the godowns of the exchanges.

The porcelain manufacturers of Seto have formed a trust with a capital of a hundred thousand *yen*, thirty thousand of which has been paid up. It appears that the export of Japanese porcelains to Chinese markets have greatly increased of late, but that the profits of the trade are monopolized, for the most part, by the Osaka middlemen, and that the potters find their gains seriously diminished by breakages, real or nominal, due to defective packing. We do not gather whether it is the intention of the Trust to free themselves from the hands of the Osaka dealers, but probably their idea is to be able to dictate terms to the latter. The fact that Japanese porcelains can compete with Chinese in the markets of China is a striking illustration of the results of defective transport facilities. The Chinese can make better porcelain that the Japanese, and have always made better porcelain. It is for lack of railroads and steamers that they can not hold their own against the over-sea competition of their pupils and inferiors in this industry.

The people of Hikawa in Izumo have been behaving with great violence about the transfer of a Middle School from one locality to another. Izumo has the honour of possessing one of the greatest *Shinto* shrines in the empire, and the inhabitants of the province are correspondingly devout. They take a practical view, also, of their religion, and believe that the Gods should protect them against inconvenience of every kind. Consequently, when the inhabitants of the place where the school now stands learned that it was to be removed, they repaired in a body to the Shrine, and handed in their amulets, saying that they saw no use in cherishing the talismans of deities who could not, or would not, protect them against such a simple occurrence as the removal of a school. They then proceeded to the residence of Baron Senge, who is high prelate of the Shrine, and having battered in the gates, began to wreak their resentment on the furniture and fittings. There were some wounds on the side of the police and the rioters before quiet was restored. It is easy to understand that the removal of a school may mean a very great deal to the people of the district where it was originally situated. It may mean that their sons, instead of having to travel only a few hundred yards to and from their studies, are obliged to traverse as many miles.

Mr. Otani Kahei, addressing the Yokohama Economical Society on the 2nd instant, diaster great deal about the defective character of harbour accommodation at Yokohama. During his recent trip to the West, he had made a special duty of inspecting the harbours at Liverpool, New York, Marseilles, Hamburg, Bremen, Antwerp, and so on, and he had come to the conclusion that the Yokohama harbour did not even deserve the name. Liverpool appears to have struck him especially, but, on the whole, Marseilles seemed the most suitable model, because the surrounding conditions, notably the absence of a river, constituted a close resemblance to Yokohama. His idea is that the whole length of the present breakwaters should be provided with railways and brought into direct connection with the central system of lines; that the space inside should be regarded as the harbour proper, and that the space outside should be a free port. He has not the least doubt that Tokyo will have a harbour one of these days, but he does not apprehend that Yokohama will suffer in consequence. The trade will require all available accommodation, especially after the distance between New York and San Francisco by sea is reduced by the Nicaragua Canal from 15,669 miles to 2,907. Yokohama can be made a free port when Tokyo has a harbour.

An interesting table has been published showing the nominal amounts of gold collected in Esashi last year and the average per head of those engaged in collecting. It should be observed, however, that this return is furnished by the official overseer of the district. It therefore represents only the actual quantities of which he had cognizance. But, as a matter of fact, numbers of people were engaged of whose doings the official overseer had no knowledge, and it is consequently computed that the total product of gold was at least three times as great as the figure shown in the table.

Month.	Total collected. Momme.	Number of persons employed.	Average collected per head. Momme.
April	149.20	35	4.263
May	8,197.30	14,743	0.556
June	10,820.10	188,728	0.573
July	26,032.26	30,167	0.863
August	29,753.74	37,768	0.788
September ...	41,883.81	53,001	0.790
October	1,321.72	4,030	0.313
November ...	1,096.20	3,649	0.300
December ...	618.20	2,067	0.229
Total 119,820.53		164,336	0.729

It will be observed that there are no returns for January, February and March and that the quantity for December is very small. The explanation offered is that owing to the fishery conservation rules, operations have to be suspended during those months. But doubtless the rigour of the climate is another reason.

The 31st of March, in other words, the last day of the last quarter of the 32nd fiscal year, has passed, and about one-half of the foreign residents of Yokohama still occupy the position of defaulters in the matter of the payment of house tax—urban and prefectural. When applied to, the residents return an uniform answer, namely, that pending directions from their Representatives in Tokyo they must decline to pay the collector's demand. Meanwhile, the Foreign Representatives are understood to be awaiting instructions from the Home Governments, since they have failed to come to an understanding with the Foreign Office in Tokyo. Undoubtedly this matter should have been threshed out before the conclusion of the Revised Treaties, but it did not suggest itself of any of the Western Governments, nor to any of the foreigners in this region who watched the course of the negotiations so keenly. Therefore, to find fault now is to rely obviously on the wisdom that follows the event. We can only hope that asettlement will be effected with the least possible delay. Every day that passes not only accentuates the refusal of the foreign residents to pay, but also increases the amount ultimately payable and correspondingly aggravates the irksomeness of the disbursement. We believe that the payment will have to be made, for the principle can scarcely be disputed, and no intelligible method of compromise suggests itself. The Registration Fee for land transfers was an impost plainly open to protest, and it has been abandoned. But we predict that the House Tax will not be seriously disputed by the Home Governments, in principle at all events, whatever may be thought about levying the full amount. It is truly most regrettable that these incidents should occur to ruffle the excellent spirit with which both sides approached the operation of the Revised Treaties.

The new electric cars on the Kodzu-Yumoto tranway are now in operation. They are splendidly arranged, and in every way a fine contrast to the miserable horse-trams. The journey is performed most comfortably and at excellent speed. The success of the system should make Tokyo people even more dissatisfied than at present with the wretched service of the capital. The new departure should make the Hakone district even more popular to pleasure-seekers from Tokyo and Yokohama.

FOREIGN INTERESTS IN KOREA..

The *Kokumin Shimbun* contains a timely and valuable analysis of the interests actually acquired by subjects or citizens of foreign States in Korea. The list is as follows :—

JAPAN.

The Söul-Chemulpo Railway.—Already open to traffic though not completely finished.
The Söul-Fusan Railway.—Concession granted to Japanese, and surveys now being made, but work of construction not yet commenced.
Gold Mine.—At Chiksan in Chhunhhang-do. Concession held by Messrs. Fukuzawa and Tatsuzo. Work is being carried on and the future is most promising.
Gold Mine.—At Chhong-won in Kyöng-sang. Concession obtained several years ago by Mr. Maki, but work not yet commenced.
Gold Mine.—At Songhwa in Hwanhai-do. Concession obtained 5 years ago by Mr. Tanaka but work not yet commenced.
Gold Mine.—At Chhölwön in Kangwön-do. Concession obtained by Mr. Okura Kihachiro, but work not yet commenced.
Smokeless Coal Mine.—At Pyöngyang. Concession obtained by Messrs. Kasai and Inukai, but work not yet commenced.
Various other mining concessions have been applied for by Messrs. Shibusawa Eiichi and Asano.
Whaling Privileges.—Obtained by Mr. Kawakita Kanshichi on the coasts of Hamgyön-do, Kanwön-do and Kyöngsan-do.
Management and Control of all the Posts and Telegraphs in the Empire.—Obtained last year by the Japanese Government.
Banks—Branches of the First, the Eighteenth, and the Fifty-eighth.
Schools—Sixteen secular and two religious (Buddhist)

RUSSIA.

Coal Mine.—In Hamgyön-do. The coal has proved bad and work is suspended.
Whaling Privileges.—In the same waters as the Japanese mentioned above, but the Russian concessionaire (Captain Kaiserin) is entitled to boiling stations on shore.
Timber-felling Rights.—In the districts adjoining the Yalu and Tumen Rivers and on the island of Ulnyung. The nature of this concession is vague, but undoubtedly very fine lumber is being obtained for use in the construction of the Trans-Asian Railway.
Schools.—Unascertained.

AMERICA.

Gold Mine.—At Unsan in Pyöng-an-do. Concession obtained by Mr. Morse. Said to be a rich mine. The employés number 40 foreigners, 1,200 Koreans and 30 Japanese. Last year the concessionaire presented a lump sum of 200,000 *yen* to the Korean Court, and the yearly payment made for the royalty is 25,000 *yen*.
Electric Railway.—In Söul. Commenced working last summer.
Schools.—Twelve, under Missionary management.

GERMANY.

Gold Mine.—At Tanghyon in Kangwön-do. Concession obtained by Mr. Walter in 1897. Several hundred men now at work.

ENGLAND.

Gold Mine—At Uensan in Pyöngan-do. Concession just obtained by Mr. Pritchard Morgan.
Various Contract Works.
Bank—A branch of the Hongkong and Shanghai Banking Corporation.
Customs and Finance—Under the complete management of Mr. McLeavy Brown.

A representative of the San Francisco Chamber of Commerce, who has been abroad since last year in the interests of that institution, reports that he finds no ground for fear that Siberia will become a serious competitor of the United States in the matter of wheat. Wheat grown in eastern Siberia, he says, is inferior to American, and even when produced from California seed it degenerates the first year. Another feature observed by this authority while in Russia was the presence of piles of American flour at every landing-place along the Amur. So far as lumber is concerned, despite the abundance of forests from Vladivostock to the Ural, the trees are small, and most of the lumber comes from Puget Sound districts. Thus far the Trans-Siberian railway has benefited commercial interests in the United States more than all Europe combined, save Russia.

MOUNTED TROOPS FOR THE JAPANESE ARMY.

WE observe that the *Jiji Shimpo* takes up a question often discussed in these columns, namely, the necessity of providing good horses for the Japanese Army. The ponies now used are not fit for cavalry and artillery purposes. They might do well enough were Japan opposed to a country employing similar cattle, as China, for example; but against European troops they would be almost valueless. The idea which prevailed when the Japanese army was organized on modern lines was that in a mountainous country like Japan cavalry could not be of much service. That notion was based entirely on the old-fashioned theory of cavalry charges, and it was not inconsistent with the belief that prevailed in Europe after the introduction of breech-loading rifles, namely, that cavalry could no longer get within reach of well-armed infantry in the open. But the war in South Africa indicates that a new role has been disclosed for cavalry and mounted troops in general, and that a hilly country is precisely the place where they can be used to best advantage. Even at this moment the details are reaching us of a brilliant *coup* made by the Boers which would have been quite impossible for infantry. Not merely have scouting duties acquired fresh significance, but it has also become plain that the breech-loading quick-firer, which was supposed to have driven cavalry out of the field altogether, has really made mounted men more necessary than ever, since it will hereafter be upon flanking operations principally that commanding officers will have to rely. We are by no means sure that in their ponies the Japanese do not possess excellent material for mounted infantry. The pony of this country is a hardy animal, cheap, easily fed and handy for use in precipitous or broken ground. Mounted infantry do not want fine cattle. All that they need is means of quick locomotion. But cavalry and artillery horsed with Japanese ponies and opposed by Western troops would make a poor showing. The Military Authorities must take this point into serious consideration. And they will also have to consider whether some means should not be adopted of encouraging equestrian exercises. Among nations claiming high rank there is not one, we believe, which has so little skill in riding as the Japanese. They learn quickly enough. Their troopers and gunners have fairly good seats, and would doubtless make a much more respectable figure if they were better horsed. But throughout the country in general horse-riding is almost unknown. Everyone must have remarked that in no part of Japan are people to be seen riding horses in such a manner as to become proficient equestrians. The peasant often perches himself on a pack-saddle, but that method of locomotion has nothing in common with riding: the man might as well be seated on a howdah. Had Japan found herself in a predicament like that recently experienced by England, where it was absolutely essential to provide, at a moment's notice, a large number of mounted men for military service in the field, she would have been quite helpless. The agricultural class does not ride; neither does the mercantile, and neither do the gentlemen. The old-time *Samurai* mounted a horse; but he did not ride, in the proper sense of the term. He balanced himself on immense shoe-shaped stirrups and trained his pony to a "disunited" gait which avoids jolting but which involves a terrible strain on a horse's endurance. The discovery that mounted infantry has such a great future before it is not unwelcome to Englishmen, for equestrianism is their national forte. With Japan the very opposite is the truth, and it seems to us to be a matter well worthy of the careful attention of the military authorities.

THE FUTURE OF JAPANESE INDUSTRY.

IT is not surprising that some anxiety should be felt about the future of Japanese industry. The factors which chiefly promised to assist this country in the field of competition were cheap, skilled labour and the small cost of living. But both of these aids are apparently becoming more and more apocryphal. The daily expenses of maintenance are fully twice as great now as they were twenty-five years ago, and the price of labour has risen in an almost equal ratio. In some cases one can readily understand why work commands increasing wages. Women, for example, who formerly could not hope for anything better than domestic service which brought them food, clothes—after a fashion—and a few shillings of annual wage, can now earn from 30 to 50 *sen* daily as factory hands, telegraph or telephone operators, or employes in various departments. The coolie class, too, are in keen demand for the purpose of carrying out extensive public works connected with the *post-bellum* programme, as well as those started by private enterprise. But take the case of gardeners. Why should gardeners be more expensive now than they were in the days when Tokyo might be called a city of gardens; the days when every one of the 273 noblemen of Japan, to say nothing of wealthy merchants, had extensive parks in the capital of the Bakufu, and when thousands of gardeners were employed where at present only hundreds are required? Why, again, should the furniture of gardens show the same appreciation—trees, rocks and shrubs, and so on? Is there greater demand for these things? Probably there is, in view of the augmented prosperity of the country; but it is not a demand proportionate to the appreciation, for the wages of common gardeners have risen from 22 *sen* to 45 or 50, and trees and rocks which cost 100 *yen* in 1875 can not be had now for less than 250. It is scarcely credible that the sums which the Japanese are now prepared to spend on fancy gardening have more than doubled in a quarter of a century. Even if there had been such an increase, it does not follow that the cost of labour and materials would have grown proportionately, for a larger quantity of both would have been forthcoming to supply the demand. There must have been a corresponding change in every branch of enterprise. Otherwise the more favoured would attract a larger supply of labour and the rate of general appreciation would lag considerably behind the enhanced demand in any one field. Some Japanese writers are disposed to attribute these economical changes in great part to the exhanced price of rice. But surely that is mistaking an effect for a cause? Rice has shared the universal appreciation, and has also felt the effect of the wave of prosperity which has greatly swelled the volume of the rice-consuming class. But it has no special responsibility for the things that have happened. What then is the cause? We should answer the question by another, is the appreciation real, or is it not, to a great extent, apparent only? Take the case of rice, since its importance is so paramount. Rice sold for 17/6 per *koku* when the pensions of the *Samurai* were commuted in 1876. Seventeen shillings and six-pence represents nearly 9 *yen* to-day, and the standard official price of rice, the price representing the maximum for the Exchanges, is 12.70 *yen*, while the actual quotation is 11.88 *yen*. Stated, then, in terms of gold, rice has appreciated 32 per cent. in 25 years, and if we apply the same unit of value to other commodities, it appears that there has been even less appreciation. In short, the labourer gets twice as much silver as he did a quarter of a century ago, and the householder has to pay twice as much of the white metal for the maintenance of himself and his family as he paid in 1875, but if the wages of the former and the disbursements of the latter are expressed in terms of gold, the difference between the past and the present ceases to be very striking. Could the appreciation of gold have been arrested twenty-five years ago, Japan's industrial outlook would not appear so gloomy to her economists as it looks to-day. But we commend to their attention the fact that the labourer's 25-sen wage in 1875 represented nearly 13 pence and that his 50-sen wage to-day represents about the same amount in sterling. Hence, for purposes of competition with gold-using countries, the situation of Japan has not been impaired. But for purposes of competition with China, the case is very different. We agree with an article published by the *Nichi Nichi Shimbun*, the writer of which apprehends that foreign capitalists will be disposed to seen a much more inviting field for industrial enterprise in China than in Japan. It will be many years before China seriously feels the effects of the appreciation of gold; or, at any rate, before she practically responds to them. In the interval silver will purchase much more in China than in Japan, and the foreign employer of Chinese labour will have a cor-

Digitized by Google Original from CORNELL UNIVERSITY

responding advantage. Japan has still a large margin for reform in the matter of organization. The petty, hand-to-mouth capitalist and the system of little domestic industries will have to be abandoned in favour of combination and economical methods. Writing in this strain some sixteen or seventeen years ago, we brought down upon our heads indignant remonstrances from critics who held that domestic industry, and the individualism it fosters, were the sources of Japan's success in the field of applied arts. There is probably some truth in the objection, but Japan can not afford to be artistic at the cost of her industrial prosperity.

HOW WE SAW THE "MAKIGARI."

BY A DISILLUSIONED FOREIGNER.

On the morning of Saturday, March 31st, there might have been seen, as the minor novelist says, at Yokohama Station a number of stalwart figures bearing a close family resemblance to a party of Boers going to the front. They all looked very happy and confident, like Boers who had just read one of Kruger's veracious despatches, speaking of the repulse of 10,000 Englishmen by 500 Transvaalers, with a loss of 6,758 killed on the side of the British and two slightly wounded on the part of the burghers. There was a warlike display of sporting rifles and guns, an impressive collection of slouch hats; and a flavouring of khaki. True, none of the party was equipped with a family Bible, without which, I believe, no true Boer goes forth to battle, but that is a mere detail.

These truculent-looking personages belonged chiefly to the Yokohama Rifle Club. They were mostly Japanese, but half-a-dozen foreigners were with them, and all were bound for the neighbourhood of Fujiyama, where a great *Makigari*, to rival those famous expeditions of the palmy days of Japanese feudalism, was to take place. None of us—I mean the foreigners—had, I fancy, very clear ideas of what a *makigari* was like, but I expect my own notion was the most vaguely magnificent of all. I had seen a picture of what might be expected—a gorgeous, coloured affair of Japanese origin—and it had kept me awake several nights, so impressed had I been with the terrible splendour of the scene which my favoured eyes were to witness. There was Fuji, towering up into the clear spring sky, the last two inches topped with a snowy crown; below were the steep and scrub-covered slopes where wild boar, deer, hares, foxes, badgers, and birds of all kinds had for three centuries swarmed unmolested by the hands of man. These slopes were now thronged with hunters and beaters. Myriads of stags and boars, each of which, in proportion to the size of the mountain, must have been vastly larger than the most terrific megatherium or mammoth of the pre-Adamite period, were rushing about in mad career, blazed at by gigantic sportsmen, and followed by the arrows of Titanic archers. Scores were lying dead upon the ground, others were in the very act of falling dead while leaping over a Scotch fir; here and there a sportsman was knocking down a boar or a fox with the butt end of his gun, or plunging his hunting knife into the animal's neck. It was indeed a warfare of Titans. Still lower down, just where the mountain began to rise from the fair plain land, were a policeman taking notes in most realistic manner, a foreign lady with brilliant gamboge hair and emphatic dress-improver, a foreign gentleman in a Newmarket coat extending over one-sixteenth of the mountain's area, two or three foreign artists, and a crowd of Japanese dandies.

This picture at once inspired and saddened me. I felt that I was about to see something mortal had never seen before, something fell and destructive, something that I might bore my grand-children with half-a-century hence, something that should invest me with the glamour of awesome experience. At the same time it seemed a little sad. I am essentially a peaceable and humane man. I am no sportsman. Even the shooting of a musical tom-cat with an air-gun has never afforded me absolute bliss. I have done it merely as a measure of state policy—as a benevolent autocrat might sign a death-warrant, recognising but deploring its necessity; the obituary howl of the unfortunate creature has even sounded reproachfully in my ears even in the moment of triumphal assurance that it would no more trouble my sleep. So I felt sorry for these poor animals, and especially for the deer. I knew this was the season of the year when a brighter iris changes on the burnished dove, and also (possibly) when a young stag's fancy lightly turns to thoughts of love; and my heart bled for the feelings of the gallant buck who should see his sweetheart laid low by one of the thousand guns that were about to ravage the ground where his ancestors lived and died in peace for centuries.

I must own, also, to a tinge of personal concern. An awful rumour had been spread abroad that two-thirds of the sportsmen had only purchased their guns and taken out their licenses a week before, and that therefore the shooting might be expected to be a trifle erratic. Anxious friends had bidden me farewell with as much emotion as if I had been bound for Pretoria. Some, indeed, had grimly hinted that the expedition was at least twice as dangerous as the assault on Cronje's laager. However, I had made my will, bequeathing my few and insignificant debts (I am an unfashionable personage) to my next-of-kin, and I was moderately ready for the worst that might happen.

I need say nothing about the journey to Suzukawa, except that I made it standing up, with a short stout man standing on my right instep, and a long thin man crushing the toes of my left foot, while a particularly robust Japanese Nimrod sat lightly on the carriage seat and heavily on my lower ribs. These are only the ordinary experiences when there is anything unusual on the Tokaido Railway. Nearly everybody drank Kirin beer, munched sandwiches, and smoked cigars of appalling strength throughout the five hours journey, so that on the whole the carriage was not a pleasant place to be in on a warm Spring day.

At Suzukawa we found a teahouse, a triumphal arch, several policemen, tram cars, and carriages. The tram line was about two feet in width, and the cars would seat uncomfortably about four persons. Each of them was filled with about 20, and a corresponding quantity of luggage. The carriages were real curiosities. Something remotely resembling a horse was in the shafts, which were generally broken in three or four places and tied up with string or paper. The wheels had a spoke or two missing, and were rather elliptical than round. The body of the luxurious conveyance bore evident traces of having been used in some agricultural work not altogether unconnected with a manuring of crops. We surveyed the whole collection—myself and my friend—and decided to "pass" the carriages. The other foreigners, more intrepid, engaged two of them, and were soon going off at a fair pace down the rough road, tossed into the air by the excessive jolting, much as a ball is kept suspended on the top of a powerful spray of water.

Presently there came up a stern-looking policeman, rather handsome, but with a dark and diabolic look that suggested his perfect readiness to wade through slaughter to an inspectorship and shut the gates of mercy on the general public. In point of fact, he proved the most amiable and accommodating of men. He asked to see our tickets, and apparently there was something in them that entitled us to special treatment, for he immediately took us into custody. He was exceedingly kind, but the impression of being his prisoners was so strong that in five minutes we were both wondering whether we hadn't committed some murder or burglary a long time ago and forgotten all about it. He spoke a little English, this uncompromising official, and saying "Come—with—me" in a tone that admitted of no compromise he took us off to the police station. By this time we felt guilty of all the crimes mentioned in the Criminal Code, and of several others that had been overlooked by the framers thereof.

At the station was an excessively polite Kencho official, to whom we were introduced. He also spoke English, but was troubled to think that he could not be "eloquent" in that language.

"Take—a—chair," said the stern policeman.

"You should say, 'Take your seat,'" corrected the Kencho gentleman in an undertone.

"Take—your—seat," said the policeman, adopting the substituted expression.

We took our seats, accordingly, and enquired when we could start for Omiya, the rendezvous.

"Wait five minutes," said the Kencho gentlemen.

We waited half-an-hour instead, and at the end of that time two trams made their appearance. They were immediately invaded by about forty sportsmen who were waiting, and still at least a hundred were left behind.

We made an attempt to storm one of the vehicles, but it was unavailing.

"Wait five minutes," said our polite friend once more.

For an hour and a half we were continually entreated to "wait five minutes," and we might have waited all night, for the supply of trams was limited, while every train brought fresh crowds of sportsmen. At length, when Fuji was beginning to look dim and ghostly in the evening shade, we represented politely but firmly that we really must be getting on.

"Wait five minutes" was the only reply. But we determined, if we could not ride, to walk, and so we said. This stirred up our friends to energetic action, and at length a tram was commandeered, our luggage hoisted up, and we, with our custodians, obtained each standing room for one foot on the platform of the vehicle. And after "waiting five minutes," which really seems a formula in these parts, we began to lumber heavily along on the way to Omiya.

I am afraid to say how long the journey occupied. It seemed a day, but it may have been only two hours. By about nine o'clock we had arrived at Omiya, a town of several thousand people, consisting of one great straggling street, which, to our exhausted perceptions, appeared to be miles long. Jam and mud seem to be the two chief productions

Digitized by Google Original from CORNELL UNIVERSITY

of Omiya. I can say nothing of the former commodity, not having tasted it, but the mud is the very muddiest mud I have ever stepped through.

Alighting from the tram we had a few minutes' walk followed by all the juveniles of the place, till we came to a triumphal arch, near which were three outdoor offices where tickets were examined.

"Wait five minutes," said our friend and disappeared with our tickets.

He went to the first office, where, in very high-toned Japanese, he protested that it was really most improper, and most impolite, but here were two foreigners, and would the officer in charge deign to examine our tickets? The tickets were examined, and after five minutes conversation it appeared that it was the wrong office. Then we went to a second office. The same delay and the same result. Finally the right place was found, and we were provided with cherry badges and a distinguishing ribbon for our coat sleeves, as well as an order on one of the townsmen for our accommodation. All kinds of signatures and counter-signatures had to be made, and a more elaborate example of officialism could not have been witnessed even at Somerset House.

One would have fancied that now everything was settled, and that two unhappy foreigners, who had been travelling ten hours and had been eight hours without food, might expect rest and refreshment. No.

"Wait five minutes," said our conductor.

"Come—this—way" said the stern policeman.

And off we marched for another half mile. We stopped before a miserable-looking hovel. This was one of the "houses of the wealthier inhabitants," in which guests were to be accommodated. We did not care for the prospect.

"Wait five minutes," and with this formula our conductor entered into a long and excited colloguing with the householder. When the five minutes were more than completed it turned out that this was the wrong house.

"I am very sorry," said the Kencho gentlemen. We were not.

Another march, and this time we stopped before a handsome residence.

"Wait five minutes." It turned out to be a quarter of an hour, and at the end we found that the host, while deploring the fact in the choicest of terms, could not help confessing that he had no room. All his accommodation was taken up.

We were in despair; but our guide encouraged us as before: "Wait five minutes."

Another long march, and this time we halted before a hotel.

"Wait five minutes." It was twenty before, from the maze of polite phrases, it became evident that we could expect no resting place there.

"Wait five minutes." On we went again.

This time we stopped before a butcher's shop, nicely ornamented by legs of beef and sides of pork, and haunted by the ghosts of all the animals ever killed in Omiya. Our friend was full of apologies. It was very dirty, it was not fit for us, we must forgive him for placing us in such degraded quarters, but what could he do?

We professed an entire satisfaction; we would be glad of any accommodation, even if it were fifty times worse.

"Then I am very cheerful," said our friend, "I am very joyful. Wait five minutes."

This time there was no difficulty and the conversation was very short. I think our friend used very few honorifics in the whole colloquy; at any rate an understanding was at once arrived at, and we were, half a minute later, in possession of a room at least six feet by six, simply but elegantly furnished with one *hibachi*. For two weary men it was accommodation enough. The place was clean, and the aroma of a cigar soon sufficed to lay the ghosts of slain quadrupeds which tainted even this corner of the establishment.

"Now for dinner," said we, as a couple of pleasant little Japanese girls made their appearance.

"Wait five minutes," said our friend, by sheer force of habit.

In a quarter of an hour the thing was done, and we were making the best headway possible for unskilful users of the chopsticks. I am not one of those who, like Mr. Lafcadio Hearn, "really prefer" Japanese food to the more substantial fare of the West, but hunger is an excellent sauce, and rice, pickled bamboo, fish, and various nameless compounds did nearly as well for two famished wretches as would the most elaborate French *menu*.

We were not able to give undivided attention, however, to the business of the moment, for we were receiving callers at intervals of ten minutes. All the officials of the district—and I am inclined to believe that that particular district is more than usually rich in officials—came to pay visits of ceremony. It was a perfect levée. Indeed, even as late as eleven o'clock, when we were vainly attempting to sleep, we had calls from two police inspectors and one civilian, whom we had to receive in pyjamas—a species of attire in which one feels to a certain extent at a disadvantage.

Our friend of the Kencho, in the meanwhile, stuck to us like an exceedingly amiable leech, plying us with instructions as to the morrow, praying us every now and then to "wait five minutes" for no ostensible purpose, and in short making himself as useful and agreeable as he could do. As the evening wore on and he himself got exhausted, his English, of which to had really a very fair knowledge, began to fail him, and he was finally reduced to "Excuse me," and "Wait five minutes."

Thus: "Will you have a cigarette?" "Excuse me, wait five minutes." "Do you think the weather will be fine to-morrow?" "I am very sorry; wait five minutes." "How many sportsmen are there here?" "Wait five minutes," &c. &c.

Finally, we were left alone, to snatch, if possible, a few hours' sleep, our friend assuring us that he would wait on us at 2.30 a.m. next day.

It was a difficult matter, that of sleeping. Apart from the unaccustomed wooden pillows and the matted flour, there was the not particularly subdued conversation of the other guests, who were apparently making a night of it. The smart tapping of a pipe against a *hibachi*, too, is not a sound that makes for slumber. However, about one o'clock we fell into a troubled dose, and by half-past two, when we were roused, we had lapsed into complete unconsciousness. It was not very pleasant getting up and dressing at that hour, but there was no time for regretful yawns, for the party was to start for the hunting ground at three. We got up, therefore, immediately, and by three o'clock we were out in the starry night waiting for the escort of police with whom we were to march up to the base of the mountain.

Presently there was a glare of paper lanterns far down the street, and in a few minutes the whole company came up. There must have been about 50 policemen and perhaps twenty civilians, all wearing *waraji*, which gave their tread an impressive silence. We all fell in, and went off at a smart pace. It was a weird journey for the first two hours. The night was dark, though clear; the path was only lighted by the paper lanterns carried by the police; and in the dim starlight the vast outline of Fuji showed vague and ghost-like far away.

The distance was said to be four *ri*, but a *ri*, as a measure of distance, is unsatisfactorily vague. We must have walked at least eight miles before the dawn, and then not nearly half the journey was accomplished. At daylight a halt was called at a country schoolhouse, the schoolmaster being unceremoniously roused to attend to the wants of the party. Then on again for another three hours of hard uphill walking. Every enquiry as to the remaining distance was met with, "Wait five minutes" from our official friend, and "one—more—*ri*" (a pause for consideration between each word), from our police ally. By this time our party was not alone. There were hundreds of people on miserable pack-horses (compared with which the animal of the Yokohama streets is a dashing and fiery steed) and on foot—sportsmen, spectators, and coolies bringing up provisions. The loads of some of the latter illustrated the amount of labour which the Japanese often give themselves by not doing things on a large scale. For instance, there was one coolie toiling up with a dozen bottles of beer over his shoulder, six on one side of the pole, and six on the other. One would have thought that it would be much cheaper to have taken two or three cases on a pack-horse, but the spirit which seems to impel a Japanese servant to draw well water with a thick wooden bucket weighing almost as much as the liquid it contains, instead of using a capacious metal receptacle that would give half the trouble, appears to obtain here also in the matter of transport.

At last, at 8 a.m,, we arrived at a sort of gipsy encampment on a small tableland just below the spot where the mountain begins to rise in earnest. We must have walked at least seventeen miles—no great feat in itself, but rather laborious when undertaken without breakfast after an hour's sleep, especially since the last three or four miles were a stiff climb. Those sportsmen who were with us were more keen on rest and food than on the pleasures of the chase, and several were quite knocked up before the day had commenced.

The weather had so far been perfect, and in the lowlands the temperature was almost summer-like. But hardly had the rendezvous been reached when it began to rain. We all know how it can rain in Yokohama. Multiply that by about ten, and you have the conditions prevailing at Fuji. Besides, it was bitterly cold, for we were now among the first patches of snow on the mountain side, and a little way up there were great white layers completely concealing the ground. A high wind was blowing—I don't know whether it was from the north or the west, for we had lost all sense of direction—but at any rate from the coldest point of the compass; and altogether the conditions were about as miserable as could be conceived. An awning had been put up here and there, but there was only one small tent for the police, capable of holding a dozen people. The rest crowded under the shelter of the scanty canvas, exposed on all sides to the rain and wind, or ensconced themselves behind rocks and tufts of herbage, like large and very miserable hares.

There was plenty to eat and drink—of a kind. At various stalls one could buy sandwiches, oranges, bottled beer, *sake*, a pre-

Digitized by Google Original from CORNELL UNIVERSITY

peration called "corned bief" (made in Tokyo), and Huntly and Palmer's biscuits of the sickliest kinds. It was not exactly the fare to put people in rollicking spirits on a nasty day. There were a few fires which, if they did not warm, at least partially asphyxiated, and over these a few resolute spirits tried to assume a ghastly conviviality.

So passed an hour or two, during which the rain came pitilessly, while every now and then a cloud, which had strayed down too low, enveloped everything in a dense Scotch mist. At last it became comparatively fine, though the bitter wind remained. Now a few stalwarts of the Yokohama division sallied forth, but the Tokyo sportsmen seemed still disinclined to quit their shelter and the *sake* cup.

We—myself and my non-sporting friend—were wondering when the *makigari* was going to begin. It was eleven o'clock, and nothing had been done on an organised plan. There were enough men with guns to form a strong Boer commando, and enough archers to have turned the scale at Cressy, but they looked rather like making a day of it in that miserable encampment than turning out on the bleak mountain side. I don't know exactly what I thought the *makigari* would be like, but I had a vague idea of great quantities of game being driven out of cover by the 2,000 beaters, and being shot at in full view of the spectators by the horde of sportsmen. Nothing of that kind had occurred. I asked my Kencho friend when the fun was likely to begin, and received the answer I might have expected, "Wait five minutes."

We waited and waited, but no commencement was made, and then, out of desperation, and more to restore our frozen circulation than with any other object, we started on a reconnaissance. We walked for several miles through the covers—among scenery that would have been pleasing on a finer day; we saw shivering policemen and beaters gathered disconsolately in knots around small fires; we heard a shot or two, but we saw no deer or game of any kind alive. By this time a good many Japanese sportsmen had gone out and there was a lot of banging of guns—aimed at nothing in particular, for hardly any game was started, but fired simply as a show of doing something, and to keep up the party's drooping spirits. Then we wandered—sportsmen and a few spectators—for an hour or so, all of us feeling that this was not the *makigari* we had sacrificed so much to see.

Then the rain came on again. The last time it had merely drizzled in comparison. Now it came down in sheets, and washed out; all the spirit that was left in us. It was clear that it was going to rain all day, and equally clear that the sportsmen were not going to face it. Everyone commenced to go back as quick as possible towards the place where the encampment should be, for it was impossible to see more than a hundred yards ahead. Off we went, a drenched and miserable crew. After half an hour's walking we got back, and found at one of the camp fires a crowd of Japanese dancing with joy round the remains of a doe, the prize of one of the Japanese members of the Yokohama Club. There was a wild report of another doe having been killed, but we did not see it, and what one does not see it is not always safe to believe. The one trophy, however, was sufficient to cast a glow of joy over the excampment.

"I am very cheerful" said our official friend, as he pointed out the victim. Poor fellow, he did not look it, for he was perfectly shiny with rain from head to foot.

There was now nothing to do but tramp back to Omiya by a path never good, but now rendered absolutely frightful by the rain. A lingering hope of the sportsmen gave place to a desire to annihilate the distance between this savage wilderness and the comparative comfort of Omiya.

Off we started at a round pace, as sorry and draggle-tailed a crew as ever was seen. Smart fur coats that had looked brave in the morning were now sopping wet as to cloth and drowned-rat-like as to fur; "dressy" covert-coats clung shapelessly to the figures of the wearer; and boots and gaiters were one solid mass of mud. Ten miles had to be walked before we got to the plain and to a road that was even approximately civilised. Here there were two or three "carriages" and a rush was made for them, regardless of the fact that hire was at a premium, and that one could almost job the best brougham ever turned out at Long Acre for the price demanded for these wretched rattle-traps.

Even then the adventures of the day were not over, for the road was so bad that once the whole conveyance toppled over, precipitating us on to our heads in an agreeable ditch, only about a hundred yards from a spot where the road verged unprotected on quite a little precipice of thirty feet or so. The driver seemed to take it quite as a part of the day's work, and when the passengers had got clear he merely gave a lash to the horse, shoved the "carriage" upright again, and invited us to resume our seats. I don't believe there was a sound spoke in the wheels of the wretched thing, or a sound timber in the body, and yet it sustained no appreciable harm from an accident that would probably have rendered a well-built vehicle unfit for service. It merely rattled and bumped a little more; that was all.

At length Omiya was reached; and with dry clothes and a meal the dismal features of the day were soon merely a reminiscence. It rained with admirable steadiness the whole of the night and till past sunrise, and by that time most people had had enough of the *makigari* not to attempt to return to Fuji-yama. A few enthusiasts, I believe, did so, and I hope (though I do not believe) that they had splendid sport. No doubt they will return with tales of the immense slaughter they effected; say that they killed herds of dear and boars, but that really it was not worth the trouble to bring them back to Tokyo and Yokohama, &c., &c. We all know the nature of anglers' stories, and other sportsmen are probably quite as gifted in the matter of imagination. But the true unvarnished tale of the great *makigari* is as I have related it. It is unpicturesque, but veracious. And I should recommend that in the next edition of the Japanese English dictionaries this definition should appear:—"*Makigari*, a synonym for humbug, or *fiasco* (sporting)."

Many of the sportmen were shy of returning immediately to the capital and Yokohama. They were to be seen on every train up and down the line. Some went to Nagoya and Kobe; not a few to the Miyanoshita district; and several camped out on the seaside near Suzukawa. All wanted a few days to collect courage to meet the fire of chaff from their friends.

But the expedition was not without some pleasant reminiscences. One discovery that I made was the absolutely falsity of the smart Mr. Foster Fraser's criticism of the country policeman. The Japanese police everywhere are not bad fellows, but those in the country district seem to be even more kindly and obliging than, and at least as intelligent as, their town comrades. Better disposed towards the well-conducted foreigner they could not be. And the kindness of the officials everywhere also is deserving of a warm tribute. E. R. T.

INTERNATIONAL COMMITTEE.

ANNUAL MEETING.

The first annual meeting of subscribers to the International Committee was held on Wednesday afternoon, in Keil's Building. Mr. H. J. Holm presided, and there were also present, Messrs. J. H. Jewett, R. J. Kirby, J. H. Brooke, C. Guisanni, J. T. Griffin, J. D. Hutchison. E. Rogers, C. B. Bernard, J. C. Hartland, H. Abegg, Alf. Woolley, Jas. Dodds, R. M. Stirling, M. H. R. Harris, E. Flint Kilby, C. V. Sale, L. Pollard. and, C. Campbell.

After a quorum had assembled, the CHAIRMAN declared the meeting open, and then read the advertisement which convened it. He next read the following:—

REPORT.

Formation.—The International Committee was inaugurated under this title at a Committee Meeting of the Chamber of Commerce on the 30th March, 1898, and was formed with the expressed object to consider the position of Foreigners under Japanese Jurisdiction.

A Committee of 21 gentlemen was appointed, mostly from among the members of the Chamber of Commerce, representatives of the various nationalities being selected in approximate proportion to their numerical strength; and their appointment at a general meeting of the Chamber of Commerce on March 29th, 1899, was confirmed.

The Work of the Committee.—The Committee at an early date have deemed it of vital importance to endeavour to bring such parts of the Japanese Law as would most directly interest foreigners to their knowledge in a condensed, readable form. Towards this end they made arrangements with Prof. Dr. Loenholm for the compilation of a so-called "Digest" of the new Codes, which was brought out by the end of July, 1898, and which was followed by a supplement in May, 1899, this latter dealing with amendments or alterations decided upon in the meantime or made by the Diet in 1898-9, etc.

Your Committee think it will be generally admitted that these little books have proved of great value to the community in general, and that their appearance has contributed largely towards enabling all to form a tolerably correct opinion as to what the position under the new order of things was likely to be.

Your Committee after the appearance of these books decided to secure the services of Dr. Loenholm as their legal adviser, at a remuneration of *yen* 1,000 a year, this agreement to run from July 1st, 1899. The payment of this sum includes ordinary consultations as well as the translation for this Committee, free of charge, of any new Laws or Ordinances which may be of general or particular interest.

Besides these and other contributions by Dr. Loenholm, this Committee has been favoured with valuable information from the British Legation, (*i.e.* a number of carefully prepared translations of notifications); by the Kanagawa Kencho, by Mr. Saito, Chief of the Bureau of Taxation, and the "Japanese Association for investigating Questions relating to the Treaties," and to all of them we, on this occasion, beg to tender our best thanks. We are especially indebted to Mr. Mitsuhashi, Secretary of the Foreign Office, for his very kindly undertaking to be in a great many instances the intermediary between ourselves and various Government Offices, and for his readiness in answering questions on the most varying subjects. We venture to express a hope that his kind offices also in future may be placed at the disposal of this Committee.

Our Circulars.—All information obtained and the nature of which made it appear desirable has been brought to the knowledge of Subscribers by the issue of circulars, which have now reached 57. For details we beg reference to these circulars, and for the purposes of this report it may be sufficient to enumerate a few of the most important questions dealt with therein *i.e.*:—

Visiting and reporting upon the principal prisons in Tokyo—(May 20, 1898).

Business Tax, Tax on Capital.—(Oct. 31, Nov. 10, Dec. 27 and Circulars 17, 41).

Certificates of Origin.—(Nov. 23, Dec. 1 and Circulars 16, 36 and 53).

Correspondence between this Committee and the Japanese Association regarding various questions (Circular 15).

Fire Insurance Laws (Circulars 18, 19, 36).

Digitized by Google Original from CORNELL UNIVERSITY

Law of Pledge (Circular 19).
Registration and Partnership (Circular 35).
National Tax Collection Law (Circular 37).
Ordinances *re* property in the former Settlements (Circulars 54, 55).
Re "Kaisha" and Kumiai (Circular 45).
Re "Perpetual Leases" and Superficies (Circular 46).
Examples *re* Business Tax (Circulars 47, 50).
Re Arbitration (Circular 57).

For some time time the Chairman of the Chamber of Commerce having been also the Chairman of this Committee some matters have been treated under the auspices of the International Committee which should more properly have been dealt with by the Chamber of Commerce—the question *re* Certificate of Origin is now, for instance, left to the Chamber of Commerce. Sometimes it is, however, difficult to describe the exact sphere of this institution, and it will no doubt serve all ends best, if also in future a close co-operation is sought and adhered to as far as possible with other associations formed for special purposes.

Under the auspices of this Committee on the 9th of April last a dinner was arranged with the object of furthering the intercourse between Japanese and foreigners, which was honoured by the presence of most of the members of the Imperial Cabinet, and many leading Japanese gentlemen, and which proved a great success. A return dinner was given to your Committee by the Tokyo and Yokohama Chambers of Commerce.

Subscribers to the International Committee.—The foreign community was invited by circular and otherwise to lend their support towards a guarantee fund, to cover necessary expenses, and also as a proof of their sympathy with the aims of this Association. The list of subscribers now totals about 100, and a hope is hereby expressed that further supporters may come forward to promote the usefulness and influence of this institution, which, we venture to say, has done some substantial service in the past, and which will most probably find equal opportunities of doing good in the future.

Our aim is still the same, as was stated in the circular inviting support, *i.e.*, "It is not intended to work in an antagonistic spirit to the Government and Laws of this country, but to endeavour through friendly representations to remove difficulties and to promote a mutually good understanding."

Accounts.—The accounts, which are open to subscribers, are in a satisfactory condition, and with a balance at the end of last year of *yen* 1,830, now increased to *yen* 2,300, and with no early extra-calls on it in view, it is probably not necessary to collect further subscriptions for some time. On the other hand, it appears reasonable that the burden of maintaining this institution, which has so far fallen disproportionately on a few, should be more generally distributed, and it is suggested that the incoming Committee be charged with placing this matter on a broader basis.

Name of this Institution.—In pursuance of a resolution passed at a recent Committee meeting it is proposed to alter the name of this institution into "International Association," and it is further suggested that the Committee now to be elected should draw up a set of rules such as may appear necessary, and again invite the further co-operation of the Foreign Community.

Committee.—Some gentlemen having left the country, and through one or two resignations, which vacancies have not all been filled, the Committee at present numbers 15, and all of them now tender their resignation. In doing so they desire to put on record their obligations to their past Chairman, Mr. R. D. Robison, to whose great exertions most of the results so far obtained are in large measure due.

H. J. HOLM, Chairman.

STATEMENT OF RECEIPTS AND EXPENDITURE FOR THE YEAR 1899.

1899.	Y. S.
Jan. 1.	
Balance in hand	203.04
Subscriptions to Guarantee Fund and Donations	3,274.50
Sale of Books	573.80
June 28.	
Refund—Decoration Committee	39.50
Dec. 31.	
Bank Interest	34.08
	4,124.92

1899.	Y. S.
Paid Dr. Lönholm Balance for "Digest"	1,500.00
Paid Dr. Lönholm Printing Supplement	134.26
Printing, Advertising, and Translation	435.68
Stationery, Postage, Delivery, &c.	150.00
Collector's Commission	74.00
Balance	1,830.98
	4,124.92

F. & O. E. C. GIUSSANI, J. H. JEWETT, Auditors.
J. E. BEALE, Secretary.
Yokohama, April 4th, 1900.

The CHAIRMAN said he wished to supplement the report with a few remarks. First, that the credit balance, owing to the collection of various subscriptions, had been increased to *yen* 2,300; and secondly upon the work of the International Committee. The institution was formed with the express hope of considering the position of foreigners. At the commencement of 1898 when it became certain that the new treaties would be put operation, everybody was asking, somewhat plaintively in some cases, how this and that would be under the new regime. Nobody however, felt inclined to take the initiative and to collect the necessary information. In fact what was everybody's business was considered nobody's particular business. The Chamber of Commerce was the only existing institution, and one which fairly represented the principal and vital interests of the community. It decided to take the matter up. It appointed from among its members the nucleus of a Committee, namely one of each nationality with power to add to their number in approximate proportion to the numerical strength of each nationality, and in this way a committee of 21 gentlemen, as referred to in the report, was formed. They had on some occasions been charged with not being fully representative of the community. He thought that at the best this was an individual opinion. Anyhow, he ventured to say that in the circumstances it was as fairly representative of the community as it could well be. The only other course was to call a public meeting and elect a Committee then, which was not at the time thought judicious. Moreover he believed the aims of the Committee and the steps taken to carry them out had been on lines having the sympathy of a very great majority of the community. Referring to the list of subscribers atttached, he said he thought it showed that the support given was fairly general. Yet there were many more names that should appear on the list. He hoped the new Committee to be elected would find means to draw more support not merely for the sake of the money but to show that all joined in the aims of the association. As to the accounts he had to say that the amount at their disposal would be reduced by the payment of three-fourths of Dr. Loenholm's retainer, payable at the end of March. Nothing was included for the salary of the Secretary, Mr. Beale, whose remuneration would have to be decided on by the incoming Committee. Since the issuing of the report and accounts the latter had been audited by Messrs. Jewett and Giussani and the account book signed to that effect.

After a pause, the CHAIRMAN moved that the report and accounts be accepted. This was seconded by Mr. STIRLING and carried.

NEW COMMITTEE.

The next business was the election of the Committee, but before proceeding with it, Mr. E. Flint Kilby suggested that a Chairman should be elected and that Mr. Holm be asked to serve again.

The CHAIRMAN, while appreciating the honour, said he felt he could not discharge the duties as well as some others and suggested that the election should be left to the Committee.

Mr. KILBY thought that the election would come far better and stronger from the meeting, especially when they remembered the excellent work done by Mr. Holm after Mr. Robison's retirement.

Mr. DODDS said he shared the views of Mr. Kilby and seconded the proposal. No one proposed another candidate, and the re-election was declared unanimous.

Mr. HOLM remarked that under the circumstances he would accept with pleasure and do his best.

The election of the Committee was then taken up and after one or two suggestions as to procedure, the number of Committeemen necessary, and the representation of nationalities, Mr. Stirling moved that the old Committee be re-elected with the substitution of Mr. C. B. Bernard's name for Mr. W. B. Walter. The Committee to have power to add to their number. This was seconded by Mr. J. C. Hartland and carried. The new Committee are Mr. H. Abegg, Capt. Bougouin, Messrs. G. W. Bramhall, J. C. Budd, James Dodds, C. Giussani, H. J. Holm, J. D. Hutchison, D. Jackson, E. Flint Kilby, G. W. Middleton, P. Sarda, G. Reiffinger, C. B. Bernard and Alf. Woolley.

THE CROWN PRINCE'S WEDDING.

The CHAIRMAN said there was one more matter to which reference should be made. From latest information it appeared that the Imperial wedding would take place in May, and he moved that—"This meeting recognising the desirability of the foreign community of Yokohama taking cognizance in a suitable way of the impending Imperial Wedding, the incoming Committee be instructed to take the necessary steps in the matter." At a recent meeting of the Committee this subject was under consideration and the general opinion seemed to be that an appropriate, signed, address, perhaps in a small casket of foreign design and obtained from Europe, might be presented. The matter, however, should be left to the Committee.

Mr. J. T. GRIFFIN seconded.

Mr. KIRBY asked that Tokyo should also be included, but Messrs. Stirling and Hutchison thought as Kobe and Nagasaki would be acting individually it would be well for Tokyo to do the same and the suggestion was dropped, the Chairman remarking that it was not the amount involved but the spirit underlying the gift.

The resolution of the CHAIRMAN was then carried unanimously.

The CHAIRMAN said it was very desirable that every member of the Community should take an interest in the work of the Committee. If any question of either individual or general interest was brought to the notice of the Committee they would always be very happy to give it their consideration. In this way the usefulness of the Committee would be greatly increased.—(Applause.)

A vote of thanks to the Chairman, on the motion of Mr. WOOLLEY, brought the proceedings to a close.

THE SPINNING INDUSTRY.

That the spinning industry in Japan has made marked progress of late is undeniable, but, remarks the *Shogyo*, strange to say, nearly all the spinning companies in the empire recently fell into a state of serious embarassment, owing to their failure to realise the profits originally anticipated. Their distress seems to have culminated in the year before last, but fortunately they have succeeded in placing their enterprise on a profitable basis since the latter half of last year. The most remarkable feature which has developed itself in connection with this industry is the gradual diminution in the number of factories, which seems to have led to a general extension of business and consequent augmentation of profits realized by the survivors. The following table shows the number of spinning companies as well as the average rate of dividends declared by them during the past eight years:—

Year.	Number of companies. 1st half.	2nd half.	Rate of dividend. 1st. half. per cent.	2nd half. per cent.
1892	28	30	11.5	14.5
1893	32	33	11.5	13.0
1894	28	43	12.4	7.1
1895	47	51	9.4	9.2
1896	59	65	9.4	9.1
1897	66	66	9.4	4.8
1898	76	71	5.9	3.6
1899	65	58	4.6	9.2

Thus the number of companies in the latter half of last year being 58, shows a decrease of 7 in comparison with the figure for the previous term, and of 13 as compared with the corresponding period of the year before last. But the average rate of dividend declared being 9.2 per cent., is precisely the double of that for the previous term, corresponding to the rate secured in 1896. This may be regarded as an indication of the revival of the industry, while the tendency to amalgamation is still noticeable. Spinning, under these circumstances, can hardly fail to be a profitable enterprise in future. As to reserves and profits for the past two years the figures stood as follows:—

	Profits. Yen.	Reserves. Yen.	Dividends. Yen.
1898 (latter half)	776,636	257,274	413,850
1899 (1st half)	1,496,188	335,281	996,267
1899 (2nd half)	1,416,609	512,131	1,632,724

Thus a slight decrease is noticeable in the amount

Digitized by Google
Original from CORNELL UNIVERSITY

of profits and in the number of corporations for the latter half of last year, but it must be observed that the spinners having ceased to obtain loans at high interest, and having adopted a proper system ofmanagement, have succeeded in increasing not only the rates of dividend, but also the amount of their reserves. They were unable to set apart any portion of their receipts as a reserve fund until the year before last, and it is therefore matter for congratulation, adds our contemporary, that they have acquired since last year funds for contingencies and for equalization of dividends.

As to the number of spindles in work and the output of yarns during the years under review, the figures stand as follow :—

	Number of spindles.	Output of Kwan.
1st half, 1898.....	925,574	15,773,787
2nd half, 1898	928,407	16,263,647
1st half, 1899.....	1,026,994	18,045,745
2nd half, 1899	1,086,721	19,663,633

Thus the number of spindles in the latter half of 1899 has increased by 2,833 and the output by 489,860 *kwan*, but a greater increment is noticeable in the figures for last year, the two items for the 2nd half of the year showing an increase of 59,721 and 1,617,888 respectively over those of the previous term. From these facts it is evident that the rates of dividend must have been augmented and the range of business extended during last year. What causes brought about these results? China, with the development of her northern territories, has shown a strong inclination to import Japanese yarns, while the spinning industry in India, which always proved itself formidable to the Japanese in the matter of competition, has for a time fallen into a state of decline. The market for Indian manufactures was gradually encroached upon by the Japanese merchants, who have thus succeeded in increasing the amount of export. These facts may be perceived from the following figures :—

	Amount of export; catties.	Value realized. Yen.
1st half, 1898.....	31,175,125	9.451,451
2nd half, 1898	37,638,637	10,665,135
1st half, 1899.....	47,964,238	13,035,116
2nd half, 1899	54,672,594	15,486,324

Thus an increase of 14 per cent. is noticeable in amount and of 18 per cent. in value, whereas the average price per catty was 28.3 *sen*,—a quotation seldom experienced since the 1st half of 1898. In the domestic market prices were still more remarkable, the tendency to rise having continued unabated since January of last year. Below are the figures :—

Average Price 1st half of 1899.	Yen.	Same in the 2nd half.	Yen.
January	77.75	July	79.50
February	79.76	August	82.87
March	80.00	September	91.25
April	77.25	October	95.00
Hay	75.87	November	94.00
June	77.62	December	93.75
Averages ...	78.04	.....	89.39

Yarns which were not sold at a higher price than 78 *yen* during the 1st half of the year under review were quoted in the latter half at over 89 *yen*, showing a difference of no less than 11.35 *yen*. Calculating according to catties, the value for each of the two periods, therefore, did not fall short of 26 and 29 *sen* respectively. These prices are higher than those fixed for yarns exported, and may apparently be regarded as indicating the unusual briskness of demand which must have existed in the interior during the period referred to.

RUSSIA'S FLEET AND THE POLITICAL OUTLOOK.

The St. Petersburg correspondent of the *Daily Telegraph*, writing on the 15th Feb says :—The Russian Minister of Marine has given orders for the following vessels of the Baltic Fleet to be held in reserve :

	Tons.
Sebastopol, battleship	10,980
Poltava, battleship	10,980
Pereswiet, battleship.....	12,674
Admiral Ouchakoff, coast defence ship...	4,126
General Admiral Apraxine, cost defence ship.....	4,126
Admiral Seniavin, coast defence ship.....	5,126
Svetlana, cruiser	3,828
Standard, Imperial yacht	

The following ships of the Black Sea Fleet are to be held in reserve :

	Tons.
Rostislav, battleship	8,880
Sinope, battleship	10,180
Dvenadzat Apostoloff, battleship	8,076
Tria Sviatitelia, battleship	12,842
Georgi Pobiedonosetz, battleship	10,800
Captain Sacken, torpedo gunboat.....	742
Griden, torpedo gunboat	400
Kazarski, torpedo gunboat.....	400
Danube, transport	—
Pamyat Merkurya, 3rd cl. cruiser.....	3,050
Beresanj, training ship	—

Some people supposed to be competent to form an opinion, explain these orders by reference to the troubled state of the political horizon and by the unexpected developments which may arise out of the war in South Africa. The ordinary cruising programme of the Russian fleet in foreign waters, however, will remain almost unchanged this year. At Port Arthur there will be the guardship *Siatch* and the torpedo flotilla, and in the Pacific Ocean the following fleet will be maintained :

	Tons.
Petropaulovsk, battleship.....	10,960
Cissoi Veliky, battleship	8,880
Navarin, battleship	10,206
Rurik, armoured cruiser	10,923
Admiral Nachimoff, armoured cruiser.....	8.524
Admiral Korniloff, second-class cruiser...	5,000
Dmitri Donskoi, armoured cruiser.....	5,882
Vladimir Monomach, armoured cruisər...	6,061
Razboynik, corvette	1,329
Zabiyaka, sloop.....	1,234
Gremiastchy, armoured gun boat	1,500
Otvazny, armoured gunboat.....	1,500
Gilijak, gunboat.....	963
Korietz, gunboat	1,213
Mandjour, gunboat	1,416
Bobr, gunboat	950
Vzadnik, torpedo gunboat	400
Gaidamak, torpedo gunboat	500
And a torpedo gunboat flotilla.	

In addition, however, the Russian Pacific Squadron is to be reinforced this year by the undermentioned ships :

	Tons.
Politava, battleship	10,960
Palloda, cruiser.....	6,630
Waryag, cruiser	6,500
Amur, transport	—
Emsee, transport	—

And the torpedo boat destroyers Kit, Skat, Dephni, Kassatka, Forel, Sterlaid, Some, and Ossetr (of 312 to 350 tons), and the second-class torpedo boat Kefal.

The armoured cruiser *Pamyat Azova*, 6,675 tons, which is at qresent in the Pacific, will return to Russia.

In the Mediterranean Sea the Russian Government will maintain the subjoined squadron :

	Tons.
Emperor Nicholas I., battleship	9,672
Teretz, gunboat.....	1,224
Kubanetz, gunboat	1,224
Uraletz, gunboat	1,224
Abrek, torpedo gunboat	535

The *Emperor Alexander II*, battleship, 9,927 tons, and the *Zaporezetz*, gunboat, 1,224 tons, are to return to Russia.

The Minister of Marine's orders include the re-armament with mordern weapons of the *Emperor Nicholas I*, battleship; *Pamyat Azova*, armoured cruiser; *Sivoutch* and *Bobr*, gunboats; and *Standard* Imperial yacht. All these vessels, with the exception of the gunboats, wil be re-armed at Cronstad and the gunboats at Valdivostock, to which port their new guns will be sent.

From the programme which I have outlined above the conclusion may be drawn that the entire attention of Russia is at present concentrated upon the Far East, though, so far as the Mediterranean squadron is concerned, It can always be easily reinforced, in the event of any political difficulties, by the vessels which have been ordered to be kept in reserve. At all events, it shows that the political horizon is clear of storms. There are some people, it it is true, who will have it that Russia, with the cöoperation of France, is going to raise the Egyptian question, thereby taking advantage of the difficulties of England in South Africa; but this idea is a mere supposition. The Russian Government, as a matter of fact, has resolved not to depart from its attitude of strict neutrality, and does not intend to profit by Great Britain's present position. I may add that there have been no negotiations between Russia and France on the subject of Egypt, and all rumours to the contrary are due simply to the fantastic imaginations of certain journalists.

THE BOOKSHELF.

"*Negro Nobodies*," by Noel de Montagnac. Fisher Unwin's Overseas Library. Yokohama, Messrs. Kelly and Walsh, Limited.

The series of tales and sketches in-out-of-the-way corners of the earth which Mr. Fisher Unwin is publishing in the Overseas Library, continue readable, though none of the succeeding volumes have been able to compare with the clever work of that talented eccentric Mr. Cunninghame Grahame, with which the new enterprise was presented to the public. "Negro Nobodies" shows the West Indian black in his various moods, grave, gay, sentimental, cynical, and philosophical. The work is evidently not that of an experienced professional writer, but it has a freshness which is not uninviting. The author has studied the negro character closely, and shows both sympathy and insight. To English readers, whose idea of black humanity is chiefly gathered from "Uncle Tom's Cabin" and the Moore and Burgess' Minstrels, the book should be interesting. One gathers the impression from it that in the West Indies, though the negro does not occupy so dignified a position politically as in the United States, he is not so much an object of aversion as in the latter country. The religious "Daddy," who delivers homilies in quaint English, and the *esprit fort* Zacche, with his Malthusian and anti-feminist notions, are the best-limned personalities in the book. We quote a sample of Zacche's powers as a lecturer :—

"This creature, woman," Zacche proceeded, "is like a lucky bag whichen small children buy for a quattie (1½d.) because it has a pretty face upon it, and, because it is supposed to contain first class sugar plums and maybe, such a thing as a diamond ring. But what do de said children find? Sutt'nly, I say, what do they find? De sugar plum all make out of plaster of Paris, and de ring—well, sutt'nly, that is a kind of a hoop for de finger having de likeness of a ring and made out of a cheap brass wire. Gentlemen, it is no diamond ring at all." (Cries of "For true, for true, 'pon my word.") "But, gentlemen, what can you expect for a so-so quattie? Howsomever, that is another matter. In de beginning a woman was made from de ribs of a man, Adam by name, whichen we read of in de second chapter of Genesis de twenty second verse (correct me, Missa Daddy, if I am wrong), and de said woman she was made perfect and knew no evil whatsoever. But she listened to all de word de serpent say, whichen we notice in de third chapter of Genesis de sixth verse, therefore she becomes to know evil, to teach evil, to do evil; and she have all those particular faculties down to this very day. A woman is de most perfect living instance of pure contraryness. Altogether, gentl'men, a woman is a petticoat full of powerful destruction. (Sensation and sighs). De more I live, de more you live, de more we all live, we are convinced that there is no end or specification to a woman's ways. Now, there are many old ways, but there are a heap of new ways. Sutt'nly, de old ways are bad ways, but, O Lord, de new ways is de worst ways.

"Sutt'nly, woman is useful, but so is dildo, whichen, as you know, makes a really first-class fence, but has more prickle and 'macca,' and is more ruinous to de flesh of a human person than plenty people can have a conception of. Woman is useful, but so is dildo; woman is amusing, but so is monkey, whichen is more deceitful than any other animal in this world; woman walk softly, but so do snake and scorpion; woman mean well, and so do black spiders; woman is attentive, but so is sand fly and mosquito; woman is bewitching, but so, by all accounts, is de very devil himself. (General uneasiness.) Therefore, my dear friends, de whole thing resolve itself into this—*have nothing whatsoever to do with such a person as a woman*. In conclusion I will tell you there are two particular things for a sensible man to avoid in this life, namely, posion of any sort and marriage. But sutt'nly poison is better than marriage, because in de one case you don't have time to see you mistake before you know nothing and all is peace, while in de other case you not only see you mistake, but you live with it, and you two eye them is constanly upon it, and that, my son, is equal to all de fire and brimstone and hot lead and de extra special boilingnation and more down below, whichen we all have been cautioned about from de first day when we were born."

On Sunday morning last a Russian committed suicide by shooting himself with a revolver at the Pacific Hotel, Oura, Nagasaki. He had been employed on the railway at Port Arthur and came to Japan a few months ago to recruit his health. The body was handed over to the Russian Consul for interment.

THE FERMENT IN CHINA.

The latest news from China shows that there is a general feeling of unrest, particularly in the northern provinces, which in some instances has developed into actual rebellion. The *N. C. Daily News* reports that a couple of Censors, evidently inspired, have presented a joint memorial to the Throne, denouncing the Tsungli Yamên as incapable, and recommending its abolition, all foreign relations to be dealt with in future by the *Li Fan Yuan*, commonly termed, The Mongolian Superintendency, but really meaning the Colonial and Tributary Department. In other words, this is a thinly-veiled attempt to relegate once more the Ministers of Foreign Treaty Powers to the grade of Tribute-bearers. Reuter's correspondent at Peking learns that the Boxers are giving much trouble round Tientsin, and that there had been an indecisive battle in Chihli between 1,500 Chinese troops and as many Boxers, with many casualties on both sides. News was also received by the Shanghai mandarins from Shanhaikuan, Great Wall, reporting the existence of a serious insurrection in the vicinity of Chinchou, on the Shanhaikuan-Newchwang railway to the northwest of the latter city. The insurgents are all pretty well armed and well-mounted, constituting a very mobile and formidable force to deal with. Several bands of them have already visited the railway and have also threatened to pull up the rails should troops be transported from Lutai and Shanhaikuan to quell the insurrection. An English engineer and a party of native assistants belonging, it is stated, to the Chinese Engineering and Mining Co., at Kaiping, detailed to inspect some coal deposits at a place called Kaochiao, south of Chinchou, were attacked *en route* by a band of these insurgents. One of the native assistants, said to be the interpreter, in preventing a savage attack by a bandit upon the person of the Engineer was seriously wounded, but the diversion thus caused enabled the Englishman to escape to Chinchou, to the prefect of which he appealed for immediate assistance. A troop of cavalry was accordingly at once dispatched to the scene, the rest of the party were rescued, and a supposed bandit captured by the troopers. It is, however, more likely that the captive was a peasant belonging to Kaochiao who had stopped "to see the fun," while the real assailants galloped off as soon as help was seen coming.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

PROVIDENCE.

To the Editor of the "Japan Mail."

Sir,—It behooves man to be very careful in his theodicies lest, in justifying God's ways, he justify only man's idea of these ways, and lest perchance he fail to justify even this idea. From the days of Job onward men have, however, occupied themselves with these great problems; and he who does so in sincerity and of necessity stands, like Job, justified in spite of errors and of words seeming blasphemous to those complacent ones on whom the heavy hand has not been laid.

Though we have thus many attempts at theodicy no one has seen fit to coin such a word as anthropodicy. It does not concern us directly to justify man's ways toward God, especially with regard to the use of ready-made phrases, which, though they may be instinct with life, are often only dead ashes from what was once a living fire. Is it necessary therefore to say anything about the ascription of recent British victories to "the help of God," or about Emperor William's writing, "God be praised for this first glorious deed of our arms?" There is no fault to be found with the use of these words, still less is there any suggestion that in such serious moments, men should utter idle words. The *Jiji Shimpo* looks into the meaning of these words asking if Lord Roberts intends thereby to say that God was the prime contriver of the recent victories, and since the use of such phrases is a stumbling block to some it is perhaps not untimely to inquire whether men are justified in giving thanks to God for victories.

By the wrong use of such phrases and the suggestion of wrong ideas about the ways of Providence stumbling blocks are made and counsel is darkened by words without wisdom. "Superstition," says Plutarch, "furnishes both a commencement to the production of atheism, and when it is gathered, a pretext—not indeed true and fair, but still not devoid of plausibility—for its continuance. For it is not because men see anything blame-worthy in the heavens. . . that they conclude there is no God in the universe; but the ridiculous works and impulses of superstition. . . give occasion to some to say that it were better there were no gods, than that there were gods who approved of and delighted in these things." All this is no less true now than it was then, and we who believe God need to reach to the depths of the commandment, "Thou shall not take the name of the Lord thy God in vain."

A doctrine is too often judged by the explanations of its exponents. When one gives thanks for victory only, he lays himself open to the pertinent question, were defeats ascribable to the temporary alienation of Providence? Such questionings are very old, and bad reasoning ever recoils on the cause in whose defence it was undertaken. One, in days of old, pointed out to Diagoras the votive tablets at Samothrace erected by those who had escaped the perils of the ocean, and said:—"Thou who thinkest that the gods neglect human affairs, do you not observe, from so many by their vows have testified that they have escaped the power of the tempest?" "It happens thus," said Dragoras, "they erect no tablets who perish in the sea."

This ascription of victories alone to the overruling of Providence is akin to superstition which, essentially, is the seeing of God's power in certain events but not in all. It must be considered a refined form of superstition which led Thackerary to write, in a letter to his mother which ought perhaps never to have been published but which shows the heart of the man; and probably expresses the thoughts of many:—"I have a right to say, 'Father give me strength to bear my sufferings'; but I can't request any special change on my behalf. . . .or see any special divine animus superintending my illnesses and wellnesses. Those people seem to me presumptuous who are forever dragging the Awful Divinity into a participation with their private concerns." Now while there is such a thing as dragging the idea of God down to man's level, making a god in the likeness of man, there is no such thing as dragging God into participation with the affairs of His World, be they small or great. For are not two sparrows sold for a farthing? and one of them shall not fall on the ground without your Father. But the very hairs of your head are all numbered."

In considering, therefore, the use of the phrase, Thanks be to God, we find not that it is used too much but that it is not used enough. The apostolic injunction is, "In everything giving thanks, for this is the will of God." True it would have sounded strange had Buller given thanks for his defeats on the Tugela and protests much more stormy would have been raised than the mild criticism of Lord Roberts' pious phraseology. But if military usage cannot be squared with apostolic teaching, it is the usage that is at fault and and not the teaching. If the man of war cannot bring himself to give thanks in all things it would perchance be better did he not give thanks at all. If one can see God overruling all he can give thanks in defeat as in victory learning the lesson that is given and out of weakness becoming strong.

Though usage forbids public testimony to this principle we may believe that in private the military leaders carry out the precepts of the principle. Their public words need to be taken together with the freer utterances of the religious leaders of the people. Of these we have an example in a sermon by Dr. John Watson on the text:—"When thy judgements are in the earth the inhabitants of the world will learn righteousness." He says:—"Had we indeed carried everything before us as some gay hearts imagined then had it been worse for us than a defeat. . . . We should have been intolerable both to God and man. . . ."

The whole matter of Providence is one very wide and very high. In thinking and in speaking of God's ways we need ever to keep in mind the reproof: "Thou thoughtest that I was altogether such an one as thyself."

I am, Sir, truly yours,
F. M.
Etajima.

JAPAN'S TEA TRADE.

(To the Editor of the "Japan Mail.")

Sir,—I notice from a paragraph in a recent issue of your journal that the Minister of Agriculture and Commerce, Mr. Sone, has informed the tea men that their manner of employing the subsidy granted them by the Treasury is not calculated to encourage a continuance of the assistance.

This subsidy was first granted in 1897, and amounts to 70,000 *yen* annually, the object being to supply means for extending the sale of Japan teas and to combat the increasing competition of the Indian and Ceylon growers.

The Government finds that after three years experience, this money has not been applied to any useful purpose and therefore it is not unlikely that it will be discontinued for the future, although it was originally intended to allow the grant for a period of seven years.

The question naturally suggests itself—what has become of the money? Nearly a quarter of a million *yen* has been paid to the Japanese tea guild since 1897 with absolutely no result, nor are there any indications that any but the most feeble attempts have been made with it for the purposes intended.

The money has not been successfully employed in extending the export of Japan teas, seeing that during the three years the guild has been in receipt of the grant, the export of tea has fallen off three million pounds.

The money has not been expended in cheapening the price of teas, as the cost of production in the country is now higher than it ever was before, nor has the money been employed in improving the quality of Japan teas, that of the past season's crop having been the poorest that has come to market for many years.

It would, therefore, be interesting to learn, to whause this quarter of a million *yen* has been put and how the further large amount to be received during the present and subsequent years is to be employed. So far, it has either been wasted and frittered away in purposeless schemes or it has been made use of for other purposes than those intended by the Government.

A very noticeable feature in the affair, is the secrecy that has been observed by the Japanese tea merchants regarding the subsidy, towards the foreign merchants, and although many enquiries have been made no information whatever has been vouchsafed as to its disposal, although this naturally would be as important to the foreigners engaged in the trade, as to the Japanese themselves.

The success of the Japan tea trade rests mainly on the efforts of the foreign firms—a fact of which the Government is well aware—and therefore it is impossible to suppose that the grant was made solely for the benefit of the Japanese merchant. It would be entirely an infraction of treaty obligations if that were the case, and it is only necessary to recall the fate of the short-lived Silk Subsidy some years ago, to dispel any ideas that the Government would be again likely to make such a mistake. On that occasion a subsidy was granted to the silk men with the object of stimulating the direct business, but so strong a protest was made by the silk merchants of Lyons and elsewhere that a bill was speedily introduced into the Diet for its annulment. Although the object for which the tea grant is made, is of an apparently different nature, it is equally a violation of treaty rights, if the sum is being employed by the Japanese merchants for their own benefit solely, but as I have already stated there are no indications that any other use has been made of it. Certainly no benefit has accrued to any foreigner connected with the trade, or to the trade itself.

At the time the subsidy was first notified, it was thought likely by the foreigners engaged in the Tea trade that they would have at least some say in its disposal, and an informal meeting was held in Yokohama with the view of offering suggestions, but owing to the decided attitude of the Japanese against discussing the subject with the foreign houses, the matter was dropped. It is not saying too much that if the foreigners had been allowed to co-operate with, or assist the tea guild when the grant was made in the beginning of 1897, the object for which it was intended by the Government would have been, if not actually attained, considerably furthered. Some practical use would have been made of the money and it would not have been wasted and lost, as it apparently has been.

The error the Japanese tea-men have fallen into is that the foreign merchants do not count in the matter. They overlook the fact that the Japan tea trade has been built up from the very commencement by English and American houses, and moreover, if these latter were to retire from the trade the Japan tea business would disappear utterly.

A few attempts have been made by Japanese firms to engage in the direct tea export business, but the conditions of the business preclude the possibility of their being able to successfully compete with foreign merchants in America and Canada. Differing from the silk business, the large open markets, such as New York and Chicago, only receive a portion of the teas shipped to America. The bulk of the trade is carried on in small shipments to all parts of the United States and Canada, specially ordered by grocers and distributors, and requiring on the part of the Japan packers the closest knowledge of the requirements of each locality. This knowledge has been obtained by foreigners only by years of experience, and it is not too much to say that it is

Digitized by Google
Original from CORNELL UNIVERSITY

impossible that the Japanese merchant could ever successfully compete in these fields.

That the foreign merchant can be overlooked therefore when any such object as the furtherance or improvement of the tea trade is in question, is impossible, and if the members of the Japanese tea guild have honestly at heart the welfare of the business the sooner they recognize this fact the quicker the object and intentions of the Government are likely to be accomplished.

I am Sir, yours, &c. TEA MERCHANT.

Yokohama, March 29th, 1900.

OUR SOLDIERS.

True with the truth of their race; strong with the strength of the limb
Of men who as children have romped, conquered in many a fight;—
To-day each Englishman fights, as if hope of the fight rests on him;
To-day each Englishman proves his pluck—his endurance—his might!

Bullets that whiz round their heads, swift shells that shreik at their feet:
Wounds to the veteran and young,—death to the dying and brave:
Across that chasm of Death, heroes clasp hands as they meet;—
Dauntless—shoulder to shoulder,—they traverse the ridge of the grave!

They stand at their guns and they think—oh! not of their own noble lives;
They think not of danger or foe, of assault,—of blood-blinding ball,
But they think of their Country and Queen, they pray for their children and wives;
They render their souls unto God;—they silently pray—and they fall!

And Death is their nearest neighbour,—Death on the plain and the hill;—
Death in the bullet and cannon, Death in the ball as it flies.
They lie in the trenches waiting;—wait for the order to kill:
No murmur's heard as they perish!—'Tis thus the Englishman dies!

They lie on the field of battle,—scorched by the heat of a hell,
Their life blood is ebbing slowly;—their throats they are parched and dry.
They're wounded,—and dying, and lonely,—yet no word as they fell;
No bitter, no useless lamenting. It is for their Queen that they die!

Oh God! cast Thy mercy on them, these gallant soldiers of ours;
As tortures they suffer in silence, pitiful pangs of the curst.
Oh Saviour! protect thy children; they lie in the sun for hours,
Bleeding and sick and weary—, and dying from wounds and from thirst.

Protect them oh, Christ!—and send them—as butchered and baffled they lay—
Visions of dear women praying,—sweet scents—as their souls they yield,—
Of the breezes ladened with fragrance on a balmy Summer's day;
The thoughts of wild thrushes warbling—the dream of an English field.

We can ask for nothing better, as their eyelids close in death—
Instead of the smell of the powder,—the whiff of a primrose from
Some haunt that they loved as children. Oh God!—as they yield their breath,—
Send them this blessed vision,—a glimpse of their English Home.

E. M. d'A.

Tokyo, April, 1900.

On Monday morning a young woman, apparently 21 or 22 years of age, dressed like a female student, was run over and killed by a goods train near Oiso. It is believed to be a case of suicide.

INTERNATIONAL SAILING RACES.

On Saturday afternoon advantage was taken of the presence in port of a German, English and American man-of-war to arrange a little scratch regatta among the sailing boats of the respective battle-ships and cruiser, and the result was some very interesting races. The idea originated, we understand, with Vice-Admiral von Bendemann, of the *Hertha*, and Vice-Admiral Bruce, of H.M.S. *Barfleur*, and Captain Wilder of the *Oregon* at once fell in with the proposal. Three races were arranged, for cutters, gigs, and barcasses and pinnaces. The course was from a flying start between the German cruiser *Hertha* and a red mark boat, past the lightship on port side, round a green mark boat one and a half miles N.E. of lightship; back again passing lightship on starboard and finish over the starting line. Distance 6 miles. The first prize was $20, second $10, entrance $5. All boats were to be rigged and sailed according to service regulations. The starters were as follow:—

CUTTERS.

H.M.S. *Barfleur* 1st Cutter, Lieutenant Jellicoe.
" " 2nd " Mr. Enghorst.
U.S.S. *Oregon*, 2 " Eng. Wartsbaugh.
" " 5 " Cadet Fuller.
S.M.S. *Hertha*, 1 " Lieutenant Berna.
" " 2 " " Hilmers.

GIGS.

H.M.S. *Barfleur*, galley, Mid. Johnson.
" " gig, Gunner Wagner.
U.S.S. *Oregon*, whaleboat, Cadet Pettingill.
" " " Lt. Comm. McCrackin.
S.M.S. *Hertha*, gig, Ob. Lt. von Natzmar.
" " " Lt. Bar. von Kottwitz.

BARCASSES AND PINNACES.

(First and last 2nd class; the American boats figure as Pinnaces).

H.M.S. *Barfleur* Barcass Lieut. Pillimore.
" " Pinnace " Stirling.
U.S.S. *Oregon* Barcass " Johnston.
" " " " McGrann.
S.M.S. *Hertha* Barcass Lieut. Bunneman.
" " Pinnace " v'Görsche.

At the time of the start there was nothing but the lightest of breezes and what there was, as well as the tide, was against the boats, and very slow progress was consequently made during the first hour or two. Later on, however, the breeze freshened up a little and on the return run the race became more interesting. The two pinnaces of the *Oregon* crossed the line in first and second place, the *Barfleur's* first cutter finishing third.

During the afternoon a number of guests were entertained on board the *Hertha* by Vice-Admiral von Bendemann, Captain von Usedom and the officers. The forepart of the cruiser had been decorated with flags and flowers, and after an excellent cold collation had been served, the guests engaged in dancing to the strains of the ship's Band, and at the conclusion of the hospitable entertainment were landed at the hatoba by the steam-launches of the *Hertha*. Among the guests present were the German Minister, Count von Leyden, Count and Countess von Wedell, Prince von Reuss, second Secretary of Legation, Miss Aoki, Mr. Consul-General Coates, Vice-Consul and Mrs. Hagen, Dr. Orth, O.S.A.; Dr. Koch; U.S. Deputy-Consul G. H. Scidmore, and many other ladies and gentlemen from Tokyo and Yokohama.

OPENING OF THE ROWING SEASON.

The Y.A.R.C. were particularly fortunate in the selection of Saturday afternoon for the opening of the rowing season of the Club. The weather was perfect and the water smooth enough for the smallest boats. As might have been expected under the circumstances there was a larger attendance of visitors at the Boat-house than usual, and the ladies of Yokohama graced the scene in considerable numbers. In addition to the attractions of a Band and dancing the fair visitors found a further interest in the sport in the fact that several of them took part in the procession of boats as coxswains.

In the run home from the Breakwater, which however could not be styled a race, W. Goddard finished first, and Allcock second. In the scratch races which followed, five 4-oars competed, J. J. Carst winning a good spurt in the blue boat, by about half a length from W. Goddard in the white boat, Hayward third. The race for Double Sculls was won by Allcock and F. Abbey against White and J. P. Abbey. The races for pair oars and skiffs failed to fill. The proceedings were under the direction of Messrs. H. C. Litchfield, President; F. J. Hall, Captain; Rev. E. C. Irwine, Dr. E. Wheeler, W. Goddard, H. Rose, E. Levedag, G. C. Allcock, L. Mottu, T. Herlihy, H. A. Poole, Hon. Treasurer; H. E. Hayward, Hon. Secretary.

NEWS OF THE WEEK.

A meeting of the shareholders of Messrs. Brett & Co., Ltd., was held on Wednesday afternoon to elect a successor to Mr. J. H. Boag, the Managing Director of the company, who is leaving Japan. Mr. G. Blundell was unanimously elected. On the motion of Mr. Blake a very cordial vote of thanks was accorded to Mr. Boag for his valuable services to the company.

About 2.45 yesterday morning the front door of the house occupied by Miss J. Lee, No. 127, Settlement, was found to be on fire. The alarm was given and a party of firemen with hose reel and standpipe were despatched to the scene of the fire from the Settlement Station. The flames were quickly extinguished, only the door and doorway being burned. The fire was clearly due to incendiarism as a straw bag saturated with kerosene had been placed against the door.

Early on Sunday morning fire broke out in the country house of Mr. Sawada Shigetaro, the well known Tokyo barrister, at Oiso. The house was entirely destroyed, but the two adjoining buildings, belonging to Count Kabayama and Mr. Yonekura Ippei, a wealthy merchant of Tokyo, were saved. A farmhouse at Higashi Hatano, in Kanagawa Prefecture, owned by Mr. Ishiwatari Seitaro, was also destroyed by fire on Sunday afternoon.

At the annual meeting of the members and supporters of the Union Church, Kobe, held on the 2nd inst., Dr. Atkinson, the Pastor, handed in his resignation, in view of his approaching departure. The Reports of the Pastor and Secretary were adopted. A Committee of three—Dr. Atkinson, Mr. S. S. Lyon, U.S. Consul, and Rev. S. H. Wainwright, M.D.—was appointed to consider the matter of securing a permanent Pastor, and a motion was unanimously passed to invite Dr. Wainwright to accept charge of the Church temporarily. Mr. Albertson was re-elected Secretary and Treasurer, Mrs. Richardson was chosen to take charge of the choir in place of Mrs. Atkinson (resigned), and Mrs. McKay was re-elected organist.

With reference to a paragraph which we quoted from a Nagasaki paper in our issue of the 31st ult., to the effect that a German naval officer had been recently fined 20 *yen* by the Nagasaki District Court for contravening the sketching regulations, we are informed by the German Vice-Consul that what the officer did was a most harmless thing. While walking in a valley behind the town, whence the harbour and fortifications were not in sight, he began to make a sketch of a pretty bit of landscape, when he was accosted by a policeman, who took down his name and address, and later on was fined 20 *yen* by the Court.

The *N.-C. Daily News* publishes the following Peking telegram under date of March 26—Orders have been sent to Admiral Yeh, commanding the Peiyang squadron, who is now at Canton with the fast cruisers *Haitien* and *Haishou*, to cruise to the Straits, emissaries of the Empress Dowager having already arrived at Singapore in the hope of assassinating or capturing alive Kang Yu-wei, Ch'iu Shu-yuan, Editor of the *Tienuan Sinpao*, and others of the Reform Party who have taken refuge under the British flag there. The speed of the Chinese cruisers (24 knots), as soon as the captured men are conveyed on board, will defy pursuit by anything that the British Government possesses in the Far East. This is said to be the last resort of the Empress Dowager in her eager desire to slay her enemies in the Reform Party.

William Steinitz, the celebrated chess player, was taken from a hotel to the insane ward of Harlem Hospital on the 8th Feb. He is 64 years old, and this is the second time he has seen such an experience. In the winter of 1897 he went to Moscow to take part in a notable tournament, and was prostrated during its progress. It was at first reported that he was dead, but a few days later a correction of the report was accompanied by the statement that he had gone crazy. Steinitz is a native of Bohemia and was born in Prague. A friend says that his case is not in.

Digitized by Google Original from CORNELL UNIVERSITY

sanity; he is simply nervous and high strung. When Steinitz arrived at the hospital he told the surgeons he believed he was greatly affected by electric currents. The surgeon at the hospital said the chess-player's condition was serious.

It is reported that upon the advice of Prince Henry of Prussia, an expedition will leave Germany in the spring for the purpose of exploring German New Guinea, and reporting upon its capacity as an agricultural settlement. The Prince is apparently of an opinion, which is shared by most of his officers, that New Guinea has been too long neglected, and that it ought to become a very important market for German commerce.

The new Japanese battleship *Asahi*, which has just been completed in England, will leave Southampton by the end of this month for home. Upon arrival in Japan the big battleship will be attached to the fleet belonging to Yokosuka Admiralty. The *Asahi* is 15.447 tons displacement and her engines, of 15,207 i.h.p. give her a speed of 18 knots an hour. Her armament consists of fifty guns and four torpedo tubes. The battleship was launched on the 16th March, 1899.

The opening of the rowing season of the Kobe Rowing and Athletic Club was inaugurated on Tuesday afternoon with the usual procession of boats. The weather was fine and there was a fair attendance at the Boathouse, but only four boats turned out. The athletic sports of the same Club, which were fixed for Saturday next, were declared "off" on Tuesday, owing to the paucity of entries, only twelve having been received up to that date. What has become of the sporting spirit of Kobe?

English journalism has sustained an irreparable loss in the death of Mr. H. D. Traill. He was perhaps the most versatile writer of our day, and the facility with which he could turn from a serious article written in plain, terse English to the composition of those delightful rhymes which charmed us all, and from these again to criticism of the sanest and most illuminating character, was little short of marvellous. His "Dialogues of the Dead," "New Lucian," and "Recaptured Rhymes," will always be enjoyed, while his monograph on Sterne and his volumes to the "English Men of Letters" series are true literary history, and must always be of the highest value to the student.

We read in a home paper that on the eve of departure of the Japanese warship *Shikishima*, Miss M'Lean, of the Japanese Christian Institute, Tilbury Dock, was presented with a beautiful brooch and studs, in the presence of the officers and crew. The captain of the vessel, in making the presentation, spoke in the most appreciative terms of Miss M'Lean's devotion to the men of the Japanese Navy. The present was accompanied by an address, in which Admiral Marquis Saigo, president of the Imperial Naval Club, Tokyo, expressed his hearty thanks to Miss M'Lean, for her hospitality bestowed on the men in the Imperial Japanese Navy, who had been sent of late years to England with a view to taking the newly-built ship to Japan.

A Honolulu dispatch of the 16th ult. reported that there had been no new cases of plague for several days and the belief was again growing that the pestilence may be at an end. An effort was being made to so frame the quarantine rules that commerce may be resumed in many of the necessary articles of merchandise without danger of spreading infection. The daily inspection of the whole population of the city was still kept up, though the work had continued so long that it had become onerous. Four cases of typhoid fever had appeared among about seventy Japanese employed on the Waikiki water-works. All efforts to trace the source of infection had failed. The Japanese were living very near where the First New York Regiment was camped in 1898 when it developed so many cases of typhoid fever among its members.

THE FINANCIAL SITUATION.

The *Osaka Asahi* divides the citics of the present financial situation of Japan into two classes. The one is represented as optimistic; the other as pessimistic. The former maintain that the present depression of the financial market is destined to remedy itself in future, and that exports will considerably increase during the latter half of the year and thus contribute to the inflow of gold. The pessimistic observers, however, hold that if things be left to themselves, the steady outflow of specie will inevitably lead to the issue of inconvertible notes, which will eventually bring about the bankruptcy of the whole economic community. These diametrically opposite views can not but be regarded as extreme, remarks our contemporary. They are far from being justifiable; a financial depression requires artificial devices for improvement or amelioration. The forecast as to the increase of the volume of trade in the latter half of the year is not likely to be fulfilled beyond the attainment of an equality between exports and imports, no scheme for amelioration is discernsable in the present condition of affairs. The remedy, in our contemporary's opinion, lies in the selection of staples of import. The excess in imports in connection with productive enterprises is not at all to be feared, inasmuch as it virtually secures the cultivation of the nation's productive power towards the augmentation of exports in future. Curtailment in the import of unproductive material, including articles of luxury, is alone of paramount importance in the improvement of the country's financial situation. To attain this end the customs tariff should be forced to its highest limit on any class of articles which are deemed unproductive: the rates, so far as the conventions will permit, might may be raised almost to a prohibitive scale. Simultaneously with the udoption of these measures, taxes on productive commodities should be decreased to a considerable extent. Any proposition involving the principles of free trade must be condemned as the outcome of stupidity and ignorance. Among the staple imports at present sugar occupies a most prominent position, but the commodity is chiefly sent from Formosa to Hongkong for refinement, after which it is again imported to Japan for universal consumption, Nothing can be more uneconomical than such a process. As regards kerosene too, a similar lack of wisdom is noticeable. Measures may be adopted to furnish the oil to the natives to a much greater extent than has hitherto been attained, if the petroleum wells are worked with renewed vigour and assiduity. As regards rice, the prospect is much brighter, seeing that it can be horvested twice a year in Formosa. Cling to home productions and home manufactures, by all means and at all costs, and then the imports will decrease by themselves. Staples of exports must of course be encouraged, but in the case of silk the brisk demand for it in the interior almost cripples any scheme for increasing its export, and in order to curtail the amount of domestic consumption taxes on it should be considerably increased. Then again, all the unproductive capital floated in the empire should be placed in the hands of the manufacturing classes; the government bonds should be decreased and the credit system developed. Finally our contemporary urges the necessity of checking, the speculative spirit of the people by the imposition of heavy taxes upon transactions in shares.

The same paper also remarks that although the Bank of Japan has by raising its interest, endeavoured to maintain an equilibrium between its reserve specie and reserve securities, by way of preventing the exodus of gold, the measure so adopted can hardly be expected to secure the end in view. It is of course undeniable that with the dimunition of reserve specie, the reserve securities will increase, and this will doubtless have the effect of checking, to a certain extent, the tendency of the exodus of specie. Still a question which presents itself for immediate solution is, whether it will not be necessary for the Nippon Ginko to raise its scale of interest again. If the same cause is to produce the same effect in matters of finance, the economic community of Japan must be prepared to witness in future the grievous spectacle of an outflow of specie such as was experienced in the 30th and 31st years of *Meiji*. If the remedial measures subsequently adopted by financiers proved successful then, steps of a similar nature taken at present should prove equally efficient. In this assertion our contemporary alludes to the reduction of currency consequent upon the raising of interest, a measure carried out a few years ago to prevent the exodus of gold,—and by way of illustration gives the following figures:—

	Specie reserve. *yen.*	Notes. *yen.*
December, 1896	132,730,192	198,313,896
December, 1897	98,261,473	226,229,058
January, 1898	91,568,364	212,003,989
February, 1898	83,626,224	195,297,483
March, 1898	74,651,152	195,889,761
April, 1898	64,053,009	183,819,239
May, 1898	62,999,561	174,196,930
June, 1898	63,820,386	180,019,930

It will be perceived that the outflow of gold continued without interruption until it culminated in May, 1898, and at the same time the volume of currency had considerably decreased, the largest reduction being noticeable in May. These results were evidently brought about by the successive augmentation in the scale of interest, as may be seen from the following table:—

	Rate of interest on loans. *sen.*	Rate of discount. *sen.*
Sept. 7, 1896	2.1	2
June 14, 1897	2.3	2
Aug. 11, 1897	2.4	2.1
Oct. 23, 1897	2.5	2.2
Feb. 9, 1898	2.6	2.3
March 14, 1898	2.7	2.4

Thus the rates of interest were raised five times during ten months from June, 1897, to March, 1898. The volume of convertible notes also steadily decreased from April, 1898.

Turning to the actual condition of finance, our contemporary proceeds to show the exact relation between specie and notes, the figures for which, according to the latest reports of the Bank of Japan, stand as follows:—

	Yen.
Total issue of convertible notes up to March, 1900	209,866,256
Specie and bullion	100,573,792

The above figures, it may be observed, are almost, though not quite, equal to those recorded in December, 1897, and in the first two months of the year 1898. It may also be observed that in October, 1897, the rate of interest on loans stood at 2.5 *sen*, while the rate of discount did not exceed 2.2 *sen*. In February, 1898, the scale was increased by 1 *rin*, and in March another *rin* was added. The rates at present are fixed at 2.4 and 2.1 *sen* respectively, being equal to those recorded in August, 1897. From these facts it may be inferred that the tendency of the outflow of specie will continue unabated and that recourse will be had to the increase of interest on several occasions hereafter. Such are the conclusions arrived at statistically through historical investigation. The plan of raising the rate of interest is by no means satisfactory, but it must be carried out, asserts our contemporary, in the interests of the economic community at large.

DINNER TO JAPANESE SILK MERCHANTS.

On Tuesday evening the Japanese silk merchants of Yokohama were entertained to dinner at the Oriental Hotel by the Foreign silk shippers of the port. Mr. John H. Jewett, of the firm of Bavier & Co., presided, and in the course of the entertainment proposed the health of their guests. Mr. Ono, Chairman of the Yokohama Silk Guild, responded, in a speech in Japanese, of which the following is a translation:—

Mr. CHAIRMAN and GENTLEMEN:—On behalf of the members of the Yokohama Japanese Silk Guild I beg to offer you my grateful thanks for the cordial manner in which you have received us this evening. In Japan there is now a great change, if we compare it with the old days, when trade was treated with contempt. It has been proved that commerce is,

Digitized by Google Original from CORNELL UNIVERSITY

indeed, the life blood of society, and that no country shut up within its own boundaries can ever hope to be the home of a prosperous, progressive and developing people, and so our doors were thrown wide open for the commerce of the world. Nations, however, being different in character and opinion, should have frequent intercourse, and by personal interchange of ideas learn to understand each other better, so that no misunderstandings can occur between them. Following this principle, I think it is absolutely necessary that both the Japanese and Foreign Silk Merchants in Yokohama should come more frequently together, in order to know each other better and to interchange ideas. Such a gathering as this can not fail to create feelings of sympathy and mutual confidence which are so essential to the friendly relations of commercial men. We, the silk merchants in Yokohama, are not your rivals or competitors, in the sense that our interests clash. On the contrary, I may say that we have practically identical interests in this trade. Let us meet often to draw closer the relations existing among us. Let us hope that we may further promote the success of the trade, increase the prosperity of our country and largely augment its commerce. I thank you again most heartily for your kind reception to-night, and I propose to drink to the health of our hosts.

ISSUE OF GOVERNMENT BONDS.

On the 30th ultimo the Government issued bonds bearing 5 per cent. interest to the amount of 3,649,000 yen, and paid in the proceeds to the Bank of Japan. Of this amount 419,950 yen consisted of Hokkaido Railway Bonds, and 3,229,050 yen of Public Undertakings Bonds. The issue value for both was fixed at 90 yen per 100 yen face value. Below are the comparative figures for the past three years :—

	Amount of issue Yen.	Issue price in Yen.
March, 1897	3,000,000	99.22
October, 1897	10,000,000	95.53
November, 1897	10,000,000	94.70
December, 1897	3,000,000	92.41
January, 1898	8,000,000	96.09
March, 1898	3,900,000	90.21
March, 1900	3,229,050	90.
Total	41,129,050	—

It is to be understood that the above figures refer to the Public Undertakings Bonds alone, bearing 5 per cent. interest. As to the Hokkaido Railway Bonds bearing the same rate of interest, the figures stand as follows:—

	Amount in yen.	Value in yen.
March, 1898	1,000,000	90.21
March, 1900	419,950	90
Total	1,419,950	

The gross total from the outset of bonds for railway, public undertakings, and Hokkaido railways is as follows :—

	Yen.
Railway bonds (in eight issues)	17,907,350
Public Undertakings Bonds (in seven issues)	41,129,050
Hokkaido Railway bonds (in two issues)	1,419,950
Total	60,456,350

It is said that the Government proposes to distribute between these three classes of bonds the loans raised in London last year, but as the relative amount of distribution has not yet been determined, the same has been excluded from the above total.

JAPANESE SETTLEMENTS ABROAD.

The following notification is published in the *Official Gazette* over the signature of the Premier and the Minister of Foreign Affairs in regard to boards of commissioners to be charged with the duty of establishing and maintaining exclusive settlements for Japanese abroad :—

Art. I.—A Board of Commissioners shall be established in all exclusive settlements for Japanese in foreign countries, under the direct control of the Minister for Foreign Affairs.

Art. II.—The personnel of the Board shall be as follows :—1 President of *Sonin* rank ; 1 Engineer ; 5 Assistant Engineers ; 3 Clerks.

Art. III.—The post of President shall be occupied by the Imperial Consul in whom the power of superintending the affairs of the Board and exercising control over its officials will be vested.

Art. IV.—The Engineer, under the directions of the President, will superintend all the works undertaken.

Art. V.—The Assistant Engineers shall work according to the directions of their superiors.

Art. VI.—The post of clerks shall be occupied by student secretaries and interpreters belonging to the Foreign Department, and shall attend to miscellaneous affairs.

BANK OF JAPAN.

BANKING ACCOUNT.

On Saturday, March 31st :—

DR.	Yen.
Share capital fully paid up	30,000,000
Reserve fund and other liabilities to shareholders	15,590,900
Amount of convertible notes issued	227,448,080
Government deposits	60,349,638
General deposits	3,680,794
Exchange liability	13,579
Total	337,001,683
CR.	
Discount notes	74,416,140
Foreign discount notes	9,667,122
Loan to Government	22,000,000
General loans	71,134,137
Exchange liability	3,282,295
Government bonds	55,513,511
Property	2,026,562
Bullion and Specie	98,961,912
Total	337,001,683

ISSUE ACCOUNT.

Daily average during past week :—

Amount of convertible notes	271,809,333
Bullion and Specie :—	
Gold	93,048,717
Silver	4,000,000
Total	97,048,717
Securities :—	
Government bonds	29,164,588
Government certificates	22,000,000
Government bills	12,099,381
Commercial notes	57,496,647
Total	120,760,616

The preceding accounts, compared with those of the previous week, show.

Specie Reserve :—

	Increase.	Decrease.
Gold	—	1,593,484
Silver	—	—
General loans	3,558,544	—
Government deposits	—	752,180
General deposits	360,152	—

TWO WILLS.

The man in the street will learn with considerable surprise that the late Sir Henry Tate was more than twice as rich as the late Duke of Westminster. Yet figures cannot lie, and Sir Henry's will has been proved at £1,263,565 5s. 5d. ("The ha'penny be demmed," said Mr. Mantalini), while that of the Duke of Westminster only reaches the very moderate sum of £594,226 is. It had been supposed that the Duke's yearly income was about as much as Sir Henry Tate's entire estate, and people said that His Grace never knew within £100,000 or so how rich he was. Chancellors of the Exchequer have been known to rub their hands at the very prospect of bringing the Grosvenor death duties into the Budget, but now we see how erroneous all these surmises really were. The Duke of Westminster, bless you, was quite a poor man—judged by what his estate is sworn to for probate—and one feels quite sorry that he should ever have been thought to be a millionaire. It is true that there is a trifle of £14,000,000 or so knocking about somewhere in the family, but what is that? Perhaps the late Duke may have been able to persuade those wealth relatives of his to assist him now and then ; but all the State is entitled to ask for probate duty on is this sum of £564,229. is. We hope that Somerset House has been very careful not to omit the shilling from duty, and for the rest we remain in a condition of thankful amazement at the beautiful legal ingenuity which can adjust these arrangements with such beautiful accuracy.—*London Letter.*

TRADE RETURNS.

The following summary of trade returns for the 32nd year of *Meiji*, as compiled by the Finance Department, is published in the *Official Gazette* :—

Exports.	Foreign production. *yen.*	Domestic production. *yen.*	Total. *yen.*
Taxed	32,490,317	—	32,490,317
Untaxed	177,027,253	1,977,757	179,005,016
Ships' stores	3,434,559	—	3,434,559
Total	212,252,136	1,977,757	214,929,894
Imports.			
Taxed	136,477,159	12,465	136,489
Untaxed	177,027,258	1,977,757	179,005,016
Ships' stores	—	—	—
Total	220,050,983	350,942	220,401
Excess of imports	—	—	5,472,031
Total of exports and imports	—	—	435,331,830

BULLION AND SPECIE.

	Gold coins and bullion. *yen.*	Silver coins and bullion. *yen.*	Total. *yen.*
Exports	8,268,365	2,409,821	11,178,247
Imports	20,080,695	82,804	20,163,500
Excess of imports	—	—	8,985,253

Classified according to the ports of export and import, the figures stand as follows :—

EXPORTS,

	Domestic production. Yen.	Foreign production. Yen.
Yokohama	107,891,874	380,855
Kobe	74,679,041	641,842
Osaka	5,79,290	265,008
Nagasaki	5,680,561	527,209
Hakodate	2,078,943	37,107
Niigata	127,429	7,158
Shimonoseki	4,161,423	92,872
Moji	6,154,606	1,117
Kuchinotsu	4,109,766	—

IMPORTS.

	Domestic production. Yen.	Foreign production. Yen.
Yokohama	76,298,120	154,884
Kobe	120,200,563	88,960
Osaka	6,390,913	14,178
Nagasaki	11,106,917	40,592
Hakodate	1,703,288	23,174
Niigata	109,006	6,809
Shimonoseki	1,374,162	3,970
Moji	689,089	132
Kuchinotsu	228,833	—

Other ports, whose trade does not exceed ½ million *yen* are omitted, while the figures below one *yen* are expunged.

PRODUCTION OF DIAMONDS.

The diamonds of Cape Colony are exported almost exclusively to England, which is (says the *Board of Trade Journal*) the great diamond market of the world ; other countries of destination are Belgium, Germany, and France, but the quantity taken by each is insignificant when compared with that received by England. The following particulars, showing the value of the exports of diamonds from the Cape in the six years 1893 to 1898 were given recently by "Le Monde Economique" :—

1893	£3,821,000
1894	2,614,000
1895	4,775,000
1896	4,647,000
1897	4,454,000
1898	4,567,000

From England the diamonds are sent to the various diamond-cutting districts, which are for the most part in Holland and Belgium. Amsterdam and Brussels are important centres of the industry. Nearly all the diamonds from the Orange Free State (Jagersfontein), valued at £400,000 in 1897, are cut in Belgium. In 1897 the production of diamonds in the Cape was 3,220,368 carats, valued at £4,000,000. This enormous production represents a fifth of the total value of the diamonds found in Brazil from the time of their discovery until 1886. At the present time, Brazil, as a country productive of diamonds for jewellery, is of little importance. In fact, only black diamonds for industrial purposes, are now mined. These diamonds

Digitized by Google Original from CORNELL UNIVERSITY

are rendered valuable by their hardness for rock-boring purposes and also for polishing diamonds intended for jewellery. They are found principally in the district of Bahia.

South Africa will probably become as celebrated as Golconda, having produced many more diamonds than India; in the latter country only £160,000 to £200,000 worth are now found each year. Diamonds are found in Australia and Borneo, but, for the time being, South Africa may be said to have the monopoly of the diamond production of the world.

OCEAN CURRENTS.

Mr. F. T. Buller, writng for the *Spectator*, says:—So mysterious are all the physical phenomena of the sea that it is, perhaps, hardly possible to say of any particular one that it is more wonderful than the rest. And yet one is sorely tempted thus to distinguish when meditating upon the movements of the almost inconceivable mass of water which goes to make up that major portion of the external superficies of our planet which we call "the sea." In spite of all the labours of investigators, notwithstanding all the care and patience which science has bestowed upon oceanography, it is nevertheless true that, except in a few broad instances, the direction, the rate, and the dependability of ocean currents still remain a profound mystery. Nor should this excite any wonder. If we remember how great is the influence over the sea possessed by the winds, how slight an alteration in the specific gravity of water is sufficient to disturb its equilibrium and cause masses hundreds of square miles in area to exchange levels with the surrounding ocean, we shall at once admit that, except in those few instances hinted at which may be referred to constant causes, ocean currents must of necessity be still among the phenomena whose operations cannot be reckoned upon with any certainty, but must be watched for and guarded against with the most jealous care by those who do business in great waters.

Perhaps one of the commonest of the many errors made in speaking of marine things is that of confounding current with tide. Now tide, though a variable feature of the circulation of the waters near land, is fairly dependable. That is to say, the navigator may calculate by means of the moon's age and the latitude of the place not only the time of high water, but knowing the mean height at full and change of the moon, he may and does ascertain to what height the water will rise, or how low it will fall at a certain place on a given date. True, a heavy gale of wind blowing steadily in or against the same direction of the ebbing or flowing tide will accelerate or retard, raise or depress, that tide at the time; but these aberrations, though most unpleasant often-times to riparian householders, are rarely of much hindrance or danger to navigation. This cannot be said of the currents of the sea. The tides have their limits assigned to them both inland and off-shore, although in the latter case it is almost impossible to tell exactly where their influence becomes merged in the vaster sway of the ocean currents, with all their unforeseen developments.

The limits of tidal waters in rivers, on the other hand, being well under observation at all times, may be and are determined with the greatest exactitude.

With regard to the few instances of dependability among ocean currents, the first place will undoubtedly by common consent be given to the Gulf Stream. Owing its existence primarily to the revolution of the earth upon its axis, its outflow through the tortuous channel connecting the Gulf of Florida with the North Atlantic is more constant and steady in direction than any ebbing or flowing tide in the world, inasmuch as its "set" is invariably upon one course. Its rate is not so uniform, varying somewhat with the season, but in the narrowest part of the channel remaining fairly constant at about four knots an hour. Yet sail but a few score leagues into the Florida Gulf whence this great river in the sea takes its apparent rise, and its influence disappears! The mariner may seek there in vain for that swift, silent flow which in the Straits of Florida sweeps him north-eastward irresistibly in the teeth of the strongest gale. What has happened? Does the mighty stream drain westward into that great land-locked sea by hundreds of channels from the Equatorial regions, but far below the surface, and, obeying some all-compelling impulse, rise to the light upon reaching the Bahama Banks, pouring out its beneficent flood as it comes at the rate of a hundred miles per day? It sweeps into the broad Atlantic, and immediately spreads out into a breadth to which the Amazon is but a brooklet, losing its velocity meanwhile, until, having skirted the North American coast as far as the Grand Banks, it rolls in sublime grandeur eastward towards these "fortunate isles." As it does so the mystery attendant upon it deepens. Its balmy presence cannot be mistaken, for the air on either side of it may be piercing in its keenness, while immdiately above it there is summer. A gale blowing at right angles to its course will raise that terrible combination of waves which gives alike to the "Western Ocean" and the "pitch of the Cape" their evil reputation as the most dangerous in the world; and yet who among navigators has ever been able to determine what, if any, rate of speed it has in mid-Atlantic? Look through hundreds of log-books kept on board ships that are, perhaps, more carefully navigated than any others, the North Atlantic liners, and you shall not find a trace of the Gulf Stream "set" mentioned. In order to make this clear, it should be said that in all properly navigated ships the course steered and the speed made are carefully noted throughout the twenty-four hours; and this course, with distance run, calculated from the position accurately fixed by observation of the celestial bodies at the previous noon, gives the ship's position by "dead reckoning." The ship's position being also found by the celestial bodies at the same time, the difference between the latter and the "dead reckoning" position should give the "set" and direction of the current for the twenty-four hours, And in vessels so carefully steered, and whose speed is so accurately known, as the great liners are, such current data are as trustworthy as any nautical data can be. But according to the records kept by these able navigators, there is no current setting eastward across the North Atlantic. Perhaps the explanation is that it is so very sluggish as to be unnoticeable, for those dreadful monuments of misfortune to themselves and others, the derelict ships, have been known to drift completely backwards and forwards across the Atlantic, finding not only a current to carry them eastward, but its counter-current to carry them back again.

But who among us with the slightest smattering of physiography is there that is not assured that but for the genial warmth of this mighty silent sea-river our islands would revert to their condition at the glacial epoch; who is there bnt feels a shiver of dread pass over his scalp when he contemplates the possibility of any diversion of its life-giving waters from our shores. The bare suggestion of such a calamity is most terrifying.

As steady and reliable in its operations is the great Equatorial current which, sweeping along the Line from east to westward, is doubtless the fountain and origin of the Gulf Stream, although its operations among that ring of islands guarding the entrance to the Mexican Gulf are involved in such obscurity that none may trace them out. And going farther south, we find the Agulhas current, beloved of home-ward-bound sailing ships round the Cape of Good Hope, pursuing its even, resistless course around the Southern Horn of Africa changelessly throughout the years. How its stubborn flow frets the stormy Southern sea! No wonder that the early navigator doubling the Cape outward-bound, and fearing to go south, believed that some unthinkable demon held sway over those wild waves. The passage of Cape Horn from east to west holds the bad eminence to-day among seafarers of being the most difficult in the world, but what the outward passage around the Cape of Storms must have been before men learned that it was possible to avoid the stream of the Agulhas current by going a few degrees south we of these later days can only imagine. What becomes of the Agulhas current when once it has poured its volume of Indian Ocean waters into the Atlantic? Does it sink below the surface some hundreds of fathoms, and silently, smoothly, glide south to the confines of the Antarctic ice barrier, or does it wander northward into warmer regions? In any case, it fulfils the one grand function of all currents, whether of air or water,—the avoidance of stagnation, the circulation of health among the nations of the earth.

Coming northward in the Pacific, let us note the counterpart of the Gulf Stream, the Kuro Siwo, or Black River of Japan, with the multitudinous isles of the East Indian Archipelago for its Caribbean Sea, and Nippon for its British Isles. It is, however, but a poor competitor in benevolence with our own Gulf Stream, as all those who know their Japan in winter can testify. Others there are that might be noted and classified if this aimed at being a scientific article, but these will suffice. These are surely wide fields enough for the imagination to rove in, wonderful depths of energy in plenty wherein the reverent and thoughtful mind may find all sufficient food for its working. Remembering that the known is but the fringe of the unknown, and that the secrets of the ocean are so well kept that man's hand shall never fully tear aside the veil, we may patiently ponder and wonder. That great sea of the ancients beyond whose portals, according to their wisdom, lay Cimmerian darkness,—what keeps its almost tideless waters sweet? Unseen currents enter and leave by the Pillars of Hercules at differing levels, and could we but penetrate those dim regions we should doubtless find the ingress and egress of that incalculable mass of water proceeding continually, the one above the other, renewing from the exhaustless stores of the Atlantic the staleness of great midland lake, itself apparetly remaining in unchanging level.

But when all these great well-known movements of the ocean have been considered, there still remain an infinite number of minor divagations influenced by who knows what hidden causes. The submarine upheavals of central heat, when from out of her glowing entrails the old earth casts incandescent stores of lava, raising the superincumbent mass of water for many square miles almost to boiling point,—who can estimate the effect that these throes have upon the trend of great areas of ocean? The almost infernal energy of those gyrating meteors of the tropics as they rage across the seas,—how can any mind, however acute, assess the drag upon the whole body of surface water that is manifested thereby? To say nothing of the displacement caused by the less violent but far more frequent stress laid upon the much-enduring sea by extra-tropical gales, whereby the baffled mariner's calculations are all overset, and his ship that should be careering safely in the wide offing is suddenly dashed in ruins upon the iron-bound shore!

Great efforts have been made to lay down for the benefit of seafarers a comprehensive scheme of ocean currents all over the watery surface of the globe, but in the great majority of cases the guidance is delusive, the advice untrustworthy, through no fault of the compilers. They have done their best, but mean results can never help particular needs. And so the wary mariner, as far as may be, trusts to the old-fashioned three "L's,"—lead, log, and lookout, knowing full well how little reliance is to be placed in the majority of cases upon any advice soever concerning the mystery of ocean currents.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE BOER WAR.

THE DUKE OF NORFOLK.

Shanghai, March 31.

The Duke of Norfolk has resigned the Post-master-general-ship, and sails for the Cape to join the Sussex Mounted Infantry which he raised.

LORD METHUEN.

In pursuance of orders from Lord Roberts, Lord Methuen with the mounted troops has returned to Kimberley from the Barkly district.

OLIVIER.

It appears certain that Olivier, with several thousand men and many guns, has reached a place of safety and is now advancing to Kroonstad. It is assumed that the condition of the horses in French's division prevented him from attacking Olivier.

THE EIGHTH DIVISION.

The Eighth Division lands at East London and proceeds to the front immediately.

RUSSIA IN KOREA.

Russia is pressing Korea for a concession at Masampo.

THE "IWATE."

The Japanese cruiser *Iwate* has been launched at Elswick.

OBITUARY.

Mr. Archibald Forbes, the famous war-correspondent, is dead.

THE DELAGOA AWARD.

The Delagoa award is that Portugal is ordered to pay fifteen million three hundred and fourteen thousand francs, plus five per cent. interest, from June 1889.

FIGHTING NEAR BLOEMFONTEIN.

Roberts telegraphs from Bloemfontein on Friday, that owing to activity of the enemy on the immediate front and their hostile action towards the burghers who had surrendered, it was found necessary to dislodge them from the kopjes at Karee Siding to the south of Blandfort. The operations were successful under Tucker and French. The British now hold the kopjes. Their loss was 108 killed and wounded.

LADYBRAND.

Reuter's agent telegraphs from Maseru that the Boers who returned to Ladybrand are strongly posted in the mountains, and are

Digitized by Google Original from CORNELL UNIVERSITY

picketing in every direction, raiding English farmers.

ANGLO-FRENCH RELATIONS.

The improvement in Anglo-French relations is marked.

THE UNIVERSITY SPORTS.

Oxford has won the sports by six events to four.

CHINESE AFFAIRS IN THE HOUSE OF COMMONS.

Shanghai, April 1.

In the House of Commons, Mr. Joseph Walton called attention to the failure of the Government to uphold British interests in China. A prolonged debate ensued. Mr. Brodrick said that in many cases railway concessions had been obtained, but no work had been done. China was justified in requiring that some substantial progress should be made, and that if a serious undertaking such as that promoted by the Peking Syndicate be supported (officially ?), it should be pressed forward. With regard to internal navigation, the employment of gun-boats would be continued, and other expedients would be considered. He denied that British influence in Peking had disappeared. The policy of Her Majesty's Government was not to look for further territorial acquisitions, but to keep open the water-ways. The Government had exercised legitimate pressure conjointly with other Powers for the purpose of promoting tradal facilities.

THE UNIVERSITY BOAT RACE.

Cambridge won the University Boat Race.

[Cambridge has won the Varsity race for the second year in succession, making her 24 victories to 32 gained by Oxford. She had a good many old Blues in her boat this year, and the betting was in the Light Blues' favour when the last mail left home.—ED. *J.M.*]

THE VARSITY BOAT RACE.

Cambridge won the Varsity Boat-race by 20 lengths.

[Last year Cambridge won by 3¼ lengths in 21m. 4s.—ED. *J.M.*]

ST. HELENA GUARDS.

Four hundred of the Gloucestershires have sailed for St. Helena to guard the prisoners.

THE TRANSVAAL MINES.

The Transvaal State Attorney has officially informed the Foreign Consuls that there is no intention of destroying the mines.

MR. MICHAEL DAVITT.

Mr. Michael Davitt has arrived at Kroonstadt.

THE FIGHT AT BLANDFORT.

The total casualties at Blandfort were two officers killed and eight wounded; 10 men killed and 162 wounded.

BIRTH OF A ROYAL PRINCE.

The Duchess of York has been safely delivered of a son.

[The family of the Duke and Duchess of York now consists of three sons and a daughter.—ED. *J.M.*]

RACING IN ENGLAND.

Shanghai, April 2.

The Lincolnshire Handicap was won by "Sir Geoffrey," with "Strikenlight" second, and "Forcett" third.

The Grand National Steeplechase was won by "Ambush," "Barsac" running second, and "Manifesto" third.

THE EIGHTH DIVISION.

Fresh orders have been issued for the Eighth Division to disembark at Cape Town and go north immediately.

MR. CHAMBERLAIN AND THE AUSTRALIAN PREMIERS.

Mr. Chamberlain, replying to the Australian Premiers, said that the view held by Australia is completely in accord with the feeling in Great Britain and the rest of the Empire.

HORSES FOR SOUTH AFRICA.

Later.

Quantities of Hungarian and other horses are being shipped to repair the heavy wear and tear incidental to Lord Roberts' operations.

PAARDEBERG.

A force of Boers are in laager in the neighbourhood of Paardeberg and marauding bands are visiting the farmers.

HONOURING THE GALLANT DEAD.

Lord Roberts has telegraphed to President Kruger, offering his condolences on the death of General Joubert and praising his chivalry and bravery.

THE NEW COMMANDER.

It is stated that President Kruger, in his speech at the funeral of the late General Joubert, announced that Louis Botha would succeed Joubert.

A SURPRISE NEAR BLOEMFONTEIN.

Shanghai, April 3.

A British convoy and batteries have been ambushed near Bloemfontein in a deep spruit, and 6 guns were captured.

THE EXPLANATION.

Reuter, in a later telegram, says that a message from Reuter's agent at Bushman Kop, dated 31st March, explains that a force consisting of the 10th Hussars, the Household Cavalry, and two horse batteries under Broadwood, with mounted Infantry under Pilcher, were garrisoning Thaba N'chu when they were threatened by a strong force of Boers on the evening of the 30th. They retired to Bloemfontein Water-works, where the camp was shelled at dawn from the rear, whereupon Broadwood sent off the convoy and the batteries, with the result already wired.

Colville's division left Bloemfontein early on the morning of the 1st April, and arrived at noon, and they are now shelling the enemy.

BROADWOOD'S LOSSES.

Later.

A despatch from Lord Roberts confirms Reuter's message from Bushman Kop. Broadwood reports that his losses in the ambush were 350, including 200 missing, 7 guns and all his baggage.

THE GUNS RECOVERED.

Roberts telegraphs from Bloemfontein under date of 1st inst. that a report had just arrived that the enemy had retired towards Ladybrand, leaving 12 wounded officers and 70 men at the Water-works. A special telegram to the *Daily Chronicle* from Bloemfontein dated the 2nd says that Broadwood's guns had been recovered and that the water supply of Bloemfontein had been cut off.

TWO OFFICERS ESCAPE FROM PRETORIA.

Shanghai, April 4.

Haldane, of the Gordons, and Lemesurier, of the Dublins, have escaped from Pretoria and reached Lourenzo Marques.

THE SCENE OF THE AMBUSH.

Reuter's agent, telegraphing from Bloemfontein, says that the scene of the ambush was a terrible sight. The spruit was filled with corpses of horses and with broken waggons, in hideous confusion. Broadwood's presence of mind and skilful handling saved the destruction of the entire force.

FOR RHODESIA.

The transport *Chicago* is leaving Cape Town for Beira with a portion of the Bushman's Corps, horses, mules and plant for the Rhodesian Railway. A large stock of supplies and provisions are also going to Beira.

THE AMBUSH AFFAIR.

Later.

Reuter's agent telegraphing from Bloemfontein on the evening of the 2nd, says that the enemy still occupied the Water-works. The Boers were shelled on the 1st and returned the fire. It is reported that some Boers are moving south.

A despatch from Lord Roberts praises the gallantry of the 9th Battery in the ambush affair. The officers served the guns as the men fell under seven hours' cross fire.

THE MINES CLOSED DOWN.

Shanghai, April 5.

The *Times'* correspondent telegraphs from Lorenzo Marques that it is reported that all the Rand mines were closed down on Thursday. The British workers and bank clerks there and in other places were expelled wholesale.

THE BOERS DEMORALISED.

The Transvaalers are demoralised. It is impossible to induce many to return to the front. President Kruger has prevailed on President Steyn to make one big stand before surrendering.

THE BLOEMFONTEIN WATER SUPPLY.

The destruction of the Water-works at Bloemfontein causes inconvenience, but there is a plentiful supply of drinking water in the town.

FRENCH RETURNS TO BLOEMFONTEIN.

Colville's division and French's cavalry have returned to Bloemfontein.

ATTEMPT ON THE LIFE OF THE PRINCE OF WALES.

NARROW ESCAPE OF THE PRINCE AND PRINCESS.

H.I.H. the Prince of Wales, while passing through Brussels on his way to Denmark, was fired at with a revolver by an unknown man in the railway station. The Prince was not hurt. The assailant jumped upon the footboard of the carriage in which the Prince, the Princess, and an Equerry were riding. He fired twice through the window, hitting nobody.

THE AMBUSH DISASTER.

The guns and waggons captured in the ambush have not been recovered. The pursuit of the Boers was abandoned.

THE QUEEN IN IRELAND.

The Queen's entry into Dublin was a brilliant and an immense success.

ADMIRAL DEWEY FOR THE PRESIDENCY.

Admiral Dewey has announced his willingness to stand for the Presidency of the United States.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE IN TOKYO.)

FRENCH VICTORY IN AFRICA.

Saigon, March 31.

Telegrams from Algiers announce that a column of French troops carried the Oasis of Turkhar in Tidikelt by assault after bombardment and in spite of desperate resistance. The assaulting column had 9 killed and 48 wounded, including 2 officers. The casualties on the side of the Morocco Arabs were 600 killed, a hundred wounded, and 450 prisoners.

Digitized by Google Original from CORNELL UNIVERSITY

THE SAHARA.

Saigon, April 1.

The French journals offer congratulations on the occupation of the Oasis of Turkhar, and forsee that this event will have considerable consequences.

SOUTH AFRICA.

Lord Roberts has dislodged the Boers from the kopjes in the neighbourhood of Blandfort. His casualties were 21 killed and 170 wounded.

PRESIDENT KRUGER'S RESOLVE.

Saigon, April 3.

President Kruger, speaking at the obsequies of General Joubert in Pretoria, declared the resolve of the Boers to continue the struggle to the death.

THE THABA N'CHU DISASTER.

It is announced from Bloemfontein that the Boers surprised in a ravine near Thaba N'chu an English column under Broadwood. They captured 7 guns, all the baggage, and 200 prisoners. The English had also 150 killed and wounded.

THE FRENCH COLONIAL ARMY.

Saigon, April 4.

The Chamber of Deputies continues the discussion of the project of law relating to the Colonial Army. General Gallifet, amid much applause, maintains the proposition of the attachment of this Army to the War Department.

THE THABA NCHU AMBUSCADE.

The whole press of London shows much concern about the Thaba Nchu ambuscade.

(By Special Arrangement with the "Jiji Shimpo.")

KANG YU-WEI AGAIN.

Peking, April 2.

It is stated that Kang Yu-wei has been negotiating for the purchase of 10,000 military uniforms in Hongkong. The Peking Government has directed Li Hung-chang, the Viceroy of the Two Kwang, to communicate with the Governor of Hongkong on the subject.

THE SHANTUNG INSURRECTION.

The Shantung insurgents have entered Chihli. It is possible that the Foreign Powers may consider it necessary to land troops for the protection of residents in Peking.

THE MASAMPO COMPLICATION.

Söul, March, 31.

Minister Hayashi, in pursuance of instructions received from the Home Government, has made some representations to the Korean Government.

Söul, April 1.

The Russian Minister was pressing his demand for land as Masampo with much insistence, but as the Korean Government, in consequence of representations made by the Japanese Minister, showed a determined front, the Russian Minister withdrew his demand, and substituted an application for land within the treaty limits, on which basis a settlement has been effected.

An arrangement having been concluded for a grant of land to Russia within the limits of the foreign settlement at Masampo, one of the Russian ships has left Chemulpo. The Russian officers appear to be dissatisfied because the Korean Government allowed itself to be influenced by Japanese representations.

MR. PRITCHARD MORGAN.

Söul, April 3.

Mr. Pritchard Morgan, the concessionaire of the Uensan gold mine, has been appointed Korean Consul in London.

(By Special Arrangement with the "Nichi Nichi Shimbun.")

RUSSIA AND KOREA.

Söul, March 31.

The Korean Government has definitely refused Russia's demand for land at Masampo.

MASAMPO.

Söul, April 1.

In consequence of the refusal of the Korean Government, Russia withdrew her demand for Rampo, at the entrance of Masampo Bay, and agreed to accept instead a lot of land within 2½ miles of the Settlement. On that basis the matter was settled amicably.

CHINA.

Peking, April 4.

The Government has issued an edict that should any trouble occur in Canton, Li Hung-chang will be held responsible.

AN APPARENT COUP.

Peking, April 5.

There are signs that the Government is contemplating some important step tomorrow.

THE INSURGENTS.

It is announced that in consequence of the doings of the insurgents the Foreign Powers are likely to land troops.

THE WAR.

London, March 13th.

A Parliamentary paper containing the telegrams sent to the British Government by the Presidents of the South African Republic and the Orange Free State, and Great Britain's reply thereto, was issued this afternoon. It first gives the telegram sent by the two Presidents to the Marquis of Salisbury, as follows:

Bloemfontein, March 5th.

The blood and the tears of thousands who have suffered by this war, and the prospect of all moral and economic ruin, wherewith South Africa is now threatened, make it necessary for both belligerents to ask themselves dispassionately and as in the sight of the triune God for what they are fighting and whether the aim of each justifies all this appalling misery and devastation.

"With this object, and in view of the assertions of various British statesmen to the effect that this war was begun and is being carried on with the set purpose of undermining her majesty's authority in South Africa and of setting up an administration over all of South Africa independent of her majesty's Government, we consider it our duty to solemnly declare that this war was undertaken solely as a defensive measure to maintain the threatened independence of the South African Republic and is only continued in order to secure and maintain the incontestable independence of both republics as sovereign international states and to obtain the assurance that those of her majesty's subjects who have taken part with us in this war shall suffer no harm whatever in person or property. On these conditions, but on these conditions alone, are we now, as in the past, desirous of seeing peace re-established in South Africa, while if her majesty's Government is determined to destroy the independence of the republics, there is nothing left to us and to our people but to persevere to the end in the course already begun. In spite of the overwhelming pre-eminence of the British empire, we are confident that that God who lighted the unextinguishable fire of love of freedom in the hearts of ourselves will not forsake us, and that he will accomplish his work in us and in our descendants. We hesitated to make this declaration earlier to your excellency, as we feared that as long as the advantage was always on our side, and as long as our forces held defensive positions far within her majesty's colonies, such a declaration might hurt the feelings and honor of the British people. But now that the prestige of the British empire may be considered to be assured by the capture of one of our forces by her majesty's troops and that we have thereby been forced to evacuate other positions which our troops had occupied, that difficulty is over, and we can no longer hesitate to clearly inform your Government and people in the sight of the whole civilized world why we are fighting and on what conditions we are ready to restore peace."

The Marquis of Salisbury to the Presidents of the South African Republic and the Orange Free State:—

"Foreign Office, March 11.

I have the honour to acknowledge your honours' telegram, dated March 5th from Bloemfontein, of which the purport is principally to demand that her majesty's Government shall recognize 'the incontestable independence of the South African Republic and Free State' as 'sovereign international States' and to offer on those terms to bring the war to a conclusion.

"In the beginning of October last peace existed between her majesty and the two republics under conventions which then were in existence. A discussion had been proceeding for some months between her majesty's Government and the South African Republic, of which the object was to obtain redress for certain very serious grievances under which the British residents in South Africa were suffering. In the course of these negotiations the South African Republic had to the knowledge of her majesty's Government made considerable armaments and the latter had consequently taken steps to provide corresponding reenforcements of the British garrisons at Cape Town and in Natal. No infringement of the rights guaranteed by the conventions had, up to that point, taken place on the British side. Suddenly, at two days' notice, the South African Republic, after issuing an insulting ultimatum, declared war upon her majesty, and the Orange Free State, with whom there had not even been any discussion, took a similar step. Her majesty's dominions were immediately invaded by the two republics. Siege was laid to three towns within the British frontier, a large portion of two colonies were overrun, with great destruction of property and life, and the republics claimed to treat the inhabitants of extensive portions of her majesty's dominions as if those dominions had been annexed to one or the other of them. In anticipation of these operations the South Africa Republic had been accumulating for many years past military stores on an enormous scale, which by their character could only have been intended for use against Great Britain.

"Your honours make some observations of a negative character upon the object with which these preparations were made, I do not think it necessary to discuss the questions you have raised. But the result of these preparations carried on with great secrecy has been that the British empire has been compelled to confront an invasion which has entailed upon the empire a costly war and the loss of thousands of precious lives. This great calamity has been the penalty Great Britain has suffered for having of recent years acquiesced to the existence of the two republics. In view of the use to which the two republics have put the position which was given them and the calamities their unprovoked acts have inflicted on her majesty's dominions, her majesty's Government can only answer your honours' telegram by saying that they are not prepared to assent to the independence either of the South African Republic or the Orange Free State."

The correspondence was read in both houses of Parliament to-day and the concluding paragraph of the British Premier's reply elicited prolonged cheers.

London, March 15.

A dispatch to the *Daily Chronicle* from Bloemfontein dated Tuesday evening, March 13th says:—

Bloemfontein surrendered at 10 o'clock to-day. It was occupied at noon. President Steyn, with a majority of the fighting burghers, has fled northward.

Lord Roberts made a state entry at noon. He received a tremendous ovation. After visiting the public buildings he went to the official residence of the President, followed by a cheering crowd, who waved the British flag and sang the British national anthem. They were in a condition of frenzied excitement.

Monday afternoon, previous to the surrender, there had been a little sniping and shelling, but the enemy retired. Lord Roberts has his headquarters at the President's house, and there are many of the British wounded in the building. The railway is not injured.

The following is the text of Lord Robert's dispatch to the War Office announcing his occupation of Bloemfontein:

Bloemfontein, March 13th.

"By the help of God and by the bravery of her majesty's soldiers the troops under my command have taken possession of Bloemfontein. The British flag now flies over the Presidency, evacuated last evening by Mr. Steyn, late President of the Orange Free State. Mr. Fraser, member of the late executive government; the Mayor, the secretary to the late Governor, the Landrost and other officials met me two miles from the town and presented me with the keys of the public offices.

"The enemy have withdrawn from the neighbourhood and all seems quiet. The inhabitants of Bloemfontein gave the troops a cordial welcome."

London, March 15.

The first half of the campaign is over. Lord Roberts arrived at Modder river on February 9th. He entered Bloemfontein on March 13th. Thus, in a little over a month, he has effected the relief of Kimberley and Ladysmith, the capture of General Cronje's forces and the hoisting of the flag in the capital of the Free State. All this has been accomplished with comparatively trifling losses.

It is small wonder that he is the hero of the hour in England. All the newspapers eulogize him and congratulate the country. They talk of the Free State as having passed out of existence, as being now one of the shadows of history.

Digitized by Google Original from CORNELL UNIVERSITY

It is not doubted that there may be heavy fighting, but the genius of Lord Roberts is looked to for victory over all difficulties. His grim reference to the "late" President Steyn is understood to show that there shall be no ambiguity as to the position assumed toward the republics.

The fact that Mr. Fraser, late chairman of the Free State Raad, and leader of the opposition to Mr. Steyn, came with the deputation to surrender the keys, is regarded as extremely significant of considerable difference of opinion among the Free Staters regarding the war. It is said that President Krueger hates Fraser on account of his sympathy with the Outlanders. The demonstrations of the Bloemfontein inhabitants are also regarded as a good augury for the future of British supremacy.

It is interesting, in connection with the rapid advance of Lord Roberts, to learn that the Russian military attaché with the Boers, who was captured by the British, sent the following telegram to the Czar:—

"I am perfectly amazed at the energy in action and the endurance of the British infantry. I need say no more."

There is still no news as tc whether Lord Roberts has captured any rolling stock. If he has not yet then he will be obliged to wait until the repairing of the bridges over the Orange river enables him to bring rolling stock up.

The British continue pressing their advance on the Orange river. The Boers still hold Bethulie ridge on the north side of the stream, but their trenches are dominated by the British artillery. Heavy firing is in progress and there has been some skirmishing.

Lord Kitchener seems to be very successful in reducing the extent of the Dutch rising.

Major Hanham has a predilection for close openings, whether as first or second player. He played similar openings during the B.C.A. Congress, London, 1886, and at Nottingham immediately afterwards—he, the late Captain Mackenzie, and Lipschutz competing as American representatives. In consequence of 3...Kt to Q 2 he cramped his game, and tries now to get elbow room with 9...K to K sq, to be followed by Kt to B sq and Kt to Kt 3; but he might have developed with 9...Kt to Kt 5, and after Kt takes B he could have posted the Q Kt at B 3, with less loss of time. White's 10, Kt to B 4 is intended to tempt Black to weaken his pawns with 10...P to Q Kt 4. The remainder of the game takes its natural course, White keeping possession of the open Queen's file, and the pretty ending which follows after 24 R takes Q, compensates for the dreariness of the previous part. Black could have stopped the threatened 25 P to R 6; but he thought, probably, of imprisoning White's Rook, only White looked further ahead in the combination, so that instead of imprisoning the Rook, it becomes an unwelcome visitor, and when at last he is ready to catch it with B to B sq, White has the pretty Kt to Q 4 *in petto*, which wins right off, no matter what Black replies.

Hall, Jr., Mr. Wm. Hall, Mr. K. Koge, Mr. E. S. Knight, Miss Mitchell, Mr. A. J. Melhuish, Miss F. B. McClure, Mr. Plummer, Mr. E. da Rosa, Mr. W. A. Ramsay, Mr. W. J. Schroth, Miss Smith, Mr. E. F. Wood, Mrs. E. F. Wood and child, Mrs. L. Wahl and child, and Mr. K. Yamada, in cabin.

LATEST COMMERCIAL.

IMPORTS.

No business worth mentioning has been done in shirtings, the quotations being nominal in the absence of transactions. There are a good many purchases previously made undelivered, dealers apparently being unable to raise the cash to take them up. The market for woollens and fancy cottons is very quiet and there is practically no market for yarns, though Japanese dealers are willing to sell at less than present Manchester cost. Of raw cotton, the imports from March 15th to 28th were 25,000 piculs, but there have been very few sales effected. The metal market is also stagnant, no sales having been reported.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirting—8¼lb, 38½ yds. 39 inches	$2.85 to 3.85

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 14TH, 1900.

DEATH.

At her residence Notton, Chippenham, England, on April 11th, FRANCES ELLEN AWDRY, widow of Sir John W. Awdry, aged 79.

SUMMARY OF NEWS.

MAFEKING has not yet been relieved and sharp fighting continues in the neighbourhood.

THE famous wrestler Takasago Uragoro (63) died at his residence in Tokyo on the 9th inst.

GOOD Friday was a wet and blustery day, but the weather cleared up after midnight, and there is every prospect of a sunny Easter.

THE Boers are displaying great activity in the Orange Free State, besieging Wepener and even threatening Aliwal North in the Cape Colony.

THE Thirtieth-year new pattern rifle for the Japanese Army has been served out to all the troops in the Tokyo command, but it is expected that the supply for the rest of troops will not be ready until next year.

BY a fire which broke out at Ichinichimachi, Nishida-kawa district, Yamagata., on the night of the 8th inst., 50 houses were destroyed.

IT is said that a dog suddenly went mad at Nakano-machi, Tokyo, on the 7th, and before it could be shot, 13 men and boys were bitten by it.

UP to noon of the 27th ultimo there had been eighteen cases of Plague and seventeen deaths from that cause in Hongkong since the 1st January.

THE *Niji*, a 31-knot torpedo-boat destroyer, built for the Japanese Government by Messrs. Yarrow and Co., left the West India Docks on 15th March for Japan.

THE smoking law is being put into force. On Saturday three young girls were punished in Yokohama for smoking. Their employer was also fined by the Police.

THERE is to be a railway bureau in Korea. One of the Min has been appointed to direct it, and Mr. Omiya Chobei is said to have received the nomination of chief manager.

A TELEGRAM received by the Meiji Fire Insurance Co., Tokyo, on the 8th inst., says that a big fire occurred at Matsuzaka, Ise, that day, and there is an estimated loss of *yen* 10,000 for the Company.

ON Monday evening a horse ran away near Yokohama railway station. The driver, named Tokijiro was knocked down and killed on the spot. The runaway horse returned to the owner's stable after smashing a *jinrikisha*.

THE promoters of the Fuji *Makigari* are sad men these days. They collected 1,000 *yen* from 650 subscribers, but had to pay about 2,400 *yen* as expenses. Instead of making money, they are out of pocket some 1,400 *yen*.

A PARAGRAPH in *L'Avenir du Tonkin* announces the opening of the first Japanese shop in Saigon. Hitherto the Japanese have limited their activities there to one profession only, and the writer congratulates them on the innovation.

A MOST successful herring harvest is reported from Yezo. In Sutsu and Iwanai twenty-five thousand *koku* of the fish were taken during the first three days of the season, and from other localities also good results are announced.

A FORWARDING agent named Tanaka Akizo, of Yokohama, has been arrested for attempting to forward some 90 *kwamme* of dynamite and 10,000 percussion caps belonging to the Kanamaru rifle store, in the shape of ordinary cargo.

MR. J. DE REUS, Consul for the Netherlands at Yokohama, has left for Kobe to take charge of the Consulate there. Mr. H. Klingen, of No. 89, has been entrusted with the care of the Dutch and Swedish and Norwegian Consulates at Yokohama.

SIR THOMAS JACKSON is deputed to represent, at the Congress of the Chambers of Commerce of the Empire, the manner in which the right accorded to foreign steamers to navigate the inland waters of China has been nullified in practice.

THE U.S.S. *Baltimore* arrived at Yokohama on Wednesday from Manila. The usual salutes were exchanged. The *Baltimore* is Admiral Watson's flagship, and her Captain is Captain J. M. Forsyth. She has 4413 tons displacement and 20.1 knots speed.

THERE is a report, which appears to be true, that many dead rats have of late been seen in the streets of Osaka, and that some cases of sickness resembling pest have occurred. The *Chiuo Shimbun* blames the authorities for keeping the matter secret.

VISCOUNT AOKI, speaking to the Local Governors now in session, urged that steps should be taken to prevent the deceptions practised by emigration agents, for the purpose of inducing women and children to go abroad. It appears that there have been many abuses in connexion with this matter.

THE trials of the 27-cent. Canet gun manufactured at the Osaka Arsenal have now been concluded on the Haruki plain in Izumi. They are said to have been entirely successful, and the weapon has been selected as a model for purposes of coast defence. This is the first cannon of large calibre made in Japan.

THE steamer *Tokyo Maru* is now reported a total loss. She ran aground at mid-night during a fog, and though hopes of saving her were entertained at first, they proved illusory. The facts as to the insurance of the cargo are not yet known, but it is believed that the risk was held mainly by the Nippon Kai-riku Hoken Kaisha.

IT is reported in the columns of the *Chiuo* that a new discovery of gold has been made in Hokkaido. The place is on the Tokoro River in the Kayabe district. It is under the Hakodate jurisdiction, and, being thus far more accessible than Esashi, the prospects are considered to be very rosy. A foreigner seems to be endeavouring to gain possession of the place.

A TELEGRAM received in Tokyo says that the U.S. House of Representatives passed the Hawaiian Administration Bill on the 6th instant. The Bill brings Hawaii definitely within the jurisdiction of the States with regard to the Oriental Immigration Law, and its effect will be to render null and void all contracts for Asiatic labour concluded subsequently to the annexation of the islands.

THE *Pique*, cruiser, Captain H. C. Reynolds, which is to relieve the *Iphigenia* on the China Station, and whose departure from Plymouth has already been twice postponed in consequence of mishaps to her machinery, has been in collision in Plymouth Sound with a steam collier. Some six feet of the cruiser's upper deck was carried away, and it was necessary to have her docked.

THE Emperor of Korea wants to have a palace in Occidental style, it is said. We should not have supposed that His Majesty's finances warranted such an extravagance, but rumour alleges that it has been found possible to set aside a sum of three hundred thousand *yen* for the purpose, and that application has been made to Japan for an architect to prepare the plans.

THE recent rain brought down a freshet by the old aqueduct of Tokyo, and it would seem that the waters carried some poison, for a number of large *funa* were seen the next day floating dead in the moat. The police have sent experts to inquire into the matter. It appears that the police stations have not yet been supplied with the filtered water of the new system, and they are naturally rendered anxious by this event.

SOUTH AFRICA.

Saturday, April 7.

It appears at first sight a little perplexing to be told, in one breath, that the Transvaalers are demoralized and that they can not be induced to muster for more than one final effort; and, in the next, to learn that all British subjects have been ordered to leave the territories of the Republic. The latter measure does not seem to suggest any symptom of weakening on the part of the indomitable old Kruger—a grand man truly, whose qualities are doubtless just as much admired by Englishmen as by his own nationals. Yet, we are disposed to think, that the two pieces of intelligence are not irreconcilable. Why should Kruger order the expulsion of British subjects at this stage, seeing that he has permitted them to remain peacefully up to the present? They do not constitute a menace now any more than they did six months ago. They are unarmed, have no access to arms, and never have had access to arms for several years. It has been part of the Boers' policy to render the Uitlanders powerless by keeping them unarmed. One possible explanation of this new measure is that some plot has been discovered among the British residents of the Transvaal. But we should probably have heard of that, had such a reason been forthcoming; for though the expulsion of the British is not an outrage, from the point of view of international law, it is at all events a hardship for which the Boers would have been glad to assign a sufficient explanation had any such been forthcoming. Another conceivable explanation is that the escape of the two British officers whose arrival at Pretoria has just been reported, was found to have been effected through the connivance of some of their civilian nationals, and that Kruger, in order to prevent any repetition of such acts, adopted a wholesale precaution. But though that consideration might apply to the British residing in Pretoria, it could not be reasonably extended to the British in Johannesburg, whose presence, for the rest, has hitherto been of the greatest service for working the mines. We thus arrive at two other hypotheses. The first is that Kruger desires more privacy. He finds that the world is getting too much information about the state of affairs in the Transvaal, and that the best way to stop the flow of intelligence is to cut off the source by driving out the British population. That may have a general, or it may have a particular, application. Kruger may find it desirable to exclude prying eyes altogether, or he may wish to lower the curtain pending the preparation of the final act. It is useless to discuss such exceedingly nebulous conjectures. The last hypothesis is that the question of provisions is becoming serious. This appears to us to be the most likely explanation. The Boers find it necessary to diminish as much as possible the number of mouths to be filled. There must have been a heavy drain upon their supplies during the past six months. If will be remembered that when Great Britain announced her intention of treating as contraband of war any provisions destined for military purposes, President Kruger uttered a protest so vehement that his forecast of the effect of the measure could be clearly inferred. Probably the Boers, taking stock of their available resources, have decided that it would be an advantage to reduce the consuming classes.

It must have been a disappointment to Englishmen to learn that the Boers get clean away with the guns and waggons taken from Broadwood and Pilcher, and that French and Colvile abandoned the pursuit. In other words, the Boers accomplished nearly all that they intended to do, and probably in one sense a great deal more. Their prime object was to cut the water-supply of Bloemfontein, and to remain in possession of the intake for a sufficient time to render Bloemfontein untenable by the British forces and thus bring about the evacuation of the town. They may not originally have expected to find an English garrison in Thaba Nchu, but the discovery did not disconcert them at all. They manœuvred so skilfully that the garrison had to fall back; and not only to fall back from Thaba Nchu, but also to abandon the Water-works. It will be remembered that the first telegram represented Broadword as having retreated on the Water-works, and thence sent back towards Bloemfontein his artillery and convoy. The first inference to be drawn from such a message is that the British commander himself remained at the Water-works. But it is plain that if he had intended to make any stand there, he would have kept his artillery. Besides, a subsequent telegram contained a significant statement; namely, that had it not been for Broadwood's presence of mind and skilful handling, the whole force would have been destroyed. We can only conclude, that he retired from his second position, the Water-works, with his whole force, and that he was ambushed in column of march, his advance guard with the artillery and waggons coming in for the brunt of the attack, which was evidently a repetition of the old story, the Boers on the heights, the British in the valley below. Had the position been reversed previously to the final retreat, our experience of Boer tactics suggests that they would have formed laager and held their ground. Broadwood might have done that, of course. But his idea, doubtless, was that instead of taking any needless risks, the wisest plan was to get as near Bloemfontein as possible, so as to be within easy reach of re-inforcements. In fact, he wanted to draw the Boers on, and they proved too much for him. But it is evident that they were not able to hold the Water-works. They got possession of them on the 31st March, and they were compelled to retire on the following day, so that beyond doing some damage which will probably be expensive and troublesome to repair, capturing some guns and waggons, and showing themselves very daring and able they accomplished nothing. As to the question of pursuit, the superficial idea is that since the Boers were encumbered with the waggons taken from the British, it ought to have been possible to overtake them. But a moment's reflection will show that the task was probably exceedingly difficult. It may be taken for granted that the Boers sent off the captured guns and waggons at the very earliest moment; that is to say, on the afternoon of the 31st of March. They themselves retired on the afternoon of the following day, but they retired before a force which had marched thirty miles to attack them, and which, consequently, can not have been in a condition to undertake any rapid operations of pursuit. Probably the pursuit did not commence until the morning of the second. Even then, had the country been fairly open. French might have got within striking distance. But the country was not open. On the contrary, it was mountainous and difficult. Under such circumstances there can be no comparison between the rates of follower and followed, other things being equal. The Boers were falling back upon friendly districts of which they had a perfect knowledge. They had nothing whatever to fear except from the British in the rear. French was advancing into a hostile country of which he knew little, if anything, and he had to feel every yard of his way, for in such movements, if at any time, the opportunities for ambushes offer repeatedly. The slightest rashness on the part of the British commander might have involved his column in a disaster precisely similar to that which befel Broadwood. One might almost compare the relative situations to those of two men, one whom walks in the light while the other follows in darkness. It has to be remembered, too, that the Boers were not demoralized by defeat. They had not suffered any defeat of a crushing character. They had merely evacuated the Water-works when they appreciated that an overwhelming force was advancing to drive them out. Under the circumstances we do not find it at all surprising that the pursuit had to be abandoned. The Boers in the north-east of the Free State will not receive their quietus until Buller forces the passes of the Drakensberg. They cannot be very strongly held now.

Monday, April 9.

The telegrams received on Saturday with reference to the fighting in the Free State were somewhat obscure. Nothing appears quite certain except that two companies at least of the British troops posted on the line of communications have been wiped out. Bethany (or Bethanie), in the neighbourhood of which the disaster occurred, is the second station on the railway to the south of Bloemfontein, at a distance of 32 miles. The next station south of Bethany, distant 11 miles, is Edenburg, and mid-way between the two stations the line crosses the Riet River. The source of the Riet is in the Beyers Bergen range of hills twenty miles eastward of the railway and nearly parallel to it, but before reaching the railway the stream receives a tributary called the Fourie Spruit, and on this tributary lies Reddersburg, 12 or 13 miles distant from Bethany. It will be remembered that after their successful ambushing of Broadwood's column, a part of the Boers were said to have moved southward. They doubtless proceeded by the road from Thaba Nchu to De Wet's Dorp, and it is not at all improbable that the objective was to destroy the Riet bridge between Bethany and Edenburg. From De Wet's Dorp they turned westward, and threading their way through the broken country about the sources of the Kaffir River and Fourie Spruit, they came upon a picquet of two companies of the Ninth Mounted Infanty at Reddersburg, and after a prolonged fight captured them. Two companies of mounted infantry have a nominal strength of 200 men. They were not capable, therefore, of opposing any considerable force of Boers. The telegram concludes with the words "Gatacre despatched," but does not tell us what he despatched or whether he was himself despatched to the scene. We do not know where Gatacre has his head-quarters, but probably he is at Trompsburg, 35 miles south of Bethany. He is an ill-starred commander, but in considering this last disaster, we must remember that the British have an immense line of communications to protect, and that they are exposed to precisely such enterprises as the Boers are now undertaking. The question is, however, what can the Boers hope to accomplish. They are running immense risks in moving so far south of their bases at Kroonstad and Winburg, and although they may cause considerable mischief and harrass the British, they may be themselves surrounded at any moment. Besides, these guerilla attacks upon lines of communication are of no consequence. Un-

Digitized by Google Original from CORNELL UNIVERSITY

less an army can throw itself across the enemy's communications and compel him to turn and fight with his face to his base, the operation is strategically valueless. The Boers have apparently broken up into a number of flying columns. We hear of one under Villebois-Mareuil at Boshof, a town 32 miles north-east of Kimberley; which is 80 miles south-east of Boshof, and another at Bushmanskop, which is some twelve miles north-east of Bloemfontein. Villebois-Mareuil doubtless intended to menace Methuen's communications between Kimberley and Warrenton, and thus check his advance. Similarly the column that cut the Waterworks, and then despatched a force southward by the road to De Wet's Dorp, intended to threaten Roberts' communications with the Orange River, and thus induce him to detach for the protection of his lines a part of the forces destined for his advance beyond Bloemfontein. The plan of campaign on the part of the Boers is courageous and clever, but it can not be effective, for guerilla bands may impare communications but they are powerless to cut them, in the strategical sense of the term. We interpret the action of the Boers to mean that their great apprehension in a general engagement is the action of the British mounted troops, and that, by organizing a number of flying columns to menace Roberts' lines, they hope to induce him to detach a large force of his mounted troops for the defence of the lines and the pursuit of these columns. But Roberts will clearly apprehend the significance of that manœuvre, and will not allow himself to be turned from his main purpose by trivial incidents. Every day is bringing him fresh troops for his lines, and every flying column detached by the Boers weakens their main body correspondingly. If they are assured that Roberts does not contemplate a forward movement for some time, their present plan would be more intelligible, but if anything like a big struggle is impending, they violate one of the fundamental rules of strategy when they detach troops on the eve of a battle.

Wednesday, April 11.

The operation just performed by the Boers in the Free State is one of the most curious in the history of warfare. Lord Roberts must have an army of sixty or seventy thousand men under his immediate command, yet we see ten or twelve thousand Boers outflanking him and placing themselves across one of his lines of communication at a distance of some fifty or sixty miles from his head-quarters. It is a *coup* brilliant in respect of audacity, but what the Boers hope to accomplish by it one does not immediately apprehend. They will certainly delay Roberts' advance beyond Bloemfontein. He can not move to the attack of Winburg or Kroonstad leaving ten or twelve thousand Boers in his rear to destroy the railway and capture his convoys. On the other hand, how long can the Boers hope to maintain such a position? If they could compel Roberts to detach for the purpose of assailing them such a force as would deprive him of the power of holding Bloemfontein, the outlook might be different. But the English General can afford to leave twenty-five thousand men in the lines at Bloemfontein, while moving as many more to crush the Boers who have placed themselves across his rear. We do not perceive how this singularly reckless column can hope to escape annihilation. Olivier has unquestionably taken Roberts by surprise, and has practically eliminated a thousand British soldiers from the fighting arena with probably very little cost on his own side. Now, however, comes the task of extricating himself from the position he has assumed. If he can manage that part of the feat, he will deserve immense credit. His only hope is to retire by the routes he followed in his advance; namely, by the east of the Free State. To move in the comparatively open plains on the west would be to covet certain destruction. But assuredly he can not expect to find the roads open for his retirement, or to preserve his own communications for more than a few days. It is one of the most interesting chapters of the war. When Bloemfontein fell and Ladysmith was relieved, Kruger declared that the British difficulties would only really commence when they had seized all the chief towns, for they would then find their detached forces swallowed up piecemeal by flying columns of Boers. Apparently an effort is now being made to illustrate that prediction.

Thursday, April 12.

It is interesting as an object lesson in international prejudice to observe the execration heaped upon the Boers because some of them have used explosive bullets against the English. But surely the English themselves have been the greatest sinners in this respect? The dumdum bullet is British and has been freely employed in our wars against Indian tribes and Arabs. We can not see that it is less cruel to fire an expanding bullet into the body of an Arab or an Afridi than into the body of a Boer. On the contrary, if degrees of cruelty be assessed, the dictates of humanity are more grievously violated in the case of the semi-civilized native who is without medical attendance or ambulance aids and has to suffer unsuccoured, than in the case of the Boer on whose account the Red Cross Society, and other charitable institutions, to say nothing of the governments of the two Republics, make all possible arrangements for tending the wounded and nursing the sick. These contrasts can not fail to make themselves apparent to people of the slenderest intelligence. The progress of civilization does not seem to bring any modification of the singular injustice shown by the white races of the world towards the coloured. From first to last we deem ourselves the superiors, and tacitly agree that the canons of conduct which must be rigidly obeyed in our treatment of each other, have no binding force where the "inferior" races are in question.

As to the Boers' contention that they have merely used explosive bullets taken from the British themselves, it is simply another of those exceedingly clumsy lies for which these stout but unscrupulous burghers make themselves conspicuous. Possibly some of them may be so ignorant as to imagine that the British soldier procures ammunition wherever he can find it, and carries one pattern to-day in his pouch, another to-morrow. But the average Boer must be perfectly well aware that not one solitary round of dumdum ammunition could be in the possession of the British force in South Africa, unless it had been served out to them by the Government, and that when the British Government declares that not one round has been served out, the truth of the declaration is beyond all question. The average Boer must be well aware of that fact, and of course the Presidents of the two Republics can not entertain the smallest doubt about it. Yet we find them addressing to Lord Roberts a despatch in which they assert that many burghers of the Free State and of the Transvaal took dum-dum bullets from British troops. That is an example of the fine courtesy said to be observed by the Boer leaders.

Friday, April 13.

The doings of the Boers are becoming more and more inexplicable. If they confined themselves to a raid into the southeast region of the Free State, ambushing or waylaying British outposts and then retiring upon their own base, we could understand their proceedings. But that does not seem to be their plan at all. On the contrary, they have made a regular invasion of the territory lying south of the Bloemfontein-Ladybrand line, and are not only besieging towns, but also sitting down within sight of the Orange River and in full view of the troops holding it. It is not to be supposed that they think of forcing the crossings of the River, or of offering serious resistance to its northward passage by the British troops. General Rundle will have no difficulty, we imagine, in moving the Eighth Division to Springfontein *viâ* Norvals Pont, though some days may elapse before he reaches that place. Meanwhile, if Roberts thinks it advisable, he can push a strong column across eastward to Thaba Nchu and Ladybrand, completely cutting off the Boers' line of retreat and their communications. The force that they have posted at the Water-works on the road to Thaba Nchu is doubtless intended to prevent a movement of that kind. and then to preserve a line of retreat for the Boers that have gone south. But it can not be a large force, and the probability is that Roberts has hitherto refrained from dislodging it, not because he apprehended any risk in doing so, but because he saw his opportunity in letting the Boers execute their strange series of manœuvres undisturbed. It appears to us that all these men who have marched down the eastern side of the Free State will have insuperable difficulty in rejoining their comrades at Winburg and Kroonstad, unless they hasten to do so at once. Roberts is not likely to hurry them. Every day they remain in the neighbourhood of Bethulie, Smithfield and Rouxville, renders their final retirement more problematical. It may be that their object was simply to demonstrate to the inhabitants of the south-eastern regions the unwisdom of submitting to the British before the latter were in a position to protect them fully, but the demonstration will prove very costly, we imagine.

General Carrington's movements when he reaches Beira are not to be governed altogether, it seems to us, by the object of preventing the Boers from trekking into Rhodesia, if, indeed, that purpose be seriously entertained at all. From Beira there is a line of railway to Salisbury, a distance of about 300 miles. Now the Makeking line runs north as far as Buluwayo, 491 miles beyond Mafeking. Between Buluwayo and Salisbury there is a break of 240 miles where the railroad has not yet been laid, though a line of telegraph runs. Thus from Beira to Mafeking troops can be carried all the way by rail, with the exception of a break of 240 miles. Colonel Plumer seems to be now posted at Ramathlabama, which is the next station on the line northward of Mafeking, at a distance of 12 miles. We interpret the last telegram to mean that he advanced six miles south of Ramathlabama on the 31st of March, but that he had to fall back again on the latter place. It will be seen, therefore, that British troops moving to the relief of Mafeking *viâ* Beira, Salisbury and Buluwayo, already have an advance post within 12 miles of Mafeking. Now the distance from Kimberley to Mafeking is 223 miles, and a column taking that route would have to fight every mile of its way, in addition to leaving large bodies of men behind it as it moved along, for it would be marching within striking

Digitized by Google Original from CORNELL UNIVERSITY

distance of the Transvaal's borders all the way. On the other hand, a column moving by the Beira route would be in absolute safety until it got within a few miles of Mafeking; the distance to be covered by marching would not be appreciably longer than that between Kimberley and Mafeking, and there would be no question of detaching men to guard communications from first to last. It appears to us that Carrington is bound for Mafekin, and that we shall by-and-by see a strong column massed there for the invasion of the Transvaal, simultaneously with Roberts' forward movement from Bloemfontein. It has always been our conviction that Mafeking would be one base for the attack of Pretoria. The telegraph has told us that railway materials have been sent to Beira, which means, of course, that the interval between Salisbury and Buluwayo is to be bridged. Had a road existed there, Mafeking would have been relieved long ago. Roberts has doubtless cast up his account carefully. That he could force a way to the beleaguered town *viâ* Warrenton and Vryburg can not be doubted; but he would have to employ at least twenty thousand men for the operation and his casualties *en route* would out-number the whole garrison. Wasting lives is not his method. The Beira road is longer in actual distance, but it can probably be traversed as quickly on the whole as the Kimberley route, and not a man need be lost until the column gets within striking distance of Mafeking. Finally, if Carrington is to undertake any enterprise against Pretoria from Mafeking, it would be an incalculable advantage to have an absolutely secure line of communications running all the way to the sea coast through British territory, entirely beyond the reach of Boer attack. It is in that region of Africa, we believe, that the greater part of Buller's troops will ultimately be employed. Instead of using them to force the Drakensburg passes at a heavy sacrifice of life, they can be quietly and safely carried into the Transvaal *viâ* Beira, Salisbury and Bulawayo; an immense flanking movement, it is true, but not a mile too long if one or two thousand lives are to be saved. It is a curious freak of fate to contrive that the Capetown-Cairo Railway should have a large section constructed for belligerent purposes in connection with a war which seems destined to greatly extend British dominions in Africa.

DEPARTURE OF MR. W. B. WALTER.

It is the custom of the great house of Jardine, Matheson and Company to allow its leading men to retire after a certain number of years in harness, and an Eastern Community has therefore to be prepared at any time for a loss like that which Yokohama has now sustained in the departure of Mr. W. B. Walter. There are, however, special reasons for regret in Mr. Walter's case. He had spent over thirty years in Japan, had won innumerable friends, and had always associated himself actively with every project for the benefit of his fellow-residents. Moreover, he was thoroughly versed in Japanese affairs, and had an intimate knowledge of the Japanese language. Our satisfaction, therefore, at the thought that he will now enjoy in the home country the ease to which his long and assiduous labours entitle him, is tempered by a sentiment of sincere sorrow that this community can no longer enjoy his fellowship and profit by his helpfulness.

YOKOHAMA COMMUNITY.

The *Jiji Shimpo* says that the foreign community of Yokohama is diminishing. The reason assigned is that under the new tariff merchants do not find the same opportunities of gain as they did in the old days, and further that the idea of submitting to Japanese jurisdiction is irksome. It is said to be chiefly the dealers in tobacco and alcoholic beverages that are taking their departure, inasmuch as the import duties on these staples are almost prohibitive, and, besides, many Japanese are engaging in the business.

We are greatly inclined to doubt whether Japanese jurisdiction has driven any one away or is likely to do so. The average foreigner does not find that his transfer to Japanese jurisdiction has made any difference whatever in the events of his daily life. He has to pay taxes—a disgreeable duty, doubly unwelcome in view of the immunity previously enjoyed. But nothing else troubles him with regard to the Tariff. Tobacconists and publicans may have felt the change very severely, but the customs returns do not show that the volume of the import trade has suffered. The figures for Yokohama and Kobe from January 1st to March 31st, indiindicate that imports aggregated 76⅓ million *yen* against exports entered at 43⅓ millions, the excess of imports being 33 million *yen* and the total volume of the trade, 119⅔ millions. That certainly does not suggest that the import trade is suffering from the increased duties. We may mention incidentally that the outflow of specie in the same interval was nearly 13 million yen.

THE ANTI-VIVISECTION SOCIETY.

The Anti-Vivisection Society of New England continues its campaign as vigorously as ever. We have received its pamphlet in the usual routine, and we do not notice any diminution of the forcible language employed by the denunciators of the practice. It is difficult, however, to accept all the assertions they advance. For example, they ask us to believe that anti-toxin has not contributed anything to the successful treatment of diphtheria. How can we believe anything of the kind when every medical expert that we meet tells us just the opposite. Again, the anti-vivisectionists seem to lay stress on the failure that has hitherto attended efforts to find a serum which shall cure the pest. Does not an argument of that kind weaken the cause in which it is put forward? Twenty negative results can not weigh against one positive. The anti-vivisectionists are on safer ground when they condemn the cruelty that attends many field sports and methods of catering for fashion. Ladies are naturally prominent in this protest. One of the gentle sex calling herself "Velina Caldwell Melville" says:—

> The woman who protests not, by example and precept, against the slaughter of birds for millinery purposes is as much a transgressor as the man whose business it is to lie in wait for the mother-bird as she wings her way homeward, with the bit of supper in her bill, and brings her down just outside the nest, strips her beautiful plumage, and leaves her there to die by inches in sight and sound of her starved nestlings.

This is an example of the defect generally marring the work of these kind-hearted people. Their imagination betrays them into hysterical excesses which bring ridicule on their reasoning. How can a bird be "brought down," "stripped of her plumage" and then "left to die by inches"?

CHINA.

Quite a number of Japanese subjects have been travelling about Fuhkien since the commencement of this year, seeking opportunities to convert Japan's "sphere of influence" to practical account. We read of a party headed by Mr. Ogawa Shigeno, of the Osaka Seisha Kaisha; of another under a mining expert, Mr. Saito Seiichi, and of others under Messrs. Yoshikawa Sanjuro and Takashima Kinsai. Considerable success is said to have attended all their exploitations. They have found silver mines, lead mines, iron mines, and smokeless coal mines, all sufficiently promising to encourage railway enterprise.

Disquieting rumours still come from Peking and Tientsin, but they have to be largely discounted, in view of the evident excitement under which folks in that part of the world are labouring. Thus a visit paid by the Empress Dowager to the Ewo Palace, in company with the Emperor, was supposed to be inspired by some sinister design, and led to the despatch of telegrams announcing that another *coup d'état* was on the *tapis*. But it subsequently transpired that such a visit was part of the Court's regular annual routine. With regard, however, to the Shantung insurgents, the statement is confirmed that they have made an irruption into Chili, and it is even alleged that they have reached the neighbourhood of Tientsin, so that, in all probability, the Foreign Powers will have to land troops for the protection of life and property in the Settlement. The Peking Government, however, desiring, it is presumed, to avert the necessity of alien interference, has sent seven thousand troops to attack the rebels. Meanwhile the threatened insurrection in Canton appears to have ended in smoke, for the present at all events. The Viceroy Li has apparently found means to check it. From Wei-hai-wai, however, comes a statement that the people of the district are banding together to oppose the British, and that disturbances are apprehended.

ASHIO MINE TROUBLES.

Fresh troubles have broken out at the Ashio Mine. The story is told in the columns of a Tokyo contemporary, but it bears the aspect of being highly coloured. The facts are stated to be these. In consequence of the great scarcity of timber for building purposes, the experts employed at the mine have been manufacturing a sort of concrete by mixing lime with the refuse of the mine. Blocks of this compound have served excellently for building purposes. The supply of lime, however, has not been over plentiful, and the men engaged to excavate and burn it showed so little concern for the farmers in the locality of the kilns that much discontent was caused and frequent complaints were addressed to the police. Finally—and it is at this point that the story becomes apocryphal—, the representative of Mr. Furukawa, owner of the mine, invited the rustics to an entertainment, plied them with *sake*, and then drew a cordon of armed workmen around them, threatening dire consequences unless an agreement relating to the lime-yielding district were signed immediately. The rustics, though more or less inebriated, refused compliance, whereupon they were vigorously attacked with swords, pistols and bludgeons, and seventeen received more or less severe injury. It is not easy to credit this tale as it stands.

RUSSIA AND KOREA.

Monday, April 9.

Recent telegrams have spoken of an island called Koka, where Russia is said to have obtained a lease of land. The place in question is now explained to be Koha, a small island about 2½ miles in circumference, lying at the entrance of Mokpho Bay. When Mokpho was opened to trade, Japanese subjects purchased various lots of land on this island, but the Korean Authorities subsequently decided that although its measured distance from the settlement showed it to be within the treaty radius of 10 *li*, nevertheless the intention of the treaty was to indicate measurements on the mainland, and that it could not be read as referring to places separated by water from the base of calculation. This decision was accepted at the time, but it would seem that Russia has now induced the Söul Government to adopt a new view. The telegrams further speak of the area of land acquired by her as 300 *tsubo*, or one-fourth of an acre. But such a fragment of ground would not suffice to build even a private residence. Some conjecture that three thousand *tsubo*, not three hundred, have been acquired. That correction helps very little. Two and a half acres of land would certainly make a coaling station, but a very small one.

Wednesday, April 11.

There is no confirmation of the rumour that Russia has obtained a lease of land on an island at the entrance of Mokpho Bay. There is no reason to believe that she has even attempted to obtain any such concession. So far as we can ascertain, she has withdrawn her original application for an extra-settlement lot, and has been content to purchase land within the Masampo treaty limits. But it is understood that she is now seeking to obtain from the Korean Government an explicit guarantee that the island of Kuje, or any part of it, shall never be alienated from Korean possession. At first sight, such a proposal seems to partake of the nature of establishing a sphere of influence, but as Russia herself is included in the Powers rendered ineligible by the guarantee, the neutralization of the island is alleged to be chiefly contemplated. We say "is alleged," but there can be little doubt as to the real meaning of such a guarantee.

SPECIE RESERVE AND THE NOTE ISSUE.

Uneasiness is evidently caused by a gradual diminution in the volume of the Bank of Japan's specie reserves. On the 24th of March, they stood at 94,640,000 *yen*, in round numbers; on the 31st, the figure was 93,040,000 *yen*, and on April 7th it had fallen to 91,960,000 *yen*. Probably it will soon be as low as 90 millions, or nearly 20 millions less than it was at the beginning of the year. On the other hand, the volumes of convertible notes at the same dates were 210,660,000 *yen*; 217,800,000 *yen* and 212,400,000 *yen* respectively. Hence, although the policy now pursued by the Bank is tending to reduce the volume of these notes, there has not been any diminution proportionate to the contraction of the specie reserves. Foreign observers do not share this uneasiness, we imagine. In every country the specie reserves and the note issues show a margin of fluctuation, and in Japan's case the margin is likely to be exceptionally large owing to the fact that the quantity of specie in circulation is remarkably small.

CONSCRIPTS AND REVIEWS.

Patriotism in Japan takes the form, *inter alia*, of giving a good send-off to lads caught in the meshes of the law of conscription, and of extending a sumptuous welcome to time-expired men, as well as to soldiers billeted on the people on occasions of grand manœuvres. As to the last habit, from what we have been able to learn, it is not altogether voluntary on the part of householders. They find that it pays better to spend some money for the entertainment of men billeted on them, than to incur risks which the men know how to make costly. In short, there is a great deal of abuse connected with this matter of billeting. The billeted soldier has many ways of making himself offensive, and even destroying property, and he does not hesitate to employ them unless his hosts make it worth his while to be tractable. Naturally the inhabitants of districts where manœuvres are held, regard the event with many misgivings. Similarly the custom of organizing festivities in connexion with the departure and return of a conscript are not really calculated to promote patriotism. The former function assumes a character of condolence; the latter, of congratulation, and both tend to foster an impression that conscription is a grievous hardship. We are not surprised, therefore, to learn that Viscount Katsura, Minister of War, in addressing the assembly of Local Governors now sitting at the Department of Home Affairs, urged that the people should be discouraged from all these practices; that entertainments should not be given either to send off or to welcome conscripts, and that householders should not supply to billeted soldiers anything beyond what is required by the regulations. Viscount Katsura being an eminently practical officer, we presume that he will accompany this injunction with the issue of regulations for restraining demands made by soldiers upon families where they are billeted.

Another useful instruction given by the Minister to the Local Governors related to the importance of posting conspicuous notices at places where trespass is forbidden for military reasons. There have been several instances lately of inadvertent violations of rules by foreigners and Japanese, and it is the duty of the Authorities to see that if certain localities are interdicted, the interdict should be distinctly published.

"*JITSUYO EIGO.*"

Mr. George Bunt, Government Teacher of English to the Police of Hiogo Prefecture, has published a little book of 14 pages containing sentences in English and Japanese simply intended for use by police constables who find themselves in contact with foreigners. The sentences seem to be well chosen. Apparently the volume is to serve as a *vade mecum*. Each constable being provided with a copy is expected to point to the phrase embodying the meaning that he desires to convey, should he not be able to make himself understood verbally. The idea is good, and, as we have said, the sentences are so judiciously chosen that they will very often prove valuable. The author has not added *Romaji*, so that few foreigners will be able to decipher the Japanese. But it is not intended that they should. What they have to do is to search for an English sentence approximately conveying the thought that they wish to communicate to the constable, and then, by pointing out this sentence to the guardian of the law, his comprehension will be secured. To facilitate the process the sentences are grouped under subject headings, as "At the Hatoba," "A Row," "Inebriation," &c.

MISCELLANEOUS TOPICS.

It is stated that the Imperial Spring Garden Party at the Shiba Detached Palace will take place on the 15th instant, and that the Emperor and Empress will both be present. The cherries this year are said to be magnificent, as might indeed have been expected in view of the extraordinarily warm weather of the past few days.

Rumour is again busy with the relations between the Cabinet and the Liberals. This time there appears to be a pretty general consensus of opinion that something more than mere talk is in the air, and that a redistribution of portfolios is really among the probabilities of the immediate future. We shall be surprised if Marquis Yamagata agrees to anything of the kind.

Tokyo newspapers speak of an island some 25 miles distant from Kelung which was deserted by the Chinese inhabitants at the time of the war, and which is now likely to fall into the hands of an enterprising Japanese. It is stated that great quantities of valuable feathers can be obtained yearly, and that a plateau of considerable area invites cultivation. But access to the island is evidently very difficult.

The Tokyo Chamber of Commerce has embodied in a manifesto its views as to the advisability of granting to foreigners the privilege of owning land in Japan. Copies of the document have been forwarded to every member of the two Houses of the Diet, and also to all the leading newspapers. It is couched in very emphatic terms. We shall publish a translation as speedily as possible.

A police officer named Murata Sanenobu recently became a fugitive from justice. He had been dismissed from his post for applying a hot iron to the cheek of a man charged with keeping a gambling saloon and for endeavouring to extort confession from a woman by even more brutal measures. Criminal proceedings were then instituted against him by the public procurator in Kobe. He fled to Himeji and has been apprehended there.

A telegram from Nagaoka reports that at 6 p.m. on the 7th instant a working train on the Hokuyetsu line (Echigo-Kaga), running against the signals, was precipitated into the Shibumi River. The statements of casualties vary: one account says that two men were injured, and another puts the number at three. Some spans of a bridge had been removed for repairs, and the driver of the train proceeded in ignorance of the fact and disregarding the signals, it is said.

It is now alleged that no less than twenty-four members of the House of Peers are implicated in the bribery scandal connected with the Religions Bill affair. Some of them are alleged to be desirous of hushing up the matter, but their fellow-members insist that something must be done to clear the reputation of the House. It is impossible to tell how much truth there may be in these rumours. Presumably they are not altogether made out of whole cloth, but we suspect that they are greatly exaggerated.

The Cotton-spinning Companies of the Kwansei region are to hold a meeting on the

Digitized by Google Original from CORNELL UNIVERSITY

17th instant for the purpose of discussing a resolution which is expected to pass without dissent. It is to the effect that night work be abandoned from May 1st, or that some other method be adopted for reducing the present output by fifty per cent. The proposed penalty for violations of this agreement is expulsion from the cotton-spinning union, and consequent exclusion from participation in the beneficial rates of freight granted by the Nippon Yusen Kaisha.

Recently, when the Pest threatened to become formidable, supplies of serum were procured from Saigon through the intervention of the French Legation in Tokyo, and owing to the great helpfulness shown by the Yersin institute and the French Minister no inconvenience was experienced. But it is naturally felt that Japan should be self-supplying in such a matter. Dr. Kitasato has accordingly made the necessary arrangements, and we read in the columns of a Tokyo contemporary that he is in a position now to furnish considerable quantities of the anti-toxin, should occasion arise for its use.

It is stated by the *Mainichi Shimbun* that another complication has occurred with reference to schemes for the reclamation of the fore-shore at Otaru. The Tanko Railway company, the people of Otaru, the Okura firm and another applicant are in the field, and if our contemporary may be believed, there is a seamy side to the competition. Perhaps so, but we can not forget that the *Mainichi Shimbun* is in an exceedingly pessimistic mood at present, and that if its representations of the state of affairs in Japan were literally accepted, a very ill-omened picture would result.

Choshi, the place where the Tone-gawa pours its waters into Yedo Bay, is one of the most dangerous spots on the coast of Japan. A great volume of water and detritus is hurled sea-ward by the big river, and at certain state of the tide and wind shipping catastrophes are frequent, for it need scarcely be said that a vast number of junks enter the Tone continually. The Maritime Life-saving Society of Japan (*Dai-Nippon Suinan Kiusei-kai*) has a station there, and we read in the *Asahi* that very successful experiments have recently been made with a gun, invented in America, for throwing a line to vessels in distress. At a range of from 300 to 400 yards great accuracy can be obtained.

Mr. Kondo Rempei, President of the Nippon Yusen Kaisha, is to start for America on the 17th instant. His prime purpose is to attend the conference of trans-Pacific steam-ship companies and connecting railway corporations which meets in San Francisco in April. He will thence proceed to Chicago, Washington, New York, and other important cities in the United States; afterwards to Canada, and finally to Europe, where England, France, Germany, Austria, Belgium, Holland and Italy will be visited. Mr. Kondo will be accompanied by Messrs. Kawada and Masaki of the Head Office, and by Mr. Mihara, the Company's Hongkong Agent.

The postage stamps issued in commemoration of the Imperial Wedding are to have, it is said, a border in the form of a scroll composed of the Imperial chrysanthemum badge and the badge of the House of Kujo. The central device will be a stand on which are piled a number of *mochi* cakes—one for each year of the Imperial bridegroom's age—and two pairs of chopsticks, one pair made of silver and one of wood. There will also be a willow-wood writing box. An expert in ethnology explains that during the first three days after the wedding the Imperial couple will use these chopsticks to eat, or make pretence of eating, the *mochi*, after which the remainder will be buried in a suitable place, duly purified. The stand on which the *mochi* cakes are piled is shaped like a crane, and the material is silver.

It appears that the revenue derived from the customs last fiscal year did not fall far short of the Finance Minister's estimate. The returns for Hakodate, Niigata and some minor ports are not yet available for the month of March, but the figures for all the other places show that 15,478,423 *yen* was collected, being only 632,898 *yen* below the estimate. At one time there was talk of the collection's failing to come within millions of the amount shown in the Budget, and the actual result is therefore considered very satisfactory, especially as the import duties on some articles used for manufacture were abolished by the action of the Diet, and a further reduction of revenue was caused by importations during the preceding year in anticipation of the new Tariff.

It is stated that the Japanese Admiralty has decided to abandon the project of constructing a torpedo-depot ship. Such a vessel figured in the original *post-bellum* programme, but doubts have now arisen as to her utility in comparison with six torpedo-catchers which can be procured for the same outlay—between four and five million *yen*. All orders under the *post-bellum* scheme, with the exception of this depot ship, have now been placed, the construction of the two third-class cruisers which remained on the list having been lately intrusted to the Yokosuka and Kure dockyards. It is stated that the Admiralty experts regard the torpedo-destroyer with great favour, and believe that its extended use in naval operations is one of the features of the future.

The citizens of Tokyo do not show as much inclination to avail themselves of the new water-works as was anticipated. According to the estimates of the Municipality, fully 80,000 houses out of the 294,436 forming the city, were expected to apply to have the water laid on, but the number of applicants up to the present has been only 19,418, and the financial prospects of the undertaking are correspondingly gloomy. It is scarcely to be expected that the average citizen will incur a heavy expense to have the new supply brought into his house and will pledge himself also to make regular monthly payments so long as the old pipes continue to keep his wells full. The Municipality must make up its mind resolutely to do away with the old *suido* altogether, and thus compel the use of the new. It is a matter that closely concerns the health of the city.

There is an interesting note in the *Chuo Shimbun* about the cost of building materials in Tokyo. We are told that prices of material and labour have increased enormously, but the figures given by our contemporary do not seem to bear out that assertion. It says, for example, that two-storeyed Japanese buildings now cost 74 or 75 *yen* per *tsubo*, and that buildings in foreign style cost 100 *yen*. Such prices would not be reckoned very high, we imagine. The *Chuo* adds, however, that the population of the capital is increasing in a much larger ratio than the means of accommodation, and that habitable buildings in convenient quarters command extraordinary prices. There are, in fact, six buyers for four sellers. It is obvious that the best way to ease the pressure is to construct street railways. As soon as electric lines give free access to the suburbs, large additions will be made to the habitable area of the city.

The directors of the Osaka Shosen Kaisha have decided to raise a loan of four million *yen* on debentures. The loan will be issued in two installments commencing from July next, and the foreign market is to be approached as well as the domestic. For home purposes the 100 *yen* debenture will be offered at 98 and will bear interest at the rate of 9 per cent. For foreign purposes the minimum selling price will be 95 and the interest 7. Ten years is to be the period of redemption, and we read in Tokyo journals that the 100 *yen* debenture is to be regarded as a £10 security. But we do not undertake to say what that means. A hundred *yen* is not the equivalent of £10: it is appreciably more than £10. After the experience that Mr. Morse has had with the Kobe Municipality, the foreign public will be exceedingly chary of placing credence in sterling figures printed on the back of Japanese securities.

An animated dispute is said to be going on among the adherents of the Shingon Sect. The sect has no less than ten *honzan*, or principal temples, including such celebrated places as Koya-san, Gokuku-ji and Ninna-ji. Their divided jurisdiction having long been a source of friction, an agreement was made at the commencement of the *Meiji* era that the chief prelate should be furnished by each of the *honzan* in turn, and that his term of office should be three years. The arrangement does not seem to have worked well, as is easily conceivable, and the representatives of the main temples now desire to change it in the sense of completely separating the *honzan* and letting each work independently. But the branch temples (*matsu-ji*) object to such a change, and a warm discussion is said to be going on. Japanese Buddhism does not appear to be in a very satisfactory condition, if we may judge from the frequent troubles that have taken place during recent years.

YOKOHAMA LITERARY SOCIETY.

An interesting programme was as usual arranged for the fortnightly meeting of the Yokohama Literary Society, held in the Van Schaick Hall last evening, and there was a fair attendance. The paper was by Mr. M. Sachs, being devoted to a critical review of the life and works of Hans Christian Andersen, probably the best known of Danish poets and authors, whose "Fairy Tales," translated into many languages, have afforded unparalleled delight to thousands of juveniles as well as to children of riper years. Mr. Sachs gave a sketch of Andersen's character and works. Strange to say, the author who wrote so sympathetically for the young and loved them so well did not like children near him, aud moreover died a bachelor, never personally knowing the delights (and troubles) of matrimnoy and paternity. The reader quoted several passages from Andersen's works exemplifying the style and characteristics of the author. The paper was received with applause. The second half of the programme was as follows:—

Vocal Solo ..... "Autumn Song" ..... Grieg.
Mr. HANSEN.
Violin Solo..... (*a*) "Abendlied" ..... Schumann.
(*b*) "Minuetto" (1702) ... Veracini.
Miss ANDREWS.
Song ..... "Dichterliebe" ..... Schumann.
Mr. HANSEN.

Sir Claude Macdonald has assured the Hongkong General Chamber of Commerce that "no change of tariff is at all likely to take place without previous consulation with the parties most interested, more especially the Chambers of Commerce of Hongkong and Shanghai."

Digitized by Google Original from CORNELL UNIVERSITY

THE COMMEMORATION MUSEUM.

IT appears that the Household Department refused, in the first instance, to approve the scheme suggested by the Tokyo Municipality for erecting a fine-arts museum to commemorate the wedding of the PRINCE IMPERIAL, the ground of refusal being that although it was proposed to erect a museum, no funds for furnishing or maintaing it were in sight. The Municipality thereupon declared its willingness to be responsible for the furnishing and the maintenance as well as the construction, and on that condition the Household Department gave its consent. The Municipality seems to think that the sum of five hundred thousand *yen* will suffice for all purposes, and as several promises of twenty thousand or thirty thousand *yen* have been already received, it is calculated that no difficulty will be experienced in raising fully six hundred thousand. It is not very satisfactory to learn these general estimates only. One would like to know how they are arrived at. There can not, we presume, be any intention of spending less than two hundred and fifty thousand *yen* on the building and its surroundings. A smaller outlay would produce an edifice quite unworthy of the purpose. Indeed, we are disposed to think that three hundred and fifty thousand would be nearer the mark, for it is obvious that the building must be of a solid and comparatively fire-proof nature. Suppose that we put it at three hundred thousand *yen*, and suppose, further, that six hundred thousand are raised. Then there will remain three hundred thousand for furnishing and maintenance. The costs of maintenance will be very considerable. There must be a principal curator and several assistants, and there must be ample arrangements for warming the building so as to prevent destruction by damp. However economical the management may be, we cannot estimate these various outlays at less than seven hundred dollars a month. Then there are insurance and repairs, at least three hundred a month, so that we arrive at a thousand a month for maintenance. In other words, a capital fund of two hundred thousand yen must be invested at 5 per cent. for maintenance alone. There remains, therefore, a hundred thousand *yen* for furnishing the museum. That is quite inadequate. In view of the prices that have to be paid now-a-days for art objects of merit, we should say that three or four times a hundred thousand *yen* would be insufficient to furnish a museum worthy to be called in any sense municipal, to say nothing of national or imperial. Of course, there would be no insuperable difficulty in getting together a pretty collection at an expense of a hundred thousand *yen*, but it would be merely such as a private gentleman might possess, and would, indeed, be far inferior to many private collections in France, the United States and England. The Municipality of Tokyo surely can not propose to form a collection of that nature and call it by some name commemorative of such events as the marriage of the Prince Imperial and the capital's offering to His Imperial Highness on that great occasion. Perhaps the idea is to fill the museum with specimens of modern art; specimens representing the *Meiji* era. That would be a reasonable idea, and every one acquainted with the subject knows that very beautiful objects of modern art workmanship are to be obtained—objects in many cases far superior to anything produced in former days. But every one acquainted with the subject knows also that a hundred thousand *yen* would not begin to suffice for such a purpose, that is to say, if specimens really representative of the finest workmanship are to be obtained. From all that has been said and written, however, we imagine that the idea is to bring together a collection of pre-*Meiji* examples. If that be so, the money will prove still less adequate, and the result will be that after furnishing a few cases, the committee will find their bank account exhausted and the museum virtually empty. Besides, the question is not of one solitary effort. There must be a sum of money available year by year for the purchase of any specially fine objects that come into the market. We presume that the idea is to work on intelligent lines. In other words, the projectors do not think of merely throwing together a number of pretty things haphazard, without any regard to their character as representing the historical and local developments of Japanese Art. There must be some serious plan underlying the programme, and if there is, then two things have to be contemplated; first, the assembling of a sufficient number of specimens to furnish the museum at least sufficiently to make it presentable; and secondly, the gradual acquisition of specimens which shall fill up the gaps inevitably left at first. It is very likely that the Committee of the Municipality have taken these things into full consideration, and that we may be simply "preaching a sermon to Shakka." But we can not conceive how the thing is to be done with the sum named, and therefore we venture to set down the thoughts that occur to us.

We learn from the *Hochi Shimbun* that the Fine Arts Museum, which is to be built in commemoration of the Prince Imperial's wedding, will probably have for architect Mr. KITAYAMA, who is connected with the Building Bureau of the Imperial Household. His plan contemplates a building of granite, having an area of 400 *tsubo* (⅓ of an acre) and costing 1,500 *yen* per *tsubo*, or six hundred thousand *yen* in all. It will have a dome 50 feet high, strengthened, probably by an iron frame. That is a costly project. The building alone will absorb all the available funds. There appears to be a great deal of uncertainty about the choice of a site. Hibiya, Kasumigaseki and Ochanomizu are all spoken of, but Kasumigaseki is most in favour for the moment. If Hibiya be selected, the building will probably have to be one-storeyed, since good foundations are difficult to find in that district.

NOTES ON CURRENT EVENTS.

Viscount Hayashi and Viscount Kuroda have been appointed to fill the two vacancies in the Privy Council.

The loss of the *Nojiro Maru* at Nojiro-hama in Akita on the 10th instant is announced. One man was drowned. The ship carried a cargo of twenty thousand bags of herrings.

Mr. D. F. Robertson, an English resident of Nagasaki, is said to have been naturalised and registered as a Japanese subject. He was formerly in the employ of the Engine and Iron Works.

The *Official Gazette* announces the establishment of a Japanese Consulate at Masampho. Hitherto there has been only a branch consulate at that place, under the jurisdiction of the Fusan Consulate, but Masampho now becomes independent.

A part of the work upon which Marquis Ito is engaged is said to have been completed, namely, the section relating to the marriage affairs of the Imperial Court and the Princes of the Blood. It appears to be a tolerably voluminous body of regulations, but the contents have not been made public.

The Government, it is said, contemplates spending a sum of 400,000 *yen* yearly on jail buildings, namely, 300,000 *yen* for new structures and 100,000 *yen* for repairs. Six new structures will be shortly commenced, the sum devoted annually to each of them being 50,000 *yen*, and the period for completing them, 10 years, the total cost of each being thus 500,000 *yen*.

A treaty of commerce and amity has been signed by representatives of Japan and the Congo Free State, and has received the approval of the Privy Council of the Empire. The exchange of ratifications is therefore expected to take place shortly. We observe that the treaty has an exceptional title, a "declaration of amity."

The next meeting of the International Postal Union is to take place at Berne on the 20th of July. In the regular routine Rome would be the place of assembly, but as this year is the 25th since the organization of the Union, a special ceremony is to be held at Berne. Messrs. Matsunaga and Hakatani are to be the Japanese delegates.

We stated in a recent issue that a railway bureau is to be organized in Korea and that Mr. Omiwa Chobei will be the first "Superintendent." It appears that the reason for organizing such an office is the extreme difficulty of transacting railway business under existing circumstances, when every question has to be submitted to, and decided by, the whole Cabinet in full conclave.

The *Fuso*, after having undergone extensive repairs in the sequel of her accident last summer, has now made her official trial. She attained a speed of 12 knots with ordinary draught, against 10.06 knots, which was her figure before the accident. She is therefore a better ship than she used to be. Her armament is now being shipped.

Mr. Hoshi Toru's abandonment, or postponement, of his projected trip to China, has set the tongues of the gossips wagging. They interpret this change of plan as an indication of some important political event—a rupture between the Liberals and the Cabinet or a change of Ministry. But the *Jimmin*, which may be trusted in this matter to know what it is talking about, denies

Digitized by Google Original from CORNELL UNIVERSITY

that the event has any political significance whatever, and refers it simply to Mr. Hoshi's desire to take part in the ceremonies connected with the Prince Imperial's Wedding, and to assist in carrying out the Municipality's plans for the erection of a commemoration Museum of Arts.

The Nagoya Court of Appeal has delivered judgment in the case of assault and battery connected with the Sumida river fête in the summer of 1898. Mr. Kansai has been sentenced to 7 days' detention, and Kondo to 15 days' major imprisonment. Thus all the appeals have not resulted in any change of the original verdict. Court after Court has recorded its opinion that the English naval officers were in the right and the Japanese pleasure-seekers in the wrong.

Reports from the North show that the take of herrings continues to be quite exceptional. The fishers in the Matsumaye district expect to get forty thousand *koku* in all. In the Iwanai waters seven or eight thousand *koku* have already been taken, and from another district the return is twenty-five thousand *koku*. These herrings are used chiefly for fertilizing purposes. Upon the abundance or scarcity of the catch the prosperity of the agricultural classes during the year depends largely.

The Department of Agriculture and Commerce publishes the following figures, showing the total production of raw silk in Japan during the past decade :—

	Catties.
1890	843,272
1891	1,087,976
1892	1,096,088
1893	1,233,554
1894	1,296,783
1895	1,603,311
1896	1,442,721
1897	1,537,561
1898	1,479,747
1899	1,752,591

The *Hochi Shimbun* has discovered that the lady who nearly rode down an official of the Foreign Office was not the wife of a diplomatic personage, and that the imperilled official was not a translator but a translator's clerk. But these errors do not disconcert our contemporary in the slightest degree. It still appears to think that the prestige of the empire was impaired because the lady was not obliged to apologise on bended knee, and it now includes the *Japan Mail* in its circle of attack.

The Osaka Shosen Kaisha has decided, it is said, to issue its new loan of two million yen at 95, the rate of interest being 7 per cent. There appears to be some uncertainty as to the destination of the money. It was supposed to be intended for developing the Company's service to China, but we now observe a statement in a generally well-informed Tokyo paper that the Company destines a large part of the sum to pay off debts to the Yasuda Bank (900,000 *yen*) and to the Mitsu Bishi Bank (300,000 *yen*). There is also a rumour that negotiations are in progress to effect a loan of 4 million yen from a French bank.

The *Chuo Shimbun* states that legal proceedings have been instituted against Messrs. E. P. Mason and Company, of Yokohama, by Mr. Hayashi Akira, of Uyeno-hara in Yamanashi Prefecture. The story told by our contemporary is that Mr. Hayashi delivered a parcel of silk fabrics to the foreign firm, but that the latter demurred to the price. Mr. Hayashi accordingly sold the goods elsewhere, but when he sought to recover them from Messrs. Mason and Company, the latter declined to part with them pending the settlement of a debt said to be due by a Mr. Okabe, whose connection with the silk we fail to trace. During the discussion that ensued the market price of the article fell, so that a loss of some hundreds of *yen* was incurred, and for that loss the suit is instituted. This appears to be a very fragmentary tale.

The case of assault in connexion with the Ryogoku river festival has not yet been concluded. The incident occurred, if we remember aright, in 1898, but the defendants, Kasai and Kondo, have managed to postpone the execution of the sentence by appeal after appeal. The Nagoya Appeal Court having finally been ordered to re-try the case, it came up for hearing on the 7th instant, and judgment is to be delivered to-day (11th). It will be remembered that the victims of the assault were British naval officers, and that the sentences were 7 days detention for Kasai and 15 days' imprisonment for Kondo.

The year before last the import of sugar into Japan represented 28 million *yen*, or 43 million catties. Last year the figures were smaller—27 million catties and 17 million *yen*. But this year already shows an import of 7 million *yen* worth in 3 months. The Japanese are becoming great consumers of sugar. That fact is generally regarded as a proof of prosperity, but the indication is not altogether conclusive in Japan's case, inasmuch as the high tax on *sake* has led to the manufacture of a substitute by mixing sugar with alcohol. The *Kokumin Shimbun* thinks that something might be done to develop the sugar-producing capacities of the Riukiu Islands.

Rumour continues to busy itself with the affairs of the Ministry. One newspaper alleges that Marquis Yamagata has actually gone so far as to convey his desire to resign through Viscount Tanaka to Marquis Ito, and that Marquis Ito has signified his willingness to accept the responsibility under certain conditions. We attach no importance to the story, for it is obvious that if Marquis Yamagata desired to make any communication to Marquis Ito, he would make it direct, not through an intermediary. It is impossible to doubt, however, that something is on the *tapis*, or that meetings are taking place between leading members of the Liberal Party and Ministers of State.

At present a Japanese child is required to attend a primary school from the age of six. He spends 4 years there, and then passes, if he pleases, into a middle school, whence he can graduate after another period of 4 years, if he passes all his examinations. Thus, at the age of 14, he is supposed to have received an ordinary education. It is probable that this system will be changed in the sense of prolonging the primary-school course to 6 years, and shortening that of the middle school to 2 years. The contention is that the great majority of lads do not pass on to a middle school. Their education ends when they emerge from the primary school, and they are then quite unequipped for the ordinary duties of life. An additional 2 years in a primary school would materially raise the average educational standard.

In spite of the serious apprehension excited by the Instruction issued by the Minister of State for Education with regard to religious teaching or exercises in private schools holding officially recognised status, the method of enforcing the instruction has been so liberal and leinient that almost all uneasiness has been removed, and Christian efforts are being vigorously employed in the educational field. The *Nippon* enumerates five schools which have been recently established in Tokyo, virtually on a charity basis, for the tuition fees range from 10 *sen* to 25 *sen* per month, reaching 50 *sen* (optional) in one case only. All these schools have obtained official recognition. In other words, children attending them are considered to be discharging their educational duty as prescribed by law. The *Nippon* seems disposed to sneer at the Minister of Education's failure, but surely it would have been juster to give him credit for wise liberality.

If the companies forming the Cotton-spinners' Union decide to close their mills during a period of 10 days each month, the output will be reduced by 25,000 catties monthly, but if, as is more probable, they adopt the eight-days proposition, the reduction will not exceed 20,000 catties. They took advantage of Count Inouye's recent presence in Osaka to invite him to speak on the subject. He delivered an interesting address, but it did not include any definite opinion as to the necessity of reducing the output of the mills. Evidently the Count was inclined to think that a better remedy lay in the direction of seeking to stimulate the export trade. The gist of his address was the want of a spirit of combination among the Japanese. It was impossible, he insisted, to achieve commercial success in the present era without employing every resource of organization and combination.

The *Jiji Shimpo* has an article condemning the methods of the dog-slayers of Tokyo. These men are entitled to kill a dog if they see that it has no collar, and they obey the strict letter of the law, striking down animals without compunction, although they must be perfectly well aware that many of the dogs thus destroyed are pet animals against which the law is not directed. There have indeed been cases where dogs, whose owners and habitations were well known, nevertheless attracted attention on account of their beautiful skins, and were watched until a day came when they happened to be found without collars. Apart from these abuses, the *Jiji* justly condemns the practice of clubbing dogs to death in the public thoroughfares. It says that such procedure is not only horribly cruel, but also most demoralizing to the onlookers. We heartily endorse our contemporary's protests. The custom is quite barbarous. But the whole question of the treatment of animals — especially beasts of burden — in Japan invites the earnest attention of benevolent people. It is impossible to walk in the suburbs of Tokyo without seeing sights that should excite the profound pity and indignation of every educated man.

The *Yomiuri* complains of the inactivity of the Formosa Association. Among the enterprises that ought be be undertaken by the Association, our contemporary enumerates the following as of supreme importance :—(1) Detailed report on the actual condition of Formosa, and the despatch of officials on a tour of inspection. (2) Collection of Formosan productions as well as of merchandise suitable to the requirements of the islanders. (3) Affording all possible facilities for immigrants to, and tourists from, Formosa. (4) Investigation of practical enterprises undertaken in the island. (5) The promotion of facilities for the mastery of the language. (6) The establishment of a Formosa Hall. (7) Publication of a practical periodical report. (8) Organisation of meetings to deliberate upon Formosan topics. (9) Superin-

Digitized by Google Original from CORNELL UNIVERSITY

tendence and protection of Formosan students. (10) Collection of correspondence, newspapers and magazines, books and old annals connected with Formosa. All these things should be done by the Association, but with the exception of the publication of a monthly report and occasional lecture meetings nothing has yet been accomplished.

Professor Murakami, principal of the Middle School of the Higashi Hongwanji, has created a sensation by delivering a most outspoken lecture against the chief Vicar, Ishikawa Shuntai, and the agitation recently promoted by the latter against the Religions Bill. The occasion chosen by Mr. Murakami was the anniversary of Shakka's birthday, which was celebrated by the Young Men's Buddhist Associations of Japan on the 8th instant. Some 4,000 persons attended at the Kinki-kan in Tokyo to listen to speeches, so that the Professor had a good audience. He attacked the Ishikawa party vehemently. Mr. Atsumi, the former Vicar, had been ousted, he said, because of corrupt practices and spendthrift methods, but it was impossible to claim that any improvement had been effected by the substitution of Mr. Ishikawa. The speaker then assailed the methods employed to prevent the passage of the Religions Bill. He spoke as though there could be no manner of doubt that corruption and intimidation had been resorted to. There are rumours that this very plain-spoken Professor will be asked to send in his resignation, but it is alleged that if such a step be taken, the whole faculty of the School and also the students will follow him into retirement.

It appears that there has been some trouble between the German Representative and a military student. Stripped of embroidery the story reduces itself to this. Count von Leyden, Mr. and Mrs. Kirkwood, and another European lady, were seated in a first-class carriage of the Japan Railway Company at Oji station, when a number of Japanese passengers attempted to enter, although the carriage was already full. After three or four had entered, the Count closed the door, using for the purpose the crook of a stick carried by him. This act seem to have been resented by a military student who was among the would-be occupants of the carriage. He seized the stick, and attempted to wrest it violently from the Count, demanding at the same time who he was, whence he came, and by what right he essayed to close the door. The Count, of course, refrained from entering into any altercation. He complained at once to the station-master and satisfactory arrangements were made, though of what nature we have not heard. The Japanese are understood to deny that there was any attempt to take the stick from its owner, but of that, we presume, there can be no doubt. Probably the very natural use made of the stick for closing the door was misinterpreted, and perhaps *sake* had something to do with the trouble.

There is talk of reducing the telephone rates at night, when the wires are little engaged. Certainly such a step would be greatly appreciated. Our own experience goes to show that the men on duty at night are generally napping when one rings them up. At the best of times they can not compare with the female operators in point of smartness. Some of the latter have developed a power of rattling off names and numbers that is quite bewildering. One gets the impression of listening to a patter song. Besides, the women are far easier to understand, and they seldom perpetrate the unbusiness-like solecism of interrupting a man after he has been switched on, for the purpose of enquiring whether he is engaged in conversation. When a male operator is in charge, the people talking to each other are oppressed with a tormenting apprehension that their sentences may be at any moment thrown into hopeless confusion by sudden interpolations of *moshi moshi ohanashichiu desuka*, or *mada sumimasenka*. The male operator has also a terrible propensity to sever the connexion at the end of the conventional five minutes, without troubling himself to inquire whether the wires are still in use. Then, if he is an accomplished nuisance, he retorts upon his complaining clients that they themselves must have retired from their posts, inasmuch as the wires were never unswitched! Since every five minutes' use of the instrument for communications outside Tokyo, or Yokohama as the case may be, costs 25 *sen*—a heavy charge—, one would suppose that, in the interests of the Telephone Bureau, the operators ought to wish people to talk as long as possible, instead of adopting vexatious devices to cut them off.

As some of the second-rate Tokyo journals show a disposition to discuss in animated terms the recent incident on the Nippon Railway Company's line in which a Foreign Representative was concerned, the *Kokumin Shimbun* points out that the affair is not worth a paragraph, having been nothing more than an attempt on the part of some people to force themselves into a carriage already full, and a very natural attempt on the part of others to obtain even standing room in the carriage rather than be left behind on the platform. The Foreign Representative himself laughs at the affair as altogether trivial. To us (*Japan Mail*) the moral pointed by the story is an old one, namely, that the organization of railway traffic in Japan leaves a great deal to be desired. Railway companies appear to have a very immature conception of their duties to the public. They do not recognise that when a man buys a ticket he is entitled, not only to a place in a carriage, but also to a place where he shall be free to enjoy the amount of accommodation which constitutes a condition of legally regulated travel. A railway company has no right to pack a carriage with passengers over and above the proper limit, and passengers have an indisputable right to protest against being thus packed. But Japanese travellers are wonderfully long-suffering. We make these remarks, not because we attach any importance to the recent incident but merely because it furnishes an obvious occasion for calling attention to defects of railway management. Perhaps it may assist to correct an abuse which constitutes a distinct imposition on the travelling public.

THE KOBE WATER WORKS CASE.

It appears that the Kobe Municipal Authorities have decided, most unwisely we venture to think, that the law must be invoked in the case of the Loan Bonds purchased by Mr. J. R. Morse. We have therefore obtained from Mr. Morse the following statement of the facts, as the affair can not fail to prove of great interest:—

On the 7th of July, 1899, I was visited by the Mayor and several Members of the Municipal Council of Kobe, who came up here to negotiate the sale of the Kobe Water Works Bonds. The inducement held out to me for the purchase of these Bonds was the promise of large orders for materials to be used in the construction of the Water Works, and the more important statement made to me by the Mayor, that these bonds were not like the Tokyo City and Osaka Harbour Works Bonds, inasmuch as they would be redeemable in Sterling or at a fixed rate of exchange, and thus make them more attractive to purchasers abroad. We discussed the rate of exchange sometime before we could agree; the Mayor wishing to take the rate fixed by the Finance Department on the 1st of July, which was 2/11/16d. to the *yen*, but this I would not agree to, for I would be obliged to borrow money at 2/13/16d. to the *yen*. This latter rate was finally settled upon and I wrote the Mayor the following letter:—

In accordance with our understanding, I agree to take from you Kobe Municipal Bonds to the extent of 1,000,000 *yen* in the denomination of 1,000 each, with the endorsement of Sterling exchange on the back of each bond at the rate of £103/7/8½ for 1,000 *yen*, and at the rate of 92 per 100 *yen*. One-half the above amount, I will take and pay for on the 15th of this month, and one-half on or before the 15th December. . . . .

We entered into an agreement at once, and on the 15th of July I advanced the sum of 460,000 *yen* in exchange for the Mayor's receipt and agreement to deliver 500,000 in Bonds on the 15th of August. When the Bonds were brought to me, I merely examined the English translation and finding the Sterling rate exactly in accordance with our agreement, I took it for granted everything was all right.

On the 11th September I had occasion to examine these bonds with a friend of mine, Mr. H. W. Denison, when to my surprise, he discovered the rate of exchange was not mentioned in the Japanese Text of the Bond, and that the translation was incorrect. I immediately wrote the Mayor as follows:—

Yokohama, Sept. 11, '99.

HONORABLE NARUTAKI YOSHIYUKI.

Mayor of Kobe City, Kobe.

DEAR SIR:—When I entered into a contract with your good self on the 7th of July last, for the purchase of Kobe Municipal Bonds to the extent of 1,000,000 *yen*, my understanding of the matter was that when we fixed the rate of exchange at 2/1 1/4d. to the *yen*, or £103/7/8½ for each 1,000 Yen Bond (which rate was to be shown on the bonds), these Bonds would be redeemable at the same rate of exchange.

Upon examining these bonds a day or two since, I find the Sterling rate is not included in the Japanese text, and therefore the translation is incorrect. I write to ask, if in selling these bonds abroad, I am justified in stating that they will be redeemed at the rate given in the English text or translation, *i.e.*, £103/7/8½ for each 1,000 *yen*. My object in having the Sterling rate fixed, as you know, was to make the bonds more attractive to foreign investors, and certainly your Interpreter on that occasion informed me this was well understood by you, but in showing a sample bond to a prospective purchaser a day or two since, this question of redemption in Sterling came up, and it was then I discovered the rate was not mentioned in the Japanese text.

Please let me know at your earliest convenience if my understanding of the matter is correct, *i.e.*, that these bonds are redeemable in yen at face value, or the equivalent of £103/7/8½, as may be desired by the holder.

Hoping you are enjoying good health, and with best respects, I remain,

Yours faithfully,

JAMES R. MORSE.

To this letter I have never received a reply. Shortly after (Sept. 23rd) I left for China, and on my return, about the end of November, I called on the Mayor in Kobe, in company wth the Interpreter, Mr. Ishida, who acted for the Mayor when our original agreement was entered into. I asked the Mayor if he had considered my letter of the 11th September and what his intentions were regarding the redemption of the Bonds in Sterling. He replied that it *was* his original intention to have the rate of exchange fixed and to redeem the bonds in sterling, but after receipt of my letter of Sept. 11th, he applied to the Minister of Finance and learned that he could not make such a contract with me and therefore he could not change the Japanese text of the bond. On my arrival in Yokohama I wrote the Mayor as follows:—

Yokohama, Dec. 1, 1899.

HONORABLE NARUTAKI YOSHIYUKI,

Mayor of Kobe City, Kobe.

DEAR SIR,—As explained to you during my short visit in Kobe a few days since, the misunderstanding

Digitized by Google Original from CORNELL UNIVERSITY

between us regarding the redemption of the Kobe Water Works Bonds has made it impossible for me to sell these bonds abroad, and consequently I cannot take up the remaining 500,000 *yen* on the 15th inst. I enclose copy of a letter I wrote you on the 11th Sept. showing my understanding of our agreement. This letter I handed to Mr. Ishida to forward to you, but in case he failed to do so, I now send this copy so that you may know how surprised I was to learn the sterling rate was not included in the Japanese text.

In my letter to you of July 7th, I wrote as follows :—

> In accordance with our understanding, I agree to take from you Kobe Municipal Bonds to the extent of 1,000,000 *yen*, in the denomination of 1,000 each, with the endorsement of Sterling exchange on the back of each bond at the rate of £103/7/8½ for each 1,000 Japanese *yen*, and at the rate of 92 per 100 *yen*.

You will remember that we discussed the rate of exchange some time before you could agree to the rate I had to pay the bank for a loan of £40,000, *i.e.*, 21 1/16s. to the *yen*, or £103/7/8½ for each 1,000 *yen*. You wished to take the rate named by the Finance Department, which I believe was 2/1 1/16d. to the *yen*, but this I could not agree to, and then you consented to the higher rate. This seems to me conclusive evidence that your understanding of the matter at the time was the same as my own, *i.e.*, that the Bonds would be redeemed in sterling at the rate agreed upon between us. Mr. Ishida, the Interpreter, has stated to me on several occasions that this was clearly understood at the time contract was signed.

I don't know at present what action I will take in the matter to protect my interests, but as stated to you at our late meeting, I have a prospective buyer for the entire amount of 1,000,000 *yen*, *provided* interest will be paid in Shanghai through the Yokohama Specie Bank, and an extension of five months time be given for taking up the remaining 500,000 *yen*.

Please let me know at your earliest convenience if this extension will be granted, and very greatly oblige.

Yours faithfully, JAMES R. MORSE.

The day following dispatch of this letter, I received the following letter from the Mayor :—

Kobe, Dec. 1, 1899.

JAS. R. MORSE, Esq.,

DEAR SIR,—A proposition for paying with sterling for Water Works Bonds of this City, which was made byyou on our last meeting of 29th ult., has been introduced again to the City Council and the matter was very carefully discussed and consulted, but decision was given upon this entirely unsatisfactory to your desire, as replied previously. And another request of postponing payment of balance on bonds until May of 1900, which was agreed upon between you and the City Council, as to be paid upon or before 15th December this year, was also not accepted. Please be good yourself to understand the circumstances as above, and hoping the agreement will be carried out on or before the 15th December this year as agreed at first.

Faithfully yours,

Y. NARUTAKI, Mayor of Kobe.

On the 6th December I received the following letter from the Mayor :—

Kobe, Dec. 5, 1899.

JAMES R. MORSE, Esq.,

DEAR SIR,—Your esteemed letter of the 1st inst. duly to hand and contents has been noted.

You have stated circumstances so fully as it is your desire to postpone payment of the balance of assets on the bonds until May 1900 on account it becomes so hard to sell out the Bonds to abroad, caused by a misundersanding made upon between us in regard to refunding principal of the Water Works Bonds of this City, but from first time of making agreement with you, we the City Council always were negotiating with you by definite opinion, that is as our answer dated 15th September last (which letter I have never received) to your inquiry of the 11th same month, it was and is our principle that we do not refund in sterling in any case.

And again, you said that the fact of our consultation made with you on exchange rate at first, shows as if refund will be made in sterling, but it was simply done by this reason, if we made entry by exchange rate at time of agreement, or by office rate of the Department of Finance, and as it was our desire to make entry by official rate, so as it is, we venture to think it is apparent that this does not mean of making refund in sterling.

Although we think you are perhaps under some circumstances necessarily of making them money matters, but we also are under some circumstances which we cannot accord with your request.

The matter as above stated, we are under obligations to request you to pay balance on or before 15th inst., in accordance with agreement.

Yours faithfully,

Y. NARUTAKI, Mayor of Kobe.

On the 7th of December, I addressed the Mayor as follows :

Yokohama, Dec, 7, 1899.

HONORABLE NARUTAKI YOSHIYUKI,
Mayor of Kobe City, Kobe.

DEAR SIR,—I am in receipt of your favor of the 5th inst., and note with much regret the position you have taken regarding my contract with you for the Kobe Water Works Bonds. If as you say it was not your intention to redeem the bonds in sterling why was the sterling rate of exchange shown in the English text of the bonds, and why was it you first objected to the rate named by me and afterwards accepted it, *i.e.*, 2/1 1/16d. to the *yen*? Your Interpreter, Mr. Ishida, is a good English Scholar, and he cannot but testify that we *did* agree to the rate at which these bonds were to be redeemed, and when on the 15th day of August your Agent brought me the first instalment of 500,000 *yen* in bonds with the indorsement in sterling as agreed between us, I did not question the genuineness of the translation, but now that I know this endorsement in sterling means nothing, and that the bonds will only be redeemable in *yen*, I must take steps to protect my interests by placing the matter in the hands of my legal adviser.

I may also mention another inducement held out to me at the time of contracting for these bonds, *i.e.*, the placing of orders with my firm for several hundred thousand *yen* worth of Supplies on Commission terms of 5 per cent. Up to the present time no orders have been placed with us, and no assurance from you that business will be given us on the terms named. I must therefore conclude that you have no intention of carrying out your part of our agreement. Regretting the necessity of taking legal action in this matter, I remain,

Yours very truly, JAMES R. MORSE.

On the 12th of December I was waited upon by three or four representatives of the Mayor, who said they had been sent by the Mayor to inquire what my intentions were regarding the remaining bonds undelivered. I told them I had already notified the Mayor that I had placed the matter in the hands of my legal adviser, and that I would not take the bonds. During our conversation I asked them if it was not the original intention of the Mayor and Members of the Council to redeem these bonds at the rate of exchange fixed in our agreement, and they replied :—

Of course it was our original intention to redeem the bonds in sterling, but when the Mayor received your letter of Sept, 11th he had to reply it was never our intention to redeem the bonds in sterling, *because* the Finance Department would not consent to our proposal to do so.

Fortunately I had two witnesses present when the above statement was made, and they will testify to the correctness of it as given in this article.

I have no intention of commenting through the Press on this matter, but simply make this statement of facts for the benefit of the public and for my own protection in case of further misrepresentations through the Japanese Press.

JAMES R. MORSE.

Yokohama, April, 1900.

The case instituted by Mr. J. R. Morse in the Yokohama Chiho Saibansho, against the Mayor of Kobe for the cancellation of the contract concluded between the parties for the purchase of Kobe Water-works bonds, came on for hearing again on Thursday, before Judge Fujise and Assistant Judges Morii and Shimamura. Mr. Morse was represented by Mr. Suzuki; defendants by Messrs Kusaka, Sakurai, Otsuki and Oda, all of Kobe. After the contract had been produced, details of which were given in our columns the other day, the defendants' counsel applied for leave to institute a counterclaim. This was opposed by Mr. Suzuki, and evidence was next given by Mr. Yamamoto Shigezo, of the Kobe Municipal Council, who deposed to being present at a conference which Mr. Ishida and others had with Mr. Morse relative to the purchase of the bonds. Mr. Ishida, who acted as intrepreter between the parties, was also examined at considerable length, and gave a full account of the various interviews with Mr. Morse and the representatives of the Kobe Municipality with reference to the fixing of price and the rate of exchange, and of the interview in Kobe after Mr. Morse found that the bonds were not to be redeemed in sterling at the rate mentioned in the English translation on the back of the bond, the Mayor of Kobe at this meeting stating that the Treasury Department refused to grant permission for such a proceeding. The case was eventually adjourned.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the *Shakai Zasshi* appears a very long and thoughtful discourse by Dr. Motora on "Religion and Education," which was delivered in the form of a lecture to the Shakai-Gakkai some weeks ago. As Dr. Motora is a highly repected Christian scholar whose opinions represent those of a large class of Japanese Christian converts we give a somewhat full summary of his essay. After observing that the Department of Education has shown by its recent action that it does not realise the intimate connection that exists between religion and education, Dr. Motora goes on to say :—According to both Buddhists and Christians one of the chief objects of religion is to give comfort to man under the trials which he is called upon to bear. Buddhism holds that one of its principal functions is to give peace of mind to its converts and contends that according to their rank and knowledge men suffer from such varieties of anxiety that, in order to meet every conceivable case, the comfort to be administered has been arranged under 88,000 heads, much after the fashion of a dictionary of medical specifics. Though Christianity does not go into such minute particulars, the comfort that it affords has special reference to the mental condition and circumstances of ordinary men and women. Both religions teach that man will eventually get rid of suffering altogether; and here is where superstition comes in. Buddhism has its Emma and its red and blue devil, Christianity has its future punishment and its future rewards—devices for getting rid of suffering. It would seem, if we are to judge from the past, as though religion and superstition were inseparable. In both Christianity and Buddhism there is a good deal that is noble and good mixed with what must be pronounced childish. . . What it is important to bear in mind is that religions rests on a special kind of faith and that this faith is quite separable from intellectual knowledge.

Coming to education—we are using the term in a broad sense to include all the training that a subject of the empire ever needs,—to say that it must be national implies that it cannot be mixed up with any special form of faith. To adopt one form would be to declare against other forms, which, whilst opinions differ as they do now, would be unjust. . . . Men's minds are more made up as to religion than they are as to education. On the latter the greatest variety of opinion is held. But taking education in the sense of the training of loyal subjects of the empire, it seems to me that there are two ways in which education and religion must come into conflict. (1) The province covered by each is different. Religion is extensive and all-embracing, education is limited and confined to one special object. To take an illustration, a member of the Congregational Church has joined a body where there is no distinction of country, where all believers are on an equality, where religion is supreme and all else of subordinate importance. Now a person who is undergoing education with the object of serving a particular state must regard the state as before all things. In the case of religion certain doctrines are pre-eminent, in the case of education the state is pre-eminent. Now it is quite plain that the two distinct sources of authority must conflict with each other under certain circumstances. When occasions arise in which a choice has to be made between following religion or being loyal to the state, one or the other has to give way. If religion gives way, then faith is weak. If the state is compromised, then the sense of loyalty is poorly developed. (2) Another particular in which religion and education come into conflict consists of the nature of the teaching imparted by religious teachers on the one hand and schoolmasters on the other. The knowledge imparted by the latter is *objective* and scientific in character, such as is acknowledged by the nation to be thoroughly reliable. But the knowledge imparted by the religious teacher is *subjective*, founded on faith and appealing to faith. Should religion then be banished from the schools? Before adopting any such course we have to consider what religion has accomplished in the past. By its teaching that in the moral world there is a

Digitized by Google
Original from CORNELL UNIVERSITY

law of cause and effect which operates most regularly, it has proved to be an incentive to virtue and a preventive of vice in many cases. It is true that with the progress of science men have studied heredity and evolution so much that the consequences of action, both moral and physical, are plain to them. Hence it may be said that with the progress of general knowledge the sphere of religion has been considerably curtailed. In teaching, the positivism of science has taken the place that religion used to occupy, and as time goes on religion is being more and more compelled to act as a mere negative power. But it would not be true to say that science has occupied the province of religion to the extent of rendering it unnecessary. It is possible that in the distant future this may take place, but this is a mere speculation and does not concern the age in which we live. . . . . Still are there not provinces of the mind which religion affects that science leaves untouched? And for the formation of character, is not an appeal to the mystical side of man's nature often most beneficial? Is any system of psychology complete that does not treat of that love of the mystical* which forms a leading characteristic of so many minds? There are regions which neither science nor philosophy have reached. It is these worlds that the mind loves to explore and it finds religion ever ready to act as guideb. If y supplying to certain minds food for meditation, by ennobling their thoughts and furnishing them with high ideals; religion moulds character, does not this clear it of the charge of being merely a negative force? This character-forming work is surely positive in character.

. . . . As I said above, there are particulars in which religion and education come into conflict, but it should be our endeavour so to arrange matters that this conflict may be avoided. It being acknowledged that both education and religion are valuable and indispensable, each in its own sphere, it only needs a little common sense to render it impossible for them to come into conflict with each other. That they do occupy separate provinces should be recognised. It was, in my opinion, this consideration that led the Mombusho to forbid the holding of any religious ceremonies in schools. This was not declaring against religion in its own proper sphere, but it was simply asserting the principle that religion and education should be kept quite separate from each other. It has been said that the order might have been confined to State Schools, but it is difficult to see how the Mombusho could allow licensed private schools to mix religion with education just as they please. This would be sanctioning the teaching of sects whose tenets are distinctly immoral.* By insisting on the separation between religion and education the Department acted wisely. It will be seen then that while I favour the separation of religion and education, and while I admit that they may often conflict with each other, I am opposed to the banishment of religion altogether. As a factor in educating the mind it is highly important and without it the highest type of character cannot be produced.

* * *

"What is new Theology?" asks the *Seikyo Shimpo*. Two distinct classes of Christians exist everywhere, says this organ, namely those who appeal to authority and those who appeal to reason. To Japanese, who know as a rule very little about these things, the term "new" applied to anything is a recommendation. It sounds progressive. As a nation we have given up so many old things that to pronounce a system of theology to be out of date seems to us a very natural proceeding in this progressive age. But there is a great deal of misconception connected with this subject. The authority on which the orthodox party relies is that of the apostles of Christ, the original transmitters of His teaching. No modern Christian has any right to make a creed for himself. His duty is to accept what has been handed down to him without arguing about it. It is true that in explaining the teaching of Christ resort is frequently had to logic, but this is a very different thing to bringing Christian doctrines to the judgment-seat of reason and relying on the verdict of such a court. To reason about questions that have been settled by Christ is heresy, and since this is just what the authors of the "New Theology" do, they are to be denounced as heretics who have made a god of intellect. When once men are allowed to alter Christ's religion to suit their own fancies, there is no end to the vagaries in which they may indulge. The remodelling of the religion of Christ attempted by this school of thinkers is to be unequivocally denounced.

* * *

No. 158 of the *Bukkyo* contains a short history of Buddhist literature during the year 1899, from which we make the following extracts. What attracted most attention in Buddhist literary circles last year was the discussion carried on in the *Mujintusui*, the *Sho*, the *Toyotetsu-gaku* and other magazines on "Pure Altruism." The *Mujinto* has perhaps no equal among Buddhist publications in respect of high theoretical discussion. Dr. Murakami has been lecturing at the Tokyo Imperial University on Systematic Buddhism. Mr. Oda Tokumo has published a glossary of Buddhist terms found in Yamato-bun, or purely native literature. The Jodoshu has been earnestly discussing orthodoxy and heterodoxy. An historical work on the Buddhist Canon of some importance, entitled *Bukkyo Seiten Shiron*, was published by Mr. Anezaki some months ago. The new magazines that appeared during the year were the *Hokyo* (Treasure Mirror), the *Kyo-o* (教王), the *Seikyo Hyoron*, which was discontinued before the end of the year the *Muryo-ju* (Eternal Life), an organ of the Jodo Sect, the *Sangan* (三眼) and the *Shinsho Shimpo*. The *Hansei Zasshi* changed its name to the *Chuo Koron* during the year.

* * *

The *Tokyo Maishu Shimpo* contends that the history of the Christian Church in Japan during the past thirty years reveals an inherent weakness in the Japanese mind, which is lack of will-power. Dividing man's mind into its three constituent parts, the intellect, the emotions and the will, it will be seen, says the writer we are quoting, that with the Japanese the development of the former powers is out of all proportion to the development of the will. This accounts for the general fickleness of which so many Churches complain. The majority of Christians go to extremes, led by their intellects or their feelings. The excessive development of the intellect lands us in Unitarianism or rationalism. Undue development of the feelings ends in revivalism and other vagaries. Religion that is dependent on feeling can never be stable. It is one thing to-day and another thing to-morrow. . . . Japanese Christian education is very one-sided. Until this defect is remedied there can be no reliable progress in Christian propragandism.

No 862 of the same periodical has a thoughtful article entitled *Seisho no Seiji Shiso* (Biblical Political Ideas), of which the following is a brief summary. The teaching of the New Testament on politics is lacking in explicitness. Hence Christians form their own conclusions, resulting in extreme individualism and anti-nationalism. The teaching that before God all nations are alike and that Christ's religion to a certain extent abolishes race and national distinctions undoubtedly gives a handle to the opponents of Christianity. John Stuart Mill maintained that political ethics are not properly taught in the New Testament, and in this country Dr. Inoue Tetsujiro, in his pamphlet on the conflict of religion and education, lays special stress on the same point. It is a fact that the church has from time to time adopted Greek and Roman politico-ethical theories to fill up the gaps left by the New Testament teaching. Now the reason of the deficiency complained of is not far to seek. When Christ preached in Judæa the Jews were subject to a foreign yoke and there were no burning political questions filling the minds of Christ's audiences. Even had there been such questions, to have discussed them would have led to interference on the part of the authorities and to the interruption of Christ's work as a preacher of salvation. But it is not true to say that no system of politics is taught in the Bible, for what is not found in the New Testament is supplied by the Old. If the object of the teaching of Christ was the benefit of men as individuals, the aim of the Old Testament prophets was the raising of a nation to a high level of attainment. This is very clearly shown by the writings of the late Professor Robertson Smith, for some time editor of the "Encylopædia Britannica," who says explicitly:—"The object of prophetic teaching was not the salvation of individuals, but the persuasion of a people to walk uprightly and to allow themselves to be guided by God's wisdom"* Those Christian sects which from time to time have figured as political reformers have taken their ideas from the Old Testament. Cromwell imagined himself to be another Moses sent to deliver God's people from the tyranny of the English Pharaoh, Charles I. The Pilgrim Fathers when they turned their backs on England imagined that they were leaving the flesh-pots of Egypt for an American land of Canaan flowing with milk and honey. The religion of the South African Boers is distinctly Old Testament in type. But the Puritans and the Boers alike make Moses rather than the later prophets their model. Hence their standard is by no means the highest Bible Standard. That is to be found in the teaching of those books of the old Testament that were composed during the later stages of Hebrew history. The political ideals presented by the prophets are as lofty as any the world has ever conceived of, and it is highly important that in this political age we, as a nation, should recognise this fact.

Mr. Hachihama Tokuro writes in the *Tokyo Maishu Shimpo* on "Religion and Suicide." He begins by observing that all religions are opposed to suicide, and in as far as they are followed tend to lessen the number of cases of self-destruction. But statistics go to show that some forms of religion are more powerful as a preventive than others. With the Christian religion Protestantism is more conducive to suicide than Roman Catholicism. The latter holds out various hopes of forgiveness and provides remedies for crimes that tend to relieve the anguish of mind that is apt to culminate in suicide. Protestantism is more severe and does little to prevent a man from lapsing into despair. Mr. Hachihama quotes statistics to show that in Roman Catholic countries like Spain, Portugal. and Italy, suicide is much less common than in Protestant countries like Germany, Norway, Sweden, Switzerland and Scotland. Doubtless the frequency or rareness of the practice is to be traced to other causes, such as general character, custom, and a variety of special circumstances, but the absence or presence of religious faith is an important factor in all cases. The following generalisations seem to be founded on facts, says Mr. Hachihama:—There are more suicides among atheists and sceptics than among religious people. There are more suicides among Protestants than among Roman Catholics. There are more suicides among rationalistic Protestants than among the unquestioning orthodox sects. There are cases where suicide may be said to be indirectly caused by religion. Such are those instances where in obedience to some religious ideal men try to suppress natural desires to such an extent as to render life unbearable and to make even self-destruction a welcome method of putting an end to the torment caused by conflicting emotions.

* * *

Mr. Abe Isoo in the periodical from which we have just quoted defines very clearly the position occupied by Japanese Unitarians. We are not strictly a church, says Mr. Abe, but an Association, resembling the Young Men's Christian Association, or the Evangelical Alliance (Fukuin-domeikai). It would be possible for us to form ourselves into a church if it were considered de-

* It is not quite clear in what sense Dr. Motora uses this word. As a recent writer in the *Saturday Review* remarks, "No word is more ambiguous, more variously applied than mysticism. One writer calls it 'the life-blood of religion.' It is merely 'the romance of religion' to another."—(WRITER OF SUMMARY.)

* We have translated the quotation from the *Tokyo Maishu Shimpo*, the original not in being our possession.—(WRITER OF THE SUMMARY.)

Digitized by Google Original from CORNELL UNIVERSITY

sirable, and I for one should have no objection to such a course being followed. But as we have notified the authorities, at present we are not a church or a separate sect. The difference between our body and the two Associations mentioned above is that, while they aim at uniting Christians of various denominations, we aim at uniting Christians with all who have religious convictions of any kind, be they Buddhists, Shintoists, Confucianists, or what not. What we strongly object to is our being represented as an anti-religious body, as merely the advocates of a certain system of morals. We have never joined forces with persons who are opposed to all forms of religion. We unite ourselves with those who believe in some kind of religion, but we go no further. In order to be a Unitarian it is not necessary that a man should give up the tenets of his own sect. There are many Congregationalists in our ranks, who still remain members of their own churches. We are ready to work with any sect that may wish to have our aid. We have no objection to occupying orthodox pulpits or to having orthodox preachers occuping ours. Though there are Unitarians in America who still retain all the characteristics of a sect, we have no connection with them and are in no sense their followers. Though not a sect ourselves, we are the friends of all religious sects.

* * *

The following statement appeared in the *Jiji Shimpo* a few weeks ago:—According to investigations made at the beginning of March, the total number of Christian Churches (buildings) is 582, of preaching stations 389, and of ordained preachers 1,243 (288 of these are Roman Catholic.

* * *

Under the title of "Religious Ideas in the Twentieth Century," Professor Murakami, of the Imperial University, one of the highest authorities on Japanese Buddhism, states his views at considerable length in the *Tetsugaku Zasshi*. We give in a brief form the conclusions which this learned Theologian has reached.

(1) *The amount of interest taken in religion in Japan at the present time is abnormal.* The question which it is important to consider is, will it last? All forecasts of the future are apt to be erroneous, but nevertheless a review of the tendency of thought is never without interest to serious minds.

(2) *Is science likely to supersede religion?* Science is active and religion is for the most part passive, and as a rule the passive gives place to the active. The reign of science during the past few decades has rendered mankind intensely practical and utilitarian, and hence it happens that even with religions the question is perpetually asked, what do they effect? What place do they fill in the scheme of things that cannot be filled by anything else so well? There is no difficulty in showing that the higher forms of religion do satisfy wants of human nature that fail to find the same kind of satisfaction elsewhere. Science will no doubt continue to expose and to make war against all untrue elements of religion, but to all that is really valuable as a factor in human progress in any creed it will prove a friend rather than an enemy.

(3) *Will existing religions amalgamate and form a new creed?* It seems to me probable that sooner or later a new form of religion will make its appearance in our midst, but I entirely disagree with Dr. Inoue Tetsujiro in thinking that there will be any amalgamation of existing faiths. Religion is very much a matter of feeling and is largely dependent on tradition and history. To imagine that the allegiance which has been given to Christ can be transferred to Shaka, or vice-versa, shows ignorance of religious human nature. Then, too, the very genius of existing creeds differs so much that amalgamation without loss to either would be impossible. Take Buddhism and Christianity. The former is a religion of ideas, on certain thoughts or conceptions the whole system is founded. The basis of Christianity is personality. It deals especially with man's personality in the Universe and preaches a personal God. The two religions are plainly incompatible with each other.

(4) *Which of the two great religions* (Buddhism and Christianity) *is likely to come off victorious in Japan?* Christians allege that Buddhism in Japan will henceforth occupy the position of the Greek philosophy in Europe and that her temples will only be preserved as specimens of ancient art. Buddhists, on the other hand, say that Christianity is irrational and that its teaching is subversive of state interests. Both of these opinions are exaggerations. In trying to predict which religion is likely to find favour in Japan in the 20th century three things have to be considered. (*a*) The past history of the state. (*b*) The general sympathy of the people. (*c*) The nature of the two religions. In all these particulars there is little doubt, I imagine, that Buddhism has a brighter future than Christianity can possibly enjoy in this country.

(5) *But what kind of Buddhism will take precedence of Christianity?* Certainly not traditional Buddhism as it is preached throughout the country to-day. There is nothing in the empty forms observed by uneducated priests to serve as a substitute for Christianity. A new form of our faith must be relied on for meeting the exigencies of the time in which our lot is cast. Both Christ and Shaka were begotten of the ages in which they lived. Is it too much to expect that amid the darkness of the present time a great light in the form of a religious reformer may appear? Buddhism must be transformed in order to harmonise with the spirit of the 20th century. It must get rid of its asceticism, its pessimism, its separation from the world, its excessive reliance on eschatology. It must mix with the busy world, enter into its affairs and leaven everyday life with its spirit.

(6) *Is it desirable to unite all existing Buddhist sects.* In my opinion they might with profit unite in the matter of doctrine, but I see no reason for enforcing uniformity as regards ceremony. While their differences are superficial, their agreement is real. I should like this fact made more patent to the world.

(7) *In the transformed Buddhism that is to take the place of the old creed what shall be chosen as a basis, the ideal or the personal?* This is undoubtedly the most difficult point connected with the construction of our new creed. It is contended that the success of Christianity in reforming men's lives is owing to its intensely personal character, and it would seem as though traditional Buddhism had been forced to try and make up for its want of real personal objects of worship by setting up imaginary ones, such as the Mida of the Western paradise. The invention of personal objects of worship may be said to be a device employed by certain Buddhists for influencing the minds of men. I have no doubt whatever that the original creed was purely ideal, and that its founder never intended it to be otherwise. But idea after idea has undergone the process of personification in the course of history. The imputation of personal attributes to conceptions has all been done with a view of making them more intelligible and of satisfying the human craving for personal objects of worship. Almost all the original conceptions of the Buddhist creed have been represented in symbols so much that to most minds the symbols stand for the original conceptions. Dr. Murakami quotes numerous instances of this and concludes his remarks on personality in the following manner. If all attempts at dispensing with the personal element in religion have signally failed in the past, there is no hope of their succeeding in the future. Hence we must see to it that our new Buddhism is no purely ideal system. The necessity of adapting the creed to the requirements of mankind renders personification imperative.

(8) *Why is it essential that the new Buddhism of the future should assume the character of a system of practical ethics?* Dr. Motora observed not long ago that religion is specially designed for individuals and morality for society generally. This is not a correct estimate of the function of the two reforming agencies; for surely religion is greatly concerned with mankind as a whole, and one of its chief functions is to show pity to the distressed and the needy and to benefit people everywhere. It is a fact that the Buddhists of the past have separated themselves from the world to too great an extent. The Buddhist view of the world has been essentially pessimistic and men have deemed it best to turn their backs on a world they have no hope of saving. But this has not been the practice nor the teaching of a large number of Buddhists. The object of Buddhism as originally conceived was the salvation of the world by active participation in its affairs. If there have been many pessimists in Buddhist ranks there has also been a little band of optimists who have in hopeful tones proclaimed to the masses enlightening truths. That original Buddhism teaches asceticism and retirement from the world I don't believe. The fleeing from evil instead of battling with it became fashionable in the middle ages, but it was not the plan adopted by the early propagators of the faith.

The ideas propounded above savour of speculation, concludes Professor Murakami, but they are founded on what has actually taken place in other countries where the circumstances have resembled those in which we find ourselves. If we have transformed our political institutions in a most radical manner, there is no reason why we should not be equal to the task of effecting a fundamental religious reform, and I am one of those who believe that sooner or later it will come.

THE DELAGOA BAY DECISION.

We have been asked by correspondents to publish a statement of the Delagoa Bay case in which, as reported by telegram, a verdict adverse to Portugal was recently rendered. The facts are these—we take them from a home journal:—

The Portuguese claimed the bay by virtue of its discovery by Vasco da Gama more than three hundred years ago, although they did not establish a colony. On the passing of the Dutch possessions in South Africa into the hands of Great Britain in the eighteenth century, the English sent an expedition along the coast, and concluded treaties with the native chiefs which secured the southern part of this bay to Great Britain. Soon after the Portuguese authorities took possession of the northern part, and made some claims to the southern part, which however, remained in the hands of the British until 1871, when the Portuguese seized a British ship. Mr. Gladstone submitted the case to arbitration without appeal, and Marshal MacMahon, President of the French Republic, decided in favour of Portugal. In this Great Britain acquiesced. In 1875 the Transvaal entered into an agreement with Portugal for the construction of a railroad from the bay to the heart of its territory. Portugal was to build it to the frontier and the Transvaal from the frontier to Pretoria. An American citizen, Colonel McMurdo, was awarded a charter for the road to the Transvaal border, and given a concession for ninety-nine years, involving the refusal of permission for another road for a distance of seventy miles on each side of his line, which gave him a practical monopoly of the inland trade. In 1887 the road was completed to the Transvaal frontier, and then the Portuguese Government insisted upon its being continued for a considerable distance, and completed within eight months. This was absolutely impossible, and the expiration of the term found the supplementary portion not quite finished. Thereupon the Portuguese Government recovered the concession and confiscated the entire railroad property. On the death of Colonel McMurdo his rights were taken up by both the British and American governments and Portugal was warned that she would be held responsible for injury or loss to British subjects, while the United States Government supported the claims of Colonel McMurdo's heirs and other investors. At last the whole matter was submitted to arbitration, and in 1890 the Swiss Government appointed three of its most eminent jurists to constitute the tribunal. In the following summer representatives of Great Britain, the United States and Portugal formally signed the writ of submission, but the court was not organized till February, 1892. The claim included one of $7,250,000 for the Delagoa Bay Company and $1,500,000 for Mrs. McMurdo. Competent engineers, it is stated, estimate the concession to be worth at present more than $30,000,000. The whole matter has hung fire for a long time, and as generally understood, for political reasons.

At a meeting of the committee of the Yokohama Foreign Chamber of Commerce on Tuesday afternoon, Mr. E. Flint Kilby was unanimously elected Chairman and Mr. John Lindsley vice-chairman for the ensuing year.

THE TEA PROBLEM.

The most important points involved in this problem are considered by the *Keizai Zasshi* to be as follows.—(1) Exemption from taxation of Japanese tea exported to America; (2) Establishment of offices for the inspection of the leaf in the ports of export; (3) Extension of markets for the leaf. In the custom houses in America certain samples are provided according to which all imported teas are to be graded, so that any found inferior are rejected. Mr. Otani Kahei, who recently returned from America, is said to have remarked as a result of his close inspection of the samples referred to, that they were apparently designed for securing leaf of fine shape and light colour, irrespective of fragrance and other essential qualities. Under this standard teas which are comparatively poor in shape and dark in colour are rejected. The leaf passed as satisfactory was found to be wanting entirely in fragrance, when steeped and mixed with milk or sugar. Mr. Otani therefore urged the necessity of abolishing the samples in America, and at the same time establishing Tea Inspection Offices in Japan, on condition that the leaf examined at these institutions should be accepted in America without reference to the samples provided. This proposal obtained unanimous approval at the central assembly of tea merchants recently held in Tokyo. As to the injustice of America's imposition of a tax upon Japanese tea, it is of course advisable that a protest should be made by way of protecting the native leaf against the competition with which it is threatened, but at the same time it must be perfectly well understood, asserts our contemporary, that the offices for the inspection of tea ought by no means to be established in ports of import, inasmuch as the operations of scrutiny, however rigorous or perfect they may be in Japan, can hardly save the leaf from the fate of rejection when improper methods of inspection are followed at its destination.

The programme recently submitted to the Central Assembly of the Tea Dealers Union with regard to the extension of markets is stated to be as follows:—(1) Measures to be taken for posting advertisements in street railway cars, shops, and other places of public resort, in the principal cities in the United States and Canada. (2) Despatch of commissioners to the States and Canada to make inspections at the most important ports of those countries; the branch offices in New York and Chicago to be continued as hitherto, and a new office established in Montreal. (3) The tea saloons in New York and Canada to be maintained as before with a view to enabling the public to appreciate the peculiarities of Japanese tea. (4) The office in Vladivostock to be maintained in its present condition, and a number of commissioners to be despatched to various parts of Siberia at a convenient season. Hitherto a certain subsidy has been secured from the Government to extend the scheme of advertisements in San Francisco, but the money so acquired is now to be appropriated for the establishment of a new branch office in Montreal. The abolition of the distribution of tea utensils, for the time being, is likewise attributable to these circumstances. The Tea Dealers' Union, it may be remembered, is furnished by the Treasury with an annual subsidy of 70,000 *yen*, and may therefore be able to inaugurate the undertakings mentioned at its discretion, but it is hardly credible, adds our contemporary, that success can ever be secured by such plans.

SAILING SHIP FOUNDERS OFF IDZU.

The British sailing ship *Iranian*, 2,938 tons, with 110,000 cases of kerosene oil from Washington and Philadelphia, consigned to the Standard Oil Company, struck a rock and foundered off the coast of Idzu, on April 3rd. The *Iranian* left New York for Yokohama on November 23rd. The scene of the disaster is about 74 miles from Yokohama and some 40 miles off the mainland.

The ship had a good passage till the night of the 3rd inst., when, at 9 p.m., she struck. A big sea was running and the vessel filled quickly. Two boats were quickly launched, and all the crew, with the exception of one man, Smith, who apparently through his own stupidity declined to leave, quitted the ship. The mate's party, after half-a-day's rowing, made land, and were conveyed to Shimoda by a Japanese schooner. The master, Mr. Watt, had meanwhile landed his contingent, at Niijima, and met the mate at Shimoda, where he had gone with a view to engaging a boat to go back to the scene of the wreck, in the hope that the man Smith, who had been left behind, might be still surviving. The mate's party arrived in Tokyo on Monday.

The names of all the forecastle hands are not yet forthcoming, but the following are among the members of the ship's company:—Master, Andrew Watt; 1st mate, John Jamieson; 2nd mate, Hubbard; 3rd mate, Richardson, Boatswain, James Buchanan; Steward, Alexander Sinclair; Cook, Archibald Watson; Sailmaker, John Brown; Apprentice, Keeling; Boys, John Brown, Simon Edward Rowney.

A part of the crew of the *Iranian* are now staying at the Salvation Home, and, being quite destitute, are deserving objects of charity. They have suffered considerable hardships, though the Japanese appear to have done as much for their comfort as was possible. A quantity of provisions was despatched by the Governor of Tokyo to Niijima, where also an interpreter was sent. The master, Mr. Watt, has not yet arrived.

No trace has been found by Captain Watt, who returned to the scene of the loss of the *Iranian* off Idzu, of either the ship or the man Smith, who refused to leave with the boats. It is inferred that the vessel went to pieces and that Smith was drowned.

THE "TOKYO MARU."

The *North China Daily News* says:—The C.N.S. *Tungchow*, Capt. Hughes, at 3 a.m. on the 2nd instant, heard distress signals fired from the stranded *Tokyo Maru*, and her engines were soon afterwards stopped, an anchorage being made in 9 fathoms. It was fine weather at the time, with light variable winds, and a heavy easterly swell. At 5.30 a.m., the *Tungchow* stood in closer to the *Tokyo* and at 5.45 she anchored in 8½ fathoms. The captain of the Japanese liner came on board the *Tungchow*, and reported having gone ashore in a dense fog. At the same time Mr. Baddeley, chief officer of the C.N. steamer, took a boat off with the idea of bringing on some European passengers from the *Tokyo*, who were making the best of it on shore, wrapped up in blankets. The heavy swell, however, prevented this being accomplished, and the boat was again hoisted in. At 7.15 a.m. another Japanese steamer of the N.Y.K. hove up to the rescue, and the *Tungchow* proceeded on her voyage at 8.02 a.m. The passengers and crew are all safe with the exception of a Japanese merchant reported missing. The ship herself is apparently a total wreck, her forecastle being under water,, and she appears to be gone in the bulkheads. With an increase of the easterly swell, of which there were all indications on the 2nd instant, she would soon go to pieces.

WRECKS ON THE WEST RIVER.

The frequency with which wrecks are reported from the West River indicates the necessity that exists for a systematic survey of this important waterway, remarks *The China Mail* of April 2. The latest victim is H.M.S. *Sandpiper*, which was brought down this morning in tow of the torpedo destroyer *Fame* with her forward compartments full of water. A large steamer named the *Wo On* has been wrecked in the Shiu Hing gorge. She lies on her broadside with about 50 feet of her starboard side showing and underneath her stern fifteen fathoms of water. It is supposed that she struck a rock right amidships. When the vessel struck she stood upright for about three hours and the passengers got safely ashore. The *Wo Ping* and *Wo Kwai* went up to render asistance, but they have since left the steamer. The *Wo On* belongs to Banker and Company. In December last a large lorcha named the *Sai Ping* was wrecked above Tak Hing; torpedo boat No. 36 was wrecked in January; and the steamer *Po Wa* was wrecked on 28th February. This vessel has been salved and is on her way to Canton. The West River will soon establish an unenviable record at this rate.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE CASE FOR ENGLAND.

To the Editor of the "Japan Mail."

Sir,—Judging from scattered expressions in your correspondent "Justice's" two letters, I am afraid he is an American of the modern "Heroes of the Revolution" type, like Mr. Bourke Cochrane, Senator Mason, and Representative Clarke, the men who wind up eloquent and passionate denunciations of British tyranny and grabbing with a fervid wish that Canada may soon be annexed by the "Great and Glorious and Righteous Republic." In that case I tender my apologies in advance to "Justice." There is no use in reasoning with such, and I have no desire to provoke a reply from one of the Heroes of '75. But if "Justice" is not sarcastic in his admission that the British people, and presumably also those to whom they intrust their national interests, have a conscience, I beg leave to submit a few observations and institute some parallels to Great Britain's action towards the South African Republics.

First may I suggest that the very definite and specific charges of corruption, misrule, and oppression brought against Mr. Kruger and his clique are hardly to be dismissed by a vague reference to the standard histories of Geo. M. Theal and James Bryce? Perhaps "Justice" has access to those works and will kindly favour us with quotations. Besides, even if Mr. Theal and Mr. Bryce judge in favour of the Boers, their decision hardly ranks with that of a judge. It was only yesterday that I read a letter of Mommsen where he speaks of "English oppression of down-trodden and despised peoples," but I should not take that dictum of the great historian as a just verdict based upon impartial consideration of the facts. Great as Mr. Morley and Mr. Bryce are in their special fields of work, their opinion on South African affairs is no more authoritative than Mr. Davitt's or Mr. Stead's; they all alike speak as opponents of the Government.

I will not refer to the very stong historical and conventional rights of England towards the Transvaal. Her rights up to 1853 were clearly as good as those of the United States over Utah, with this difference in favour of the claim of the Mormons to independence, that they did not dispossess and reduce to slavery any native race, but, to be sure of not being interfered with, settled in the desert and made it blossom. The English Government through Sir A. Milner referred to their historical rights only when the passing in silence of Mr. Reitz's claim to absolute independence for the Transvaal might have been construed as a tacit admission of the justice of it. Up to that time the English Government acted solely on the undoubted right which belongs to every nation to see that its subjects are fairly treated.

Let us see, then, what was the situation before the Jameson Raid. I have not access to reliable statistics of the white population of the Transvaal, the apportionment of the taxes, and the land ownership. The figures I have seen vary very widely. But it may be taken as conceded that either before the Raid or on the eve of the war the Outlander population greatly outnumbered the Boers, that they owned a large part of the land, controlled all the industries other than cattle raising, and contributed more than half of the total revenue. It will be conceded that in all countries that have a pretence to civilisation the basis of political power is either superiority of numbers, or wealth and land ownership, or intelligence, and that, since the removal of anti-alien legislation, naturalisation has become easy and the rule for established immigrants, and that now the words "population" and "nation" are practically synonymous. It cannot be questioned that the franchise has practically been denied to the Outlander population in the Transvaal, before there was agitation and conspiracy, simply because their numbers were too great! In 1882, the law of naturalisation was similar to that of the Orange Free State and admitted all whites of 5 years' residence to the citizenship. As Captain Mahan has pointed out, as soon as the first batch of immigrants was eligible for citizenship, the law was changed so as to deprive them of it indefinitely or leave it at the discretion of Mr. Kruger. Mr. Stead and "Justice" also doubtless will plead for Mr. Kruger that the Outlanders would shortly have swamped the burghers. What! the franchise to be conceded to Outlanders only when their number is so small that they cannot manage to win any seat and to be withdrawn when their numbers are sufficient to entitle them to several! A very novel plea, indeed, to parade under the name of love of independence. Suppose the Canadian

Digitized by Google Original from CORNELL UNIVERSITY

Government, about to grant representation to the Klondyke district, should adopt that rule and say to American gold diggers, "You can have the franchise now because you are in the minority and anyhow cannot get a seat; but, mind, if your numbers increase and you ever become able to secure one, you shall then give up the privileges of citizenship." What a storm there would be in the States, which can scarcely admit even now Canada's right to impose what customs duties seem fit to her.

But, admitting President Kruger's theory for the sake of argument, is that right he claims for the native population an absolute right? Are there no limits put to it by common sense? Is it to last as long as there is any one of the chosen race to inherit it? Suppose England, as "Justice" and Mr. Stead and all cranks of that ilk suggest, had had patience and had allowed time to work its cure. Suppose 10 years have elapsed without interference and that emigration has gone on at the same rate. Suppose the proportion of Outlanders to Boers had increased till it stood at 10 to 1. Evidently Mr. Krüger's argument would be stronger than ever, for the danger would be greater than ever of the Outlanders swamping the Boers and robbing them of their "hard-earned independence." The Outlanders might be $\frac{9}{10}$ of the population, own $\frac{3}{4}$ the land, control all the industries, contribute $\frac{9}{10}$ or $\frac{99}{100}$ of the national income, and yet the "nation" would be Mr. Krüger and his friends, now all in office or enjoying monopolies. And a Jameson conspiracy then would still be a wicked conspiracy to overthrow the dear old republic. Mr. Krüger would pathetically appeal to his friends in America---(I suppose the Irish vote which in their minority manage to get the balance of power)---"Can I grant the franchise to people who are always slandering me and conspiring against the Republic?"

The situation has arisen before, although most people do not seem to remember it, on the municipal stage. At an early period in the history of the European incorporated cities and communes, when there was no longer the same fear of annexation by land-grabbing barons, the Burgess lists were closed, although settlers were still invited. The Burgesses kept to themselves the control of the communal property and the government of the City. There was exactly the same situation as in the Transvaal now, first and second class citizens, and "inhabitants" (Outlanders); Small Council (1st Raad), and Great Council (Second Raad); the second class citizens being hardly better off than the inhabitants, and the Burgesses on the Golden Book having the monopoly of office, paying no taxes, and in many cases sharing the handsome proceeds of the communal property. Their authority was not uncontested, as "Justice" will find if he consults the history of Genoa, Venice, Berne, Freiburg, and Geneva. Each attempt at revolution (Johannesburg agitation and Jameson raids) hardened the hearts of the Burghers, who like Mr. Kruger saw in their "subjects" merely-stiff necked rebellious people.

The French Revolution put an end to that tyranny in many countries, and the ease with which the Revolutionary armies overran Switzerland was due solely to profound hatred of Burgher rule which prevailed everywhere. In some cities the old régime was re-established after Waterloo, and Geneva saw two unsuccessful attempts before the evil thing was finally done away with. In '48, if I remember well, Fazy by a bold *coup* seized the arsenal, and the oligarchy collapsed, just as Jameson hoped to effect a bloodless revolution by the capture of Pretoria.

What differences there are between the "inhabitants" of the oligarchic cities and the outlanders of the Transvaal are wholly to the advantage of the latter. The Burgesses at least could claim that their fathers had firmly established the independence and prosperity of the City. In the Transvaal, real independence and stability was impossible until Great Britain had reduced the Zulus and Matabele to submission at the cost of may lives and 6 millions sterling, and the national finances had been placed on a sound footing by the labour of the outlanders.

That distinguished exponent of American ideas of justice and liberty, *The New York Sun*, lately suggested that when England was tired of butchering people that preferred death to English tyranny, she would turn to America and ask her what should be done. A gruesome suggestion. Had the *Sun's* writer in his mind the American saying that the only good Indian is a dead one? Let us consult American history and see what precedents America affords in her treatment of Mexico. The American settlers in Texas, many of whom had gone in defiance of law, not by virtue of treaties as the Outlanders, enjoyed full civic rights (see Jay's Mexican War). They only objected to sharing it with Mexicans (greasers) in the joint legislature of Coahinla and Texas. And they wanted liberty, like the Boers, to hold slaves! Perhaps when the *Sun* editor spoke of England going to America for advice he thought also of the treatment dealt to rebellious Mexicans when Kearry proclaimed the annexation of New Mexico, (see Jay's Mexican war, pp. 199 and 235). The loyal Mexicans were threatened with confiscation of their lands if they did not return forthwith to their homes and submit to United States rule, while at Taos eleven were hung for fighting for their independence.

But perhaps "Justice" will say to this that it was a criminal act of the Slavery Party in the South, that it was duly reprobated by men like Mr. Seward, President Adams, Dr. Channing, and Chancellor Venn. It is referred to in present-day school histories of America as a vindication of political rights against Mexican oppression. However, let that pass. Let us come to later acts of the great, glorious and righteous Republic that have some similarity with the acts of England he complains of. Let "Justice" tell us by what right the American outlander minority (mostly, by the way, sons of missionaries, I have heard) overthrew the rule of the native majority in Honolulu. And finally, as he has so much virtuous indignation to vent, let him turn his attention to the acts of his Government, backed by the majority of Congress and the nation, towards the Cuban and Philippine patriots.

I have argued so far on the supposition that the British had claimed all they had a right to—proportional representation and share in the government—and as if the English Government had attacked the Transvaal to back their demands. That was only to bring the British case on a parallel line with the precedents set by the citizens and government of the free, enlightened and righteous Republic. That is doing a grave injustice to England, however. As "Justice," whose knowledge of history seems to be derived from editorials in papers like the Chicago *Tribune* and the New York *Sun*, would know if he had cared to follow the course of negotiations last year, all Sir Alfred Milner asked for on behalf of his countrymen was a modicum of representation, at most ¼ of the seats in the Rand for more than half of the population, so that (I forget his exact words) the outlander population might have a constitutional way of submitting their views to the Government and relieve the British Government of the necessity of interference in the international affairs of the Republic. As to the second point, it is strange it should be necessary to remind one who signs himself "Justice" that the criminal aggression was against English territory, and that Mr. Leyds all along has talked of the Transvaal's *right to a port*.

If we have precedents in America's way of dealing with people like the Boers, we have also precedents showing the way to deal with immigrants in exactly parallel circumstances. When the gold fields in Western Australia were discovered, there was but a scanty cattle-raising population living much as the Boers live. In one year, there was an influx of 20,000 immigrants, largely Americans and foreigners. Five years later a Legislative Assembly was established and all the immigrants were given the franchise. He will find another example in Klondyke, and more in his own country. In fact, the unexampled prosperity of the States is undoubtedly due to a great extent to its liberality towards settlers. As a fact, America may be said to be governed by the outlander majority, Irish, German, etc., and thoughtful Americans deeply regret that the English influx has not been more considerable. It would be curious to analyse the composition of the meetings held in favour of the Boers by "the heroes of the Revolution." How many of those thousands that follow Mr. Bourke Cochrane are of American parentage? How many of Anglo-Saxon blood in the States were through their ancestors backing George III., in his "criminal aggression" against the colonies?

In justice to the American nation let it be recognised that much of the frothy denunciation of England now in fashion is due to the coming on of one of those quadrennial fits of insanity brought on by the Presidential election. There is danger in that appeal to national vanity and prejudice. Even people who sign themselves "Justice" are apparently influenced by the torrents of lies and misrepresentations poured out by the most unscrupulous party press. It is indeed strange how educated men, as I take "Justice" to be, allow themselves to be turned by falsehood provided it be printed. I have an example in a neighbour of mine, a full-fledged Ph.D. of Gottingen, who is content to answer to my request for evidence:—"But it is in all the papers. German papers do not tell lies!"

Lest my allusions to America's little transactions in land-grabbing (your friend, Dr. Clay McCauley, had a fine name for them, which I have treasured since the days of the Venezuela trouble, "America's *natural*, providential expansion within her *continental* limits") should add to "Justice's" dislike of England, let me state, in conclusion, that I am not an Englishman. I am a citizen of an older republic, one that has had to battle a good deal for its independence in the course of the last six centuries. Only that independence and love of freedom was always consistent with other people's rights (except in the case of burgesses and inhabitants). And when twice within this century two powerful neighbours threatened her, it was England, not the States, that came to the rescue and saw her safely through, without any possible thought of reward. I believe England is in the main right, though her motives may be mixed, and acting for freedom and civilisation, so much so that had not I had impedimenta in the shape of a family, I should have hastened to South Africa and tried to enlist under the English flag; nay, in spite of the fact that Mr. Jameson and Mr. Rhodes are millionaires, I would deem it an honour to have been a member of the unfortunate Raid.

I remain, dear, sir, Yours truly,

HISTORICUS.

Kumamoto, April 2nd, 1900.

THE PASSING OF A HERO.

To the Editor of the "Japan Mail."

Sir,—The message announcing Admiral Dewey's willingness to stand for the Presidency is the second act of the drama in which the hero of Manila Bay passes off the stage on which he has been a star for almost two years. The first act was the transfer to his new wife of the house which was the gift of the admiring and loving public. The admiral can, in fact, lay the blame for his downfall from his high pedestal of a hero to that ambitious woman. That to her is due also his change of opinion concerning the Presidency is made clearly evident by the following paragraphs from Mr. Wm. E. Curtis' column in the *Chicago Record*:—

Mrs. Dewey has confided to a few intimate friends that while she and the admiral are travelling this spring they will ascertain the feeling of the public toward Admiral Dewey and the Presidency and decide whether he will be a candidate. Mrs. Dewey does not deny her ambition to be the "first lady in the land," and says that while Admiral Dewey was averse to running for office before his marriage he is such a devoted husband that he will gratify her by accepting the presidency if the country desires to bestow it upon him.

When one of the women to whom this remark was made asked Mrs. Dewey on what ticket the admiral would be be a candidate she replied naively:—"I don't see that it makes any difference, because he will be supported by all the people. He is a republican and I am a democrat so that will be a stand-off."

It has always been supposed that Admiral Dewey s a Democrat and might be a formidable rival to Bryan for the Presidential nomination; and it was also supposed that his marriage to the sister of John R. McLean, recently defeated Democratic candidate for Governor of Ohio, might assist that candidacy. But, as the Democrats seem to have taken a firm stand against expansion, or imperialism, as they call it, the admiral, as an ardent expansionist, must train with the Republicans. But, in that case, what reason is there for laying aside the experienced McKinley and taking up an inexperienced naval hero? Admiral Dewey deserves the highest rank as a naval commander; but what qualifications does he possess for the Presidency? It is greatly to be feared that Dewey's entry into politics will spoil him, just as a similar course detracted tremendously from Gen. Grant's reputation. The military hero of the Civil War was a failure as President; the naval hero Dewey would better keep out of politics.

HAWKEYE.

Tokyo, April 7th, 1900.

THE LOST "IRANIAN"—AN APPEAL.

To the Editor of the "Japan Mail."

Sir,—The shipwrecked crew of the *Iranian* have appealed to me to supply them with clothing, underwear, caps, and shoes.

May I ask you to kindly make known the need to the community through the columns of your paper? Contributions of clothing, etc., sent to the Mission will be gratefully acknowledged.

Believe me, Yours faithfully,

W. T. AUSTEN, Seamen's Chaplain.

April 10th, 1900.

OVERHEAD RAILWAYS.

According to the *Hochi Shimbun*, the following overhead railways are shortly to be established in Tokyo:—

Shinsenza-Eirakucho section—This is to be completed under the supervision of the Government. The portion within the castle walls has already been determined, and surveys are now being undertaken. The Shiba district alone seems to present some difficulties, as it involves an invasion of the *geisha* quarters.

Kinshibori-Yokoami section—This is in fact an extension of the Sobu railway. A charter has already been obtained for a section between Kinshibori and that part of Hyappongui which extends to the Sumida. But as the line has to traverse the urban district of Honjo, considerable difficulties will prob-

Digitized by Google Original from CORNELL UNIVERSITY

ably be experienced in the purchase of land as well as in the execution of the work.

Senju-Makurabashi section—The extension of the Tobu railway is to terminate at Etchiujima, but it has been determined for the present to complete the work between Senju and the neighbourhood of Makurabashi in Mukojima. As this line passes, for the most part, through open fields, work is expected to be finished much sooner than that on other sections.

Shinanomachi electric railway.—This railway is to be established between Shinanomachi and Kawasaki, under the supervision of Mr. Homma Eiichi, who proposes to commence work at no distant date.

Yotsuya-Akasaka section—This being an extension of the Kobu railway, work is shortly to commence in conformity with the decision of the Railway Assembly last month.

YOKOHAMA RECLAMATION SCHEME.

According to the *Yorozu*, there are at present three distinct parties who have applied to the Government for permission to reclaim the seashore at Yokohama. One consists of Mr. Oda Kwanichi and 270 others; another comprises Messrs. Sasa and Saito; a third is headed by Mr. Yokozaki Shigetaro. Each party claims a different portion of foreshore. Messrs. Sasa and Saito have applied for 4 million *tsubo* west of the Honmoku headland. Mr. Oda wants to secure 240,000 *tsubo* east of the cape, for the reclamation of which permission has been already granted to the Oyamada party and the Yokohama combination,—while Mr. Yokozaki prefers, the neighbourhood of the coast set apart for the construction of a harbour. Serious trouble, however, is imminent in connection with these schemes,—a trouble which seems to lie in the Home Department's resolution to accept the Sasa party's application alone to the exclusion of other parties' demand. It is said that Mr. Oda's application is to be rejected on account of Oyamada's portion being still in process of reclamation, whereas the difficulty of sanctioning Mr. Yokozaki's project is attributed to the possibility of its creating an obstruction to the harbour scheme. The Oda party, however, includes among its promoters over forty Liberal members of the Diet, and these, adds our contemporary, have now combined to demand an explanation from the Home Department as to the latter's intention of rejecting their application; representing in strong terms that the scheme of filling-up the seashore ought to be approved so long as it is calculated to offer facilities of communication.

LADIES' BENEVOLENT ASSOCIATION.

Committee :—President—Mrs. Irwine. Vice-President—Mrs. Eldridge. Hon. Treasurer—Mrs. Parsons, Hon. Secretary—Mrs. Thomas. Managers—Mrs. Dodds, Mrs. Litchfield, Mrs. Isaacs, Mrs. Grauert, Madame Gielen. Hon. Secretary, Tokio,—Honourable Mrs. Whitehead.

Your Committee have much pleasure in laying before you the 27th Annual Report of the Association, but regret that the Funds of the Society are not in as satisfactory a condition as last year. You will see by the Hon. Treasurer's Report that several very sad cases of poverty have been relieved, also the passage money of others either partly or wholly paid, in order to give them a chance of another start elsewhere. We are glad to say one of the families who have been receiving assistance for some years, is now able to do without help, beyond having their house rent paid, the children being now old enough, and able to assist their mother, who in a short time, we hope, will be free from all assistance from the Ladies' Benevolent Association. The case of every person desiring assistance is enquired into personally by members of the Committee, and all such are helped according to their need, without any distinction as to creed or nationality.

We trust the subscribers will kindly continue their subscriptions and donations, and that many new members may join, as in such a changing Community, it is impossible foretell when some urgent and sudden call may not be made on the Funds of the Association, and though there are many outside calls as we all know, still we must not forget there are many cases of poverty and distress to relieve in our own little Community. We draw attention to the Hon. Treasurer's account which shows that the subscriptions are less than half the expenditure, being $1,240 against expenditure $2,985. Members of the Society are therefore earnestly solicited to raise their subscriptions, and any donations will be gratefully received. The sincere thanks of the Ladies' Benevolent Association are tendered to the kind friends who have sent donations either from themselves personally, or by giving entertainments for the benefit of the Funds of the Society and to the Editor of the *Japan Herald* for printing last year's Report at a reduced rate, also for the donations of clothing, further contributions of which, especially men's clothing, are greatly needed at present, and will be thankfully received by the President at the Parsonage.

The Committee gratefully acknowledge the kind help of the King's Daughters' Circle towards the part maintenance of a destitute sick woman at the General Hospital.

The work done by the Ladies' Benevolent Association during the past year will be seen by the Hon. Treasurer's Report.

J. P. THOMAS,
Hon. Sec., L.B.A.

Dr.

Paid to Salvation Army	$ 50.00
Paid to Hospital for one bedridden woman, an insane man, and operation and attendance for a poor woman	719.00
Paid ward and schooling for one year for a deserted European child	177.25
Paid rent for one year for a widow and her children	337.50
Paid for milk for and her seven children, also assistance during summer months.	240.30
Paid by monthly installments to assist a woman with 7 children and an insane husband	320.00
Paid for furnishing a lodging house to help a poor woman to help herself	172.00
Paid to assist and send back to Guam some destitute islanders	237.75
Paid one month's school fees for one boy.	38.00
Paid to assist two men destitute	2.00
Paid for boots for one boy	3.00
Paid passage to America for a poor woman	100.00
Paid for cod-liver oil for a boy	8.75
Paip for boots for a poor woman	3.50
Paid printing and stationary Account to Secretary	17.00
Paid rent and assistance for destitute couple	67.00
Paid to assist a poor woman with a sick husband	5.00
Paid part passage to Vladivostock of a poor miner	30.00
Paid for two Christmas hampers for two poor families	15.00
	$2,543.05
To balance	382.81
	$2,925.86

To Balance	$ 382.81

M. M. WALTER,
Hon. Treasurer.

THE B. W. P. A.

A Committee of the British Women's Patriotic Association was held at No. 7 Bund, on April 2nd. The total amount realised by the Tableaux Entertainment on February 20th, was *yen* 704, and a first cheque for *yen* 500 was accordingly forwarded on March 6th, to the Mansion House Fund for immediate necessities. The result of the Choral Society's Concert not having yet been announced by the Secretary, the Committee proceeded to the discussion of the Burlesque entitled "Bluebeard," which is to be given at the Public Hall on April 19th under the auspices of Mrs. Dinsdale, assisted by an influential Committee. The current accounts of the B.W.P.A. are appended :—

M. DODDS, Honorary Secretary.

Balance at Chartered Bank of India, Australia and China	76.83
	729.00

B. BUCHANAN DUNLOP, Hon. Treas.

NEWS OF THE WEEK.

A coolie named Takata, employed on the railway, committed suicide in a house of ill-fame at Shin Yanagicho, Kofu, the other day, by blowing off his head with dynamite.

On Tuesday night a farewell dinner was given at the Oriental Hotel to Mr. de Reus, Netherlands Consul, who has been transferred to Kobe. Mr. Klingen is appointed acting Consul.

At a "Book Tea" one guest went with a neat little card pinned to his coat, whereon appeared a large ? in red ink, set in the middle of an escutcheon. It stood for "The Red Axe." Another lady wore a single flag over her head which puzzled everybody. "It can't be 'Under Two Flags,'" said one of the guests. "Why not?" said the smiling lady; "one flag is under two, isn't it?"

An impudent theft is reported to have taken place on the *Empress of India* on Monday morning. A Chinese from the Van Tai exchange shop went on hoard with 950 *yen* in paper and silver, and was about to enter a cabin when a foreign sailor seized the bag containing the money and made his escape. The matter was reported to the police, but no arrest was made by the time the steamer left, 5 p.m.

The *Nippon* publishes statistics of the Finance Department showing the number of foreigners who, being domiciled within the jurisdiction of the Kobe Customs authorities, are amenable to business tax for this year. Classified according to occupation, the figures stand as follows :—Sellers of merchandise, 94; Bankers, 2; money lenders, 2; lenders of goods or furniture, 1; brokers, 99; manufacturers, 22; persons engaged in transport business, 9; building contractors, 6; printers, 2; inn-keepers, 2; restaurant keepers, 4; public agents, 5; middlemen, 6.

The Police have arrested four Chinamen, whose ages range from 19 to 13 years, on suspicion of setting fire to No. 127 on the morning of April 3rd. After their arrest they confessed that they set fire to Miss Lee's residence by collecting quantities of charcoal matting, old brooms, etc., and lighting them after pouring kerosene oil over the heap. Their hope was to steal something in the confusion which would follow an outbreak of fire; The lads have been sent to the Court for trial. two have already served terms in prison.

An attempt to commit *seppuku* occurred at the Water Police station, Yokohama, on Thursday. A man named Nakajima Kanekichi (42) had intended to proceed to America, where he hoped to obtain work as a cook. He endeavoured to leave by the *Braemar*, but having no passort was stopped by the police. The man was also penniless, and being desperate drew a dagger and cut himself in the abdomen, inflicting an injury about five inches long. The inspector-in-charge in attempting to prevent the act had two of his fingers injured.

A foreigner who is alleged to have forged two drafts on the Chartered Bank at Kobe and Yokohama was arrested at Shanghai on Wednesday, and an application is to be made for his extradition. The man has passed under the names of Rosario and Smith, and was employed formerly by the Chartered Cank at Bangkok. The drafts forged are said to have amounted to about 18,000 *yen*. He left Yokohama under the name of Brown. The proceeds of the crime he remitted to a friend at Singapore through another bank, and almost all the money has been recovered. The forgery is said to have been exceptionally clever.

We read in a home paper that on the eve of departure of the Japanese warship *Shikishima*, Miss M'Lean, of the Japanese Christian Institute, Tilbury Dock, was presented with a beautiful brooch and studs, in the presence of the officers and crew. The captain of the vessel, in making the presentation, spoke in the most appreciative terms of Miss M'Lean's devotion to the men of the Japanese Navy. The present was accompanied by an address, in which Admiral Marquis Saigo, president of the Imperial Naval Club, Tokyo, expressed his hearty thanks to Miss M'Lean, for her hospitality bestowed on the men in the Imperial

Japanese Navy, who had been sent of late years to England with a view to taking the newly-built ship to Japan.

The *North China Daily News* learns that the provincial officials of Chêkiang have, through Mr. Glenell, British Consul at Hangchow, contributed the sum of Tls. 10,000 to the Indian Famine Fund. No pressure of any kind was put on them; they were simply told that the outports were giving something, and that anything they chose to subscribe would be gratefully received.

Inouye Kasaku, a clerk employed by Mr. Kitagawa Yohei, a wholesale cotton merchant of Kobe, was arrested on the 2nd inst. on a charge of obtaining money to the amount of *yen* 175,000 by forging cheques with his employer's signature. The forger, the *Kobe Herald* reports, presented the fraudulent cheques to the Formosan Bank and Sumitomo Bank and has drawn the amount in several sums since February. The man confessed at the police station that he put the whole amount into the share and rice markets. The authorities are searching for the man's accomplice, as it is thought he could not have lost so large an amount in the course of a month or two. It is also reported that the man was in the employment of Mr. Kitagawa for a number of years and bore a very good name.

Telegrams recently received from Peking by the *N.-C. Daily News* state that the impression in official circles was that H.I.M. Kuang Hsu's death by foul means is daily expected, and that so sure of this is the conservative Grand Secretary Hsu T'ung that he has already prepared his suit of Court mourning, consisting of grey and black cotton-cloth official robes, in anticipation of the Emperor's near demise. This example was being generally followed by officials high and low in Peking, and so numerous are the orders for mourning Court robes at the clothes' stores in the capital that buyers are now charged twice and often three times the ordinary figures demanded for such articles.

THE FEELING OF EUROPE REGARDING THE WAR.

Commenting on the feeling of the Continent of Europe towards Great Britain during the earlier stages of the war, and the effect produced by the news of Roberts' successes and the relief of Ladysmith, the *Saturday Review* says:—

The injury in truth done to British prestige in Europe was very serious. It was not so much that our Continental friends thought that they would have done any better against the Boers: their Intelligence Departments are too well informed for that. On the contrary, the successes of the Boers had caused sundry searchings of the heart amongst European military authorities, and an uncomfortable consciousness of their own defects. The higher staff officers of the German and French armies are too clever not to have asked themselves repeatedly of late, Would our conscripts have stuck to their general, when reverse followed upon reverse, as loyally as the British soldier has fought for General Buller in his patient, and apparently desperate, attempt to find a way into Ladysmith? No: the danger to Great Britain did not arise from a belief on the part of other nations that they would have succeeded where we had seemingly failed. Our peril sprang from what our neighbours hailed as the sudden and unexpected discovery that the British were not invincible, that their spell of luck was over, and that they had lost the key to world-wide success. This thing called British prestige is after all a myth, a figment of the diplomatist, a bogey with which our senile statesmen have been frightening us into paying more taxes for our army nnd navy! Such has been the language of the man in the street, faithfully reproduced by the able editor, in the capitals of Europe. If two tiny Republics like the Transvaal and the Orange Free State can invade British territory, and hold England at bay for four months, what might not be effected by France and Russia, or by a Triple Alliance? Visions of a Russified Persia, of a Frenchified Egypt, or of a Germanised Zanzibar, of the partition of China —what limit is there to the building of Castles in Spain?—have been floating through the heated brains of nameless politicians, who talk in cafés and write in newspapers. We do not say that these wild dreams have been cherished in the chancelleries of Europe; but they have not been discouraged, and the sovereigns and their ministers have been content to watch and wait.

The recent striking events have changed all this, and the symptoms of the transformation are rather amusing. Our real friends in Europe, we must sorrowfully admit, are easily reckoned: the German Emperor, Italy, Denmark, and Greece. The bundle of races and provinces, which goes by the name of the Austrian Empire, is so divided on every topic under the sun that it is safe to assert that there is nothing like national unanimity on the South African War, though it is equally safe to assume that the Emperor has no intention of siding with Mr. Kruger against Queen Victoria. But apart from the Courts there is unquestionably both in Germany and Austria a vast amount of illfeeling against England. In France, except the hotelkeepers and possibly the fashionable tradesmen, we fear that the nation is almost to a man hostile. We know that in Russia Mr. Chamberlain's policy is bitterly condemned in all circles of opinion. Now of course this volume of enmity has been increased rather than diminished by the successes of Lord Roberts and Sir Redvers Buller. Hope has given place to rage, and dreams of partition have been succeeded by fear of annexation.

THE COMMERCIAL SITUATION.

Although the Bank of Japan has steadily raised its scale of interest since last autumn, as a means of preventing the exodus of gold, it has failed, remarks the *Jiumin*, to secure the results anticipated. The inequality of trade continues unabated, and indeed increases with the lapse of time, threatening to involve the whole economic community in serious embarrassment. Financiers, unable to remain patient under these circumstances, have now begun to devote their utmost energies to the improvement of commerce by schemes of their own creation. Some of these have been disclosed, and are receiving practical recognition from the people at large. The most remarkable is one which refers to the taxation of silk for domestic consumption. That plan is advocated by Count Inouye, whose recent address at the Yurakukai has clearly shown the necessity of such a step as a preventive against luxury and a stimulus to the export trade. Next in importance is the system of remitting taxes on exports of all descriptions. Such a measure is suggested by Mr. Masuda Ko and approved by Mr. Megata, Director of the Taxation Bureau, and Mr. Hayakawa, Director of the Section of Customs of the Finance Department. The third plan which is brought upon the tapis has for its object the collecting of small sums now in the hands of the poorer classes of society. The bonds issued by the Industrial Bank as well as the Agricultural and Industrial Bank are considered too large in face value to secure subscription from the labouring classes. But the issue of debentures in small sums of one to five *yen* would bring the investment within the means of every individual. Another scheme proposed is to increase the duties on imports to the highest extent consistent with conventional stipulations. The excess of imports at present is the great source of embarrassment which almost cripples the operations of the economic community of Japan. Augmentation of customs duties may have the effect of creating a sort of a barrier against imports of all descriptions. Finally the plan of Government endorsement of bonds is recommended, with a view to facilitating their sale in foreign markets.

THE INCOME TAX.

We are asked by the Revenue Officials of Yokohama to bring to the notice of the foreign public, the undermentioned facts concerning the payment of Income Tax, reports concerning which should be made this month:—

FOR INDIVIDUALS.

All individuals who are under obligation to pay income tax according to the provisions of Art. VIII. of the Income Tax Law, issued as Law No. 17, in Feb., 1899 shall forward their report to the Government in April every year. According to this law incomes are divided into three classes, namely (1) Incomes of juridical persons: (2) Interest on public bonds or companies' debentures payable in places where the Income Tax Law is in force; and (3) Incomes of individuals. Incomes of the third class are calculated on estimates based on the actual circumstances of each taxpayer in April every year. Any person who has in any part of this country, where the Income Tax Law is in force, a residence, or place of abode, or who resides in a fixed place for one year or more, and has an income of 300 *yen* or more per annum, is under obligation to pay income tax. Persons residing outside the districts where the Income Tax Law is in force, who have property, trade, business or occupation, in a place where the said Law is in force, are under obligation to pay income tax in respect of the income derived therefrom.

2.—With regard to incomes mentioned in clauses 1 to 7 in paragraph 7, the tax is directly levied on the estimates of their annual receipts; and the cost of living, all other household expenditure, etc., cannot be deducted therefrom. If there has been a difference between the estimate and the actual income, and the latter has sustained a diminution amounting to one-fourth or more, the person concerned may report the fact to the Government on or before January 31st of the following year and apply for the revision of his income.

3.—The incomes derived from business or professions, house rents, ground rents, or other property are based on the estimated annual amount which remains over after the necessary expenditure has been deducted from the total receipts. The term "necessary expenditure" is only applicable to that which is directly necessary for the carrying on of a particular business; as, for instance, the original cost of goods laid in as stock; the cost of raw materials; the cost of repairs to, or charges for, hiring places and things; public imposts upon places, things, or businesses; employees' wages; and other expenses necessary for the earning of incomes. In case of places or things used for business purposes being also used for household purposes, no portion of the cost of repairing or of charges for hiring them, or of public imposts or other expenses on the same, can be deducted in respect of such use for household purposes from the amount available for taxation. For the same reason the wages of servants who are employed for both business and household purposes, entertainment expenses disbursed for business as well as social purposes, and interest on loans raised other than for business purposes, must not be deducted.

4.—The incomes of the head of a family and of members of his family who live with him, or of two or more members of a family who live in the same house, shall be reckoned together, and if the total reaches 300 yen or more per year they are under obligation to pay income tax. In such cases the reports of their incomes shall be made out separately, and on the margin of the reports the words "Living with so-and-so" shall be written.

5.—Although all incomes realised from property, trades, businesses, or occupations in places where the Income Tax Law is in force, must be reported, the incomes falling under any of the following heads need not be reported, as they are not taxable incomes:—

1. Occasional incomes which do not belong to undertakings conducted with the object of profit.
   An income here mentioned means one which comes into one's possession unexpectedly, such as money left by the dead, or rewards or remuneration and the like which are given without any previous understanding.
   The provision is not applicable to fees or remuneration received by professional men such as doctors, lawyers, translators, interpreters, etc., as the result of a tacit agreement or according to prevailing usage.
2. Dividends receivable from a juridical person upon whom income tax has already been imposed under the Income Tax Law.
3. Incomes realised from property, trade, businesses, or occupations in a foreign country, or in places where the Income Tax Law is not in force, [Formosa, Okinawa-ken, (the Luchu islands). Ogasawara-jima, (Bonin islands), and the seven islands of Idzu comprise the districts where the law is not in force].
4. Interest on public bonds or companies' debenture which has been paid in a place where the Income Tax Law is in force—that is, interest on which income tax of the second-class has already been levied.
5. Travelling expenses, educational funds, and legal allowances for support granted to widows and orphans, etc.
6. Salaries of military and naval men on active service.
7. Allowances for support granted to widows and orphans, etc., and pensions to wounded or invalids.

6.—The reports on the incomes of individuals shall first be examined by the competent Taxation Office and then they shall be submitted to the discussion of the Income Investigation Committee, elected from among the payers of income tax in the locality, and the Director of the competent Revenue Administration Bureau shall decide upon the amount of tax to be levied on each payer according to the resolutions of the Investigation Committee. Taxpayers shall be informed of the amount of tax to be levied on them before the process of collection is commenced, but the decision of the authorities will not necessarily be in accordance with the reports furnished by them. According to the results of investigation the amount of tax not based on the reports may be notified to them; and even to persons who have not presented any reports at all, notice to pay a certain amount of tax may be sent by the authorities,

Digitized by Google Original from CORNELL UNIVERSITY

as the result of their investigation that they enjoy an income justifying the imposition of that amount of tax. If the taxpayers object to the amount of tax notified to them, they may apply for an enquiry into their income, stating the reasons for their dissatisfaction, or they may lodge an appeal or institute administrative litigation against the decision. In taking these measures, however, considerable trouble would be unavoidable. Moreover, the cases where a change in the amount of income are allowed are limited to those caused either by the result of an enquiry, of the examination into an appeal, or of an administrative litigation; or to cases where a revision of the amount of income is required owing to a diminution of the income amounting to one-fourth or more. For these reasons each taxpayer should be careful to make a correct statement.

7.—The following is a definition of the principal items to be reported:—

1. Salaries or wages—By this is meant the remuneration which any person receives, for occupation, labour, etc., from Government, public offices, companies, shops, factories, and other corporations or individuals, either according to fixed rules or by a periodical contract, etc.
2. Special allowances—By this is meant the rewards which any person receives for labour from others under the name of either monthly allowances or entertainment expenses, etc.
3. Rewards paid in instalments—By this is meant the rewards which any person receives as share for labour, according either to a certain contract or a periodical resolution, etc., from companies, shops, and other corporations or individuals when the accounts of profit and loss are made out, and at other similar times.
4. Interest on money loaned or deposited not in the course of business—By this is meant interest on money loaned by persons who do not make the business of money-lending their occupation; interest on money deposited not for the purpose of business, that is interest on money loaned or deposited by ordinary individuals other than business men, such as interest on money deposited in banks, post offices, and other places for the purpose of gain. As a matter of course interest on money loaned by pawnbrokers and others whose business it is to loan money, as well as interest derived from money deposited in the course of or owing to the nature of business, is to be calculated, and reported as business income.
5. Dividends received from juridical persons upon whom no income tax has been levied under the Income Tax Law—By this is meant incomes from juridical persons in a foreign country or in a place in this country where the Income Tax Law is not in force, or from juridical persons whose business is not conducted with the object of profit and who are exempted from taxation.
6. Interest on public bonds or companies' debentures, which is not paid in places where the Income Tax Law is in force—By this is meant interest on public bonds or companies' debentures, which is paid in a foreign country or in a place in this country where the Income Tax Law is not in force, and is received by transference in a place where the Law is in force.
7. Annual allowances, annuities, and pensions—Money which is given to members of an Assembly elected either by the Government or the people for their labour and expenses is called annual allowance; money which is given to persons who have rendered meritorious services to the nation is called annuity; and money which is given to civil officials and military and naval officers, and others, according to fixed rules, in recognition of services rendered by them, is called pension.
8. Income derived from a business or profession—By this is meant income derived from commercial, industrial, and other businesses or professions or scientific and technical occupations and from all classes of labour not otherwise enumerated.
9. Income derived from house rents.—By this is meant income derived from the letting of houses.
10. Income derived from ground rents.—By this is meant income derived from the letting of land to others by persons who have leased it from the Government or from others.
11. Income derived from properties other than the two items above mentioned.—By this is meant income derived from properties other than houses and land, that is from ships, boats, vehicles, horses, and other properties.

8.—Entries in the report shall be made in compliance with the principal points mentioned in the above para graphs, and the report so entered shall be forwarded to the Yokohama Taxation Office (Tobe Rokuchome) within the legal period (April). Anyone who wishes for further information or explanation may obtain it by applying to the Yokohama Taxation Office at any time. For more details persons are referred to an English translation of the Tax Laws of Japan, published by the Yokohama Revenue Administration Bureau.

FOR JURIDICAL PERSONS.

1.—The statement of accounts is to be presented to the Government each business year by juridical persons who are under obligation to pay income tax according to the provisions of Art. 7 of the Income Tax Law (No. 17), promulgated in Feb., 1899. By the term "juridical persons" is meant corporations composed of several persons for the purpose of carrying on commercial business and registered in compliance with the provisions of laws and ordinances as joint-stock companies, limited partnerships, or ordinary partnerships. By the term "business year" is understood the fiscal year in which the account of profit and loss of respective companies is made up; as, for instance, the period from January to June is fixed as the first half-year and July to December the second half-year; or the whole calendar year, or from April to March the following year, that is, the period in which the account of profit and loss of respective companies is made up is regarded as a fiscal year.

2.—With regard to the third-class incomes mentioned in the Income Tax Law, that is, incomes of individuals, the kind and amount of income is to be reported to the Government by each tax-payer in April every year. But as to the income of juridical persons there is no fixed period during which a report should be made, as the period of closing accounts differs according to the statutes of each company or partnership, as already mentioned. In the case of joint-stock companies a statement of accounts of profit and loss should be presented to the competent Taxation Office within seven days after the passing of accounts at any ordinary general meeting of shareholders, and in the case of limited partnerships or ordinary partnerships the same should be presented to the said office within seven days after the approval of accounts at a meeting of partners. When a statement of accounts is presented it should be accompanied by a copy of the statutes of the company, of the business report presented to the shareholders or partners, and of the resolutions passed at the meeting.

3.—In the case of first-class incomes, that is incomes of juridical persons, being different from those of individuals which are based on estimates, whereas those of juridical persons are based on actual income, should the business year comprise the period in which the Revised Treaties had not become operative and that in which they became operative, such juridical persons are required to forward a statement of accounts to the Taxation Office on the present occasion.

4.—The income of a juridical person is calculated on the balance remaining after deducting total expenditures or gross losses from the total receipts or gross profits in each fiscal year. In case of there being a balance carried over from the accounts of the previous year on which the tax has already been imposed, and, in the case of an insurance company, should there be an amount reserved to meet liability for insurance, such amount may be deducted. If among the profits, there is a dividend which has been received from a juridical person on whom tax has already been imposed, or interest on public bonds or companies' debentures, which has been paid in those parts of Japan where the Income Tax Law is in force, that is where the second-class income tax has already been imposed, such amount may also be deducted.

5.—Amounts of money given to members or employees of a company as rewards at a fixed period or occasionally, irrespective of the profit or loss of the company, according to the statutes of the same, may be deducted from the profit side in preparing a statement of accounts. In case of defraying rewards from a balance remaining after deducting all the business expenditures as total loss from the total profits according to a resolution at a general meeting of shareholders or partners, such amount of money shall not be deducted, or, in other words, all the balance shall be calculated as net profit.

6.—When a reserve is made for the purpose of an extension of business, of the purchase of property, of the redemption or depreciation of machinery, furniture, etc., if such reserve is defrayed out of the net profit after deducting the total loss from the total profit, it shall not be deducted.

7.—A juridical person who has a head office in any part of Japan, where the Income Tax Law is in force, and derives income from his trade, business, property, or occupation in a foreign country, must forward to the Government a statement of accounts, adding it to his income in Japan. However, in case the office in this country is merely a branch of a head office in a foreign country, a statement of accounts of profit and loss only in respect of business or property in any part of this country, where the Income Tax Law is in force, need be presented.

8.—With regard to the income of a juridical person the competent Taxation Office will make investigation into any statement of accounts presented, and the Director of the competent Revenue Administration Bureau will decide upon the amount of tax to be levied. The process for the collection of the tax shall be adopted after each tax-payer has been notified of the amount of tax to be collected. Sometimes it may be possible that the amount of income does not agree with that of the statement of accounts presented, as the result of investigations made by the Government. If the tax-payer thus notified is not satisfied with the amount of income decided upon by the Government he may apply for an enquiry by stating the reasons of his objection, or may make an appeal, or institute an administrative litigation. In doing these, however, there will be considerable trouble inevitably involved, and therefore it is required that any juridical persons, in presenting a statement of accounts, should bestow careful attention on its compilation and ensure its accuracy.

9.—Although persons who derive income from property, business, or occupation in any part of this country, where the Income Tax Law is in force, are under obligation to pay tax, income falling under any of the following heads is not liable to taxation, and therefore no report is required as to it:—

1. Income of juridical persons, the business of whom is not conducted with the object of profit.
2. Occasional incomes which do not belong to undertakings conducted with the object of profit.
3. Income realised from property, or trade, business, or occupation in a foreign country, or in places in Japan where this law is not in force (Formosa, Okinawa-ken, or Luchu islands, Ogasawara-jima, or the Bonin islands, and the seven islands of Idzu). But this provision is not applicable to the income of a juridical person whose head office is in a place where the Income Tax Law is in force,

10.—Entries in the statement shall be made in compliance with the principal points mentioned in the above paragraphs, and the report so entered shall be forwarded to the Yokohama Taxation Office (Tobe Rokuchome), whtiin the legal period. Anyone who wishes for further information or explanation may obtain the same by applying to the Yokohama Taxation Office at any time. For further details persons are referred to an English translation of the Tax Laws of Japan, published by the Yokohama Revenue Administration Bureau.

ADDITIONAL REMARKS.

If the members or partners of a juridical person upon whom first class income tax has been imposed have any other income coming under the third class, they should as a matter of course forward a report of the income as the income of an individual.

Special attention is called to this matter so as to avoid any possible misunderstanding on the subject.

SANITARY CONDITION OF THE FAR EAST AS IT AFFECTS THE UNITED STATES.

By STUART ELDRIDGE, M.D.,

Acting-Assist. Surgeon M. H. S., Sanitary Inspector at Yokohama, Japan; Late member Imperial Board of Health, at Tokyo, and Sanitary Adviser to the Japanese Government.

Great as has been our recent progress in the knowledge of the causes and methods of prevention of the infectious diseases, it is questionable whether, as regards the propagation of such from point to point, any advantage gained by our more exact information is not almost neutralized by the present rapidity and frequency of communication by sea and land, and the great increase in the number of people transported.

At the time when crossing the Atlantic involved a voyage of 12 to 14, and, as concerns the Pacific, of from 20 to 30 days, and in the earlier era of the sailing ship, disease either manifested itself before arrival at a United States port, and so could be, as a rule, stopped at quarantine; or, in the case of sailing vessels, the infection often exhausted itself in a shipboard epidemic before the American destination was reached.

The Orient is the home and focus of the most dangerous and infectious epidemic maladies. Cholera, always present in India, has become almost, if not quite, acclimated and endemic in China, is frequently epidemic there, and lingered in Japan, sometimes widely and fatally prevalent, from 1877 until 1896, having been introduced from China in the former year, and, perhaps, on several subsequent occasions.

Smallpox is more or less epidemic in China and the Philippines every year, and, though with greatly diminishing frequency, is occasionally widely prevalent in Japan as well.

Dysentery of a peculiarly infectious and malignant type, of which an average mortality of over 25 per cent. is an evidence, has been steadily increasing in Japan, with each succeeding summer, for nearly 20 years, until now the whole country is infected by it to such an extent that the number of cases during the past few years has reached annually over 100,000. A special report on this disease, by myself, will be

Digitized by Google Original from CORNELL UNIVERSITY

found in the Public Health Reports of the U.S. Marine Hospital Service for January, 1900.

Beriberi, too, a comparatively little understood disease, but undoubtedly infectious and capable of becoming violently epidemic and fatal, conditions on shipboard seeming somewhat specially to favour its development; has, during the past 25 years, spread from its probably original home in the Far East, until now it is occasionally met with, sometimes in serious outbreaks, almost all over the earth.

Leprosy also must be mentioned in this connection, although, of course, its infection can be more easily detected and guarded against than those of the maladies just named.

All the foregoing diseases, however dangerous and insidiously propagated they may be, must at present yield in importance to the plague, when considered from the point of view of State Medicine.

After a century of practical quiescence, during which it lingered only in remote Asian localities, or, if it invaded better-known regions, the epidemics following were, however severe, of but comparatively limited extent, this disease had for most of us become but of historical interest, to be read of as it occurred in Europe in former times, with pity for the ignorance that encouraged or failed to check such pestilences, and with self-congratulation that in these days we need no longer fear them. Our happy confidence in the practical extinction of the plague has, however, of late been rudely destroyed. Plague is now actually present and epidemic to a greater or less degree in China, the Philippines, Formosa, Hawaii, the Malay Peninsula, India, Persia, Arabia, Egypt, Turkey, Eastern Russia, Portugal, East Africa, the Madagascar, Mauritius, Reunion, Paraguay, Brazil: has recently knocked at the doors of both England and the United States; and, within a month, was violently, if briefly, epidemic in Japan, where it has, fortunately, been, at least temporarily, arrested either by the very active measures employed by the Government or by an exceptionally cold winter or by both, though grave fears are entertained that it may reappear in the coming spring.

In short, plague shows at present, the strongest tendency to become pandemic.

While, undoubtedly, in the most civilized countries, the conditions favouring filth-bred diseases are no longer so general as once, when the sanitary state of the palace was little better than that of the hovel of to-day, and, consequently, we have reason to hope that, with the knowledge and means at our disposal, we can control the pest, if only after a struggle, costly both in lives and money; there are, even in the best governed modern cities, slums which offer a most favorable environment for the germs of the disease. That it behooves the authorities responsible to at once inaugurate thorough sanitary reform in such localities, in anticipation of the possible introduction of plague, is a truism; but as is always the case, no action is likely to be taken until the danger is at, or within, our doors.

However successful may be the attempt to exclude, control, or stamp out this malady in more enlightened regions, the old foci of the disease in Asia, where no intelligent effort for its control or suppression is to be looked for, will still remain, an ever-present danger, from which, at any time, may start the pandemic wave of pestilence.

First studied from the point of view of our recent advances in etiologic research, in Hongkong, in 1894, and, later, especially in India, our knowledge of its causation, the conditions determining its epidemic development, and its methods of propagation from man to man, or from the lower animals to man, is still sadly incomplete.

The protean nature of plague constitutes one of its most dangerous features considered with reference to its early recognition when met. So called pestis minor, with its close resemblance to ordinary, and comparatively, innocuous lymphadenitis, but capable, under conditions as yet unknown, of assuming malignant epidemicity; mild or slowly developing cases of the graver form of the malady, which, after a few hours, or days, of relatively slight and non-specific symptoms, suddenly develop with fatal violence; and the pneumonic type of pest, often closely simulating acute pneumonia; may all, especially in single cases, and in the absence of a well-marked epidemic, easily escape correct diagnosis and the enforcement of proper precautions; and so initiate a serious outbreak.

The material infection of plague, too, is, in all probability under natural conditions, more persistent and resistant to disinfectants and changes of temperature than is shown by laboratory experiments, while it undoubtedly shares the property of certain other pathogenic microbes, *e.g.*, those of cholera; of, at times, adapting itself to unusual and ordinarily unfavourable climatic conditions; and all we know points to the ready transmission of the disease by infected bedding, clothing, merchandise, or soil, in which the infection may remain active for a period as yet undetermined, but, certainly, not brief.

Such being some of the most imminent dangers from the Far East, to which our country is exposed, an exposure that must became more perilous with the increase of travel that will, infallibly, follow upon our territorial expansion in the Pacific, how are they to be guarded against?

First and foremost as a protection is, of course, our seacoast quarantine; but this is, as yet, but imperfectly and irregularly organized. It is one of the faulty results of our federated system of government that matters deeply affecting the welfare of the people as a whole, such as the administration of quarantine, are, at many points, in the hands of local officials, often untrained, inexperienced, and, perhaps, appointed from purely political considerations. At some places a double system of quarantine is in operation, the class of officials just mentioned cooperating with or, more often, opposing and embarrassing the officers of the Marine-Hospital Service, who are acting in behalf of the United States. In time of pressing danger, as for example, in the notorious instance of importation of cholera to New York by the steamship *Normania*, it may be, as it was then, indispensably necessary for the United States, legally or illegally, to assume absolute control. This, however, can be done only with difficulty and at the expense of severe, perhaps dangerous, friction with the State or city authorities,

Of primary importance then is the placing of the whole system of sea-coast quarantine in the hands of the only body of trained and experienced sanitary experts in the country, the officers of the Marine-Hospital Service, by effective legislation, ignoring all local organizations and interests as well, when conflicting with thorough precaution.

Protective measures employed abroad, so far as they consist in the mere issuing of bills of health to vessels, which certify to the good health of the persons on board and to the sanitary condition of the port of departure, are common to all civilized countries. With the exception, however, of those issued at certain ports, on behalf of the United States, bills of health, in these days of ocean telegraphy and rapid communication, have lost much of their former value and have degenerated into a simple formality, being issued, as a rule by the consuls of the country to which a ship is bound, without special knowledge on their part of the sanitary state of the place of issue, and upon the unsupported statement of the captain or surgeon of the vessel that all is well on board. This applied, equally and generally, in the case of ships destined for ports in the United States, prior to the passage of the Act of Congress approved February 15, 1893, granting additional quarantine powers and imposing additional duties upon the Marine-Hospital Service. This act provides for the detailing of medical officers of the government, to serve at the consulates in foreign ports, for the purpose of furnishing information, inspecting vessels, and intelligently granting the necessary bills of health.

Under this act, officers and acting officers of the Marine-Hospital Service, the latter selected from resident practitioners of special knowledge of the local conditions and diseases, and familiar with the language of the country, have been assigned to the consulates of the United States at most points of large emigration or which are peculiarly dangerous sanitarily; and their services have, again and again, proved of the highest value.

My own experience, as one of the medical officers of the second class above mentioned, during 6 years, and at a point of special importance, has shown me the utter futility of dependence upon the judgment or information of non-medical officials, however careful and conscientious, or upon the statement of interested officers of ships, and the absolute necessity of skilled and independent professional assistants to the consuls.

Yokohama, the port at which I am on duty, is, in a sense, and so far as America is concerned, the sanitary gateway of the far East. At the distance of a journey of a week or more, by steamer, from the China ports; the point of final departure for all the lines trading between China and Japan and our Pacific coast, some 7 in number, any infection embarked at Hongkong, or at Amoy or Shanghai, the Chinese ports of call, is almost certain to manifest itself prior to the sailing of the ship from Yokohama, and to be detected at the man-by-man inspection of all on board made just before the departure of the vessel. Should infectious diseases be found at this final examination the bill of health is withheld pending thorough disinfection, and, if necessary, detention in quarantine; and, as a penalty, up to $5,000, may, under the law, be imposed upon any ship entering a United States port without these documents, the vessel, be she American or of other nationality, is practically under the control of the United States Sanitary Inspector, and must submit to such measures as he thinks necessary. As there is now an officer of the Marine-Hospital Service located at Hongkong, and, since the recent outbreak of plague in that city, one at Kobe also, it will be seen that, in this part of the part of the world at least, and with certain exceptions hereafter mentioned, the system of extra-territorial protection is as perfect as can well be devised.

In addition to the duties above noted, officers of the Marine-Hospital Service abroad are expected, under the head of furnishing information, to keep the Supervising Surgeon-General thoroughly posted upon all matters of sanitary interest relating to the countries in which they are stationed, and material of the greatest value is thus supplied for the various publications of the service.

When especially dangerous diseases are epidemically prevalent at foreign ports, or in the neighbourhood of the same, the law of the United States imposes upon all steerage passengers, whether way or through, upon ships bound thither, disinfection of persons and effects, and a quarantine before embarkation of duration varying with the incubation-period of the existing disease. To enable this to be effectively carried out, the steamship companies interested have been induced to erect, at several ports in Europe from which steerage travel is greatest, regular establishments for the accomplishment of the isolation and disinfection required, and these are under the supervision of the United States medical officer on duty at the port.

As yet no such complete appliances, although urgently required, have been supplied at any port in China or Japan, though one of the steamship lines possesses a disinfecting plant in Hongkong, erected under the pressure of the late Hawaiian Government, but which has no buildings for isolation attached, and is, besides, not generally available. It is, however, hoped that arrangements may soon be effected by which, at least in Yokohama, the needful equipment will be at the disposal of the medical officer in charge. Meanwhile the United States sanitary inspectors in the Orient are doing as best they can, by makeshift and temporary arrangements, to carry out the spirit if not the letter of the law, though under great difficulties.

Altogether, with the exception of the deficiency in equipment just mentioned, it is not easy to see where, under existing circumstances, it is possible to take greater or more effective precautions abroad save by a wider extension of the system of attaching medical officers to consulates, or, perhaps, by a modification permitting the consuls, at ports not of the first importance, to employ the services of local physicians, at a compensation paid by fees, and so varying with the amount of work performed.

In concluding these brief and imperfect notes upon an important subject, I would say that, so far as my personal experience goes, while, in the earlier days of the enforcement of the necessarily somewhat onerous requirements and restrictions of the United States laws, the shipping companies were somewhat obstructive and recalcitrant, they are beginning to recognize that the precautions required are a protection and advantage to themselves and that, as a rule, they are ready to cooperate with and asssist the Sanitary Inspector in their execution.—*The Philadelphia Medical Journal.*

[We are informed that, since the above was written, arrangements have been made with the steamship companies trading between Japan and the United States, by which, both at Yokohama and Kobe, they will furnish the necessary facilities for disinfection and, when required, detention of steerage passengers or infected crew, under the supervision of the U.S. officials.—Ed. *J.M.*]

SILK.

Vernacular papers agree in stating that the silk trade of Yokohama continues to be dull in spite of the general activity of foreign markets. Orders from abroads appear to decrease day by day. Last year the market held out bright prospects for every merchant, quotations in the case of fine silk having risen from 800 *yen* to 1,100 *yen*. As for first class Shinshiu silk, the value even reached to 1,080 *yen*, and this tendency to increase steadily continued until October. This year the condition is exactly reversed. Prices on the whole have fallen by 200 *yen* in the case of coarse silk, and prospects are gloomy in all respects. The following comparative figures clearly show the situation of the silk trade:—

	1899. Bales.	1900. Bales.
Stock at the end of May.....	1,440	8,577
Same from June 1st to March 1st ...	111,404	92,445
Total.....	112,844	112,792
Sales from June 1st to March 31st .	108,018	104,315
Stock on March 31st	4,764	1,479
	Yen.	Yen.
Price of silk for June delivery	112	110
Price of coarse filatures at end of March	1,150	1,080
Price of fine filatures	1,150	1,110

No small anxiety is felt by firms interested in the trade.

BUSINESS CORPORATION LAW.

This law consists of nine chapters containing 90 Articles in all, of which the most important may be enumerated as follows :—

Art. I.—The Business Corporation dealt with in this law is to be understood to mean the juridical persons of an association organized for purposes as set forth below, securing the personal occupation or financial benefit of its members by :—(1) Issuing loans to the members of the corporation and affording facilities for investing their savings. (2) Selling their manufactures. (3) Purchasing articles necessary for their occupation or subsistance and selling the same to the members. (4) Disposing of articles produced by them, or providing them with work or articles necessary for their occupation.

The business specified in clause 1, is not allowed to be carried on conjointly with any of the transactions mentioned in other clauses.

Art. II.—Business corporations shall be of three classes : limited, unlimited, and guaranteed.

Art. VI.—The corporations shall be free from income and business taxes.

Art. NII.—Any number of persons less than seven cannot be organized into a corporation.

Art. X.—A corporation is not allowed to limit the number of its members.

Art. XVII.—Each member must be possessed of more than one and not more than ten shares.

Ar. XLIII.—Any surplus funds for distribution among the members of the corporation shall be appropriated for the payment of shares in arrear.

Art. XLIV.—The corporation is not allowed to distribute the surplus until it has redeemed all losses sustained by it.

Art. XLVI.—The corporation is required to set apart one-fourth of the surplus at the end of each business year until the same shall have reached the reserve specified by its regulations,

Art. LIX.—The corporation shall be under the direct supervision of a Minister of State, a local Governor, or communal Headman.

Art. LXXVI.—The manager, inspector or liquidator of a corporation shall be liable to a fine of from 5 to 300 *yen* in the cases enumerated below :—

1 When he has failed to register as prescribed by these regulations, or has made a fraudulent registration.

2 When he has made false statements to the government officers or at a general meeting of the corporation, or has concealed facts.

3 When he has neglected to note down the items in the document as required by this law, or has inserted fraudulent notes in them.

4 When he has violated Articles XLIII. or XLVI. or four others relating to a statement of accounts, the nature of shares, and the distribution of property.

5 When he has failed to present necessary reports to the Authorities, or refused to undergo inspection, or to comply with the order of the Government.

6 When he has neglected to insert advertisements as prescribed in Article 79 or 81 of the Civil Code, or has issued fraudulent advertisements.

7 When he has acted contrary to the provisions of Article 70 or 81 of the Civil Code.

Art. LXXVIII.—The date of operation of these regulations shall be determined by Imperial Ordinance.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE BOER WAR.

THE BOERS PUSHING SOUTHWARDS.

Shanghai, April 6.

The Times correspondent at Bloemfontein, telegraphing under date of the 3rd instant, says that the Boers have crossed the Modder River in some force on the east of Bloemfontein, and that the mounted infantry has been in touch with them all day at Bushman Kop, twelve miles distant.

TROOPS FOR BEIRA.

Later.

Altogether four transports, mostly with Bushmen, have gone to Beira.

MAFEKING.

Reuter's Agent, telegraphing from Mafeking, under date of 23rd March, says that after several days' bombardment the enemy are very quiet.

THE QUEEN AND HER IRISH SOLDIERS.

The Queen has ordered the formation of an Irish regiment of Foot-guards.

CLEMENTS.

Shanghai, April 7.

The *Daily Mail* correspondent telegraphs from Bloemfontein under date of the 4th inst. that Clements' division, 6,000 strong, passed Bloemfontein in the morning and encamped temporarily five miles further south.

THE FREE STATE.

The *Daily News* correspondent telegraphs that President Steyn has been appointed commandant of the Free State. The General Volksraad was adjourned temporarily after a comforting speech from Steyn.

A SKIRMISH.

Reuter's agent telegraphs from Bloemfontein under date of the 5th inst. that a slight skirmish took place on the preceding day at at Bushmans Kop. The Boers moved south and the British reoccupied Uppington.

METHUEN CAPTURES A COMPANY OF BOERS.

Shanghai, April 7.

Lord Methuen telegraphs from Boshof (the word in the original is "Loshop," but it is probably a mistake for "Boshof") that on the 5th of April he surrounded a Boer force under General Villebois-Mareuil. None escaped. Villebois and 7 Boers were killed, 8 were wounded, and 54 were taken prisoners.

CAPTURE OF BRITISH BY BOERS AT REDDERSBURG.

Lord Roberts telegraphs under date of the 5th that it is supposed that three companies of the Irish Rifles were captured at Reddersburg. No trace of them can be found and they are doubtless all prisoners.

LATER NEWS OF THE REDDERSBURG AFFAIR.

Two companies of the Ninth Regiment of Mounted Infantry were surrounded near Reddersburg, eastward of Bethany Station, by a strong force of Boers. They resisted from noon on the 3rd until the morning of the 4th, when they must have surrendered. General Gatacre has been despatched to attack the Boers.

THE CASUALTIES IN THE AMBUSH.

The total casualties in the ambush near Thaba Nchu were 435, namely, 8 killed, 75 wounded, and 352 missing.

ACCIDENT TO A LINER.

The liner *Mexican* sank two days from Cape Town after collision with a transport. The passengers, 112 in number, were all landed.

ATTEMPTED ESCAPE.

Shanghai, April 8.

A determined attempt to escape was made by the Boer prisoners in Simonstown. Fourteen succeeded.

THE BOERS AT BLOEMFONTEIN.

Reuter's agent telegraphs from Bloemfontein that parties of Boers are seen in the environs of the town.

THE REDDERSBURG AFFAIR.

Shanghai, April 9.

The five companies which were captured near Reddersburg on the 3rd instant were marching across country to Smithfield when they were surprised by a force of 3,200 Boers with five guns. The British numbered 591. They gallantly defended themselves, but the Boer guns obliged them to surrender. The British casualties were : Two officers killed, two wounded, and nine captured ; eight men killed, 33 wounded, and the remainder captured.

THE BOER ACTIVITY ROUND BLOEMFONTEIN.

It is believed that the extreme activity of the Boers around and to the south of Bloemfontein is rather in the nature of a raid against the inhabitants for the purpose of terrorising the Free Staters who have submitted. The British troops have been withdrawn from Rouxville to Beeste Kraal. The Boers are all round Rouxville.

A BEWILDERING SITUATION.

Later.

The military situation is regarded as bewildering. The British Army is immobile at Bloemfontein, while a force of Boers, estimated at not less than 12,000, of which Olivier's commando is the nucleus, is scouring the country far South and overpowering or threatening the British outlying posts. The formation of a town guard at Aliwal North indicates that even a fresh invasion of the Cape Colony is possible.

SWAZILAND.

The condition of Swaziland is frightful. The Queen's impies are butchering the obnoxious chiefs wholesale.

EXCITEMENT IN PARIS.

Many Frenchmen are among Methuen's prisoners. There is excitement in Paris in consequence, especially at the death of Villebois.

OUTPOST AFFAIR NEAR SPRINGFIELD.

The Boers from the Waterworks have attacked our outposts near Springfield.

TROUBLE IN ASHANTEE.

There is serious news from Ashantee. All the tribes are in arms.

EFFECT OF THE REDDERSBURG AFFAIR.

Shanghai, April 10.

The Times correspondent, telegraphing from Bloemfontein under date of the 6th instant, says that the loss of the companies at Reddersburg is unfortunate, as it completes the eastern flanking movement by the Boers, who now stretch in a thin line from Sannas Post on the south to a point on the east of the Jagersfontein road.

BRABANT.

Later.

Reuter's agent telegraphs from Aliwal North under date of the 7th inst. that four companies of Irish Rifles and two companies of Volunteers arrived from Rouxville yesterday evening covered by two squadrons of Border Horse sent out by Brabant to prevent the enemy from frustrating the British movement.

ON SPECIAL DUTY.

Rundle is ordered on special duty to Kimberley.

THE BOERS' ADVANCE : WEPENER SURROUNDED.

Shanghai, April 11.

Six hundred Boers have occupied Rouxville.

Digitized by Google Original from CORNELL UNIVERSITY

A larger commando, mainly composed of burghers who had previously submitted, have left Smithfield for Wepener. Two thousand Boers with five guns are already round Wepener, which is practically isolated, but the place is provisioned and entrenched.

The enemy is in sight of Aliwal North.

HORSES FOR THE CAPE.

Twenty-three steamers have been chartered to convey 20,000 horses, from Australia, Buenos Ayres, and New Orleans to the Cape before the end of May.

CARRINGTON.

Shanghai, April 11.

Gen. Carrington, who is now at Capetown, proceeds to Beira immediately.

FIGHTING AT WEPENER.

There has been severe fighting at Wepener during two days. There were considerable casualties on both sides, but the result is unknown.

SEVERE BOMBARDMENT AT MAFEKING.

The enemy opened a most furious bombardment at Mafeking on the 27th March. The Boers advanced to attack the place on two sides, but were repulsed.

RUNDLE.

Gen. Rundle, with the Eighth Division, has been diverted to Springfontein.

THE GENERAL POSITION.

Reuter's agent telegraphs from Bethulie under date of the 9th that the Boers now practically hold the entire Free State on the east of the Railway. The enemy is located 12 miles to the east of Bethulie Bridge, having evidently come down country after the Reddersburg affair.

COLONEL PLUMER'S ADVANCE.

Shanghai, April 12.

Colonel Plumer, with 270 men and a Maxim, reached Ramathlabama on the 31st March and got within six miles of Mafeking, but was forced to retire in good order. His casualties were three officers and seven men killed; three officers and 24 men wounded; and 11 missing. The enemy's loss was serious.

[Note.—Ramathlabama is 14 miles to the North of Mafeking on the railway.—Ed. *J.M.*]

COL. PLUMER.

Later.

Colonel Plumer was slightly wounded in the action on the 31st March.

BRABANT AT ALIWAL NORTH.

Colonel Brabant, with the bulk of his brigade, is at Aliwal North.

REINFORCEMENTS.

Troops have been ordered from Durban to the Cape.

GENERAL GATACRE.

General Gatacre returns to England.

GENERAL POLE-CAREW.

General Pole-Carew has been appointed to the command of the 11th (?) Division.

WEPENER.

The fighting continues at Wepener. The garrison is holding out bravely. Troops are rapidly advancing to the assistance of the place.

LADYSMITH.

Reuter's agent telegraphing from Ladysmith under date of the 10th inst., says that the Boers opened fire that day, shelling the British camp at Elandslaagte from three positions. They did no damage. A British reconnoisance found the enemy in large force and strongly fortified.

THE U. S. "BENNINGTON."

The American warship *Bennington* has been ordered to China, owing to the unfavourable conditions prevailing there.

ST. HELENA AND THE PRISONERS.

The authorities intend to ship all the Boer prisoners to St. Helena.

H.M.S. "POWERFUL."

The *Powerful* has arrived at Portsmouth, where she has had a magnificent reception.

(Telegrams Received at the Legation of France in Tokyo.)

THE ATTACK ON THE PRINCE OF WALES.

Saigon, April 6.

At Brussels yesterday evening an anarchist named Sipido, an ironmonger, fired, at the railway station, two shots with a revolver into the carriage containing the Prince and the Princess of Wales, who were on their way to Denmark. No one was hit. Sipido declared that he fired because the Prince of Wales had caused thousands of men to be killed in South Africa. The Prince has asked for merciful treatment for him. There is universal indignation.

WAR NEWS.

Saigon, April 6.

The English are fortifying Bloemfontein. The Boers, to the number of about 20,000, are massing in the neighbourhood of the town and are menacing the English communications.

The London journals show some uneasiness about the situation of Lord Roberts.

CHAMBER OF DEPUTIES AND THE COLONIAL ARMY.

Saigon, April 8.

The French Chamber of Deputies has adopted the project for a Colonial Army, and has agreed that it should be attached to the Department of War.

CAPTURE OF A BOER DETACHMENT.

Lord Methuen, with infantry and guns, surrounded near Boshof the French Colonel Villebois-Mareuil with a detachment of 70 Boers. Villebois-Mareuil and 7 Boers were killed, 8 wounded, and 54 made prisoner.

BRITISH DETACHMENT CAPTURED.

The Boers, near Reddersburg, in the neighbourhood of Bethany, killed and wounded 40 English and made 600 prisoners.

CONSULAR APPOINTMENTS.

Saigon, April 9.

M. Bons d'Anty has been nominated Consul at Chungking; M. Dautremer, to Szemao; M. Chassain de Marcilly, to Hankow; M. François, to Meng-tze; and M. Guillien to Lung-tze-chow.

SENATOR FOR NICE.

Saigon, April 10.

General Berenger has been elected Senator for Nice.

SOUTH AFRICA.

The Boers, to the number of ten thousand, reoccupy the places evacuated by the English in the south of the Orange Free State.

Saigon, April 11.

The Boers yesterday attacked the British garrison at Wepener, and renewed the attack to-day.

THE BUDGET.

Saigon, April 12.

The French Senate have adopted the Budget with some modifications.

THE WAR.

The Boers show great activity in the Orange Free State. They continue to attack Wepener.

(By Special Arrangement with the "Jiji Shimpo.")

RUSSIA AND KOREA.

Söul, April 11.

It is rumoured that the Russians have presented to the Korean Government a renewed demand with reference to Masampo consisting of 11 items.

The principal local official at Mokpho has been dismissed from office for entering into negotiations with Russia on the subject of a lease of land on Koha Island without proper consideration of the question of Treaty limits.

(From the "Hongkong Daily Press.")

THE CHINESE EMBROGLIO.

Shanghai, March 30.

A Peking native telegram states that the Chinese 24-knot cruisers *Haiten* and *Haishow* have been ordered to Singapore to arrest the Reform leaders there and to evade any possible British pursuit.

(From the "China Mail.")

ABDUCTING POLITICAL REFUGEES.

Hongkong, March 29.

On Tuesday Kwong Yu-pui, a member of the Chinese Reform Party, and formerly Editor of the Chinese newspaper published at Yokohama, was arrested by emissaries of the Chinese Government here in Hongkong. The captive was abducted to Canton.

Sir Henry Blake, the Governor, and the British Consul at Canton have made representations on the subject to Li Hung-chang, the Chinese Viceroy to Canton, but the latter still holds Kwong a prisoner.

Hongkong, March 30.

Kwong Yu-pui is safe in Macao.

Notes from The Illustrated London News.

(a) A critical point in this variation. If P to K 5, Q to R 4 ch, and Kt to Q B 3 is answered by B to Kt 5. Perhaps the best is Q to Q 3.

(b) Very awkward, but Black has gained the attack and threatened Kt takes B, followed by B to B 4 or Q to Kt 5.

(c) The position is full of interest. White might, instead, try R to K Kt sq, threatening to win by B to K Kt 5. Black could not reply Q takes P because of R to R sq. Anyhow, the text move leads at once to a most hopeless game, and Black makes the best of a fine attack.

Vivanti Bros.	76
Kiito Gomei Kaisha	47
Doshin Kaisha	24
Mitsui Bussan Kaisha	22
Total	169

LATEST COMMERCIAL.

IMPORTS.

There is absolute stagnation in all lines. In yarns, grey shirtings, and fancy cottons and woollens Japanese dealers still stand out against the prices demanded by importers, though the latter are more than justified in their demands by the high values prevailing at home. Metals are also quite inactive for similar reasons.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirting—8¼lb, 38½ yds. 39 inches	$2.85 to 3.85
Grey Shirting—9lb, 31½ yds, 45 inches..	4.75 to 6.50

Cuticura SOAP

For the Complexion

To purify and beautify the skin and prevent pimples, blotches, blackheads, redness, roughness, yellow, oily, mothy skin, chapping, tan, sunburn, and many other forms of skin blemishes, no other skin or complexion soap is for a moment to be compared with CUTICURA SOAP, because no other soap reaches the cause, viz., *the clogged, irritated, or inflamed* condition of the PORES.

For Red Rough Hands

SOAK the hands, on retiring, in strong, hot lather of CUTICURA SOAP. Dry thoroughly, and anoint freely with CUTICURA Ointment, the great skin cure and purest of emollients. Wear during the night, old, loose kid gloves. For red, rough, chapped hands, dry, fissured, itching, feverish palms, shapeless nails with painful finger ends, this one night treatment is simply wonderful.

For Hair and Scalp

SHAMPOO with CUTICURA SOAP, rinse with warm water, dry, and apply a light dressing of CUTICURA, purest of emollients, gently rubbed into the scalp. This simple, refreshing, and inexpensive treatment will soothe irritated and itching surfaces, stimulate the hair follicles, clear the scalp and hair of crusts, scales, and dandruff, supply the roots with energy and nourishment, and make the hair grow, when all else fails.

For Sanative Uses

ITS remarkable emollient, cleansing, purifying properties, derived from CUTICURA, the great skin cure, warrant the use of CUTICURA SOAP, in the form of baths for annoying irritations, inflammations, and chafings, for too free or offensive perspiration, and also in the form of internal washes and solutions for ulcerative weaknesses, and for many sanative antiseptic purposes which readily suggest themselves to women, and especially to mothers. The use of CUTICURA Ointment with CUTICURA SOAP will also suggest itself in the severer cases.

INSTANT RELIEF
SPEEDY CURE
FOR EVERY HUMOUR

Warm baths with CUTICURA SOAP to cleanse the skin and scalp, gentle anointings with CUTICURA to heal the skin, and mild doses of CUTICURA RESOLVENT to cool the blood, will afford instant relief, permit rest and sleep, and point to a speedy, permanent, and economical cure, when all else fails.

Sold everywhere. Price, THE SET, 6s.; or, CUTICURA SOAP, 1s.; OINTMENT, 2s. 6d.; RESOLVENT, 2s. 6d., of F. NEWBERY & SONS, London, E. C. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

The Japan Weekly Mail.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 21ST, 1900.

SUMMARY OF NEWS.

HONGKONG had only 25 hours of recorded sunshine in March.

THE entries for the Spring Meeting of the Nippon Race Club exceed the numbers entered at the Autumn Meeting.

THE yacht *Tolna*, with Count Festetics on board, has been wrecked on the Minicoy islands, Ceylon. The Count and the crew are believed to have got ashore safely.

FIRE broke out on the 15th inst. at Awabori-dori, Osaka, in a house occupied by Kikyo Heijiro. Five houses were destroyed. A carpenter's family resided on the upper-floor of one of these houses and all of them, Matsubara Sokichi (52); Kumi (45) his wife; Tomi (18) the daughter and Uichi (11) the son, were burnt to death.

THE Easter services in the various Churches of Yokohama were well attended and the musical portions were particularly pleasing at Christ Church and Union Church.

THE Duke of York has accepted from a resident of Cork a thousand packets of shamrock seed, which will be sown upon the graves of Irish soldiers in South Africa.

THE six-year-old grandchild of Prince von Hohenlohe, the German Imperial Chancellor, has been bitten by a mad dog at Cannes and was sent to the Pasteur Institute for treatment.

THE German Emperor has given his brother, Prince Henry of Prussia, six months' leave of absence from naval duties, after which period his Royal Highness is to be given a post on land.

THE severest snowstorm known in Austria for many years began on March 30. The streets of Vienna were impassable. Provisions ran short in many parts of Austria and on March 31st railway service ceased entirely.

SELDOM has Yokohama witnessed a more successful extravaganza than that of "Blue-beard," given at the Public Hall on Thursday. Pretty music, charming dancing, and clever acting made the evening thoroughly enjoyable.

IN the University regatta held on the Sumida-gawa on Saturday, the Championship flag was won by the crew sent by the Medical College; Law and Engineering making but a poor bid for the honour.

OFFICIAL notification has been received in Manila, but not as yet published, that the Eighth Army Corps is to cease to exist, and that the military forces of the United States in the Philippines are to constitute a separate department to be known as the Department of the Philippines.

THE news from South Africa is meagre this week. Lord Roberts has been criticising severely the tactics of Generals Buller, Warren, and Thorneycroft before Ladysmith. The seige of Wepener has been raised. Mafeking still holds out. Sir Charles Warren has been recalled.

QUEEN VICTORIA cabled to Lord Roberts asking him to convey to Mrs. Joubert, widow of General Joubert, her sympathy at the loss of her husband, and to tell her that the British people always regarded the dead General as a gallant soldier and honorable foeman. The captured British officers sent a handsome wreath.

SUNDAY was the great cherry-viewing day in Tokyo and the public parks were crowded. With reference to the affair the following police-statistics for the day are interesting:—Asakusa—drunken men, 87; missing children, 47; fights, 11; pickpockets arrested, 2. Honjo—drunken men, 205; missing children, 14; fights, 96 (severe injuries, 6); pickpockets, 2; other misdemeanours, 10.

THE *Jiji* give some figures with regard to the number of convicts sentenced to death during the past three years. The total, it remarks, did not exceed 3 males in 1897, 2 males and 1 female in 1898, and 3 males and 2 females in 1899. This year the figure had already reached 5 up to the end of last month, while 11 more are under sentence of death.

DR. STAINER'S sacred meditation, "The Crucifixion," was given at the close of Evening Prayer on Good Friday by the choir of Christ Church. The beautiful music was charmingly rendered under the skilful direction of Mr. W. Karl Vincent, Organist of the Church. The solos were taken by Mr. H. E. Hayward and Mr. S. H. Somerton. The quartet was particularly well sung.

Truth hears that the dispute between the British Treasury and the representatives of the late Duke of Westminster has been settled, and the case will not go into the law courts, the result being that death duty will now have to be paid upon the whole of his real and personal property. It is estimated that upwards of a million sterling will have to be paid by the new Duke in respect of the duty on the settled estates in Middlesex and Cheshire.

A FIRE occurred in the library of the Vatican at the end of March and it was almost by a miracle that a quantity of ancient books and documents of great value were saved from destruction. The fire originated in the chimney of a room occupied by one of the night watchmen, who gave the alarm, calling the papal guard and city fire department. After considerable effort the fire was finally quenched, although not until much damage had been done by smoke and water.

MESSRS. C. ILLIES & Co., the local Agents of the United States and China-Japan Steamship Line, have received a telegram stating that the steamer *Verona*, of the above named line, from New York to Japan, sprang a leak which necessitated her being beached near Suez to save her from foundering. The steamer is now in drydock at Suez, and is expected to be able to continue the voyage ont he 5th proximo. The cargo is reported to be considerably damaged, but no particulars have as yet reached the local office.

ONE of the oldest residents of Yokohama, Mr. E. Whittall, died on Saturday morning at the residence of his son-in-law, Mr. V. Blad. Mr. Whittall, who was in his sixty-ninth year, came to the East at a very early age. He was for some years in China, and was afterwards chief of the Yokohama branch of the firm of Jardine, Matheson, and Company. He retired to carry on business on his own account. He had been ill about a year.

ACCORDING to the *Yomiuri* the number of fires in the capital from January to March this year, as compared with last year, was as follows:—

	1900.	1899.
January	22	42
February	29	26
March	36	29

The comparative figures as to houses destroyed are as follows—January, 18 and 54; February, 72 and 20; March, 46 and 90.

JUDGE Wilkinson, while passing through Chicago on his way to England, was pounced upon by the reporters of the city. To the representatives of the *Record* he is reported to have said:—"It is an open question whether or not the new court system in Japan was not inaugurated too soon. The law of Japan is derived largely from the French and German codes, which are not as adaptable to the Japanese uses, and especially with reference to English and American subjects, as would have been English common law."

SOUTH AFRICA.

Sunday, April 15.

The communication addressed by the Boers to Portugal with respect to the passage of British troops through Beira is an interesting development of international law. England's case—which obviously has Portugal's endorsement—is that the Beira route gives access to British territories, not to Boer territories. Any attempt to move English troops from Lourenzo Marquez against the Transvaal would be an obvious violation of Portugal's neutrality. But in the case of Beira the troops are carried into British territory—Rhodesia—and if from thence they operate for either defensive or offensive purposes against the Transvaal, Portugal has no responsibility. It would certainly be a most unfriendly act on the part of the Portuguese Government to close to Great Britain a railway having no *raison d'etre* except the fact that it communicates with a town in an English Colony. Such procedure would amount to saying that Portugal refuses to allow the English to pass to their own dominions along a road ordinarily used by them. At the same time, there is no denying that the Boers have some ground for a protest. Their contention doubtless is that the passage of the British troops is plainly connected with the war; that they are, in fact, destined for operations against the Transvaal in some form or other, and that they would be ruled out of the campaign in that district if they could not penetrate to Rhodesia through Portuguese territory. We must assume that the question has already been considered in all its bearings by Great Britain and Portugal, but it is a question of capital importance, and we await the issue with much curiosity. We have already stated our reasons for thinking that the Beira route, if accessible, will prove of very great value to England.

Thursday, April 19.

It appears to us that the defence of Wepener will stand out as one of the most brilliant exploits of the War. Two thousand Boers sat down before the place on April 8th, and thereafter their number was steadily increased until it reached probably six or seven thousand. Colonel Dalgety, who commanded the British detachment, had from five hundred to six hundred men, and it is very improbable that he had thrown up any intrenchments prior to the investment. He nevertheless managed to hold out for eight or nine days, and finally the Boers seem to have beat a retreat, being warned of the approach of relieving forces. The odds against the Englishman were at least as great as those against Cronje on the Modder; namely, ten to one. Indeed, it is very doubtful whether Roberts' had more than twenty-five thousand men to attack Cronje's four thousand. But even supposing the odds to have been equal, Dalgety's feat is much the finer of the two, for that a force of six or seven thousand should compel five or six hundred to surrender is incomparably easier than that a force of thirty thousand should force the surrender of four thousand. The reason is simple. Four thousand men can deliver a volume of fire ample to hold off a very powerful attacking column, whereas the fire of five or six hundred men is comparatively insignificant, and should be insufficient to deter resolute assault. Moreover, five or six hundred men holding a position against six or seven thousand can take scarcely any rest. They must always be on the *qui vive*; always ready to repel an assault. Four thousand, on the other hand, are sufficiently numerous to relieve each other. Dalgety's losses, too, appear to have been far heavier than those of the Boers on the Modder. During the first six days of the attack, he had 18 killed and 132 wounded—a total of 150 out of six hundred, or 25 per cent. At the same rate Cronje should have lost a thousand, whereas his casualties do not appear to have aggregated even one half of that number. It is very unlikely, in fine, that Dalgety's detachment is supplied with medical aid to meet such an emergency. How his wounded have fared we do not like to think. Even the question of provisions may well have tried him severely, and he must have used his ammunition with remarkable judgment. Altogether he and his men have covered themselves with honour.

LAND TAX.

In Japan a land-owner pays a tax of 3⅓ per cent. of the assessed value of his land. He may not derive any income at all from the land. There may be a mortgage on it to the full extent of its value. Still, he has to pay as though the whole thing belonged to him. For example, *A* buys a plot of land for a hundred thousand *yen*, of which he puts up twenty thousand himself and borrows eighty thousand from *B*, giving a mortgage on the property. Nevertheless, *A* has to pay the full tax on the land just as though there were no mortgage, and *B* pays income tax on the interest of the money he has lent to *A*. Suppose, further, that *A* sub-lets the land so as to obtain a certain return from it yearly. Then he pays income tax on the whole of the rents collected, although a large part of them may have to be handed over to *B* as interest on the mortgage. So at least we read the law. But in truth this question of mortgages has perplexed legislators everywhere. We observe that it is provoking a great deal of discussion in America now. Some influential financiers of New York propose that a special annual tax of one-half of one per cent. shall be imposed on mortgages; but others contend that since the owner of the land has already to pay a tax assessed as though there were no mortgage, it can not possibly be fair to tax the mortgagee also. For example, if the land is worth ten thousand dollars, and has been bought for that amount, its new owner paying four thousand and borrowing six, then he has to pay tax on ten thousand, and if the lender has also to pay a tax on the mortgage, it follows that the land is taxed on the basis of a value of sixteen thousand dollars, which is obviously absurd. But let us see how things work in Japan. *A* buys a lot of land for ten thousand *yen*, borrowing eight thousand from *B* for the purpose. Then he borrows ten thousand from *C* and builds houses on the land, letting them for two thousand *yen* annually. What are the taxes? There is first the land tax on ten thousand *yen* worth of land; there is, secondly, an income tax on the interest accruing from *B*'s loan of six thousand; there is, thirdly, an income tax payable by *A* on the rents he collects; and there is, fourthly, an income tax payable by *C* on the interest he receives. Of course, the really just plan would be that *A* should pay two-fifths of the land tax and *B* three-fifths, and that *A* should pay income tax on only the residue of the rents after deducting the interest to *C*. That would be what is called taxing the equities, but unfortunately it has been found impracticable.

FINANCIAL.

Mr. Sakatani, of the Finance Department, who seems to be preeminent among Japanese officials for his clear ideas as to the country's fiscal condition, has explained that the revenue actually collected during the financial year just (March 31st) concluded, did not by any means fall short of the estimates to the extent anticipated by a section of the public. Exact figures will not be obtained before the end of July, but it is now possible to say that the actual receipts will not be more than a million *yen*, approximately, below the estimates. In four items the estimates proved over-sanguine, namely, land tax, customs dues, tobacco monopoly, and telegraphs. As for the land tax, climatic conditions were responsible, and these, of course, could not have been foreseen. In the case of the customs dues, imports made in 1898 in anticipation of the action of the new tariff were doubtless responsible. The falling off in the tobacco revenue resulted from a bad crop, owing to inclement weather, and a consequent decline in prices, the quality of the leaf being inferior. It can scarcely be said that the monopoly system is yet in full working order. Telegraphs yielded a considerably reduced revenue, but as the diminution was largely in connexion with foreign messages—so, at least, we interpret Mr. Sakatani, but he is somewhat obscurely reported at this stage—the country's assets did not suffer much. On the other hand, the returns from posts, income tax, stamp tax, and forests all showed increases. Thus the posts yielded a revenue 1,700,000 *yen* above the estimates, and thus the reduction of 2½ millions on the telegraph side was brought down to 800,000 *yen*. In the items of income tax, stamp duties, and forests and moors, the surpluses were 770,000 *yen*, 2,000,000 *yen*, and 1,200,000 *yen* respectively. On the whole, therefore, the record is not bad, but Mr. Sakatani justly observes that it is not altogether satisfactory to have to devote surpluses in certain sections to the purpose of filling up deficiencies in others, instead of using the former to pay off national debts.

THE HOUSE OF PEERS AND CORRUPTION.

The charges of corruption brought by the *Asahi Shimbun* against certain members of the House of Peers in connection with the Religions Bill have naturally caused indignation. Many of the nobles, as well as of the Imperial nominees sitting in the House, are strongly of the opinion that such accusations should not be suffered to pass unnoticed, and that legal action should be taken, for the purpose of either convicting or vindicating the accused. The *Sawa-kai* (or *Chawa-kai*) section of the House is making itself conspicuous in this crusade for publicity, and one of its associates, Mr. Nango, formerly in the Navy, a gentlemen of the highest reputation, is said to be particularly active in insisting that the House can not possibly allow the matter to remain uninvestigated. On the other hand, the members against whom the charges have been brought—we omit their names—are said to be endeavouring, with the aid of their friends, to create an impression that these demands for investigation are dictated, not by any honest desire to clear the reputation of the Peers, but by political scheming, which has for its objects the discrediting of the *Kenkyu-kai* section of the House to which the accused belong. It is scarcely necessary to observe that no well-informed person could suppose Mr. Nango to be associated with a political scheme of any kind.

RUSSIA IN KOREA AND ELSEWHERE.

Russia is unfortunate at present in being the object of a great deal of attention and talk. If it be quite true that, in the interests of peace and amity, she withdrew her recent demands in Korea, she deserves much credit. But surely it would have been wiser to abstain altogether from making such demands if their satisfaction was not imperative or essential? There never could have been the slightest doubt about the reception accorded to them in Sōul and Tokyo alike. It is impossible that Japan should quietly acquiesce in the establishment of a Russian naval station on the southern coast of Korea. The most trivial estimate of her own safety must peremptorily forbid anything of the kind. She would be behaving with the short-sightedness of stultification if she adopted such a policy. The Russian Government does not labour under the smallest apprehension upon that subject, nor can ever have laboured under any apprehension. Of what use, then, the recent demand for a lease of land outside treaty limits at Masampho, and the subsequent demand for a guarantee that no part of the island of Koje should be alienated at any time in the future? As to the latter proposal, there is the shallow argument that if the guarantee be interpreted absolutely, it excludes Russia in common with all other States. But does any one pretend to think that guarantees of the kind are interpreted in that sense now-a-days? The guarantee obtained from China by England with regard to the Yangtsze Valley does not provide against alienation to any Power except England. There is no exception. So far as the letter of the guarantee is concerned, England participates in the common exclusion. Yet there is not an Englishman who does not regard the Yangtze valley as his country's sphere of influence in China. A guarantee of non-alienation given to one particular foreign State, invests in that State a special title to the guaranteed property whatever the exact nature of the title may be. That proposition is not to be denied. No rational person will think of denying it. Hence Russia's demand that the perpetual integrity of Koje island should be guaranteed, is nothing less than a method of ear-marking that portion of Korean territory, and no Japanese could be induced to believe, were such a guarantee granted, that Russia had not formulated in her own mind the deliberate intention of planting her foot permanently on Koje island so soon as a convenient occasion offered. The situation thus resolves itself into this, that the Russian Government is proclaiming to the world an intention of acquiring a naval station on the southern coast of Korea sooner or later. The effect of such a proclamation must be most disquieting to Japan, as Russia well knows. For that reason we find her procedure regrettable and apparently ill-judged. It assumes the form of abortive agitation, which creates a general feeling of uneasiness throughout the Orient, and is not calculated, so far as we can perceive, to procure any compensatory advantage whatever for Russia herself. Of course rumour may be entirely wrong in attributing such doings to the great Northern Power, but if that be the case Russian diplomacy has been particularly unfortunate. We have never supposed that Russia can disobey the natural law of expansion. She is still in her growing stage—a very vigorous stage in her case—, and it is probably inevitable that her progress should bring her into collision with some Powers lying in her path. But we have always given her diplomatists credit for seeking to remove factors of friction and elements of alarm. Indeed, her success in achieving great ends with a minimum of disturbance is a remarkable, and in some respects an admirable, spectacle. Her doings in Korea are therefore all the more difficult to understand. They are producing a feeling of deep unrest throughout the Orient, and their results are altogether incommensurate.

Rumour says that Russian officers have been making surveys at Yingkow (Newchwang), measuring and marking spaces, collecting statistics and otherwise behaving as though they harboured proprietary designs. Is there anything strange about that? We do not think so. Nothing that Russia does in Manchuria by way of asserting her ownership can surprise us in the least. If there be any folks who seriously imagine that Manchuria has not become a Russian province, they would greatly interest the public by giving a synopsis of the circumstances under which she is likely to surrender her title. We deem it to be within the range of much less remote possibilities that England should pack her Egyptian portmanteau than that Russia should do anything of the kind in Manchuria. And for the matter of that, it is in the interests of civilization that both Powers should remain where they are.

Disquieting telegrams continue to reach Tokyo from Korea. It is evident that M. Pablov has not desisted from his remarkable activity. He appears to be a gentleman gifted—some might say afflicted—with a superabundant store of energy, and an overwhelming ambition to make a *coup* of some kind. The latest statement is that he has asked to have an official despatched from Sōul in connexion with the purchase of land which he desires to effect at Masampho. There is no precedent for the special despatch of an official on such business, and we can only interpret M. Pablov's request as an indication that he desires to invest the transaction with exceptional significance. Whatever substantial success may attend his efforts, he has at all events succeeded in creating a great commotion. Solid achievements are seldom associated with such displays of vehement zeal. We do not know whether St. Petersburg approves the doings of its Representative, but we have not heard that it disavows them, though as feats of diplomacy they do not appear to rank high in a Russian catalogue.

CAMPHOR MONOPOLY.

Japanese newspapers state that Messrs. Samuel Samuel & Company having complied with all the requirements in connexion with the Camphor Monopoly in Formosa, have now taken over seven hundred thousand catties of camphor, representing the stock held by the Authorities from last year, and are commencing to export it. We learn that the condition originally imposed as to the nature of the bonds to be lodged as security has been relaxed. Bonds of the new Formosa Bank were originally designated, but this provision has been changed so as to read that any officially recognised securities will suffice. The change is of much importance. It is stated in this context that Mr. W. F. Mitchell, the able representative of Messrs. Samuel Samuel and Company in Japan, will make a journey to England towards the close of May for the purpose of consulting with the heads of the great House as to Japanese enterprise in general.

A MEAN THEFT.

In the last session of the Diet an attempt was made to pass a bill granting a sum of money to the inventors of the *jinrikisha*. Two of the men concerned in the invention are dead, but their sons as well as the third man, Takayama, seem to be worthy objects of public assistance, especially as they derived no pecuniary benefit from the invention and are living in penury. The House of Representatives, however, declined to sanction the proposed grant. Thereafter steps were taken to approach the Imperial Household Department, with the result that a present of 200 *yen* was made to each of the three men, or, to speak more correctly, was handed to the persons that professed to be acting in their behalf from motives of sweet charity. The sequel of the story is now reported by several Tokyo journals, Beginning, it is said, with Mr. Kobayashi, a member of the Diet for Ibaraki Prefecture, all those concerned in the affair helped themselves to a liberal share of the money, until finally Takayama and the sons of the inventors found themselves with a sum of ten or twelve *yen* each, plus the wrapper and parti-coloured twine that had enclosed the Imperial gift. There is a corollary about a memorial tablet for which subscriptions are to be solicited by the men that "managed" this affair, but the gist of the matter is that the Emperor's money was almost entirely stolen *en route* to the indigent folks for whom it was intended. If the tale be true, these wretched thieves ought to be hounded out of society.

TOKYO.

The Tokyo Municipality has decided, it is said, to raise a loan of seven million *yen*, for the purpose of rapidly carrying out certain improvements in the matter of roads, drains, and bridges, instead of proceeding by the slow process of small annual appropriations. The loan will bear interest of 6 per cent., and will be paid off at the rate of 450,000 *yen* annually, that sum being taken from the City Improvement fund.

The question of Street Railways is again upon the *tapis*, and most conflicting accounts are given as to the attitude of the authorities. The *Kokumin Shimbun*, which can generally be trusted to speak accurately, alleges that, at a meeting held two days ago, the Cabinet decided to give the charter to the Three Companies Union (*Sampa Godo*), some additional conditions being, however, imposed, which conditions are not yet definitely drafted. The *Mainichi Shimbun*, on the other hand, declares that Marquis Yamagata has officially announced his resolve not to grant the charter under any circumstances to a private company. This announcement is said to have been made through the Marquis' Private Secretary, Count Hirosawa, in answer to a deputation of gentlemen representing the Tokyo Municipality. The editor of the *Mainichi Shimbun* has always been a staunch advocate of granting the charter to the City, not to a private company, especially a company headed by his political opponents. His hopes, therefore, may have coloured his information in this instance. Yet it is hard to understand how two important journals can have received information so utterly contradictory. Nothing is more desirable than that this question should be quickly settled. It is becoming quite a burlesque.

Digitized by Google Original from CORNELL UNIVERSITY

MARQUIS ITO.

Marquis Ito, speaking in Osaka, said something which will not be pleasant hearing to the politicians of the time. He charged them with being swayed chiefly by personal ambition—ambition for fame or ambition for money—, and he observed that, if they were really so anxious to amass wealth, they would be more likely to attain their object by becoming clerks, bankers, or manufacturers. He further remarked that any one aspiring to be an administrative statesman should have a knowledge of all branches of the administration. It would not do to know finance or local government only, and to have nothing to say when such topics as the army and the navy came upon the *tapis*. The days were past when a statesman might blindly place his signature on a document.

The Marquis spoke very plainly about the present cabinet also. He expressed the highest opinion of Marquis Yamagata's courage, integrity, and singleness of purpose; he declared that the cabinet was thoroughly united, and he declined to foresee any probability of its yielding to the demand of the Liberal leaders for portfolios. Administrators of State affairs did not repose on a bed of roses. The present Cabinet would gladly resign office at any time if it saw competent successors offer themselves. But the country did not want another *Kensei-to* Cabinet. As for the Diet, the Marquis could say little in its favour. Not more than one-third of the original members now retained their seats. Could it be said that the successive changes had been accompanied by improvements? Rather the contrary. Probably the next elections would see some good men returned under the operation of the new law. In the meanwhile, the Marquis saw little hope of any radical reform of political parties. Finally, he did not anticipate the dissolution of the Diet next session even though the Cabinet and the Liberals should fall out. The House of Representatives could not have any desire for dissolution.

RUSSO-JAPANESE RELATIONS.

A few months ago London received an impression that the relations between Japan and Russia were strained to breaking point. Shanghai now seems to labour under a similar misapprehension. The *North China Daily News* says:—

> There is a very general feeling, induced by numberless indications, some more, some less serious, that the relations between Russia and Japan will soon become so strained that war between the two countries will result. Russia has been hurrying out troops and munitions to the East for the last few months with ceaseless activity, and with them have come ambulance corps, nurses, and doctors, as though preparations were being made for an immediate campaign, the pretext being that the plague was the enemy they were sent to combat. Japan has been hurrying on the completion of her men-of-war in European dockyards, and importing munitions of war of all kinds with feverish activity. The preparations for supplying an army in the field have been going on energetically in her arsenals; and very extensive naval manœuvres are just about to take place in which the ships engaged, comprising the greater portion of Japan's fleet, are to be manned, armed, and provisioned as if for actual war. The naval reserves have been called out, a step that has never been taken at any previous manœuvres. All Japanese steamship owners have been ordered to send in a return of the number of passengers their steamers can carry. Finally, we learn that "two prominent American journals have sent a staff of correspondents and artists to Japan to be ready when hostilities begin."

Though apparently crediting all these assertions, our contemporary is careful to say that there is no certainty of war's breaking out this spring. Perhaps it may be well to point out, for the sake of persons disposed to lend credit to such rumours, that the greater part of the "indications" marshalled by the Shanghai journal are quite untrustworthy.

We do not pretend to deny or confirm any of the statements about Russia, but we do claim some knowledge of what is going on in Japan, and we therefore venture to make the following comments. Japan has not been "hurrying on the completion of her men-of-war in European dockyards." Japan has not been "importing munitions of war of all kinds with feverish activity." The "preparations for supplying an army in the field" have not been going on with any unusual energy in her arsenals, and, as for the naval manœuvres, they were planned last autumn, months before any of the "indications" catalogued by the Shanghai journal presented themselves to the imagination of any one. There remain thus two items out of the whole list. The first is that a return of the passenger accommodation possessed by the steamers of Japanese companies has been called for, which may or may not be true; the second that "two prominent American journals have sent out a staff of correspondents and artists to Japan to be ready when hostilities begin," a small part of which is true, we believe. Of such materials are war scares composed!

"ROMAJI."

The *Nichi Nichi Shimbun* has an excellent article insisting on the unpractical and cumbersome character of the Chinese ideographs. It ridicules the idea that any sanctity attaches to the ideographs, and declares that many of the words formed with them as equivalents for terms in modern science and philosophy do not convey any clear idea to persons unacquainted with the original, while many indigenous Japanese words have to be written with characters which a Chinaman could not possibly interpret in the sense given to them by the Japanese. The *Nichi Nichi* alludes also to the strange argument of Mr. Nishimura Shigeki, an ex-member of the Privy Council, who challenges the advocates of the *Romaji* to indite with it an imperial rescript which shall secure the respect of the people. Mr. Nishimura's conception of the Japanese nation's mood towards the Throne must be very singular if he imagines that the Emperor's Rescripts would not be respected were they not written with Chinese ideographs. At the same time, we (*Japan Mail*) desire to propound a query to the *Nichi Nichi Shimbun*. It is this—could the contents of its own leading columns be intelligibly transcribed in *Romaji*? The *Nichi Nichi* has the good fortune to be edited by a gentleman gifted with exceptional literary facility. We think we shall be borne out by all competent judges when we say that its leading articles reach a higher standard of literary excellence than those of any other journal published in Japan, the *Nippon* not excepted. But, at the same time, they make the largest drafts upon Chinese expressions and Chinese scholarship, and in nine cases out of every ten they are unintelligible when rendered phonetically. Why does the *Nichi Nichi Shimbun*, while advocating the abolition of the ideograph and the substitution of the *Romaji*—why does it adopt, in its own editorial columns, a style eminently calculated to demonstrate the difficulty of such a substitution? The continued use of the ideographs has begotten a special language which depends mainly on the ideographs for its intelligibility. The first step towards the abolition of the ideographs must be the abandonment of that special language, and it is here that we find our contemporary's practice at variance with its professions.

BANK OF JAPAN AND RATE OF INTEREST.

The Bank of Japan has again raised its rate of interest by 2 *rin* daily, so that the rate now stands at 9.49 per annum. The specie reserve is said to have fallen to 90 million *yen*, and, the issue of bank notes having reached the normal limit without any appearance of a falling off in the demand, the volume will now begin to pass the limit. Count Matsukata, speaking on this subject, is represented as having taken a somewhat gloomy view. His Excellency notes that during the first half of the present month imports exceeded exports by 12 million *yen* approximately, so that the total excess since the 1st of January is now 45 million *yen*. The Bank of Japan has consequently been obliged to raise its rate of interest again, and the question arises, what hope is there of the balance of trade's becoming redressed? Silk is the staple upon which Japan depends chiefly. But there is little prospect of the export of silk reaching such a figure as it did last year, when the approach of the Paris Exhibition created an extraordinary demand. European purchases are more likely to show a falling off this year, and experience shows that America is always a comparatively bad customer during the year of the Presidential election. From every point of view, therefore, silk can not be regarded with any confidence. Hence the quality of the rice crop assumes paramount importance. If the weather prove unfavourable, so that a large quantity of rice has to be imported, things will be serious.

THE SANITARY BUREAU.

An extraordinary story is published by the *Nippon*, to the effect that remonstrances have been addressed to the Sanitary Bureau by the Foreign Representatives, notably the United States Minister, on the ground that the recrudescence of the pest in Osaka was concealed from the public. The American Representative is supposed to have declared that such action on the part of the Bureau deprived his nationals of all confidence in Japanese officialdom, and exposed them to undue risks. The *Nippon* concludes by recommending Dr. Hasegawa, the head of the Bureau, to resign gracefully. It is scarcely conceivable that the *Nippon* can credit this story, or be so very naïve as to imagine that the United States Minister could take such a course. Dr. Hasegawa is not likely to feel the effects of any castigation with a stick so unsubstantial.

ECHIGO KEROSENE.

Some of the Echigo Kerosene Companies have declared fine dividends; e.g. the Takurada Company, 48 per cent.; the Zoo Company, 44 per cent.; the Takatsu-ya Company, 60 per cent., and so on. It is rumoured, however, that much of this Echigo petroleum is of exceedingly inferior quality, its flashing point being only some 65° or 70°, against 125° in the case of imported oil. We presume that the question has received official attention, for there can be no second opinion about the terrible danger of using oil so easily combustible. It is not impossible that some of the recent conflagrations have been due to the employment of Echigo oil.

COUNT OKUMA ON FINANCE.

Count Okuma delivered an interesting lecture on Japanese finance in the Osaka Club on the 14th instant. He cited the various theories advanced by economists to account for what they regard as an unsatisfactory state of business affairs; the theories that extravagant expenditure in the sequel of the war is responsible; that the people are deficient in the efficient spirit of saving; that the excess of imports is impoverishing the country; that the gold standard is operating injuriously; that the duties on foreign manufactures are insufficient; that the large demands made upon the working population by the increased conscription is crippling the nation's productive capacities; that there is an absence of ability to form working combinations; that capital is too much divided, and so on. The Count did not deny that these various theories may have more or less to recommend them, but it was evident that he attached little importance to any of them. His view is that there is nothing to complain of; that things are going on very well; that the nation is prosperous; that its wealth has increased immensely during the past twenty years; that its manufacturing development is progressing quite as rapidly as can reasonably be expected; that the people are shrewd enough to manage their own affairs; that the steps taken by the Bank of Japan to raise its rate of interest in order to prevent the outflow of gold are quite illusory, since there is no such connexion between the money markets of Japan and the Occident as would enable such an operation to produce a sensible effect; that the people are quite capable of forming combinations if they see their account in doing so; and, in fine, that no artificial interference of any kind is needed, the wise course for financiers and statesmen being to refrain from meddling. The Count does not think that the time has come for trusts in Japan: she has yet to go through a long apprenticeship. People whose cupidity is excited by the spectacle of the results that trusts produce in America had better recall the advice of Mencius, "don't gloat over fish in a river but go home and make a net."

SLUMP IN SECURITIES.

There has been an extraordinary slump in Japanese securities, a slump both sharp and sudden. The following figures show the quotations of various important stocks on two consecutive days for deliveries in June:—

Name of Stock.	Quotation on the 17th instant.	Quotation on the 18th instant.	Fall.
Nippon Railway.....	72.90	70.70	2.20
Sanyo Railway	55.60	54.20	1.40
Kwansei Railway	42.60	41.00	1.60
Kyushu Railway.....	56.40	54.50	1.90
Tanko Railway	89.60	86.20	3.40
Nippon Yusen Kaisha	64.60	62.70	1.90
Toyo Kisen Kaisha	26.70	25.80	.90
Kanegafuchi Spinning	50.20	47.30	2.90
Rice Exchange	144.50	141.50	3.00
Tokyo Stock Exchange.....	182.50	175.50	7.00

This movement is attributed to the action of the Bank of Japan in raising its rate of interest, but the explanation seems scarcely sufficient. Undoubtedly there is a feeling of considerable uneasiness in the air, caused chiefly by the course of the country's foreign trade. Up to the middle of April, imports exceeded exports by 44 million *yen*, and the outflow of specie amounted to 14 millions, while, at the same time, there was an actual diminution on the export side to the extent of 3,200,000 *yen*. The statements attributed to Count Matsukata as to the prospects of the market for silk abroad and the importance attaching to a good rice harvest this year, have doubtless contributed to the alarm. The *Kokumin Shimbun* has an article on the subject, the writer of which lays much stress on the defects of Japanese methods of manufacture, and on the speculative spirit that leads men to look to temporary and rapid gains rather than to permanent and solid advantages. But for our own part, while we fully agree that there is immense room for improvement in that respect, as has often been pointed out in these columns by Englishmen of experience and competence, we really fail to see why the nation should be perturbed because it finds itself in a buying mood. People that make purchases are usually in a condition to do so; in other words, they have money to spend. We should not feel in the least alarmed though the specie reserves of the Bank of Japan fell to 70 million *yen*. When foreign products, raw or manufactured, are not required as largely as they are at present, the demand for them will decline. But in that day if it becomes apparent that lack of money—which after all, is quite useless except as a medium of exchange—drives the country to sell its goods and to refrain from buying others in their place, we shall be inclined to say that the time of real adversity has arrived. There would be nothing perturbing in the present situation had not Japan joined in the almost universal scramble for gold. She now feels it to be a vital necessity to cling to those piles of yellow bars stored in the vaults of the Bank of Japan. An altogether factitious value attaches to them in consequence of the insupportable strain that has been thrown upon gold by the world's irrational attitude towards it.

KUSUNOKI MASASHIGE.

The experts of the Fine Arts School in Tokyo have just completed a bronze statue of the celebrated soldier and loyalist, Kusunoki Masashige. The statue weighs 250lbs. and the intention is to erect it in the space opposite to Niju-bashi in Tokyo. We do not know what guides the modellers had for re-producing Masashige's figure and features. History, so far as we are aware, says very little on the subject, and although one wooden statue at least is believed to exist, purporting to be a likeness, it can scarcely claim a right to much reliance. However, it is an indisputable fact that the modern Japanese have succeeded remarkably in applying the skill of their ancestral metal workers to the requirements of the new school. Masashige's statue will doubtless add to their reputation.

BALL AT THE CHINESE LEGATION.

A most enjoyable ball was given by His Excellency Mr. Li, the Chinese Minister, on Wednesday evening. The salons of the Legation in Nagatacho were tastefully decorated for the occasion, and nothing could have been better than the arrangements of every nature. After supper, which was served in the upper storey, a cotillon was danced, the very original and valuable character of the favours adding not a little to the pleasure. The music was supplied by the Imperial Band, and owing to the presence of a number of French, American, and British naval officers from the ships now lying in Yokohama, dancing was kept up with unusual spirit until past 2 o'clock.

KANG YU-WEI.

According to the *Jiji Shimpo's* special correspondent, Kang Yu-wei has not left Hongkong. He made a pretence of leaving—actually went on board a steamer bound for Singapore and left the harbour in her, but he ultimately returned by the pilot's launch and is now lying *perdu* in the colony. The same authority further alleges that the uniforms ordered by Kang in Hongkong had on the breast of the tunic the legend "Honour the Sovereign, work for the country," and that when the news of this fact reached the Empress Dowager, she tearfully drew the attention of the Emperor—who happened to be present—to the words "Honour the Sovereign." Rumour adds that twenty-eight thousand stand of small arms have been imported at Macao to Chinese order, but whether the weapons are for Kang Yu-wei or for the Canton rebels does not seem to be known. We observe that our contemporary's correspondent endorses the opinion expressed by other writers in Chinese treaty-port journals, namely, that the *I Ho-Chüan*, or Shantung rebels, are not in any sense hostile to the Peking authorities. Their whole object is to oust the foreigner and extirpate Christianity. There is, therefore, a tendency in the capital to treat these insurgents gently, for it need scarcely be said that the reactionary party in Peking, headed by Jung-lu, Kang-yc, and the Heir Apparent's tutor, Hsü Tung, sympathise with everything anti-foreign.

KOREAN AFFAIRS.

The Russian men-of-war are reported to have left Chemulpho for Port Arthur.

The bridge over the Han River on the Sōul-Chemulpo Railway will be completed, it is expected, by the end of July, and will be opened for traffic at the end of September.

It is stated that sites have been selected for the terminal stations of the Sōul-Fusan Railway, and that they have been marked out with stone pillars, the consent of the Korean authorities having been duly obtained.

There is some talk of unrest in Korea. Insurrection has raised its head in Chollado and troops have been sent to quell it. The little empire has enjoyed an unusual spell of quiet. The record would be spoiled if something did not happen soon.

According to a telegram published by the *Jiji Shimpo*, Russia has concluded a secret treaty with Korea, pledging the latter not to alienate any part of Koje island to a foreign Power. The treaty is said to contain other clauses which have not been made public.

A company has been formed in Korea which in Japan goes by the name of Kankoku Tetsudo Yotatsu Kaisha, that is to say, a company for carrying on business in connection with railways. Capital is to be supplied from Japanese sources.

The Korean Representative at the Court of Japan, Mr. Li, who is expected to leave Sōul for Tokyo within the next few days, and who will act as his country's special envoy in connexion with the approaching nuptials of the Prince Imperial, is said to be the bearer of grand cordons which the Emperor of Korea is sending to the Emperor of Japan and to the Prince Imperial.

The Korean Government has appointed its Representative at the Court of Japan to be special

Digitized by Google Original from CORNELL UNIVERSITY

ambassador in connexion with the marriage of the Prince Imperial.

It appears that the statement recently circulated with regard to a second sale of land at Masampho was incorrect. The sale has not taken place. It is fixed for the 30th instant, when 68 lots will be brought under the hammer. The number of lots in the first sale was 35, of which Japanese buyers secured 15 and foreign buyers 20. But all the choice sites were then offered. It is not expected that the competition will be keen at the next sale, and much of the land will probably come into the possession of Chinese subjects.

NOTES ON CURRENT EVENTS.

It is said that the Emperor has decided to inspect the Naval Manœuvres about the 26th instant. His Majesty will probably visit Yokkaichi and Kobe, and ultimately proceed to the coast of Kiushiu.

It is stated by Tokyo papers that an action for assault and battery has been brought by a Japanese woman, Yasuda Kisa, aged 22, against the manager of Messrs. Moutrie and Company. The maid-servant claims to have been badly beaten, and even thrown down-stairs.

The ceremony of unveiling bronze statues of the late Prince Mori Keishin (Chiusei-ko), and four representatives of branch houses of nobility, took place on the 15th instant at Yamaguchi, Marquis Ito being the principal officiator and Count Inouye assisting. In spite of somewhat inclement weather a great crowd assembled, and the ceremony seems to have passed off most successfully.

The last, or seventh, issue of the Industrial Bank's premium bonds has not proved a success. The sum to be raised was two million *yen*, but only a million and a half has been subscribed, and the Bank itself will have to take up the remainder. With such rates of interest as those now ruling in the open market, five-per-cent. bonds, even though they carry a chance in a lottery, are not good enough to be tempting.

The latest argument in favour of abolishing the ideographs is advanced by the *Jiji Shimpo*, which says that the doctrine of Confucianism is inculcated insensibly in the process of teaching Chinese characters. It adduces some illustrations from the standard books used in the Middle Schools. It is evident that the ideographs are doomed. Nearly all the influential publicists of Japan are gradually joining in the attack on them.

Hokkaido is said to be extraordinarily prosperous this year. What with the gold fields, the fine take of herrings, and the anxiety to make the most of the Saghalien fisheries while the opportunity holds, things are booming. Some Tokyo journals, however, allege that the accounts of the herring fisheries must be discounted: there is probably a great deal of exaggeration in order to draw on the capitalists who give accommodation to the fishers every season.

The *Jimmin* gives an abstract of an agreement said to have been concluded between the representatives of the Tsukushi (Chikuzen-Chikugo) Railway and Messrs. Samuel Samuel and Company. The British firm is to supply material to the extent of a million and a half of *yen*, ten per cent. of the cost being paid over at once, and the remainder in installments spread over a year and a half, or three years should such an extension prove convenient in the interests of the Company. The engagement to pay is to be endorsed by either the Specie Bank or the Mitsui Bank. That appears to be a very practical manner of bringing foreign capital within reach of the Japanese.

The *Jiji Shimpo* strongly recommends the Prefectural Authorities of Tokyo, Kobe, and Nagasaki to follow the example of Governor Asada of Kanagawa, by issuing regulations for the control of guides. Our contemporary justly remarks that the chicaneries practised by these men on the unsuspecting stranger are injuring Japan's reputation and turning away the tide of tourists from her shores. This is a subject to which we drew attention years ago. Recognition of the abuses in question led to the organization of the *Kōhinkai* (Welcome Society), which has certainly contributed greatly to the comfort of tourists.

It is alleged that the Liberal leaders have proposed to the Ministry one of two courses: either that portfolios should be given to some of their number or that the Cabinet Ministers should enter the Party. The matter has been discussed in a perfectly amicable spirit, and Marquis Yamagata is said to have replied that no definite answer could be made pending the Prince Imperial's Wedding, but that due consideration would be given to the question. We can not, of course, vouch for the correctness of these rumours, but that some *pour-parlers* have taken place can scarcely be doubted.

The Osaka Shosen Kaisha must have a heavy bill to pay for casualties every year. It seems to be very unfortunate. Another accident is reported. The *Miyashima* (1,200 tons), entering Kagoshima from Formosa on the 13th instant, ran into a man-of-war, the *Kasagi*, one of the new cruisers built in America, and barely escaped sinking by being beached. Most her cargo will be a total loss, it is said. The conjecture is that, owing to the Naval Manœuvres, the port was more crowded with war-vessels than usual.

The pest seems to have made its appearance again in Osaka. Two cases are reported, one of them a boy of nine, the other a youth of nineteen. The latter case has ended fatally. It does not seem to be quite certain, however, whether the disease is really pest, though the symptoms all point in that direction. There has not been any abatement of precautions in Osaka. Fully a hundred physicians have been constantly performing medical examinations and looking after the sanitation of the city. But it is probable that the germs of the disease were never completely eliminated.

The six principal emigration companies of Japan have just held their spring meeting in the Imperial Hotel, and have adopted various measures for promoting their business. They are said to have obtained official permission to increase the amount of security lodged by them, in order to exclude irresponsible enterprise. Apparently they do not anticipate any diminution of the demand for Japanese labour in Hawaii owing to the passing of the islands under American jurisdiction. They propose to leave in the hands of Hawaiian employers the sum of $350,000 already deposited with them.

Led by the Higashi Hongwan-ji, the Buddhist sects—the Nishi Hongwan-ji excepted—have decided that delegates shall be sent to welcome the relics of Shaka, which are to be despatched from Siam in a short time. A sum of two hundred thousand *yen* is to be spent on organizing a fitting reception. Count Otani (Koyen), the new High Prelate, will be the chief of the committee of welcome, and among his colleagues will be the celebrated priest, Nanyo Bunyu. The project excites some ridicule. It is declared that the money is to be chiefly spent on amusements for the priests. The bump of reverence is not strongly developed on the skulls of all Japanese.

A telegram from Aomori announces that on the 18th instant a considerable portion of the railway embankment between Nobechi and Otsutomo gave way, and a train was derailed. Traffic does not seem to have been yet restored. No casualties to life or limb are reported.

Marquis Ito, according to statements attributed to him by the *Chiio Shimbun*, has lost his faith in the probabilities of China's integrity being preserved. The Manchu Government is going from bad to worse, his Excellency thinks, and all hope of seeing it adopt an intelligent remedy must be abandoned. The more the pity, for—we still quote—a little enlightened and resolute statesmanship could still save the situation. Marquis Ito has always been a believer in his friend Li Hung-chang. But he seems to think now that Li's day is passed.

The first-class line-of-battle ship *Asahi*, constructed at Elswick to order of the Japanese Government, has been duly taken over by Captain Misu and the crew sent to England to bring her out. A telegram dated the 12th instant says that the transfer was completed on that day, and that the ship is now lying at Southampton.

The torpedo-destroyer *Oboro* reached Hongkong on the 13th instant, *en route* for Japan.

The first-class line-of-battle ship *Shikishima* passed Sada-no-misaki on the 16th instant at 12.06 a.m., and doubtless reached Saseho on the same day.

Two hundred and fifty Yokohama carpenters whose business is to make the fittings of houses, foreign and Japanese, struck work some time ago, their grievance being that they wanted their daily wage raised from 70 *sen* to 85 *sen* all round. Their forty-seven employers naturally objected that the rate of pay must depend upon individual skill, and it is stated that the men would not have held out had not one employer, Mr. Tanabe Daigoro, separated himself from the rest, and offered to employ the whole of the men at their own rate. The present situation is that the other employers are said to be contemplating legal action against Mr. Tanabe, but it is difficult to see how the law could be invoked in such a case.

Mr. Kondo Rempei, President of the Nippon Yusen Kaisha, gave a farewell party at his new residence in Sanaizaka-machi, Ushigome, Tokyo, on the 15th instant. The guests were their Excellencies Baron d'Anethan, M. Harmand, Count Orfini, Colonel Buck, Sir Ernest Satow, Mr. Kato (Vice-President of the Nippon Yusen Kaisha), Mr. Okubo, Vicomte de Bondy, Mr. T. B. Glover, Mr. Yoshitake, Mr. Tsuda, and Captain Brinkley. The house, which is a very beautiful structure in pure Japanese style, has just been finished, and the grounds have been laid out with exquisite taste so as to include in the range of the garden the broad slopes of the castle moats and the grand old trees crowning them, which lie in full view. The entertainment was in strict accord with Japanese fashions, and was enlivened by some excellent dancing and singing.

On the 15th instant two parties of eques-

Digitized by Google Original from CORNELL UNIVERSITY

trians, numbering twenty-five each, proceeded to view the plum-blossoms at Kogane. They were the Provincial Governors, now assembled in Tokyo for their annual conclave, accompanied by some members of the Imperial Household Department. It appears that this picnic was organized in consequence of a suggestion of the Emperor's. When the Governors had the honour of dining at the Palace a few days ago, His Majesty recommended them to set the example of taking exercise, and they obeyed with alacrity, a visit to Kogane being among the delights of the spring. Two of the equestrians came to grief on the outward-bound voyage and one on the homeward-bound, but they were all able to present themselves at the Palace on their return, and to partake of a stand-up repast, at which the Emperor is said to have expressed lively satisfaction with their proceedings.

What newspapers have to suffer in some parts of the world is illustrated by the following statement :—

The Russian administration in Finland has just introduced some further restrictive and repressive regulations for dealing with the Finnish Press. A fine of 500 marks is be imposed for any attempt to elude a prohibition to publish; the Governor-General is given the right to demand a change of the responsible publishers on pain of suppression of the journal; and a consultative committee on Press affairs, composed of six members and a president appointed by the Governor-General, has been instituted. Furthermore, the Finnish newspapers may not publish Imperial decisions until they have appeared in the Government organs, nor the doings of scientific societies, conferences, public speeches, or commercial affairs without the authority of the Governor-General.

The Finnish Senate has received orders to draw up measures for punishing any infraction of these regulations.

There has been submitted to the Government a proposal which is likely to obtain approval. It is based on the fact that, owing to the uncertainty of the Diet's action towards the Budget from year to year, no work requiring a long time for completion can be safely undertaken. In Hokkaido, however, much of the most important work is of that nature; namely, the making of new roads, the construction of drains, the parcelling out of land, and so on. The proposal therefore is that a sum of 14 million *yen* should be voted at once for such purposes, the money to be appropriated in the form of a continuing fund extending over a period of 10 years. It is not surprising that all persons connected with serious public undertakings should desire to remove them beyond the range of the Diet's caprices.

In consideration of the rapidly swelling volume of the foreign trade transacted at Yokohama, it has been found necessary to elaborate an extensive scheme for increasing the accommodation at the Custom House. The basis of the plan is a work of reclamation which will expose a surface measuring 58,950 *tsubo*. The reclaimed land will not, however, be directly connected with the present foreshore. It will take the form of an island, which will be connected with the shore by means of bridges—one an ordinary iron bridge, sufficiently high to permit the free passage of barges and steam-launches; the other, a swinging bridge. A frontage of 1,820 yards will be obtained towards the sea, and of this a large portion will be prepared so that ships can come right alongside for the purpose of loading or discharging, as there will be 24 feet of water even at the lowest tides. Within the island a space, measuring 360 yards, by 100 yards will be available as a harbour for lighters and steam-launches. It is said that the plans and estimates of the work have been prepared, and that the consent of the Diet will be sought next session.

At their recent meeting in Osaka the representatives of the cotton-spinning companies forming the Union decided to increase the number of non-working days by 4 each month. We do not know what the total number of holidays thus becomes, but the fact indicates that another source of income derived from exports will be reduced this year. Cotton yarns now occupy the second place on the list of exports, silk standing first, and if, as seems probable, both of these staples are destined to have a comparatively bad season, the outlook is disquieting.

It is observed by the *Kokumin Shimbun*, in an analysis of the import trade for the first quarter of this year, that whereas the quantity of raw cotton brought to Japan exceeded the figure for the corresponding period last year by 14 million *yen*, the export of yarns showed a diminution of 3 millions, so that in this branch alone of the trade there was a difference of 17 million *yen* virtually in favour of imports, which accounts for a large part of the total excess of imports, namely, 32 million *yen*. Our contemporary does not draw any discouraging inferences from the diminution of exports. It thinks that the markets of Northern China will soon show a brisk demand, for, though there has been some talk of a bad barley harvest, the forecast does not seem likely to be verified by facts, and, by way of set-off, the bean crop, which closely affects the prosperity of the districts, is understood to show an increase of 20 or 30 per cent. above the normal figure. In Shantung, the insurrection doubtless checks demand, but that is only a temporary factor. Of course, in the Yangtsze Valley the products of the Bombay mills have hitherto been greatly preferred to Japanese spinnings, but out of the 80 Bombay factories, 30, representing 850,000 spindles, have ceased working for the moment, and among the remaining 50 (1,400,000 spindles) several are working short time. Thus, on the whole, there is nothing discouraging in the outlook for Japanese exporters.

During the past three months, newsmongers outside Japan have been busily endeavouring to persuade the world that Russia and Japan were on the verge of war, and people in Japan have been laughing at their prognostications. But the Japanese themselves are now responsible for a rumour which throws all its predecessors into the shade. The Imperial News Agency—an institution with a high-sounding title, but which has no connection whatever with the Government—gave out among its daily bulletins of intelligence an item to the effect that while a Russian Squadron of 27 vessels was manœuvering in Yashan Bay off the Korean coast, three Japanese men-of-war steamed in, the movement being connected with the naval manœuvres now in progress. Thereupon one of the Russian ships fired a ball cartridge in the direction of the Japanese, and the latter, much astonished, withdrew and reported the fact. Orders were at once issued to suspend the naval manœuvres and await the result of negotiations opened with Russia. The striking element of the story is that the Russian vessels supposed to have been in Yashan Bay at the time were really in Port Arthur, and that no Japanese men-of-war went near the Korean coast in connexion with the manœuvres. More interesting than these marvellous stories themselves would be some accurate information as to the manner of their concoction. That, however, the public seldom learns.

Mr. Shioten Nobutaka, the military cadet who has been charged with behaving rudely towards some foreigners travelling on the Japan Railway Company's line, has published in the *Jiji Shimpo* and the *Nichi Nichi Shimbun* a statement of his version of the case, appending the name and address of a witness. It is a moderately worded account, and naturally it represents matters in a light somewhat different from the view taken by the foreigners. These troubles are nearly always due to misunderstandings, and no sensible person supposes that the right is entirely on one side. For our own part, the moral we deduce from the incident —a moral which is not suggested, but only strengthened, by this experience—is that foreigners travelling in Japan would be acting wisely if they refrained from insisting upon any right which their Japanese fellow-passengers do not claim. It is not judicious that the foreigner should make himself an exception. The result is that however warranted his attitude may be as a matter of theory, he inevitably gets the credit of being arbitrary and exacting. For the rest, the Oji incident is not worth five words of comment, except as an illustration of the carelessness of the railway officials in allowing people to crowd into a carriage which was already full.

The press has succeeded in completely changing the character that war bears in the eyes of the public. In former days battles were fought and the world heard only their result and the list of casualties; armies were moved in accordance with strategic plans, but the public learned the issue only. Now, on the contrary, everything is put under the microscope. So soon as an officer is appointed to a command, long stories of his career are published, and paragraphists vie in constructing a record which represents him as a hero and which he can scarcely hope to live up to. Petty victories are extolled and small defeats magnified or extenuated so that all sense of true proportion is lost. Even the letters of the common soldier are copied in the columns of newspapers, and his opinions about a general's strategy or the conduct of a campaign receive grave attention. But the strangest development of all is the professional puffer, who talks about the face and features of the thoroughbred fighter, the steel-trap jaw of the lion, the splendid intrepidity and bull-dog tenacity of the youthful warrior, and piles a Pelion of epithets on an Ossa of compliments until his readers begins to think that the age is one of heroism or of hysteria. Things certainly have not improved in these respects. There was more manliness and less talk in former times.

HABUTAE.

The *Habutae* market continues prosperous. The total stock in Yokohama, Fukui, Kanazawa, and Toyama, is said to have reached over 200,000 *tan*, but this is not considered a glut. During last month delivery was taken of some 80,000 *tan* by Japanese merchants alone. Negotiations with foreign firms can never, remarks the *Nichi Nichi*, be carried on smoothly without retaining 100,000 or 150,000 *tan* in stock. The actual stock, however, is of inferior quality, the amount available for foreign buyers being limited to 10 or 20 per cent. Messrs. Samuel Samuel & Co. have recently purchased at a price about 30 *sen* higher than the current quotation, but this is simply due, adds our contemporary, to their selection of finer qualities for export.

Digitized by Google Original from CORNELL UNIVERSITY

COUNT OKUMA IN KYOTO.

COUNT OKUMA resembles Mr. GLADSTONE in the range and versatility of his tastes and intellectual pursuits. Politics, education, finance, art, orchids, *bonsai*, peony and chrysanthemum cultivation—it is difficult to exhaust the catalogue of his competences. He is at present on a visit to Kyoto, and we learn that, after a visit to the shrine of Kitano in that city, he delivered a two hours' lecture to a large audience in the hall of the municipality on the subject of SUGAWARA NO MICHIZANE, to whom the shrine is dedicated. The lecture is not reported, which is regrettable. We have always thought that the fate of MICHIZANE has been nvested by poste rity with romantic elements which cannot be found in the pages of sober history. He seems to have had no real aptitude for the functions of government. Profound scholarship, singular sweetness of disposition, and unswerving fidelity to justice and truth were his distinguishing qualities, but as a statesman he failed. Unfortunately for himself he accepted office at a time of extreme difficulty, when a wide interval separated the rich and the poor, when political power was the object either of usurpation or of abuse, when the arbitrariness and extortions of local governors had become a burning question, when nobles and princes were crushing the people with merciless taxation, and when the finances of the State were in extreme disorder. MICHIZANE'S placid conservatism was not fitted to cope with such difficulties, and his situation at Court was complicated by the favour of an Emperor who, though he had abdicated, still sought to take part in the administration, and by the jealousy of the FUJIWARA representative, TOHIHIRA, a young, impetuous, and arrogant nobleman. These two men became the central figures in a struggle, the forces on one side being the whole Fujiwara family and the unscrupulous but seasonable daring of the ambitious TOKIHIRA; those on the other, a few scholars, the love and respect of the lower orders, and the benevolent tolerance of the self-effacing MIDHIZANE. That MICHIZANE, under such circumstances, should have become the victim of slanderous accusations was in accord with the methods of the time, and at any rate his removal from office could not be considered a national misfortune. Posterity has lavished upon TOKIHIRA obloquy and on MICHIZANE sympathy, but TOKIHIRA was unquestionably a great man who deserves public gratitude rather than condemnation. One incident of his career forcibly illustrates his character. In conjunction with the Emperor DAIGO he earnestly sought to introduce economical reforms, but he departed from the spirit of his policy one day by appearing at court in sumptuous costume. The Emperor reminded him that practice was better than precept, whereupon he retired and changed his dress. That certainly was not the act of a man such as the average Japanese supposes TOKIHIRA to have been. We should greatly like to hear Count OKUMA'S views about MICHIZANE. In one respect the Count has special reasons for recalling the memory of MICHIZANE. The Waseda Semmon-gakko may be compared to the schools founded in remote times by the MINAMOTO, the TAIRA, the TACHIBANA, the FUJIWARA, and MICHIZANE himself.

MISCELLANEOUS TOPICS.

The new battle-ship *Shikishima* reached Kure safely at 3.37 p.m. on the 17th instant. Her sister ship the *Asahi*, now lying at Portsmouth, is expected to sail at the end of June, and will reach Japan by the end of August.

The two contending squadrons in the naval manœuvres are now getting into close contact. Several minor engagements are said to have taken place, and the final battle will be fought in a few days. The inspection is expected to take place on the 29th and 30th.

All the principal officials of the Kiushiu Railway have resigned. They have taken this step, it is understood, in order to facilitate the carrying out of the recommendations made by Count Inouye in his capacity of arbitrator, one of which was that the staff should be considerably reduced. A special meeting will be held for the purpose of deciding which of the officials are to be reappointed.

Subscriptions to the Museum of Fine Arts in commemoration of the Prince Imperial's Wedding are beginning to be collected. Fourteen firms and individuals have put up 84,500 *yen*, the largest donors being the Iwasaki Family, the Mitsui Family, and the Japan Railway Company, whose contributions are 15,000 *yen* each. The Nippon Yusen Kaisha follows with 10,000 *yen*, and the remaining subscriptions vary from 7,000 to 1,000. The *Jiji Shimpo* publishes a drawing of the intended structure. It appears to be almost a replica of the Hakubutsu-kan in Uyeno Park, which was built after plans furnished by Mr. J. Conder.

A naval expert, talking to a representative of the *Jimmin*, takes a very confident view of his country's capacity for defence. He thinks that England is the only Power Japan need fear at sea. The Japanese fleet is much stronger than anything Russia could send against her, and, even if France joined in the fray, she dare not reduce her fleet in home waters sufficiently to be really formidable to Japan. He evidently has a great admiration for the methods pursued in the British navy and is convinced that no other service is in such a condition of efficiency. He is also persuaded that the Japanese fleet could easily seal the seas of China nd Japan if the occasion for such a measure arose.

Count Okuma made a strong political speech at a meeting of Progressist sympathisers in Osaka on the 15th instant. The text he took was the absolute necessity of a powerful opposition. In the absence of opposition the management of national affairs was sure to be disfigured by abuses and the conduct of party politicians by corruption. Nothing was more demoralizing than stagnation, a condition of contentment. The United States, appreciating that danger, had abandoned the Monroe doctrine, and adopted a policy of expansion. Spain, on the other hand, had allowed her strength to be impaired by long quiescence, so that when the crisis overtook her, she proved unable to resist it. England was now employing a million tons of shipping, two hundred thousand men, and a hundred million *yen* a month on her South African campaign. No other Power could possibly make such sacrifices. France could not do it. And if the conquest of South Africa required these colossal efforts, what would be the case with any attempt to conquer Japan? The contingency need not be apprehended. The Japanese were not wanting in any of the qualities that make good soldiers. That they were brave and patriotic no one doubted. That they possessed endurance — which some had doubted—was clearly established by their conduct in the Manchuria campaign. Blessed, thus, with a sense of security, Japan had the further advantage of being surrounded by countries offering an almost unlimited market for her productions. Energy and integrity were all that she needed, and to educate those qualities there must be active and vehement attacks on, and scrutiny of, all official and political doings. The reproach under which politicians and statesmen now laboured was due in great part to the fact that they were insufficiently criticized.

EASTER SERVICES AT UNION CHURCH.

The services in connection with Union Church on Easter Day were thoroughly appropriate, and harmonised with the joyous spirit of the occasion. The morning service was well attended, while the decorative shrubs and white flowers about the pulpit added to the brightness and beauty of the festival. Special music was rendered by a well-balanced choir, —two quartettes and two choruses being given from Handel's "Messiah," while during the offertory "I know that my Redeemer liveth" was played by the organist, and at the conclusion of the service the majestic strains of the *Hallelujah* chorus pealed forth with inspiriting fervour. The Pastor's sermon was eloquent and impressive, dealing comprehensively with the subject of the Resurrection.

In the afternoon a large gathering of children and adults filled Van Schiack Hall, which had been tastefully decorated with lilies and other flowers associated with Easter-tide. Suitable recitations and songs were excellently given by various Sunday scholars and six Easter carols charmingly sung by the whole school. All the little lads and lasses brought floral offerings, their faces looking the happier and brighter among the dainty blossoms. At the conclusion of the service the flowers were distributed to the four local foreign hospitals.

THE CHINESE IN KOREA.

An item of some importance is published in the *Keizai Zasshi* in regard to the commercial situation of the Chinese in Korea. It appears that the number of Chinese in Soul and Inchhon is 1,500 for each place, while for Mokpho, Chinnampho, Pyongsang, and Wonsan, the total is given at 500. The influence of China in the peninsular kingdom seems to have been lost immediately after the war with Japan, but the position was gradually restored so far as commercial prosperity is concerned, and some idea of it may be acquired if reference is made to the figures, given below, for the past two years :—

	Imports 1897. Yen.	Exports. Yen.
From Japan	2,742,000	2,941,000
From China	3,121,000	93,000
	Imports 1898. Yen.	**Exports. Yen.**
From Japan	3,389,000	1,279,000
From China	4,396,000	1,097,000

Thus the import trade of Korea is almost entirely in the hands of the Chinese, Japan's ascendancy being limited to yarns and cotton fabrics. The causes of Chinese prosperity in Korea, as indicated by our contemporary, are somewhat interesting. They are ascribed to abundauce of capital; prevalence of transactions on credit; freedom from usury; mutual observance of commercial morality; cheapness of staples for export; absence of speculative enterprises: firmness in combination; perseverance and frugality; and moderation in unproductive consumption.

OWNERSHIP OF LAND BY FOREIGNERS AND MINING PRIVILEGES.

The following is a translation of the declaration of the Tokyo Chamber of Commerce in favour of conceding to foreigners individual ownership of land and mining privileges.

Since Japan, has in pursuance of a liberal and progressive policy, concluded treaties which place her on an equal footing with foreign Powers, and has opened the interior of the country to foreigners, it is not unreasonable that the latter should be granted the same private rights as subjects, without distinction in respect of nationality. The existing law does not allow foreigners to own land or work mines in the interior in an individual capacity. What can be the reason for such a restriction? It has now become a general principle of international intercourse that such privileges should be granted to nationals and foreigners alike. All the civilized countries of Europe have adopted this rule, and nothing can be more unreasonable than for Japan to withhold these rights—the more so when we consider that such concessions would bring upon the country, not the slightest injury, but considerable advantages.

It is true that the industry of Japan has made marked progress during the past few years; but it is equally true that many useful enterprises still remain undeveloped. Capital, the most important element in the development of industry, is wanting, and the country is seriously embarrassed by the lack of it. Under these circumstances the necessity for the introduction of foreign capital is fully recognised by the people, but unfortunately the law frustrates the realization of such a scheme. The barrier ought to be removed at once, and foreigners should be granted the privileges of owning land and working mines in the interior, so that they may, in perfect safety, invest their funds in domestic enterprises. In making such concessions it may of course be necessary for Government to place a limit in accordance with the necessities of the case, but it is the earnest hope of this Chamber that the concessions in question will be carried into effect without delay.

We take this opportunity to present the following facts for consideration, illustrating as they do the regulations adopted by the various nations of Europe in regard to the bestowal of privileges of land ownership and mining rights upon foreigners:—

France.

(1) In France foreigners are allowed to enjoy exactly the same rights as citizens in the matter of landed property. Article III. of the Civil Code, though possessing no express provision on this subject, takes cognisance of the principle, and no one has ever ventured to question it. Landed property owned by foreigners in France is always, however, under the control of the French law, as provided for in Article III. of the Civil Code. Foreigners there cannot secure for immovable properties any materjal rights or feudal privileges not recognised by French law: whenever foreigners desire to transfer rights over immovable property acquired in France, they must effect the transaction in conformity with French law. (Law issued on the 24th December, 1882). The question as to a foreign State owning land is still undecided, namely whether the Sovereign of a foreign Power or a foreign State itself is or is not able to own immovable property in France. Generally speaking, the positive view appears to be popular. See Leny's Remarks on Pages 280 of the *Private Diplomatic Magazine* of 1893 and the Reports of the Supreme Court on page 843 of the same magazine.

(2) Article XIII. of the Law enacted on the 21st April, 1810, which is still in operation, provides that "foreigners, though not naturalized as French citizens, may enjoy mining privileges." This provision, moreover, is applicable even to aliens not actually domiciled in France. In short, all foreigners are treated exactly as citizens in respect of mining privileges.

England.

(1) No distinction is made between subjects and foreigners in respect to the ownership of landed property in the United kingdom (Section II., Naturalization Law of 1870).

(2) Foreigners are allowed to secure possession of mines and mining districts.

Germany.

(1) In this country no express provision exists in regard to the ownership of landed property by foreigners. In Prussia a regulation was formerly in operation, placing certain restrictions upon foreigners with regard to the acquisition of land, but it is now entirely rescinded, what is still in force being only the law promulgated on March 3, 1846. According to this law the ownership of land by foreign companies or foreign juridical persons can only be effected with the sanction of the Sovereign, and any action for the acquisition of land without such sanction is invalid. With the exception of restrictions thus imposed, foreigners in Prussia enjoy the same rights as subjects in general. Foreigners acquiring land in the interior of the country have certain obligations in connection with their holding. In the case of independent districts not included in the municipal divisions under the Prussian local system of administration, where the regulations are of such a nature as to restrict privileges to subjects, a foreign owner of land is required to appoint representatives suitable for the discharge of such functions, and, upon failure to take such a step, the representatives are nominated by the Government at his expense. As for the franchise appertaining to the ownership of land, no representative of a foreigner is allowed to exercise it.

(2) With regard to the acquisition of mines no restriction whatever is imposed upon foreigners except so far as relates to the ownership of land in general. As to mining privileges the liberality of the Government is still more remarkable. The mining law promulgated on June 24, 1865, guaranteed an equal footing to foreigners and subjects. It was evidently based upon the fundamental principle of the freedom of mining enterprise. Any person, whether native or foreign, has a right to search for minerals or make trial borings in conformity with the provisions of law, at any place except public highways, railways, and cemeteries. He may undertake such operations even on land owned by another provided that compensation be paid, houses and gardens being excepted. Nor is a foreigner precluded from applying for the privilege of owning a mine at the place where he has discovered it. Whenever any such application has been received from a foreigner, privileges are granted him exactly on the same terms as are imposed upon subjects. The right of possessing the mine, however, must not be confused with the right of acquiring land. The former consists in obtaining ore at a fixed place specified in the licence, or constructing necessary buildings for the purpose, or demanding the cession of land from the owners thereof on payment of compensation prescribed by law. In these matters the Prussian law makes no distinction whatever between subjects and foreigners, while the Mining Office does not practically recognise the necessity of acquiring the royal sanction for mining privileges in the sense above indicated, even in the case of a foreign company, such sanction being considered necessary only for acquiring land on the part of the company. Again, no discrimination as to nationality is made in regard to the actual operations of mining and the relations between miners and the Mining Office. The only point worthy of special attention is that, although in the case of the death of foreign labourers through accidents connected with mining operations the family of the deceased is entitled to receive a certain amount of money in the form of insurance, yet, if the family in question is not living in the country at the time of the accident, no claims can be made for the delivery of such money in accordance with clause 3 of Article VI. of the Casualty Insurance Law promulgated on the 6th of July, 1884.

Italy.

(1) This country makes no discrimination between subjects and foreigners as to the ownership of immovable property. Foreigners are allowed to acquire, sell, transfer, or inherit immovables in accordance with provisions of law. Although no express provision of any positive character exists in connection with these matters, yet Article III. of the Civil Code entitles foreigners to enjoy the same private rights as Italians. So long, therefore, as no conflicting enactments are found to exist, it may be inferred that in Italy foreigners enjoy exactly the same footing as subjects in regard to the ownership of immovable property. These facts may be clearly ascertained by reference to the documents connected with the compilation of the Civil Code.

(2) With regard to the ownership of mines or mining districts, foreigners have enjoyed and are still enjoying precisely the same privileges as subjects. Article XXXVIII of the Mining Law, promulgated on November 20, 1859, clearly provides that both foreigners and natives may, without distinction, receive mining licences by complying with the requirements of law. This Mining Law, however, seems to have been established prior to the unification of Italy, and is not therefore carried into operation throughout the whole territory. Still in districts where it has no validity foreigners, in accordance with Article III. of the Civil Code, have enjoyed the same rights as natives.

Denmark.

(1) No law exists differentiating subjects and foreigners in respect to the ownership of immovable property.

(2) Foreigners are allowed to secure possession of mines or mining districts.

Austria.

In this country the general principle observed is that foreigners shall enjoy the same civil rights as subjects. It is practically applied in cases where the foreigner's own country has conferred upon the Austrians living in it all the rights enjoyed by its native subjects. (Article XXXIII. of the Civil Code). Whenever any doubt is entertained as to whether Austrian subjects in any foreign country are granted the same civil rights as natives, and in case no express provision is to be found in the laws, ordinances, or treaties, explanation of these points has to be made by the foreigner living in Austria.

(1) It is evident from the principle above mentioned that any subject of a country where Austrians are not forbidden to enjoy the possession of immovable property is also allowed possession of immovables in Austria. The subjects of Montenegro are not permitted possession of immovable property in Austria, simply because Austrians in Montenegro are precluded from such a privilege. (Imperial Ordinance, issued on June 23, 1825, and another issued on January 14, 1846). A similar veto is imposed for the same reason upon people from Turkey (See Ordinance of the Judicial Department of August 29, 1891) and upon non-Christian Romans (Imperial ordinance No 46 of June 28, 1865). In general, the question of ownership by aliens of immovable property is definitely settled in the provisions of the treaties of the country.

(2) The Austrian law does not impose any restrictions as to the acquisition of mines or mining districts on the part of foreigners. Any person, therefore, who is legally entitled to acquire or retain immovable property is also allowed to engage in mining enterprises, or to acquire possession of mines (Article VII. of the Mining Regulations, issued on May 22, 1854). In the case of a foreign company whose operations are recognised as compatible with the law of a district where it exists, it is not necessary to apply for any special permission for carrying on business in connection with a mine or mines held in Austria. (Page 9 of the aforesaid Regulations embodied in the Imperial Ordinance of November 29, 1865, published in *Official Gazette*, No 127). Other companies, however, pursuing a similar business in Austria, are required to apply for special permission. (Judgment delivered in the Administrative Court of January 5, 1881).

PRIVATE RAILWAY LAW.

We translate the most important articles of this law :—

Art. II.—Any persons desiring to organise a private joint stock railway company must obtain a provisional charter from the Departmental Minister concerned, by presenting the following documents :—(1) Programme : (2) Provisional rules; (3) A statement showing the enterprise to be conducive to public benefit; (4) Preliminary surveys of the railway routes, with explanatory notes; (5) Estimates of necessary expenses; (6) Estimates of traffic receipts and expenditures, with explanatory remarks.

Art. VIII.—The projectors are required themselves to take up at least two-tenths of the total shares.

Art. IX.—The shares shall not be subscribed or secured except by means of currency. The first calls on shares may be as low as one-tenth of the shares.

Art. XVI.—If registration is not made within six months from the date of charter, the latter shall lose its validity.

Art. XXIV.—The company is forbidden to engage in business or occupations other than those specified without special permission of the Minister concerned.

Art. XXIX.—The sanction of the Minister is also necessary for the issue of debentures. No debentures can be issued until shares have been paid up to the extent of one-fourth.

Art. XXX.—The company cannot mortgage its lines or their appurtenances without special permission of the Minister concerned, and then only by the process sanctioned by Government.

Art. XXXI.—No dividend shall be declared without making provision for the redemption of debentures and loans, both principal and interest.

Art. XXXII.—The amount of loans shall under no circumstances exceed that of the shares paid up.

Art. XXXIII.—No line or any appurtenances thereof shall be pledged.

Art. XXXV.—The company shall not be allowed to amalgamate with another company without sanction of the Minister concerned.

Art. XLII.—Works connected with roads, bridges, rivers, ditches, and drains, must be sanctioned by the authorities concerned.

Art. LV.—In case any person engaged in agriculture, industry, or commerce, desires to connect his private railways with those of the company for the purpose of transporting his manufactures or merchandise, the company shall not decline without substantial reason.

Art. LVIII.—Third-class passenger fares shall in no case exceed 2 *sen* per mile, except for a distance of less than 2 miles, in which case the rate may be raised to 4 *sen*.

Art. LXXII.—The Government reserves the right of purchasing railways and their appurtenances after the lapse of 25 full years from the date of the delivery of the permanent charter.

Art. LXXIII.—In making the aforesaid purchases of railways the cost shall be determined by taking the average value of shares during the preceding five years. If the cost so ascertained shall exceed 20 times the average amount of profits distributed among the shareholders during the five years past, the same shall be taken as the purchase price.

Art. LXXXI.—In case of a charter being declared invalid or withdrawn, the Minister concerned may submit the railways and their appurtenances to public sale, and allow the buyer to complete the work.

Art. LXXXIV.—Any person attempting to organise a company or undertaking works without receiving a provisional charter, shall be liable to a fine of not less than 100 *yen* and not more than 2,000 *yen*.

Art. LXXXV.—In case of accidents or casualties any person wilfully deceiving the Government inspectors or refusing to answer enquiries, or giving false statements, shall be liable to a fine of from 5 to 500 *yen*.

Art. LXXXVI.—Violation of Articles XLV., XLVII., and XLVIII., prohibiting traffic or the use of buildings without Government sanction, shall render the Overseer of the company liable to a fine of not less than 100 *yen* and not exceeding 2,000 *yen*.

Art. LXXXVIII.—In the cases enumerated below the Projector, as well as the Overseer, shall be liable to a fine of not less than 5 or more than 500 *yen* :—

1. Failure to effect registration as prescribed by this law.
2. Publication of false advertisements or failure to make public intimations as required.
3. Failure to provide a railway ledger, or omission of necessary items from or insertiou of false statements in it.
4. Presentation of false reports or statements to the authorities, or withholding business reports, statistics, or other documents.
5. Violation of provisions, or instructions, or conditions imposed by laws and ordinances.

Art. LXXXIX.—Any of the proceedings or offences enumerated below shall render the Overseer liable to a fine of not less than 10 *yen* and not more than 1,000 *yen* :—

1. Adoption of measures without Government sanction where such is necessary.
2. Acceptance of other company's shares either s appreciable bonds or as the object of pledge.
3. Distribution of profits in contravention of Article XXXII.
4. Non-compliance with decisions that may be given by the Minister concerned, according to the provisions of this law.

FEES FOR BONDED WAREHOUSES.

The scale of charges for the use of Bonded Warehouses is now established as follows, in accordance with Article X. of the Regulations for the enforcement of the Bonded Warehouses Law, recently promulgated :—

Art. I.—Any person using the Bonded Warehouses shall be charged the following rates :—

1 For every cubic foot of goods deposited, from 5 *rin* to 2 *sen* per month.

2 For every *tsubo* of space occupied, from 40 *sen* to 75 *sen* per month.

Art. II.—In the case of goods enumerated below, every 100 *kin* (catties) shall be computed as one cubic foot :—Goods (and also Chinese timber) included in Nos. 215, 234, 240 and 259 of the scale of Import dues annexed to the Customs Tariff.

Art. III.—Fees shall be calculated by the month. For a fraction of a month not exceeding 15 days, half a month's fees shall be collected. After the lapse of 15 days a full month's rate shall be charged.

Any fraction of a cubic foot shall be regarded as one cubic foot, and any weight less than 100 *kin* shall be calculated as 100.

Art. IV.—Rin shall not be calculated in fees.

Art. V.—Any person desiring to have warehouses specially opened must pay the following fees :—

From sunrise to sunset, 1 *yen* per hour.

From sunset to sunrise, 1.50 *yen* per hour.

Art. VI.—Fees shall be paid at the time of removing goods.

EMBARRASSED BANKS.

The recent depression seems to have involved in serious embarrassment some of the minor banks in the capital. Rumour says that three of these institutions are shortly to be closed by order of the Finance Department. Should a rigorous scrutiny be made by the authorities not only these, but many other banks, remarks a vernacular paper, will have to be suspended or dissolved. Such a fate awaits the Business Savings Bank in Asakusa, and the Tokyo Agricultural and Commercial Bank in South Adachi district. The former has a capital of 100,000 *yen* and the latter 300,000 *yen*, and they have hitherto occupied the most conspicuous position among the minor institutions, but speculation in salt is said to have absorbed the entire funds of both banks. It is added that among the banks which are regarded with suspicion by other institutions of good standing are the Shusei Chochiku Ginko, the Toyo Chochiku, the Bansei, the Bancho Ginko, the Ontake Chochiku, the Kigyo Chochiku, the Honjo Chokin, the Tobu Chokin, and the Kwanto Chochiku.

"BLUEBEARD" AT THE PUBLIC HALL.

Believing that discriminating and intelligent criticism is the best compliment that can be paid to amateurs, we have not been in the habit of exhausting the superlatives of the language in speaking of local performances; but we must heartily congratulate all concerned in the production of "Bluebeard" at the Public Hall. It was an almost complete success artistically, and a quite complete success from other points of view. The hall was filled to overflowing, and the result should be a substantial addition to the War Fund, to which object the proceeds are to be devoted.

This particular version of "Bluebeard" is the production of Mrs. G. K. Dinsdale, and the lines are generally a good deal superior to the ordinary pantomime book. They are full of points, and local allusions are happily introduced here and there—the most elaborate being a lament on the subject of Treaty Revision and the altered conditions it has involved, by a member of the mercantile community in Japan. The lyrics, which in many cases have been "adapted" almost to the extent of being entirely re-written, are capital, and everything goes with a jaunty swing from beginning to end. Mrs. Dinsdale is to be congratulated on her performance.

As to the acting, it was on the whole excellent; indeed, if the performance were judged according to the standard of a high-class professional company, the same adjective might be applied to several of the performers. Mr. Brady was in his happiest vein. He is an actor of remarkable versatility, and has shown himself capable of creditable work in comedy and serious drama as well as in farce, but his true *métier* is certainly low comedy. There his high spirits and innate love of fun can show without any restraint, and he can create a roar of laughter out of patter which, less well done, would be an insult to intelligence. Last night he almost surpassed himself. As *Bakemono*, Prince Bluebeard's Secretary and General Factotum, he proved a humorous and ever-delightful Proteus. At one time he would come on dressed like an Irish comic man; at another as the stage policeman; on a third occasion as a Cook's tourist agent; then he transformed himself into a medical man, made up in sly imitation of a local practitioner; then he became the 48th *Ronin*, disguised as a Hatoba coolie; then a Japanese curio, and so on. His ready "gag" was exceedingly amusing, and his patter songs, especially "The Doctor, always in demand," and "The man from Cook's," fairly brought down the house. We speak of Mr. Brady first because he is really the life of the whole piece. Indeed, Yokohama is very fortunate in the possession of an amateur so free from the usual amateurish faults—quite self-confident, attentive to every tiny detail, and possessing the power to move laughter by every gesture and grimace, as well as by his words. But of the others most did well, and all creditably. Miss Thomas was particularly good as *Cyclona*, the volcanic sister-in-law of *Bluebeard*. Her songs were capitally rendered and the lovemaking between her and the sprightly *Bakemono* (in his coolie's garb) was one of the most delicious bits of fooling we have seen in Yokohama. Miss Thomas's make-up was splendidly gorgeous, and she cut an especially queenly figure by the side of the aspiring but low-statured *Ronin*. Miss Strome made a charming *Fatima*, and Miss K. Page was perhaps even more successful as *Sister Anne*, chiefly because she appeared to suffer less from nervousness than her companion. The lovemaking in the first act, and the duets and quartets with the Greek *beaux* of the two Turkish beauties, were extremely pretty. Mrs. P. de Tomkyns was capitally made up as the *Widow Kus-kus*, mother of *Fatima* and *Anne*, and both in her spoken lines and in her duet with *Anne*, "Listen to our Tale of Woe," she made a very favourable impression. Mr. Somerton was *Prince Bluebeard*, and few people could have looked the part better. In his voluminous trousers, his richly laced scarlet coat, his towering turban, and his immense blue beard, he was the most impressive of Oriental potentates, and would have graced the Court of Haroun Al

Digitized by Google Original from CORNELL UNIVERSITY

Raschid himself. He spoke his lines well, and put sufficient of the ogre into his manner, but was even better in his songs. Nature has endowed him with a baritone voice of a very superior tone, and even in the trivial numbers which fell to his lot in this extravaganza he was able to charm the house. Mr. Eric Irwine and Mr. Edward Kilby were the Greek twins *Kartos* and *Kabos*, and were gorgeously made up in white skirts, glittering jackets, and tasselled caps, with curly-toed shoes and yataghans thrown in to add to the effect. Mr. Irwine was perhaps the more successful; Mr. Kilby was a little lacking in spontaneity—a not unnatural fault in so young a performer. Mr. H. Kilby filled the minor part of *O'Dearo*, a slave in Bluebeard's Household picked up at sea by the Prince while yachting in Japanese waters. The chorus was an admirable one, and consisted of the following young ladies, who were most tastefully dressed: Mrs. Murray, Miss A. Page, Miss H. Page, Miss M. Thomas, Miss N. Strome, Miss M. Sharp, Miss Merriman, and Miss B. Sharp. The ballet in Bluebeard's palace was an extremely pretty performance.

A line or so must be given to the stage management. It must have involved the greatest labour on Mr. E. Beart to present a piece so long, and involving such changes of scenery, in so elaborate a manner, and abundant credit is due to him for his untiring exertions. None but those who are familiar with the conditions prevailing behind the scenes, and particularly on a stage involving so many inconveniences as that of Yokohama, know the immense variety of details the stage manager has to see after, and we are fortunate in having a gentleman who possesses the inclination and capacity to undertake so arduous and too often so thankless a task. The scenery was capital, particularly that of the last act—the grand hall in Bluebeard's palace. Many an important provincial theatre in England could not show so pretty a set, complete and harmonious in every detail. An infinitude of pains and ingenuity must have been lavished upon it. It may be mentioned that the costly draperies for the stage were kindly lent by Mr. Ono, of Honcho-dori. Mr. F. J. Hall acted as property man, and Mr. B. R. Berrick played the piano accompaniments. By kind permission of Captain Warrender the band of H.M.S. *Barfleur* was present, and added much to the enjoyment of the audience.

The following were the airs (all, except one "No one in the world," being re-written or adapted) that were introduced into the piece:—

ACT. I.

Fatima and Kus-kus.....Air "Ten little niggerboys."
Anne and Kabos..Air "Sister Mary Jane's Top Note" (*Gay Parisienne.*)
Fatima and Kartos.Air "No one in the world like you" (*Runaway Girl.*)
Kartos.....Air "My girl's a highborn lady"
Fatima, Anne, Kartos, and Kus-kus ...Air "The Festive Continong"...*The Gay Parisienne.*)
Bakemono and Chorus....."Follow the man from Cook's"..(*Runaway Girl.*)

ACT. II.

Fatima ...Air "Trilby will be true"..(*Artist's Model.*)
Kus-kus and Anne.....Air "A little Peach in an orchard grew"
Bluebeard .....Air "Come into the Garden, Maud"
Fatima, Anne, Kartos and Kabos..."There is a tavern in the town"
Bakemono....."The Doctor"
Cyclona,.....Air "Star of my Soul" .....(*Geisha.*)

PICTURE EXHIBITION.

Mr. F. J. Basuke is giving an exhibition of pictures at Tamamura's Studio, Benten-dori. He has altogether some 40 or 50 water-colour studies, the work of the last two months or so. Mr. Basuke has spent many years in America studying European art, and his success is far greater than that of the majority of his compatriots who have applied their talents to the conquest of western methods. Generally speaking, the average Japanese artist in foreign style is too formal and constrained; his figures lack spirit and his landscapes are deficient in the touch of nature. Mr. Basuke, however, appears to have much natural aptitude for European methods, and both as a landscape painter and in his studies of Japanese figures he is very successful. His scenery is real Japanese scenery, invested with the peculiar atmosphere that is so characteristic of Japan; while his studies of the Japanese face and figure show the advantage of the instinct of a native coupled with the vigour and and expressiveness of a foreign artist. One of the best is a "Japanese Woman with Baby," full of feeling and expression. "A Girl with Needlework" is also very natural in pose, and shows good technique. "An Old Woman" is another capital study, replete with the suggestion of pathos such figures in real life have. The landscapes are also good. "A Scene by Moonlight" has rather a Rossetti-like softness in its impressionism. "A Spring Scene" is pretty and smiling, and another of a rural spot in summer time is equally pleasing. Altogether the collection is an attractive one, and many charming souvenirs of Japan may be picked up by the discriminating amateur of pictures.

CHRISTIAN WORK IN TOKYO.

The signs of Christianity in Tokyo are almost invisible to the casual observer. In taking a bird's-eye view of the city one is struck with the absence of those tapering spires which rise as indexes of the Christian life of Western cities. Impressive temples and Government buildings meet the eye at every turn, but the buildings of Christian organizations are mostly small or in unnoticed parts of the city. Hence not a few transient and permanent residents conclude that Christianity has hardly made a ripple on the life of the capital, much less become a strong current.

It is partly with the hope of dispelling such erroneous impressions that the following statistics have been compiled. It is manifestly impossible to register all the diverse agencies deriving impetus from Christianity and indirectly furthering the many-sided truth which it embodies. All those papers and lecture platforms, relief societies and reform clubs, which are animated to some degree by Christian principles, should not be left out of account, although necessarily omitted from a table like this, which comprises only the institutional work of the principal Christian churches in Tokyo. Among the auxiliary institutions omitted are:—the Young Men's Christian Association, with 420 members, varied activities, property worth 60,000 *yen*, and a budget of 2,600 *yen*, two-thirds of which is raised in Japan; the Salvation Army with its evangelistic and relief work; the Christian orphanages (3), hospitals (5), and industrial student homes (2); the publishing houses (3) and book-stores; and lastly, not a few chapels and evening schools conducted by independent workers.

The compiler has made estimates in a few cases where facts were not accessible. But in order that the table may have authoritative value it should be stated that it is based on special reports kindly furnished by the following representatives: The Reverends Topping, Guy, Webb, Voegelein, Wendt, Spencer, Aurell, Howard, Keirn, Snodgrass, Bishops McKim and Awdry, Doctors Greene, Scott, and Wyckoff, Bishop Nicolai and Father Evrard.

These figures would seem to show that at the focus and distributing centre of the higher life of the Empire, Christianity is firmly intrenched; that at this commercial emporium institutional Christianity has a plant worth 1,200,000 *yen*; that at the chief seat of education it is doing an educational work so extensive and valuable that no wise government would hamper it by intolerant religious restrictions. They would seem to show that Christianity is no longer a frail exotic but a hardy growth largely supported by the contributions of the Japanese themselves. One hundred and twenty-five preaching places, twenty academies and one hundred and forty pastors and evangelists may appear insignificant as compared with the thousands of Buddhist priests and temples or with the immense mass to be quickened. But the leavening and transforming forces of Christianity are so widely and permanently noted that they must continue increasingly to bring forth their inevitable and beneficent fruits.—*Communicated.*

ORGANISED CHRISTIAN WORK IN TOKYO CITY.
COMPILED MARCH, 1900.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense) responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE "IRANIAN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The shipwrecked crew of the *Iranian* return their hearty thanks to the many kind friends who responded so readily, and liberally, to the appeal for clothing made on their behalf, in your columns.

I am, yours gratefully, W. T. AUSTEN,
Seamen's Chaplaincy.
Yokohama, April 17th, 1900.

NIKKO NEWS.

Mr. Kobayashi Hachiroi, who is the biggest banker in Nikko, gave a dinner on the 12th and 13th. There were no fewer than 100 guests at each sitting, who were amused with conjuring, singing and dancing.

There will be a great Buddhist ceremony at Nikko, commencing on the 17th inst., and lasting until the 21st inst. Many priests will come from all parts of Japan, and it is said that the Tokugawa family will present gifts to the Iyemitsu Temple. Dancing, singing, and fencing will form part of the programme, and the treasures of the Tokugawa Shoguns will be exhibited. It is very seldom that anybody has the opportunity of seeing them.

Nikko is lovely just now. The plum and cherry blossoms are out and can be seen everywhere on the mountains and river banks. Many people are coming from all parts of Japan. The weather is splendid.

FOREIGN TRADE OF KOBE.

With regard to the foreign trade of Kobe for the latter half of last month, the *Jiji* gives the following figures:—

Exports.	Catties.	Value in yen.
Yarns	1,304,791	447,072
Rice	1,728,000	99,664
Habutae	186,700	42,201
Tea	105,276	7,082
Sundries		2,690,600
Total		3,286,620
Imports.		
Raw cotton	26,439,600	6,991,024
Rice	22,631,000	813,566
Sugar	6,880,503	500,144
Yarns	290,602	185,860
Sundries		3,514,027
Total		12,004,621
Excess of imports		8,718,003
Export of specie and bullion		3,220,968
Import do. do.		26,166
Excess of exports		3,194,802

The figures for the month of March, compared with those of the corresponding period of last year, are as follows:—

Exports.	March, 1900. ¥	March, 1899. ¥	Increase. ¥
Yarns	531,542	2,621,795	2,090,253
Rice	140,055	1,055,294	914,839
Total of all exports..	5,658,906	8,119,132	2,460,216
Imports.			Increase.
Raw cotton	11,729,071	4,447,331	7,281,740
Rice	90,054	100,371	802,682
Yarns	26,121	10,082	326,039
Sugar	801,859	391,756	410,097
Total imports...	19,858,767	8,130,948	11,727,819

The above figures, together with those for Yokohama, Osaka, and Nagasaki, are tabulated in the *Shogyo* as follows:—

	Exports in *yen*.	Imports in *yen*.
Yokohama	8,025,431	9,187,443
Osaka	542,134	498,490
Nagasaki	599,568	1,287,565
Kobe	5,658,906	19,858,767
Total	14,826,039	30,832,265

The excess of imports up to February this year being 17,640,000 *yen*, the gross total by the end of March does not fall short of 33,650,000 *yen*.

THE SHARE MARKET.

The raising of interest on the part of the Bank of Japan, together with recent diplomatic complications, has had the effect of depreciating shares of all descriptions, remarks the *Osaka Asahi*. Prospects, however, are still more darkened by the necessity of still further increasing the scale of interest in the near future. The institutions of Osaka will be the greatest sufferers. The currency diminution scheme adopted by the Bank of Japan some years ago with a view to ameliorating the condition of the industrial community has almost crippled the share market, as may be clearly perceived from the following table:—

RATES OF INTEREST.

	Nippon Ginko.		Tokyo.
	On Loans.	Discount.	Loans.
	Sen.	Sen.	Sen.
April, 1897	2.1	2.0	2.73
July, 1897	2.3	2.0	2.74
September 1897	2.4	2.1	2.74
November, 1897	2.5	2.2	3.00
March, 1898	2.6	2.3	3.10
April, 1898	2.7	2.4	2.15

	Tokyo.	Osaka.	
	Discount.	Loans.	Discount.
	Sen.	Sen.	Sen.
April, 1897	2.74	3.01	2.60
July, 1897	2.75	2.74	2.74
September, 1897	3.01	3.01	2.74
November, 1897	3.01	3.01	3.00
March, 1898	3.29	3.01	3.01
April, 1898	3.29	3.27	3.18

Such were the rates of interest enforced by the Bank of Japan with a view to curtailing the volume of currency, and the extent to which they have affected the share market may be seen from the following figures:—

Shares.	April, 1897. Yen.	July, 1897. Yen.	Sept. 1897. Yen.
Consols	100.37	97.37	96.83
Nippon Ginko	386.04	372.88	369.38
Specie Bank	218.21	201.65	200.96
Japan Railway	98.07	97.55	97.80
Sanyo Railway	63.66	56.84	58.84
Nippon Yusen Kaisha	72.41	56.13	58.16
Tokyo Stock Exchange	378.	313.89	209,81
Kanegafuchi Spinning	57.67	56.78	54.53

Shares.	Nov. 1897. Yen.	Mar. 1898. Yen.	April 1898. Yen.
Consols	96.90	91.53	90.31
Nippon Ginko	370.22	392.50	370.37
Specie Bank	180.42	183.37	165.78
Japan Railway	78.35	69.25	68.48
Sanyo Railway	55.05	58.62	57.30
Nippon Yusen Kaisha	54.88	54.49	50.56
Tokyo Stock Exchange	177.46	165.56	146.27
Kanegafuchi Spinning	49.24	46.10	43.54

In the above table a few prominent shares only are given, but that the enhancement of interest has caused a general depreciation of shares is certain. If the Bank's interest is to be raised to 2.7 *sen*, as was the case in March, 1898, various shares will probably suffer as serious a depreciation as was experienced in April of that year.

AMERICAN NOTES.

Many Indiana Republicans believed, when the last mail left, that if the National Republican Convention should call on Gen. Harrison to lead the party this fall he would not decline the nomination.

According to the annual reports of the Indian agents which have just been received at Washington and compiled, the aboriginal population of the country at the close of last year was 267,805. Of these 42,597 can read and 53,314 can speak English well enough to hold an ordinary conversation. Over $325,000 has been contributed by religious societies and individuals for their instructions, which is carried out by 407 missionaries.

Admiral and Mrs. Dewey are going to make an extensive tour of Europe. They may be gone a year. They are to sail on May 25th. This will not interfere with the Admiral's visit to Chicago on the 1st of May, but it will prevent his attending the Grand Army encampment in Illinois in August.

Four towns in Indiana—Marion, Muncie, Anderson, and Indianapolis—will soon be joined by an electric railway nearly one hundred and sixty-five miles long, all of which will be operated by one power station located at Anderson. It will be the longest electric railroad in the United States up to date.

Here is a delicious bit of news from Chicago:—

Chicago, March 21.

Histories of England were dropped from the list of supplementary reading for the public schools at the meeting of the Board of Education to-night. None of the histories will contain a mention of the English, except as an incident in connection with the war of independence. For three months Trustee John T. Keating, who is the national president of the Ancient Order of Hibernians, has been fighting the use of histories of England, which he declared were prejudiced in favour of England.

The district superintendents decided to eliminate English histories, and nothing but American history will be included in the supplementary reading.

The Rev. Thomas K. Beecher, the elder and last surviving brother of the Rev. Henry Ward Beecher, died at Elmira, New York, on March 14, aged 81 years. Mr. Beecher was stricken with paralysis while on his way home from church. Mrs. Mary Foote Beecher Perkins died the same day at the home of her son, Charles E. Perkins, aged 94 years and 9 months. She was the daughter of Rev. Lyman Beecher and his wife, Rosalia Foote.

Of the two Pacific Mail steamers now being built at Newport News, one will be completed in December, 1900, and the other early next year. They are the largest steam vessels ever contracted for in the United States, being considerably larger than the *St. Louis* and *St. Paul* of the American line, which are the largest now flying the flag. They will cost $2,500,000 each. The length is 575 feet, the beam 63 feet-depth 40 feet, tonnage 18,400 tons, speed 18 knots, and there will be accommodation for 150 cabin and 1,200 steerage passengers. The actual cargo capacity will be about 12,000 tons.

The Carnegie Steel Company (limited) has become a stock company with a capital variously estimated at from $200,000,000 to $250,000,000, the famous "ironclad agreement" is wiped out, all litigation between the partners in the Carnegie Company is dropped, and H. C. Frick, the former president of the company, virtually secures all he has contended for. These facts are embodied in an authorized statement issued by the Carnegie Steel Company Limited).

The rush to Dawson and Cape Nome is being repeated in miniature in Leadville. Word came to the city of a rich discovery in an old prospecting shaft that was sunk to a depth of eighty-five feet many years ago. The ore is sylvanite and resembles that of Cripple Creek. Assays have been made and it shows forty-eight ounces of gold to the ton. How much of it there is up to the present there are no means of finding out, but the vein lies in a high ridge at what is known as "Two-bit gulch."

At a recent meeting of the Yale corporation a gift was announced of $150,000 to Yale for the purpose of founding a school of forestry. The donors are Mr. and Mrs. J. W. Pinchot, of New York city, and their sons, Gifford Pinchot, Yale, '89, and Amos R. E. Pinchot, Yale, '98. This school will be a new departure at Yale. The founding of it has been due to President Hadley and to Gifford Pinchot, who is at the head of the division of forestry in the department of agriculture at Washington.

President Caroline Hazard at the close of the chapel service at the Wellesley College on March 20th announced that Mr. John D. Rockefeller had promised to give Wellesley $100,000 when the college debt should be raised. The debt is about $96,000. By efforts of the alumnæ during the last two years more than $60,000 has been raised or pledged toward wiping out the incumbrance. It is hoped that the conditions of Mr. Rockefeller's gift, which will be used to establish a permanent endowment fund for the college, will be met by next commencement.

Lieutenant-Commander Seaton Schroeder, at present Secretary of the U. S. Naval Inspection Board, has been selected to succeed Captain Leary as Naval Governor of the island of Guam. Commander Schroeder had applied for and been promised the Governorship of the island of Tutuila, but the administration of the affairs of Guam is believed to be more desirable, and many of the difficulties in the establishment of government have already been removed through the energy of Captain Leary. It is stated at the Navy Department that Captain Leary is going home in conformity with the policy laid down to make frequent changes in the command of naval stations in the interest of the health and spirit of the officers.

Indications point to the probability that Mr. Grover Cleveland, who heretofore has not lent his aid to the candidacy of Mr. William Jennings Bryan, is about to come out in support of the Nebraska silverite. Many of Cleveland's followers, who in the campaign of 1896 held aloof from Bryan and his 16 to 1 issue, already have come into line for the candidate, and now that the gold-standard bill is law and the money question is largely removed from the position it occupied in 1896, it is argued that there is nothing to keep Mr. Cleveland in the background. His friends are so certain that he will indorse Bryan that they declare he soon will come out with a signed statement advising Democrats to act together in the coming campaign.

Mr. Hill, of the Great Northern Railway, expects to establish a shipyard of his own at New London, Conn., where he proposes to build four big cargo steamers, designed for him in England, which are run between the terminus of the Great Northern railway on Puget

Digitized by Google Original from CORNELL UNIVERSITY

Sound and the ports of China, Japan,and the Philippine Islands. These ships will be the largest in the world with the exception of the new ones recently built for the Atlantic trade by the Hamburg-America and White Star lines. They will be over 600 feet long, 70 feet broad, and have five decks, capable of carrying 20,000 tons of cargo and 200 passengers. They are not built for speed, although they are expected to average twelve knots an hour under ordinary pressure and fifteen or sixteen knots in an emergency. The engines will develope 8,000-horse power. Mr. Hill expects to commence two of the ships this spring and have them completed within eighteen months. As the *Lucania*, the *Campania*, and the other *Cunarders* carry only 2,800 tons of cargo, the magnitude of these new ships will be appreciated.

Brig.-Gen. Henry Harnden, famous as the Union-army soldier who captured Jefferson Davis, died of pneumonia at his home in Madeson, Wis., on March 18. He had a brilliant army record and at the time of death was department commander of the Grand Army of the Republic of Wisconsin. He leaves a widow and four children. Gen. Harden was born in Wilmington, Mass., March 4, 1823. He received a common school education and at the age of 18 ran away to sea on a sailing vessel bound for Africa. He remained on the ocean several years, during which time he doubled Cape Horn twice and visited the present site of San Francisco in 1839. He lived at Ripon, Wis., where he was operating a saw mill when the civil war broke out. On Lincoln's call for troops Harnden enlisted as a private in the 1st Wisconsin cavalry, July 15, 1861. He was promoted to sergeant in Jan., 1892, then to captain. He was in the campaigns in Missouri, Arkansas, Tennessee, and Georgia, and participated in many battles and skirmishes. In January, 1865, he was made major, then lieutenant-colonel, colonel and brigadier-general. He was wounded in several battles and had numerous narrow escapes from death. In May, 1865, Gen. Harnden was selected by Gen. Wilson to take a detachment of the 1st Wisconsin cavalry and cross the country toward Savannah and head off Jeff. Davis, then a fugitive. Gen. Harnden rose from a sick bed, suffering from a wound, but performed his duty so well that it resulted in the capture of the confederate chief at Irwinsville, Ga. Gen. Harnden was mustered out July 19, 1865. On his return home he was immediately elected to the Wisconsin legislature from Jefferson county. In 1873 he was appointed internal revenue collector, which office he held for ten years. In 1899 he was elected department commander of the Grand Army for Wisconsin.

NEWS OF THE WEEK.

It seems that the M.M. *Ernest Simons* broke the couplings of her shaft between Saigon and Hongkong. The couplings having been renewed, the steamer is now on her way to Japan.

A big fire broke out at Matsugasaki, Uri district, Akita Prefecture, early on the morning of the 18th inst. Fifty-two houses and two telegraph posts were destroyed. Another fire broke out the same day at Nagasawa-mura, Kubiki district, Takata, Niigata Prefecture, and 20 houses were burnt.

The *Peking and Tientsin Times* of the 7th inst. gives the settlement of the Brooks murder case. One man has been beheaded, one strangled, one sentenced to imprisonment for life, and six others have had lesser punishments. The village elders are to put up a memorial at the scene of the murder at a cost of Tls. 500; and the Chinese authorities have paid Tls. 7,500 for a memorial chapel, with 6 *mow* of land, and Tls. 1,500 for a memorial in Canterbury College.

There was a large and representative gathering at All Saints' Church on Wednesday afternoon, says the *Kobe Herald*, to witness the marriage of Mr. Herbert Grimble to Miss Florence Peace. The ceremony was conducted by the Chaplain—Rev. G. H. Davies—assisted by the Rev. C. Graham Gardner. Mr. Whymark, brother-in-law of the bride, gave the bride away, and Mr. F. Grimble performed the duties of groomsman. The Misses Annie, May, and Marguerite Whymark were the bridesmaids.

The *Hongkong Maru* brought to Yokohama the new Commander-in-chief of the U.S. Asiatic Squadron, Rear-Admiral Remey, and his staff; and the second in command, Rear-Admiral Kempff. During the forenoon of Wednesday, Rear-Admiral Watson shifted his flag from the *Brooklyn* to the *Baltimore*. In the course of the afternoon Rear-Admiral Remey's flag was hoisted on the *Brooklyn* and Rear-Admiral Kempff's on the *Oregon*, the events being signalised by the usual salutes.

Trooper Morris, belonging to the Australian contingent on service in South Africa, has been recommended for the Victoria Cross for rescuing an officer while under fire. Morris is the first Australian to receive this coveted decoration, which carries with it an annual pension of £10 from the British Government. He will also receive £52 annually for life, this sum having been offered by an Australian insurance company to the first Australian winning the Victoria Cross.

On January 1, 1898, the merchant marine of Russia was made up of 604 steam and 2,294 sailing vessels. The steamers of the Russian merchant marine are principally screw steamers, with one engine, but a few are of larger dimensions, with two engines, chiefly on the Caspian and Black seas. Sixty-one per cent. of the entire fleet of sailing vessels are of less than 100 tons, 16 per cent. has from 100 to 200 tons, and only 131 vessels have a tonnage exceeding 500 tons, chiefly on the Caspian sea.

The India Office has issued its annual financial statement. This shows a surplus for 1899-1900 of £2,553,000 and an estimated surplus for 1900-1901 of £160,000. The famine expenditure for 1899-1900 worked out at £2,055,000. It is estimated that the famine expenditure for 1900-1901 will be £3,335,000. Except for the famine expenditure the budget is regarded as healthy. The gold standard has been successfully introduced, and all demands have been met without borrowing. The surplus of £160,000 is, however, only a paper surplus for a temporary loan of £500,000 to be incurred in England, and it is estimated that a temporary loan of three crores of rupees will be necessary for ways and means.

An official account has been issued of the victory of the French troops over the Arab army at Inrahr, which assembled with the object of attacking the French expedition which recently occupied the oasis of Insalah, southwest of Algeria. The French learned of the scheme and decided to storm the enemy's position, which was successfully carried March 19th by a column led by Lieut.-Colonel Eu. The town was first bombarded and then stormed, the Arab warriors making their last stand in the mosques. They left 600 men killed and a hundred wounded on the field. In addition 450 prisoners were taken. The French losses were nine native soldiers killed, thirty-eight wounded, and two officers wounded.

Mitchell's Newspaper Press Directory. The fifty-fifth issue of this valuable book of reference, sold at the extremely moderate price of 2/-, more than maintains the standard of previous years. It contains the latest reliable information concerning newspapers and magazines in all parts of the world. We gather from it that there are 472 papers published in London, 1,475 in the English provinces, 110 in Wales, 233 in Scotland, 181 in Ireland, and 20 in the British Isles. Magazines number 2,328; 543 of them being of a religious character. Of all these journals full particulars are given as to day of publication, politics, proprietorship, area of circulation, aims, etc. Of the foreign press, of course, less is said, but what information is given is remarkably accurate and valuable. To newspapers and firms having a large advertising connection the volume is simply invaluable. Among the special articles is one by Mr. Hugh Fraser, LL.D., on "Decisions affecting the Press, with special reference to the Law of Libel," another by Miss Laura Smith on "Women's Work on the Press," and an illuminative review by Mr. E. Williams of "The South African Settlement and Imperial Trade." In regard to the information given as to principal towns in the British Colonies and India the book has almost the value of a gazetteer as well as a directory.

Paris journals state that the report that the Duke of Orleans was injured by a wild boar is untrue. The *Aurore* states that the Duke's indisposition is really due to a sound thrashing he received from an Englishman on account of his letter of congratulation to M. Willette, the artist who caricatured the Queen in *Le Rire*.

The *Osaka Asahi* states that the Mitsubishi Dock-yard continues to receive new orders to such an extent that the existing organisation proves inadequate. A scheme was formulated two years ago to acquire a piece of land (some 7,000 *tsubo*) by reclaiming the shore of Tomiwan, which borders the yard. A hill was demolished, and with the earth thus obtained a small island was formed over the hidden rocks in front of the bay, and a bridge was constructed there. These works were undertaken with great speed, and were lately completed. The expenditures incurred are said to have amounted to 110,000 *yen*, and the area of reclaimed land extended over 2,000 *tsubo* in Tomiwan and 3,000 in the new island. In Tomi a sawing machine is about to be fitted up, while as to the island four rails were laid over the bridge for the transportation of shipbuilding materials. The place is surrounded on all sides by sea, about 20 feet deep even at low tide, and thus large vessels can come alongside. Simultaneously, however, orders for two vessels have been received from the Nippon Yusen Kaisha and for one from the Osaka Shosen Kaisha, and the new yard is still found insufficient for the execution of the work on hand. A fresh reclamation is now being undertaken to enlarge the yard.

THE "TOKYO MARU."

The following particulars of the wreck of the *Tokyo Maru* in the Gulf of Pechili are taken from the letter of the Tientsin correspondent of the *N.-C. Daily News*:—The wreck of the *Tokyo Maru* is the event of the week. Captain Jones had given orders to be called on sighting Howki light. Just after changing watch at midnight on Saturday, in fact the moment the relief officer came on the bridge, the latter heard breakers on the port bow. The helm was put hard-a-port and the Captain instantly called, but before he could get on the bridge the ship struck. Her bow slewed off to starboard with the forward plates badly torn, but the stern held fast. There was little or no panic, and the crew behaved well, working admirably under the second officer and the bo'sun. A bit of a rush was made for the first boat, and in the somewhat selfish hurry-skurry of the native passengers she swamped with, it is feared, a loss of three (? two) Chinese and two Japanese (? three). Happily the sea was smooth, and when one boat went off to search for a landing place, there was little danger beyond that caused by the darkness and the fog. A good landing-place was not found, so the boats returned and lay close to the ship until daylight. At day-break a landing was made, and Captain Jones sent ashore awnings with which a tent was made: signals of distress were shown, but from the peculiar position of the vessel they were extremely unlikely to be seen by vessels passing to the southward 3 or 4 miles distant. Only one such ship did pass, and she did not see the *Tokio Maru*. Meanwhile the second officer, Mr. Staats, had sailed for Tengchoufu in Hope Sound, in one of the ship's boats. He made it in due course, and informed the Chefoo agent of the accident by telegraph. Help was at once sent, but as it did not arrive till late, Sunday night was spent on the Island.

The passengers speak highly of the conduct of the officers and the Japanese sailors, but the reports of the behaviour of the stewards are far from satisfactory. Some of these fellows partially looted the cabins, stole money, tried to monopolise the biscuits and bread, were rude and insolent, and looked exclusively after their own precious selves. The two European ladies on board, and the Japanese lady passengers, all behaved admirably; the three little children of Mr. Hancock seemed to regard the whole thing as a fine picnic. Capt. Jones and the officers got invaluable aid from Dr. Morrison and the Rev. F. Norris, the male European passengers. Mr. Norris' linguistic services were indispensable in getting supplies and courteous treatment from the natives of the island, who did the right thing throughout.

HYOGO AND OSAKA CONSULAR REPORT.

The trade of Hyogo (including Osaka) during 1898 maintained its normal steady increase, as is shown by the following figures:—Imports, £14,456,548 against £11,906,651 in 1897, and exports £6,330,038 against £5,386,578, being an increase in value of the total trade of more than 20 per cent. As usual the imports were more than double the value of the exports and the rate of increase of imports was greater than that of exports, being over 23 per cent. in the former as against 17 per cent. in the latter. More than half of the entire increase in the year's trade was due to an upward bound in the import of rice. A special interest attaches to last year's trade as marking the close of the era of the 5 per cent. Conventional Tariff, which secured to Japan for a whole generation the benefits of what was virtually free trade. The new Statutory Tariff came into force on Jan. 1, 1899, and in view of that momentous change there was a great rush of imports at the close of 1898. Of the six leading staple imports four—namely, rice, railway materials, raw cotton, and sugar—showed a marked increase over the preceding year; whilst two—namely, spinning machinery and cotton yarn—showed a no less marked decrease. In exports the greatest advance took place in cotton yarn, matches, and copper. As the total trade of Osaka is less than one-thirtieth of that of Kobe, I shall use the latter term as including both ports, unless where the two are expressly dealt with separately towards the end of this report.

Imports.

Raw cotton is the leading staple import, being more than a quarter in value of the whole import trade. The increase in the quantity imported, about 127,000 tons, was about 14 per cent. increase on the quantity taken during 1897; but the point of most interest in connection with the staple is the change which has taken place in the source of supply. At first the imported cotton came mainly from China, now most of it comes from Bombay; and whereas the American cotton was, a few years ago, a negligeable quantity, it now comes next to the Indian in quantity and value, and tends more and more to drive the Chinese article out of the market.

As was to be expected, the increased import of raw cotton caused a decreased import of cotton yarn to the extent of nearly £100,000 worth, entirely at the expense of Great Britain. The small importations from Germany and France, though insignificant, showed a marked upward tendency. And the fact that the drop in cotton manufactures in general was only £55,000, shows that the import of cotton fabrics is not falling off like that of yarn. Grey shirtings, in spite of the prolonged tightness of money, more than held their own, whilst white and other shirtings doubled in value. There was an advance of nearly 50 per cent. in handkerchiefs and thread, and the only marked decline was in Victoria lawns and duck.

Whereas in 1896 rice was the leading item in the list of exports. Primarily, this change was undoubtedly due to short crops in the two last years, a shortage which for 1897 was estimated at 800,000 tons below the average, but the fact is that Japan is steadily tending to become more and more dependent on foreign supplies for its staple grain.

Third on the list of imports comes metals, amongst which bar iron, displacing rails, took the leading place with 30,000 tons, value £175,000, as against 22,000 tons, value £130,000, in 1897. Pig iron shows a similar advance, being over 35,000, tons, value £80,000, as against 6,000 tons, value £60,000, the preceding year. Plate and sheet-iron made even a greater stride, rising from 7,500 tons in 1897 to 11,000 tons, in 1898. The most marked decrease was in rails, of which hardly 3,200 tons were taken, value £118,000, being only two-thirds of the amount imported the year before, the drop being mainly at the expense of the British manufacturer, the United States having now ousted us from the leading place. The average import of rails for all Japan during the last three years has been something over £250,000 sterling, of which half was taken by this port. Up till 1896 American rails were unheard of in this country, but in that year they made a promising first appearance, forming nearly a sixth of the total import. In the following year they reached more than a third, and last year more than a half, being double that of the British share, which fell from over £200,000 in 1896 to £80,000 in 1898. Belgian and German rails were not of much account, but they too have suffered from the American competition. As showing the vigorous forward tendency of the American article, I may mention that a few months ago an order was settled in Kobe for some 8,000 tons of rails, value close on £60,000, for which Carnegie's underbid the lowest British offer by 13s. 6d. per ton.

On the other hand, in locomotive engines British imports have in 1898 somewhat recovered ground from the American, as the following figures (for all Japan) show:—

Country.	Value.		
	1898.	1897.	1896.
Great Britain	£204,150	£180,600	£115,940
U. S. A.	200,000	239,400	45,760
Other countries.....	23,000	3,500	16,500
Total	£427,150	£423,500	£178,200

In imports of machinery there was a decided falling off, but the competition of other countries was but slightly felt by the British manufacturer. The value of spinning and weaving machinery brought into this port was barely £200,000, as against more than double that amount in 1897; but 89 per cent. was British—Germany and France being the only competitors. In electrical, mining, printing, paper-making, sewing, and other miscellaneous machinery the total of £255,000 shows a decrease of only 6 per cent. from the preceding year's amount; and while the British share fell from 56 to 51 per cent., the American share fell from 28 to 20 per cent., the German share advancing from 12 to 24 per cent. As indicating one of the causes of the British falling-off, I may here mention an incident relative to bicycles. An important British company which manufactures that article recently wrote to me, saying they were desirous of appointing an agent for the sale of their goods here, enclosing copy of their catalogue, and asking me to recommend a desirable firm competent and willing to look after their interests. Here is the gist of the reply I received from the firm to whom I communicated the application:—"Must decline with thanks; for the English make of cycles there is no great 'show' in Japan. . . . The British maker is by far too conservative and in every way unaccommodating; we are at present importing machines from America, and can get two smart-looking articles for the price of one English cycle. Of course, the finish is not to be compared, but the main thing is the Americans are willing to adapt themselves to the peculiar 'extras' wanted by the Japanese; whereas the British maker puts too many obstacles in the way, and even in cases where he does adapt himself to the local requirements' the prices for 'extras' are prohibitive altogether. We may say this does not refer to cycles alone; it is our general experience."

The import of sugar last year amounted to the value of close on £1,000,000, the preceding years import being only £750,000. In woollens there was a slight decrease, cloth being the only fabric which made any considerable advance, over 1,000,000 yards being taken, value £108,000; as against 600,000 yards, value £63,000, the year before.

Probably no staple in either the import or export trade presents the same steadiness from year to year as petroleum. The normal annual increase, keeping pace with the movement of population, may almost be predicted in advance. In 1898 import was 31,000,000 gallons, as against 25,000,000 gallons, the preceding year. Such fluctuation as took place was between the various brands in the market. Chester and Anchor brands declined, but the increase in the Atlantic made up the deficiency. The Russian oil imported in bulk amounts, as before, to about a fifth of the total, and the Langkat article has made no advance on the figures of the preceding year.

Exports.

The leading exports during the year were, in the order of their importance: cotton yarn, matches, rice, copper, matting, tea, and straw-braid. Just as raw cotton is now the leading import, so cotton yarn has become, definitely, the leading export. How rapid has been the development of this manufactured staple will be apparent from the following figures:—

Quantity and Value of Cotton Yarn Exported from Hiogo.

Year.	Quantity. Tons.	Value £
1895	1,610	87,875
1896	6,407	360,130
1897	22,005	1,213,525
1898	37,565	1,889,431

As yet the whole of this export goes to the neighbouring Empires, China and Korea, and to Hongkong. Thanks to the financial assistance rendered by the Government, as noted in last year's trade report, the trade is almost entirely in the hands of native merchants. As the import of foreign cotton yarn during the year amounted only to some 3,500 tons, less than one-tenth of the home production, it is manifest that the mills of Japan are now producing far in excess of the requirements of the home market, and that if their prosperous career is to continue they must retain and even extend their hold on the markets of Eastern Asia. It may be doubted, however, if the Government will ever repeat the subvention of the year before last. The fact is that the change of the monetary standard in that year from silver to gold reduced the spinning industry to a most trying position. So severely was the change felt that many of the weaker companies had either to dissolve or incorporate with other companies owing to the dearth of money, and some of those which stood the strain had to forego dividends altogether. Nevertheless, five new companies were established in the course of the year, aggregating over 55,000 spindles. Yet the monthly returns of the Japan Cotton Spinners' Association for December last show that the spinning mills in that month numbered 48, working 823,317 spindles, a number only about 30,000 in excess of the number of spindles in operation at the close of 1897. As regards the quality of the goods, the coarser counts turned out are pronounced by foreign experts to be satisfactory, though in some instances the spinnings have proved deficient in weight. In two-fold yarns the quality is moderately good, but the best work is shown in plain brown Egyptians. Gassed yarns are as yet not up to the mark, being deficient in gassing and by no means free from snarls.

For the third year in succession matches occupy the second place amongst exports. In 1898 over 21,500,000 gross, value £625,000, were sent out, being an advance of 2,500,000 gross in quantity and £65,000 in value over 1897.

Owing to the shortage of the rice crop of 1897 the export of 1898 was less than for previous years, only 48,500 tons, as against 53,000 tons in 1897, and 80,000 tons in 1896. The export of copper shows a steady increase, over £444,000 worth in 1898, as against £340,000 the previous year. The light, cool, and tasteful floor-covering made of the Japanese rush continues to displace in the American market the old-fashioned but much more durable Canton matting. £397,000 worth was exported last year, as against £322,000 worth the preceding year. Although the tea-crop was of very inferior quality, the export of 1898 was only about 10 per cent. lower than that of the year before. Porcelain-ware is the only other export worth notice which shows an increase. Camphor, vegetable wax, straw-braid, isinglass, dried fish, and coal all show a falling-off.

General.

As compared with 1897, the gain of the total British imports was less than 8 per cent., whilst the imports from the United Kingdom itself fell off about 15 per cent. The United States made a huge stride. Last year, for the first time in the history of its foreign trade, this port received more imports from the United States than from Great Britain; the advance on the American import of the preceding year being over 68 per cent., nearly treble that of 1896. German imports exceeded those of 1896. German imports exceeded those of 1897 by 40 per cent., or, to put the facts in another form, whilst the imports from the United States and Germany put together were in 1897 barely equal to four-fifths of the import from Great Britain, in 1898 Great Britain's import was only about two-thirds of the aggregate imports of the United States and Germany, and in previous years the British preponderance in the import trade was much greater.

In exports, as in imports, whilst there has been a respectable gain in the "total British" figures, the exports to the United Kingdom show a falling-off, whilst those to the United States, to Germany, and, most of all, to China, show an advance.

It is abundantly clear that whilst the trade with the British Empire as a whole continues to advance, that with its two great commercial rivals, the United States and Germany, is advancing at a much more rapid rate.

The tonnage entering the port during the last two years was:—

Year.	Number of Vessels.	Tonnage.
1898	1,464	2,651,160
1897	1,438	2,452,503
Increase	26	198,657

being an increase on the total tonnage of the prior year of over 8 per cent. The increase in the British tonnage was only 3.3 per cent., the increase in the Japanese tonnage was 20 per cent., in the German 9 per cent.; but the British tonnage was fully one-half of the total, the Japanese 30 per cent., and the German less than 8 per cent. of the total.

There were at the end of the year 1,080 foreigners residing in the two ports, not counting Chinese, who were nearly double that number. Of the Europeans, 598 were British, 158 German, 49 Portuguese, and 46 French, but the United States' citizens came next to the British, being 160. There were 81 British firms, an increase of six over the preceding year; 82 German firms, and 29 American, being an increase of one and three respectively.

I have to express my regret for the delay in forwarding this report, the compilation of which has been twice interrupted by attacks of illness.

J. C. Hall.

An auction sale was held at Ladysmith on February 21, about a week before the arrival of the relieving column. The following prices were realised:—Tin of milk, 10s; eggs, £2 8s a dozen; a fowl, 18s; one pound of marmalade, £1 1s; a plate of potatoes, 19s; a plate of tomatoes, 18s; pound of tomatoes, 18s; a pound of coffee, 17s; half a pound of tobacco, 65s.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE BOER WAR.

GENERAL GATACRE'S RECALL.

Shanghai, April 13.

General Orders state that General Chermside is to replace General Gatacre, who has been ordered to England owing, it is believed, to the Reddersberg disaster.

GENERAL HUNTER.

General Hunter is to command the Brigade going from Durban to join Lord Roberts.

WEPENER.

The garrison at Wepener numbers only 500 men, with seven guns.

FRANCE AND BEIRA.

M. Delcassé, speaking in the French Chamber of Deputies, refused to discuss the question of the passage of British troops to Beira. He said that France was not concerned in the matter.

A TIMELY WARNING.

In view of symptoms of unrest, which have displayed themselves in the north of Cape Colony, Lord Roberts has issued a proclamation, warning the inhabitants against further hostility, and telling them that no leniency will be shown them in future, but that rebels will be treated with the utmost rigour of military law.

THE REPUBLICS AND PORTUGAL.

Later.

The Boer Governments have formally notified Portugal that they consider her permission for the passage of British troops through Beira tantamount to hostile action.

ASHANTI.

The news from Ashanti continues to be serious. Letters from the interior state that five British officers and forty Houssas (negro troops specially raised for service on the West Coast of Africa) have been killed.

WEPENER.

Lord Kitchener has arrived at Aliwal North and has heliographed a sympathetic message to Wepener, where the attack seems to be slackening.

NEWS FROM WEPENER.

Shanghai, April 14.

The Times' correspondent telegraphs from Bloemfontein that General Dalgetty occupies a position outside Wepener and the Boers hold the town.

Various telegrams refer vaguely to fighting at De Wets' Dorp. It is inferred that this is the column from Bloemfontein, which is advancing to Wepener.

WEPENER RELIEVED: THE BOERS RETREAT.

Later.

Reuters' agent, telegraphing from Bloemfontein under date of Friday, says it is reported that the Boers at Wepener have been repelled with great loss, have relinquished the attack, and are returning north.

GENERAL CHERMSIDE.

General Chermside, with the Third Division, has arrived at Reddersburg from Bethany.

EXCITING DEVELOPMENTS AHEAD.

The censorship is strict and exciting developments are expected.

LEYDS' PROCEEDINGS.

Shanghai, April 15.

Dr. Leyds met a Boer deputation at Milan and had a long conference with them. He proceeds to the Hague to-morrow. The German Consul at Milan called during the Conference and the newspapers state that he was present during the latter half. They also announce that Count von Buelow, who is staying at Pallanza, went to Milan yesterday, presumably to see the delegates, and stayed some hours. The *Daily Mail* adds that Leyds had a long conference with Buelow this morning.

A CONTRADICTION.

Later.

It is untrue that Count von Buelow has seen the Boer delegates.

THE PARIS EXHIBITION.

The Paris Exhibition has been opened. The ceremony was simple but imposing. President Loubet, surrounded by the Foreign Ambassadors and Commissioners, delivered an address.

GENERAL CARRINGTON.

Shanghai, April 16.

General Carrington has sailed from Cape Town to Beira, with a further force of Australians and with the Scotch Gillies Corps.

WEPENER.

No shelling was heard at Wepener yesterday.

BRABANT ADVANCES.

Brabant and his head-quarters with all the mounted troops have left Aliwal North for Rouxville.

FIGHTING AT WEPENER.

Later.

Reuter's agent, telegraphing from Aliwal North, says that it is officially reported that the British losses at Wepener during four days of fighting were 18 killed and 132 wounded. The besiegers are apprehensive of being themselves surrounded.

ON THE BASUTO BORDER.

Three thousand men are posted on the Basuto border to prevent the Boers from crossing.

ROBERTS PREPARED.

Reuter's agent telegraphing from Bloemfontein, says that Lord Roberts is now in a position to concentrate an overwhelming force at any point.

HORSES.

Shanghai, April 17.

Horses continue to arrive at Bloemfontein in great numbers, but they are in low condition and require nursing.

WEPENER.

The losses hitherto telegraphed from Wepener were anterior to the 14th instant. The losses since that date are unknown. The garrison signalled on Saturday that all was well.

BOERS RETIRING NORTHWARD.

There are persistent reports that the Boers in the South East of the Free State are retiring northward, being short of ammunition and disheartened. It is said that Kruger has been down to Brandford, and that he was recently visiting the South. The continual exertion of his personal influence appears to be becoming a significant necessity.

MAFEKING.

Later.

Lieutenant Smithman, of the Rhodesian Regiment, reached Mafeking through the Boer lines and returned to Colonel Plumer's camp on the 8th of April. All was well at Mafeking on the 4th of April.

THE BOERS AT WEPENER.

Shanghai, April 18.

The *Standard's* correspondent telegraphs from Bloemfontein that the commandos investing Wepener are in full retreat. The majority have retired north but six thousand are still reported to be approaching Bethulie.

MAFEKING.

Snyman resumed the bombardment of Mafeking, on the 6th of April.

WEPENER.

Reuter's agent telegraphing from Maseru, wires that the Boer scouts report the approach of forces to relieve Wepener from Reddersburg and Rouxville. The majority of the Boers favour raising the siege, but Olivier is reluctant to move while there is a chance of capturing Dalgety, who is determined to hold the position.

BEIRA.

Three transports of Bushmen landed at Beira on the 14th instant, and twenty-two transports are expected during the month.

THE QUEEN.

The Queen leaves Dublin on the 27th instant.

LORD ROBERTS' CRITICISMS.

Shanghai, April 19.

Despatches from Generals Buller and Warren regarding the Spion Kop affair, with a covering despatch from Lord Roberts, have been gazetted. Lord Roberts severely criticizes Buller, Warren, and Thorneycraft.

The Times refers to the great services rendered by Lord Roberts in exposing impartially and severely the costly errors and omissions committed in high quarters.

MAFEKING.

News from Mafeking says all was well on the 11th inst.

WEPENER.

Reuters' agent, telegraphing from Maseru on Tuesday, reports that five of the enemy's guns at Wepener had been disabled, and that the leaders were still disputing.

ROBERTS'S CRITICISMS.

Later.

There is no news from South Africa. The War Office declines to give any information regarding the report that General Warren has been recalled. The papers generally approve of Roberts's outspokenness. They observe that his criticisms inspire misgivings regarding the training of officers.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE.)

THE CHAMBER OF DEPUTIES AND THE CABINET.

Saigon, April 13.

During the discussion on the Budget in the French Chamber of Deputies, M. Cochin criticized the general policy of the Cabinet. M. Waldeck-Rousseau defended the Government's policy, which, he said, had restored to the country tranquillity and moral peace. The Chamber, by 286 votes to 211, recorded its endorsement of the President of the Council's discourse.

THE CHAMBER OF DEPUTIES AND THE BUDGET.

The Chamber of Deputies has rejected some modifications made in the Budget by the Senate.

THE BOERS IN NATAL.

The Boers, on Tuesday and Wednesday, bombarded the British camp at Elandslaagte. A brisk cannonade took place between the two sides.

THE FRENCH BUDGET.

Saigon, April 14.

The French Budget has been definitively voted and Parliament is adjourned until the 22nd of May.

A PRETORIA STORY.

It is announced from Pretoria that after the

Digitized by Google Original from CORNELL UNIVERSITY

eombat at Elandslaagte the English retired in the direction of Ladysmith.

WEPENER.

The combat continues at Wepener and is favourable to the Boers. Fifteen hundred English are surrounded.

[It is scarcely possible that the English can have had a force of anything like 1,500 men at Wepener. The British version of the number is 500, which is much more probable. For the rest, our latest news is that the Boers have been heavily repulsed.—ED. *J.M.*]

OPENING OF THE EXHIBITION.

Saigon, April 15.

Yesterday, the 14th instant, in the afternoon, the President of the French Republic inaugurated the Universal Exhibition in the *Salle des Fêtes* of the Palace of Machines. The President was surrounded by the French Authorities, and by the Ambassadors and Commissioners of foreign countries. There was great enthusiasm.

M. Loubet expressed the conviction that the Exhibition will develop sentiments of concord and solidarity among the nations, and that the twentieth century will see more fraternity and less misery.

The President, warmly applauded, traversed the Champs-de-Mars and ascended the Seine to the Pont Alexandre and the Elysée. The weather was beautiful and the crowd enormous. There was great enthusiasm, and the whole city was decorated.

Saigon, April 16.

On the occasion of the opening of the Exhibition, the President of the Republic received numerous telegrams of congratulation, notably from the Emperor of Russia and President McKinley.

The President of the Council of Ministers, M. Waldeck-Rousseau, received, on his side, numerous congratulations from the provinces and from abroad.

THE EXHIBITION.

Saigon, April 17.

Enormous crowds visited the exhibition yesterday and to-day. The success has been brilliant, notably for the French Colonial Section. Most of the installations will be completely terminated by the end of the month. Paris is *en fête*.

WEPENER.

Saigon, April 18.

20,000 English are marching to relieve Wepener. The Boers have retired towards an unknown destination.

(FROM THE "CHINA MAIL")

PLAGUE IN AUSTRALIA.

Melbourne, March 20.

There have been five deaths from suspected Plague at Adelaide.

Adelaide and Sydney have been declared infected with the Plague.

Advices from Sydney state that stringent measures are being taken to eradicate the Plague, and citizens are being inoculated.

BRITISH CAVALRY.

Colombo, April 9.

The immobility of the British force at Bloemfontein is explained by the fact that the cavalry has broken down under the great strain of the last few weeks.

The operations of the British are confined within a limited area, it being impossible to cover a radius from the town of thirty miles.

It is not expected that Lord Roberts will attempt any further advance until the arrival at the front of ten thousand Sauth American horses which are landing this week at Cape Town.

BANK OF JAPAN.

BANKING ACCOUNT.

PARIS AND "LE DUM-DUM."

On the boulevards on Mardi Gras confetti was sold everywhere. Stalls of it stood at every corner; anæmic youths flourished it by the bag; old women hawked it about in wooden measures—and all three did well in spite of the rain. White lilac was to be had, and nougat. A Turk passed to and fro, with Sujat carpets; behind him came another pedlar, loudly calling attention to a new toy. It consisted of two figures, the one large, the other small; it represented a Boer and an Englishmen, and it was worked by a string. "Voici Kronje et Roberts," announced the man, then holding his puppets up, made them bow and dance, made Cronje pick Roberts up eventually, made Roberts shake, totter, fall, "Kronje wins," cried the pedlar. "See Kronje victorious, see Roberts defeated, see the triumph of the Transvaal over England—only fifty centimes." Soon, another cry rose, and it was, "Here's the dum-dum, the dum-dum, the dum-dum," and it came from a brother pedlar, equipped also with a new toy. His was a card-board bullet out of which an Englishmen jumped when a spring was touched, and this was Roberts again, or Buller, or Macdonald, or Kitchener, now one, now the other, yet all three alike. No one heeded these pedlars, however, because everybody was buying or exchanging confetti; and both men were pushed and proclaimed to be a nuisance and persuaded at last to get out of the way. Grumbling, they took to the terraces of the cafés, and made Cronje throw Roberts; or Buller, or Macdonald, or Kitchener jump out of their "dum-dum," again and a bourgeois, surrounded by his family, held forth on the war. "Le dum-dum," he said, "is the most terrible bullet employed in the war, and it has been used now for the first time. It can kill twenty men, one after the other. It will blow them to pieces, and into the air. It can ——" "Merci, mon ami," replied his wife. "Get Jeanne some confetti, and let's walk. Never mind your dumdum: we shall never see one in France." And so Jeanne threw confetti, handfuls of it; and so others pelted her; and so Jeanne was soon bathed in colour; and so the pavements became purple and yellow and pink and green; and so a mud of confetti was made because it rained; and yet the crowd grew and passed on patiently, gaily, amiably, without a word that was rude or a gesture that was rough. "Voici Kronje," shouted the pedlars, "Voici Roberts." "La Patrie," cried a camelot suddenly. "Défaite du Général Kronje par les Anglais." But—the battle of confetti continued and the camelots, twenty or thirty of them now, all hastening, were rarely stopped. Time passed; and the crowd, the confetti grew thicker and thicker. Here and there, a camelot still announced the news; occasionally, some one would say, "Les Boëres sont en fuite, tu sais." The mud of confetti got sticky now, and ran in coloured streams. There were purple splashes, green splashes, yellow splashes, pink splashes of it everywhere. Towards six o'clock apéritifs were taken; and then only did the Parisian discuss the news of the day. "Ce pauvre Kronje," was his favourite remark, "sa pauvre femme! Parait qu'il y'a 3,000 prisonniers. C'est la fin. C'est la triomphe du dum-dum." When the "Petit Bleu" appeared with a photograph of Cronje, the Parisian studied it and called the heroic General "a fine man" and "a big man," and sympathised with his wife who was "a brave woman" and "a good woman," and drew pictures of them both in their camp, surrounded by their men. It stirred him to think that the General had been followed by his wife throughout the campaign; and there was almost more sympathy for her than for him, while President Kruger's name was not even mentioned. "London will rejoice," said a portly little bourgeois. "Chamberlain will become a hero," replied another. "C'est le dum-dum." And when the Parisian had finished his absinthe, he went forth on to the boulevards once more, and exchanged more confetti on his way to dinner, and shook it off as he entered his restaurant, and dined well, and laughed in a theatre afterwards, and did not mention the matter again.

On the Rive Gauche, the "dum-dum" had won both Roberts' and Buller's victories. Kimberley and Ladysmith have been saved by it and Cronje would be at large if there had been no "dum-dum." Mr. Rhodes—according to Bohemia—must rejoice; Mr. Rhodes, indeed, should give the inventor of that particular bullet the richest of his gold mines—for, without it, he would be a prisoner or, worse still, careering about South Africa in a balloon. Queer birds might attack him; a storm might drive him straight into the enemy's camp; a perverse wind might blow him across the ocean, upset him, and he—in spite of his nuggets—would be obliged to strike out for his life and swim. Then, mes amis, Rhodes would become a Robinson Crusoe, and wear skins instead of a frock coat and sandals in the place of boots, and sip water and cook sparrows and cry for crusts; or, finding no island, he would seek refuge on a rock and stare at the sea all day, and have no one to speak to and no companions but silent oysters and sentimental seals. All this might have happened to Mr. Rhodes. Now he must respect, now he must admire, that "chose effrayante, le dum-dum." And then "ce pauvre Kronje," and, "sa pauvre petite femme," how they must condemn the cause of all their troubles, that sinister object, "le dum-dum"! Weeks ago they were side by side in the trim camp, the one smoking his pipe, the other reading the Bible to him, or bathing their grandson, or knitting. Both were certain of success, then; both dreamt, no doubt, of returning to their farm in a month or so, when the war had been brought to a triumphant close. And then, suddenly, all their hopes are shattered, all their dreams dispersed, not—"Hear me, Mimi"—by an honest cannon, but by that frightful monster, "le dum-dum." "Is it big?" asks Mdlle Mimi. Like a petit pain," answers Paul. Is it in a shape of a croissant?" goes on Mdlle. Mimi. "No," replies Paul, "it is straight. It could travel from here to Amiens killing everybody it met on the way, and even then have power enough to shatter the Théâtre Municipale, the Cathedral, aud the Hotêl de Ville, and afterwards——" "Assez!" cries Mdlle. Mimi. "It has killed enough." Paul, however, is bent on showing his knowledge of military matters, and attributes many an odd power, many a strange merit, to that outrageous assassin, "le dum-dum." "It is at once bizarre," he goes on. "It never smokes and it can scarcely be seen. It does not travel straight like other bullets but is on the ground now and then in the air, or turning somersaults or cutting figures, waiting always for a favourable opportunity to drop. It has marked its man—the biggest in the field. One would say that it can *see*." "Diabolique," observes Pierre. "And then," continues Paul, "it strikes. It enters an arm or a leg. It travels; it goes everywhere, and then it comes out and strikes another Boer and explores him also, and then it treats a third Boer in the same manner, and a fourth, and a fifth, and a six—"Assez," cries Mddle. Mimi, "it has killed more than enough." "When," concludes Paul, "it is exhausted, it shrieks and gives up smoke which suffocates everybody and which, sinister detail! is green!" Still, Paul admits that the Boëres also use the "dum-dum," a kind of their own. It is not so successful, because it cannot kill as much. After it has "explored" three Englishmen, it is spent. Why? Because it is bothered by khaki, a mysterious stuff. "You," declares Paul, pointing to Mdlle. Mimi, "you might wear khaki and no one would know that yours was not an ordinary dress. The Quarter would say, 'Mimi is wearing fawn.' The Quarter

Digitized by Google Original from CORNELL UNIVERSITY

would never know that you had, in reality, a suit of armour on, as strong as steel, as sound as the costumes of the ancient Moors, Mohammedans, and Crusaders." And as Mdlle. Mimi is still sceptical, Paul explains that khaki is a preparation of india-rubber almost impossible to penetrate, and that it blunts bullets and swords, and that the Boères do not know this because it looks like an ordinary and innocent suit of yellow. What wonder then, that Cronje should be a prisoner! What wonder that thousands of his men should be also helpless to attack. Khaki and the "dum-dum" have been too much for them; khaki and the "dum-dum" have saved Kimberley and Ladysmith; khaki and "dum-dum" will destroy South Africa very soon, and put an end to the war.—*The Saturday Review.*

And White announced mate in nine moves.

INTERNATIONAL CHESS.

The international chess match, by cable, which was commenced on Friday, March 23rd, was brought to a close the next evening, and resulted in a victory for the American team by a score of six games to four, the same as last year. The handsome trophy given by Sir George Newnes now becomes the permanent property of America. The score of the match follows:—

AMERICA.	Won	GREAT BRITAIN.	Won
Pillsbury	½	Blackburne	½
Showalter	½	Lee	½
Barry	1	Atkins	0
Hodges	1	Bellingham	0
Hymes	½	Mills	½
Voight	1	Lawrence	0
Marshall	0	Jackson	1
Bampton	0	Jacobs	1
Newman	½	Ward	½
Delmar	1	Trenchard	0
Total	6	Total	4

The contest was spirited throughout. England scored the first blood, but at that time it looked as if America would achieve an overwhelming victory, yet later it was a question whether America would be able to win the match even by one narrow point. The whole issue hinged on the game between Pillsbury and Blackburne and the contest between Bellingham and Hodges. Blackburne, by very fine play, regained a pawn lost in the opening and finally secured the better position, but not sufficient to win. Hodges was put on the defence for a day and a half, but finally, by excellent play, succeeded in establishing a won game. Seeing that the match would have been won for America anyhow, he offered a draw, which, however, was not accepted, the gallant Englishman resigning instead.

LATEST COMMERCIAL.

IMPORTS.

There is no improvement in yarns. Japanese buyers are apparently in want of money and wish to sell rather than to buy. All quotations are nominal. Shirtings are also flat and dull, and in fancy cottons and woollens there has been a retail business only. In metals there is nothing doing.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirting—8¼lb, 38½ yds. 39 inches	$2.85 to 3.85
Grey Shirting—9lb, 31½ yds, 45 inches..	4.75 to 6.50

White Java and Penang	6.90 to 8.60
White Refined	7.90 to 9.70

EXPORTS.

RAW SILK.

Holders have got tired of keeping their goods and lowered prices to the following rates. Some little buying has begun on this basis, and probably more orders will soon come in at these or similar values. Prices are now down to the nominal quotations of 16 June, 1899.

QUOTATIONS.

Kakedas—No. 1½	950 to 960
Kakedas—No. 2	None
Kakedas—No. 2½	None

WASTE SILK.

Very poor market, prices in Europe being from 5 to 10 per cent. lower than what the Japanese have been asking. They now show some inclination to meet buyers, but there are few orders in hand, and those require a quality that is not at present available.

FOR RED ROUGH HANDS ITCHING BURNING PALMS

FOR PAINFUL FINGER ENDS

One Night Treatment. Soak the hands on retiring in a strong, hot, creamy lather of CUTICURA SOAP. Dry, and anoint freely with CUTICURA, the great skin cure and purest of emollients. Wear, during the night, old, loose kid gloves, with the finger ends cut off and air holes cut in the palms. For red, rough, chapped hands, dry, fissured, itching, feverish palms, with shapeless nails and painful finger ends, this treatment is simply wonderful.

HOW TO CURE TORTURING, DISFIGURING HUMOURS.

Bathe the affected parts with HOT WATER and CUTICURA SOAP, to remove the crusts and scales, and soften the inflamed, cracked, bleeding, or thickened cuticle. Next apply CUTICURA Ointment, the great skin cure and purest of emollients, to allay itching, irritation, and inflammation, and soothe and heal. Lastly, take a full dose of CUTICURA RESOLVENT, to cool and cleanse the blood, and expel HUMOUR GERMS.

This single treatment affords instant relief, permits rest and sleep and points to a speedy, permanent, and economical cure of the most torturing, disfiguring, itching, burning, and scaly skin and scalp humours, rashes, and irritations, with loss of hair, when all other remedies, and even the best physicians fail.

Sold throughout the world. British depot: F. NEWBERY & SONS, London. French depot: L. MIDY, Paris. Australian depot: R. TOWNS & Co., Sydney. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 28TH, 1900.

BIRTH.

On April 20th, at No. 8, Tsukiji, Tokyo, the wife of Richard J. KIRBY, of a daughter.

DEATH.

At Richmond, Virginia, U.S.A., on March 31st, 1900, General FRANCIS H. CAMERON, father of Duncan H. Cameron, of Yokohama.

SUMMARY OF NEWS.

THE Duke of Argyll is dead.

SIR NICHOLAS HANNEN died at Shanghai on Thursday.

THE Chartered Bank of India, Australia, and China opened an Agency at Madras on the 29th ult.

YOKOHAMA Bluff Lot No. 140-B, containing 550 *tsubos*, and buildings consisting of dwelling house, outhouses, kitchen, and lodge, was put up for sale on Monday morning by Messrs. Eyton and Pratt, but was not sold. The highest bid was 3,000 *yen*, against a reserve of 7,000 *yen*.

COMMANDER ROBERT B. S. WREY, H.M.S. *Brisk*, has become Sir Bourchier Wrey, Bart., by the recent death of his father.

GENERAL SIR A. P. PALMER, K.C.B., Indian Staff Corps, commanding the Punjab, is to be provisional Commander-in-Chief in India.

THE U.S.S. *Albatross* has been docked by the Ishikawajima Shipbuilding and Engineering Co., at Uraga, to have her hull painted and for necessary repairs.

THEIR Excellencies Sir E. Satow and Count Orfini were on Monday received in audience by the Emperor to say farewell in view of their approaching departure for Europe.

THE sailor who robbed a Chinaman of 1,000 *yen* on board the *Empress of India* at Yokohama was arrested in Hongkong. The prosecutors left Yokohama for Hongkong on Saturday.

TWENTY lots of land—33 to 52 inclusive—at the new settlement of Kunsan in Korea, were put up for sale on the 5th instant. Seventeen were purchased by Japanese and three by Chinese.

THE situation in South Africa has changed slightly. The British have caused the Boers to retreat from the neighbourhood of Wepener. Mafeking can hold out till the middle of May on one ration a day.

A FRENCH engineer is said to be engaged surveying the route of the Sōul-Wiju Railway, and the Emperor of Korea is to entertain the chief promoters of the Sōul-Fusan Railway on the 25th instant.

DURING the gale on Friday afternoon a lighter towed by a steam-launch was swamped at the entrance to Yokohama harbour and sunk. A *sendo* was thrown into the water but picked up by the launch.

MR. JUSTICE WILKINSON, who left here at the end of February for London, is now on his return journey to Yokohama and Shanghai, having left Queenstown on the 22nd inst. He is due in Yokohama on May 21.

IT is stated that the official Committee appointed in connexion with the approaching marriage of the Prince Imperial has fixed the date of the ceremony, but no public intimation of the time has yet been made.

THE wreckage and cargo of the *Iranian* were sold at auction on Monday by Messrs. Eyton & Pratt. The cargo brought *yen* 3,000 and the ship *yen* 450, the purchaser being Mr. Sasawo Shojiro. No trace of the vessel is at present visible, so that the purchase is quite a speculative character.

ON Saturday evening, a stabbing affray occurred in Chinatown in front of the Star Saloon, No. 133. The affair was between two sailors, named William Painter and Douglas Gulgor. The latter slightly wounded his opponent's back with a knife. They were taken to the Kagacho Police Station.

STATISTICS published in the *Official Gazette* show that the receipts from posts, telegraphs, and telephones for January this year amounted to 1,320,838 *yen*, showing a decrease of 1,098,453 *yen* as compared with 2,419.311 *yen* for the previous month, but an increase of 288,747 *yen* in comparison with the corresponding period of last year.

MR. C. B. RICKETT, of Foochow, has presented the bird department of the Natural History Museum at South Kensington with a magnificent collection of over 1,100 birds, collected during his travels in Southern China. The series contains many valuable types of species new to science, discovered by him in various parts of China, and comprises a complete collection of the birds of Foochow and the province of Fukhien.

PROVISIONAL charters have recently been granted for the following railway lines projected by the Hoshiu and Hansen Railway Companies :—

Hoshiu Line.	Miles.	Chains.	Capital. Yen.
Kawasaki-Soeida section ...	3	13 ...	220,000
Ida-Ikari section ...	1	45 ...	180,000
Hansen Line.			
Ichinoseki-Ofunada section..	62	25 ...	4,300,000

IT is announced that the Naniwa and Kyoritsu banks have amalgamated, and their joint capital amounts to 3,700,000 *yen*. The Osaka Railway Company and the Kwansei Railway Company have taken a similar step, the basis of agreement being that each share of the Osaka Company shall be considered equivalent to two shares of the Kwansei Company together with a sum of 13½ *yen*.

A RUSSIAN sailor, who deserted from the *Admiral Korniloff*, appears to have given some trouble to the police. He was first arrested at Shinagawa, but escaped. The whole police force of the district, 90 constables altogether, then directed their energies to his re-arrest, and he was at length seen lying under a tree. On the approach of a constable the man drew a knife and sprang at the policeman, but he was finally captured, though with difficulty, and taken to Yokohama.

REPRESENTATIVE Japanese members of the foreign and Japanese newspapers of Yokohama assembled at the Nagoya-ro, Kanagawa, on Sunday, and after a short discussion decided to enroll themselves under the name of *Shimbun Kyokai* (Union Newspaper Society). There will be two general meetings a year and the affairs of the society will be managed by a committee of five elected from the sixteen newspaper offices. After this business had been conducted, dinner was served and the evening was spent in the usual fashion at Japanese entertainments.

STATISTICS published in the *Shogyo* show that the customs receipts during the 32nd fiscal year amounted to 15,487,135 *yen* for imports and to 399,346 *yen* for exports, making a total of 15,886,481 *yen*. This amount is less than the estimates, by 224,840 *yen*, but is an increase of 9,259,652 *yen*, or 130.97 per cent., over the figures for the previous year. The augmentation is due to the enforcement of the revised tariff.

THE new Hongwan Temple in Tsukiji, Tokyo, now in process of construction, will have a main hall measuring 129 feet by 126 feet, its area consequently being 960 "mats," according to the Japanese style of measurement. Mr. Ito Heizayemon is the architect. The roof, being of the comparatively colossal dimensions peculiar to Japanese religious structures, will have a spread of 700 *teubo*, or ⅞ of an acre. The vernacular journal giving these figures does not say anything about the estimated cost.

THE Mitsui firm, working in conjunction with some Chinese capitalists, has made arrangements for constructing a horse tramway in Tientsin. The line will run through the British, German and Japanese settlements, and will have a length of about 4 miles. This will be an interesting object-lesson, if it becomes an accomplished fact. There is a strong tinge of novelty in the idea that Chinese and Japanese should step in to take up an enterprise which Europeans and Americans have been looking at listlessly for some years.

SOUTH AFRICA.

Thursday, April 26.

The Boers are certainly not too lavish of the truth. Their last exhibition was quite quaint. Roberts defeated them on the 10th March at Driefontein; advanced 12 miles beyond that place on the 11th; 16 miles further on the 12th, and took possession of Bloemfontein on the 13th. Meanwhile General Delarey had made the following report with regard to the fighting on the 10th:—

"The English forces, which I estimate at 40,000, approached our positions from two directions. They first shelled the positions occupied by General Cellier's artillery and this attack was followed by a musketry engagement, during which two of our men were wounded. The British discovered that the attempt to break through at this point was hopeless, and a second assault was made upon our left flank, which was scattered in a position covering the top of the road where I and 300 men were stationed.

"To gain possession of these hills was of considerable strategic importance to the British, and, the Federals appreciating this, a heavy engagement occurred. It lasted from 9 o'clock in the morning till sundown. The burghers fought like heroes, and three times repulsed the masses of the enemy which were thrown against them. The British kept relieving their tired men, but each and every attempt to storm our position was defeated. At sundown there were not 50 yards between us.

"The British lost heavily. No accurate return of our losses is available, but I will report later."

That was a singularly unlucky "break" on the part of Delarey. His falsehood might have passed muster had it not been so quickly exposed by the fall of Bloemfontein, but he certainly ignored the first principles of successful lying when he left Bloemfontein out of his calculations. The Boers are losing caste. Perpetual abuse of the white flag; constant firing upon ambulances; deliberate cannonading at the quarters occupied by women and children, inveterate lying and the free use of explosive bullets—that is an ugly catalogue of offences.

MARQUIS ITO ON ECONOMICAL TOPICS.

In the speech delivered by him at Yamaguchi, Marquis Ito took for his theme the necessity of cōoperation in industrial and commercial enterprises. He instanced the case of the Chōshiu clan at the time of the Restoration. In spite of its comparative insignificance, and in spite of the great forces at one time arrayed against it, it had succeeded in strongly influencing the course of national events; a success entirely attributable to united methods. The Marquis entered minutely into statistics relating to the wealth of England and its development in recent years. He pointed out, among other things, that her foreign investments are supposed to aggregate five thousand millions sterling, from which, even at 3 per cent. interest, she derives an annual income of 150 million pounds. But in that context he made a point which will attract considerable attention. It amounted to a warning against too great a desire for the importation of foreign capital. The bringing-in of foreign capital, the Marquis is reported to have said, is another name for contracting a foreign loan. Interest and principal have to be paid out of the pockets of the people. It is therefore better, if possible, to invest domestic funds and to keep the interest at home. We suspect that the reporter has done Marquis Ito an injustice here. Certainly there is nothing like working with one's own money if, by that process, it can be turned to best account. But the question in Japan's case, we take it, is not one of preferring her own money, but of either obtaining foreign capital or going without capital altogether. There can not be much hesitation about a decision of that nature. Suppose, for example, that a railway is to be built, either with foreign money or not at all. Suppose that foreign money is obtained and the railway built. Then, after a few years, the earnings of the line suffice to pay back the principal and interest and the railway remains a permanent asset of the country, apart from all the collateral advantages it has meanwhile conferred. It is true that the money used in liquidating the indebtedness has come out of the pockets of the people using the line. But they have an ample equivalent: the facilities afforded by the road have fully compensated them directly, and have indirectly contributed to their prosperity and wealth. A railway is a particularly simple illustration. But the same argument applies correspondingly to all useful enterprises.

JAPANESE FINANCE AND INDUSTRY.

Count Inouye delivered an interesting address at the recent unveiling of Prince Mori's statue in Yamaguchi. His subject was finance and industry in Japan, and the gist of his speech related to the points he has so persistently brought before the public of late, namely, the tendency of the country to buy more than it sells and the great need of organization and cooperation in industrial and commercial circles. Taking the customs returns for the past four years, the Count found that there had been the following excesses of imports:—

	Yen.
1896	53,830,000
1897	5,600,100
1898	111,000,000
1899	5,970,000
Total	276,410,000

The greater part, if not the whole, of that large total must have left the country; and there is no sign of improvement this year, for, up to the middle of the current month, imports exceeded exports by 44 millions. Last year, too, Japanese cotton-spinners were able to sell 28½ million *yen* worth of yarns in the markets of China, but this year, owing to various causes, no such sales can be anticipated. The Count went on to say that the investigations recently undertaken by him in connexion with the Kiushiu railway trouble showed that there is a tendency on the part of Japanese industrials to think of immediate profits only, and to neglect ordinary economical principles. Repairs, for example, are effected in such a cursory and temporary manner that, although large outlays are avoided for the moment, a time comes when very great expenses have to be incurred and when work may even have to be suspended. It is the same in all directions. Rolling stock and machines are strained to the utmost capacity of their power, with the certain prospect that they must break down badly and prematurely. There is not a factory in Tokyo that the Count has not visited and inspected, and there is not a factory among them all which can be said to satisfy all the requirements of economy. The most flagrant need everywhere is cō-operation. In Yamaguchi Prefecture, where the speech was delivered, there are over forty petty banks with small capitals, and by their want of union their working expenses swallow up a great part of their profits. This theme has occupied much of Count Inouye's attention lately, and we observe that Marquis Ito spoke much in the same strain, avowing his endorsement of Count Inouye's views.

CORRESPONDING VIEWS.

It really seems as though some matters presented themselves less expeditiously to the intelligence of critics in Europe than they do to out-of-the-way folks like ourselves. At the close of February and just before the relief of Kimberley, the *Militär Wochenblatt* of Berlin published an article which is thus epitomized in the *Literary Digest*:—

Whether it be because the Boers are anxious to save lives, or because their organization does not suffice for a decisive attack, they do not seem to be able to inflict a crushing defeat upon the enemy. They can not hold White and Methuen in check with forces so small that a large army remains for decisive engagements. Yet a decisive battle, though bloody and dearly won, would have changed entirely the aspect of affairs. The Cape Boers would have risen, and the question whether South Africa is to be Dutch or English would be placed in the foreground. At present, the Boers must hope that international complications will turn out to be in their favour, or that England is tired out by her efforts. In that case, peace would really be only an armistice, and the struggle would soon break out again. But things may turn out worse than that for the Boers. If England is given time to use her inexhaustible resources for the increase and proper training of her forces, then the heroic resistance of the Boers must gradually collapse. *The lesson to be learned from this war is that the offensive is still necessary to make strategical defense effective.* In the future as in the past, we Germans must be ready to strike quick, decisive blows. If we are attacked by a combination of powers, we must crush the most dangerous enemy ere others can develop their resources.

With reference to the above, the *Literary Digest* says:—

The *Militar Wochenblatt* (Berlin), even before the relief of Kimberley, predicted that the Boers will ultimately be crushed, owing to their inability to take the offensive. The article has influenced many German and German-American papers, and we condense it here.

But on January 13th, we (*Japan Mail*) wrote:—

If any one considers carefully the operations of this South African war as hitherto reported, he will see that the Boer is in a most anomalous position; strategically he is on the offensive but tactically he is on the defensive. He has invaded British territory, but he never attacks. He simply sits down and waits to be attacked. He defeats an English column sent to attack him, but he never makes any resolute attempt to reap the fruits of his victory. We confess that after the news of Maggersfontein we held our breath. Cronje had the game in his own hands then. He could have converted Methuen's position into a second Ladysmith, and we should have had the pleasant spectacle of the Guards and the Highland Brigade "held-up" by the Boers just as Sir George White's Division is held up beyond the Tugela. But the *Boers had become slaves to the necessity of acting on the defensive.* They shrank from undertaking a movement which would have placed Methuen almost at their mercy. The feat at Ladysmith did not constitute an exception to the rule. Ladysmith is invested completely. There was not the least apprehension of White's assuming the offensive even if he succeeded in beating back his swarm of assailants. *That this anomaly in their military methods will ultimately tell against the Boers, we can not doubt, and if our readers will take the trouble to think out the position at Magersfontein, they will probably agree that the first serious discomfiture of the Boers will take place there, supposing that they hold their ground a little longer.*

The portions of the two articles italicized by us show a curious parallelism of thought, but our remarks were published six weeks earlier than those of the Berlin journal, and as a reason for the Boers' disinclination to attack we assigned what we believe will ultimately be recognised by military critics to be the true cause, namely, that mounted infantry, unless strongly supported by cavalry, horse artillery, and regular infantry, will always tend to the defensive. It will be observed, also, that these considerations led us, on January 13th, to predict that the first great disaster to the Boers would occur at Maggersfontein, which prediction was literally verified by events in the opening week of March.

THE JAPANESE JUDICIARY.

The commission of judicial experts sent recently to Europe and America to inspect and report upon the working of judicial affairs in the Occident, has embodied the results of its observations in a document which must commend itself to the approval of very careful observer. The commissioners found nothing more remarkable than the absolute confidence felt by the European and American public in the integrity and competence of the occupants of the bench, and they were astonished to observe the high social status accorded to a judge and the splendid emoluments he received. It is natural, they say, that under such circumstances the Bench should command the services of the best men the country possesses. They draw a comparison very unfavourable to Japan, where a majority of the judges do not receive more than 50 *yen* a month by way of salary, and where a position on the bench is so little respected and its rewards so insignificant that good men do not care for the appointment, and it is found necessary to fill the vacancies with unsuccessful barristers. Another point to which attention is drawn is the discrimination shown by judges in the West. In minor cases they dispense with formalities and render judgment rapidly, whereas in Japan the full length of red tape has to be measured out however trivial the question at stake.

This very outspoken report is attracting much attention. We observe that an attempt is being made to discredit it by attributing purely selfish motives to its compilers, who are said to be working for the improvement of their own status and emoluments without any serious thought of the country's requirements or capacities. It is not to be imagined, we presume, that personal considerations had no part in moulding the opinions expressed in the report. Human nature remains human. But, on the other hand, it is equally undeniable that the Japanese judiciary, as at present constituted and remunerated, is very far from being what it ought to be. There is immense room for reform, and since the most vital interests of the public are concerned in obtaining really competent judges, we trust that no silly slanders or petty jealousies will be allowed to impede the measures which the report recommends.

The members of the Japanese Bench and the officials of the Judicial Department seem to be perturbed about the report compiled by the Judges and Public Procurators who recently visited Europe and America. It is evidently thought that a report of such a character ought not to have been published, as its nature required its previous presentation to the Departmental Authorities, by whom the question of publicity should have been determined. We are inclined to agree with that view, but it is not so easy to endorse the opinions attributed to some official critics, who contend that to increase the salaries of the occupants of the Bench would not increase their dignity or add anything to the public's confidence in them. Naturally the mere question of the amount of an official's salary does not finally determine his social status or the attitude of the public mind towards him. But there can be no second opinion that the quality of the men presenting themselves for the judicial service depends, to a great extent, on the rewards offered by such employment. From that point of view, the compilers of the report are unquestionably right, and their statements seem to be misconstrued when a critic interprets them in the bald sense that salary determines dignity and trust. It is further claimed, we observe, that special factors have combined to raise the emoluments of American and English judges to their present high figures, and that the salaries of Japanese judicial officials do not offer a very vivid contrast with those of judicial officials in some European countries. Certainly there is not such a flagrant discrepancy between the pay of Japanese and French Judges, for instance, as between the pay of Japanese and English. But as to the broad questions whether Japanese Judges are sufficiently remunerated, whether society accords to them the rank that a Judge ought to have, and whether their status in the official organization is what it should be, surely there cannot be any second opinion?

THE PEST.

Another case of pest has occurred at Osaka, and much uneasiness is felt lest the disease should spread at this most dangerous time—just on the verge of the wet, warm season when climatic conditions will be specially favourable to the cultivation of the bacillus. The *Nippon*, we may observe, continues its violent crusade of accusation against the Sanitary Bureau, on the ground that cases of plague have been concealed. Our contemporary now alleges that no less than eleven persons perished of pest, that their remains were cremated and their property disinfected, but that the public were carefully kept in ignorance of what was happening. The name of the physician chiefly concerned in the concealment is given, but there appears to be an impression that this campaign is dictated not so much by genuine solicitude for the common weal as by considerations of party politics. It is, indeed, a humiliating reflection that in present-day Japan party politics have come to be counted a sufficient motive and explanation of everything that is false, corrupt and vindictive.

A novel and most disquieting discovery has been made, or is alleged to have been made, in Tokyo. It was recently stated in these columns that in the sequel of a flooding of the Castle moats after heavy rain, a quantity of dead fish—*funa*, *koi*, *kingyo* and *dojo* —were found floating on the water, and were eagerly collected by the poor people, to whom the origin of such an incident made little matter in comparison with the supply of food that it brought within reach. The suspicions of the Sanitary authorities being, however, excited, investigations were undertaken, with the result that a bacillus closely resembling that of the plague was found in the dead fish. Parts of them were then fed to healthy rats, and the animals quickly sickened and died, the autopsy showing the veritable bacillus in their carcases. It is said to have been shown by investigations in Germany that crabs are affected by the pest, but this is believed to be the first instance of the disease attacking fresh-water fish, so far as science knows. The announcement has naturally caused much uneasiness in Tokyo, where it is feared that the arrival of the plague must now be regarded as an accomplished fact.

Dr. Kitasato reassures the public with reference to the subject of the pest among fishes. He says that European nations have given the name of plague to many maladies by which animals are attacked, but that none of them is identical with the pest so fatal to human beings, except the form that affects rats. Cattle plague, fish plague, swine plague, crab plague—all these do not injure human beings. The rat is the only known creature that shares with man the unhappiness of being liable to bubonic pest. Concerning the statement that portions of the dead fish recently found in the moats were fed to rats with fatal results, the eminent investigator explains that the so-called rats were in reality *Nankin-nezumi*, or marmots, and that the experiment does not furnish any ground for uneasiness.

By way of set-off to these comforting utterances we have news from Osaka that the pest has undoubtedly reasserted its presence. Four new cases are reported, one a child of two years of age, and there are fears that others have been concealed.

It is now alleged that medical investigations with regard to the possibility of the pest's being propagated by fishes have not been carried so far as was stated recently. The doubtful point is whether, or to what extent, salt-water fishes are secure against the malady. The impression is that they enjoy complete immunity, but in connexion with this a pertinent point is raised as to the fish in a place like Shinagawa Bay, where the percentage of salt in the water is comparatively small. It appears that one of the big carp found floating in the moat during the recent freshet, was carried home by a lad who, together with the members of his family, partook freely of the fish, without any bad results being experienced by any of the party.

Two fresh cases of pest are reported from Osaka, one a child under a year old. Since the recrudescence of the malady, three males and one female have been attacked, and all have perished.

The *Kobe Herald* says another case of Pest was reported from Osaka on Thursday. The victim, a woman, succumbed. This is the fifth case since the recrudescence of the plague in Osaka.

KOREAN AFFAIRS.

The news from Korea is that no truth attaches to rumours recently circulated as to Russia's having preferred eleven categorical demands in consequence of the Korean Government's refusal to make the territorial concession proposed by her at Masampho. It is alleged, however, that a convention has been duly concluded providing that, in consideration of Russia's having withdrawn her claim to Koje Island, it shall not be ceded to any other power. This allegation still rests on non-official information and consequently calls for no comment.

Further intelligence from Sōul is to the effect that the Japanese Representative is very strongly pressing the claim of Mr. Asano to the Chukshan mine. The Korean Government had rejected this application, but there are prospects that the decision will be re-considered, since it would amount to an unfriendly discrimination against Japan.

Telegrams from Korea published by the *Asahi Shimbun* say that nothing in the shape of a written agreement has passed between Russia and Korea with regard to Koje island. There has been merely a verbal intimation that no part of the island shall be alienated to any foreign Power. It is possible that this understanding will be reduced to writing, should the temper of the various Powers be found placable.

The same journal has a telegram to the effect that shares of the Sōul-Chemulpo Railway to the value of a hundred thousand *yen* are to be acquired by the Korean Household Department.

Digitized by Google Original from CORNELL UNIVERSITY

TOKYO DRAMATIC AND MUSICAL SOCIETY.

The piece chosen by the Tokyo Dramatic and Musical Society for their performance on the evening of the 26th was "Charley's Aunt," a farce in three acts, which has the great merit of being farcical from first to last. Two Oxford students invite to luncheon two young ladies with whom they are in love. One of them expects the arrival of an aunt whom he has never seen, and they count on her for chaperone. But she fails to put in an appearance, and they induce a third student to personify her. To this fictitious old lady two proposals of marriage are made for the sake of her supposed wealth, and the resulting incidents, together with various complications naturally arising out of such circumstances, make a thoroughly amusing comedy, happily not dependent on vulgarity for its humour. The chief role, that of *Lord Fancourt Babberley*, the fictitious aunt, was taken by Mr. Davis. who also discharged the difficult duties of stage manager. Mr. Davis is Mr. Bayne's successor in Yokohama as representative of the North China Insurance Company, and it is an interesting coincidence that two men of such histrionic ability should occupy the same post in succession. The part of "Charley's Aunt," however, needs more than excellent acting: it needs exceptional farcical expression. In both respects it found everything necessary in Mr. Davis, who rendered it the most mirth-provoking performance we have hitherto seen on the stage in Tokyo. He had to go through the ordeal of receiving two proposals of marriage, and, strange to say, he acquitted himself excellently. We call it strange because the perennial contrast between the conduct of the male and the conduct of the female on these occasions remains a psychological puzzle. No one has ever detected any gaucherie or gracelessness in a lady's manner of receiving an offer of marriage on the stage; no one has ever seen a man make the offer without awkwardness and embarrassment. Apparently the solution of the problem is in the petticoat, for Charley's male aunt showed entire freedom from the usual male defects. *Jack Chesney* and *Charley Wykeham*, the two collegians whose love affairs are responsible for all the complications, were personified by Mr. Pattison and Mr. Vickers. These parts are entirely lacking in any of the elements of caricature that so greatly help the amateur actor. The collegians had to be perfectly rational and normal individuals throughout, and when we say that they succeeded, we offer a tribute which need not be elaborated. Mr. Conder, as *Colonel Sir Francis Chesney*, made another of his many hits, and Mr. Gardiner as *Stephen Spettique* showed that the management had done wisely in assigning to him a role much more difficult than any of those previously taken by him. Mr. Kirby, in the part of *Brassett*, a typical college butler, unscrupulous and obsequious, won, and deservedly won, a great deal of applause, nor should a word of congratulation be omitted in the case of Mr. T. Mason, victim of a playwright's tyranny, who had to make up as a gorgeous footman all for the sake of a forty-seconds' appearance and the utterance of three sentences, two of them consisting of the formula "Yes, Sir." Concerning lady's roles, three were taken by *débutantes*, but the fourth, *Donna Lucia d'Alvadores*, had Miss Hayes for representative, and we need scarcely say that the rendering was capital. Miss Hayes' elocution is so clear, and her demeanour so natural and self-possessed, that it is always a pleasure to hear and see her. Of the fair *débutantes* the palm must be given to *Amy Spettique* (Miss Helen Takayanagi), who not only presented all the attractions of appearance that the part demanded, but also acted with delightful ingenuousness and grace. *Amy Spettique* (Miss Lay), had a more colourless role, but she made the most of her opportunities and showed herself a decided acquisition. *Ela Delahay* (Miss Maude Nishikawa) is a part that would break the heart of the best actress, for, as written by Brandon Thomas, there is absolutely nothing in it. The audience had to be grateful to Miss M. Nishikawa for the good will she brought to the rendering of such a colourless role. We offer our compliments to Mr. Conder on the scenery, which displayed his often-proved artistic taste and ingenuity. Mrs. Vickers performed the irksome duties of prompter, and the Imperial band played some pretty music between the acts.

TAX ON BICYCLES.

The tax on bicyles being local, its amount varies in different places. Apparently it has been raised to 6½ *yen* per cycle in Yokohama, and many complaints are made about the figure, which, it must be confessed, seems out of all proportion to the value of the object taxed. We are surprised that the Authorities should think it expedient to levy heavy rates upon bicycles. If the bike be viewed simply as a luxury such a policy would be comprehensible. But the bike is not a luxury in Japan; it is a necessity. The Government should do everything to encourage its use. What the youths and men of this country need above all things is physical exercise, and the bicycle promises to supply just the incentive that is required for that purpose. Besides, it immensely increases the productive capacity of the mercantile and manufacturing classes by enabling them to get about from place to place in one half of the time and at a fraction of the cost incurred where a *jinrikisha* is used. The Authorities must know very well that a tax of 6½ *yen* will prove prohibitive to hundreds, if not thousands, of persons. As a general rule, young men in Japan can not afford to pay such an impost. They will have to give up riding bicycles, and the Local Authorities will then have the satisfaction of losing the revenue they might have collected had their ideas been moderate. and of having put an end to one of the most valuable customs ever introduced into Japan. It is further alleged, we observe, that in Yokohama the same rate is charged on bicycles which ply for hire and bicycles in private possession. That seems incredible. In all branches of taxation there is discrimination in favour of the tradesman.

THE IMPERIALISTS.

The death of Viscount Shinagawa having deprived the Imperialists of their leader, they are about to hold a meeting for the purpose of electing a successor. Marquis Saigo is spoken of, with Mr. Kiyoura Keigo as Vice-President. But doubts are expressed as to whether these two gentlemen will agree to accept the positions. We should think it more than doubtful. Cabinet Ministers have not hitherto allowed themselves to be enrolled as members of political parties in Japan, and neither Marquis Saigo nor Mr. Kiyoura is likely to make a new departure in that respect.

KOREAN DECORATIONS.

The Korean Government is said to have entrusted to a Japanese artist, Mr. Sugimura, the duty of manufacturing the new decorations which have been instituted by the Court in Söul. Our readers are aware that Mr. Li, Korean Representative in Japan, who is now *en route* for this country, is commissioned to offer the grand cordon of the new order to the Emperor and the Crown Prince. This cordon is reported to bear a close resemblance to that of the Japanese chrysanthemum, but we fail to understand how the "imperial flower" can enter with any propriety into a Korean decoration.

With reference to the chrysanthemum and the almost universal part it plays in the scheme of Japanese ornamentation, we have often speculated whether it had not its origin in the work of Hippodamus of Miletus, who, having planned and embellished the Pirœus at Athens, was subsequently employed as architect of Camirus in Rhodes, where his achievements were supplemented in later times by those of Protogenes, the painter, and Chares, the sculptor. It is certain, at all events, that in early gold ornaments from Camirus, preserved in the British Museum, a prominent place is occupied by a flower which no Japanese would hesitate in calling a chrysanthemum, and that the same ornaments show the "cord-and-tassel" design, so common in China and Japan. Archæologists would, doubtless, identify these many-petalled flowers as representations of the rose from which Rhodes is believed to have derived its name, but had the scheme of ornamentation come into Japanese hands without any explanation as to the nature of the flower, the latter would surely have been regarded as a chrysanthemum. Pindar tells us that Rhodes was raised from the depths of the ocean by the Sun-god Helios, who always continued to be its tutelary deity, and whose image is depicted on all the Rhodian coins. This legend bears as close a resemblance to that which describes the origin of Japan as do the *rodion* and fringe of Camirus to the *kiku* and *yoraku-de* of the Eastern islands.

THE FAMINE IN INDIA.

The famine in India has evidently assumed the dimensions of a terrible catastrophe. According to the latest telegraphic intelligence no less than five millions of persons are receiving governmental relief, and there must be millions whom the official arm does not reach. We can not doubt that the occasion calls for a strenuous effort on the part of every charitable subject of the Queen, and the disposition to relieve distress is strengthened in this instance by the fine spirit of loyalty to the Empire that the Princes and people of India have shown in connexion with the South-African war. Large sums have already been collected in England, and already in Hongkong the list of subscribers, both British and Chinese, has reached to considerable length. In Japan, however, nothing seems to have been done as yet, and our readers will probably agree that it is time to make a commencement. Doubtless the Banks will be glad to take charge of subscriptions, as they did on a previous occasion; but should any one find it more convenient to send a donation through the office of this journal, we will receive and forward it, with due acknowledgments.

THE WAR DEPARTMENT.

Several promotions and transfers are gazetted in the Army. Four Major-Generals become Lieut.-Generals and fourteen Colonels become Major-Generals, among the latter being Colonel Fukushima, of trans-Asian fame; Colonel Arisaka, inventor of the new gun; and Colonels Tamura Iyozo and Iseji, two officers who are regarded as men of quite exceptional military ability. General Nozu, hitherto Commander of the Eastern Division, becomes Superintendent General of Military Education; and the Educational Department of the Army is placed under the direct control of the Emperor; Lieut.-General Oku, its former Superintendent, being appointed to the command of the Eastern Section, *vice* General Nozu. Lieut.-General Terauchi becomes Assistant Chief of the General Staff; Major-General Fukushima is gazetted Chief of Staff of the Western Section; Major-General Tamura Iyozo, chief of Staff of the Eastern Section; and Major-General Arisaka, President of the Artillery Council. Lieut.-General Nagayama, hitherto in command of the Seventh Division (Hokkaido), is placed on the Seconded List, and is succeeded in the command of that Division by Lieut.-General Oseko, hitherto Assistant-Chief of the General Staff. This last change is taken to mean that the organization of the Seventh Division is to be vigorously pushed.

As a matter of organization these changes indicate greater centralization, the headquarters of the three *Totoku-bu* (Eastern, Middle, and Western) being transferred to Tokyo; and they indicate also that greater attention is to be paid to military education. For the rest they are merely promotions and shiftings in recognition of merit and suitability. Colonel Tamura's name has been frequently mentioned of late. He seems to be regarded as an officer of great promise.

THE FINANCIAL SITUATION.

The Economical Society has decided to invite the Tokyo Chamber of Commerce to hold a special meeting for the purpose of considering the financial situation. Several members of the Society are also members of the Chamber, and in that way a connexion can be established. The position taken by the Society is that whereas the Government's attitude towards the post-bellum expansion programme is positive, its attitude, as reflected by the Bank of Japan, is negative. On the one hand it is making large outlays for non-productive purposes, drawing great quantities of labour and material from the industrial field and thus enhancing the price of commodities in general; on the other hand, the Bank of Japan is raising its rates of interest, thus depriving the mercantile and manufacturing classes of accomodation, and causing a state of depression. The Society thinks that these proceedings are irreconcilable, and that if the post-bellum programme is to be pushed, the only rational course is to introduce foreign capital. On these lines the Tokyo Chamber of Commerce is invited to debate the situation.

THE INDIAN FAMINE FUND.

We acknowledge with thanks receipt of the following sums towards the funds now being raised for the relief of the sufferers by the great Indian Famine:—

Q.	1

THE HAWAIIAN AFFAIR.

There seems to be much dissatisfaction in connexion with the tribunal appointed by the Hawaiian authorities to consider the claims of the Japanese and Chinese whose property was recently destroyed by order of the sanitary officials. The tribunal is said to be organized with second-class barristers in whom the claimants can not repose any confidence; there is to be no appeal from its decision; its procedure is not governed by the assumption that compensation is due or that any responsibility rests on the Authorities, and it is directed to attach prime importance to documentary evidence furnished by the sanitary officials, although the claimants and their witnesses are to be examined upon oath. The Chinese and Japanese sufferers have come together, we read, and are devising measures to protest against being entrusted to the jurisdiction of such a tribunal.

According to telegrams received in Tokyo, after the above was written, the Government of Hawaii has suspended *sine die* the discredited tribunal. The reasons presumed to underlie this step are remonstrances addressed by the Japanese and Chinese Consular Authorities in Hawaii and Washington, and demonstrations of dissatisfaction publicly made by the claimants for compensation. But the proximate cause of the Government's action is the refusal of the Privy Council of Hawaii to approve the appropriation required for the tribunal's expenses. This indemnity affair, it must be confessed, reflects very little credit on the Hawaiian Authorities. We have never previously heard of any civilized Government's refusing to grant due compensation to individuals who are required to suffer losses in the interests of the community at large. That is a fundamental principle of justice and sociology, and the delay that has taken place in obeying it seems most unaccountable.

CHINA, MANCHURIA, AND KOREA.

There is said to have been an engagement between the forces of the Chinese Government and the insurgents at Paoting-fu in Chihli. Sixty of the insurgents were killed and a great number captured. The Chinese Authorities are reported to have sent troops to protect the persons and properties of missionaries in that district.

The *Jiji Shimpo* publishes telegrams saying that the Russian railway in Manchuria will be opened for traffic between Vladivostock and Port Arthur by next October, and that strenuous exertions are being made to complete the Manchurian connexion with the Siberian line by next year. A number of Chinese labourers have been engaged.

The plot of land acquired by Russia at Chupok-poh, near Masampo, is said to measure 100,000 *tsubo* (83 acres). That is a wide area; wide enough for almost any purpose.

THE MEIJI ONGAKU-KWAI.

The Meiji Ongaku-kwai is singularly fortunate in having for its conductor a musician of such ability and learning as Mr. E. H. House, who devotes to a labour of pure love his literary as well as his musical capacity. The Association's last concert was rendered remarkable by a brochure, which has only just come under our notice, as we were unfortunately prevented from attending the concert. It is evidently from the pen of Mr. House, and it consists of a collection of notes analysing the great artists from whose works selections were made for the purposes of the concert. Not only the erudition and research displayed in this little work of eight pages—which, we are glad to see, has a good Japanese translation attached—but also the admirable literary style, render the brochure very agreeable reading. We presume that the idea of such an adjunct to the concert was conceived by Mr. House himself, but, however that may be, few could have carried out the conception so successfully, and we can not imagine any more effective method of enhancing the delights of a concert and developing its intellectual aspects. We make one or two quotations:—

> Among the names of eminent European composers, a very few—not more than five or six—stand absolutely supreme. Several are associated with great productions, but the greatness of these is comparative, not superlative. The necessity of observing this distinction forbids us to include Schubert in the highest rank of creative musicians, though the beauty and grandeur of his best works bring him very near the foremost grade. To many he is known chiefly as a writer of lovely songs, but his finest orchestral achievements—some of which were not discovered till after his death—are second in strength and dignity only to those of Beethoven, who was his contemporary, and whose matchless reputation over-shadowed that of all competitors. Schubert, who died in 1828, at the age of thirty-two, was a remarkably prolific composer, all varieties of music having been treated by him with the hand of a master. * * *
>
> The position of England in musical history is very imperfectly understood, even by the majority of Englishmen themselves. It is commonly asserted and believed that the development of modern harmony originated with the Dutch writers who founded their scientific school in the fourteenth century. But it is proved by authentic manuscripts that an equally advanced school existed in England at least one hundred years earlier. That its influence did not extend to other countries is accounted for by the isolation of England, due to internal disorders and to long-continued war with continental powers. It was perhaps owing to this restriction of intercourse that English music acquired its strong national character, which was preserved unchanged down to a very recent period, and which may again be worthily revived. The progress of the art was sure and steady until it was brought to a remarkably high standard in the seventeenth century by Purcell, who in learning and skill was inferior to none but the great German master, Bach, whose career began after Purcell's death. The work in England was carried on by Handel, a German by birth, but a thoroughly English musician from the moment he adopted that country as his home. All that he wrote thereafter was in strict accordance with the English method and spirit. It has been mentioned, in a preceding paragraph, that very few composers are acknowledged to hold the highest rank. The right of three to this distinction—Bach, Mozart and Beethoven—is undisputed. In the judgment of many, Handel may be classed with them, but this judgement is not quite universal. He certainly had extraordinary gifts, and in addition to great scientific attainment possessed a varied and fertile power of invention. In one branch of composition he was without a rival. The choruses of his oratorios are the finest works of their kind ever produced. The most popular of these—though not necessarily the best—is the chorus from "The Messiah," of which an orchestral arrangement is given by the Ongaku-kwai. Much of the favour bestowed upon this superb work is due to the precision with which the music fits the words,—a rare merit, which Handel was not always careful to aim at. Even without the aid of voices, the exultant cry "Hallelu-Jah" (Hail-Jehovah) may be heard almost as if it were sung in triumph; as may also the resonant syllables —"King of *kings*, and Lord of *lords*"—near the close. There are few compositions more famous or more deservedly honoured than this splendid inspiration.
>
> The peculiar national character of English music, referred to above, is nowhere more perceptible than in the old part-songs, madrigals and glees which were formerly produced in profusion. Many of the best of these were written toward the end of the eighteenth century and in the beginning of the nineteenth. A favourite example, which has always held the highest place in public regard, is the pastoral glee, "Ye Shepherds Tell Me," the sweet and gentle melody of which deeply touches all who hear it. Again, it may be observed that the author of this piece bore a name indicating a foreign origin, but his music is purely English in every tone and phrase. It is a common occurrence in Europe for composers to adopt the musical spirit of the land in which they dwell, and to identify themselves with its methods. This has happened even more frequently in France and Italy than in England.

SHIPPING SUBSIDIES.

An interesting article in the *Atlantic* shows the amounts paid by the British Government in the form of subsidies to steamship companies. The following are the figures :—

For the United States, divided between the Cunard and White Star lines, outward to New York only, £130,00.

For India, Straits Settlements, Ceylon, China, and Japan, paid to the Peninsular and Oriental Company outward and homeward, £245,000.

For Australia, divided between the Peninsular and Oriental and Orient companies, out and home, £170,000.

For the West Indies, to the Royal Mail steam packet company, out and home, £19,000.

For South Africa, divided between the Union and Castle mail lines, out and home, £90,000. After September, 1900, this will be increased, under the new contract, to £135,000.

There is a further annual payment made to four companies, amounting to £50,000, for the right to call upon certain steamers as armed cruisers in the event of hostilities between Great Britain and a foreign Power. There is another important service, namely, with Canada, for which £60,000 per annum is paid; but this has undergone so many changes of late, and is even yet so subject to change, that it is difficult to discuss, particularly as it includes the overland service via Vancouver to China, Japan, and Australasia. There are one or two smaller contracts, like those of West Africa and South America, the latter being regulated strictly by weight of matter carried.

This shows a present total of £835,000, to be increased to £870,000 next September. The writer of the article contends that the British mercantile marine owes practically nothing of its development to State aid, and that the withdrawal of all these subsidies would affect the tonnage only very slightly. His argument is that the Government expects to get, and does get, full value for all that it pays, and that the conditions necessary to secure its patronage are most costly. He concludes thus :—

These facts are well worth consideration before an attempt is made by any other Government to build up, by wholesale subventioning, a mercantile marine to compete with the British. France has tried the experiment, at an enormous cost, with anything but satisfying results. The stimulus to the great expansion of German shipping has been from within, and not from heavy grants of taxpayers' money; and though two or three of the larger companies do receive mail subsidies in excess of those paid for like service by the British Government, their success is in much greater degree attributable to their independent efforts. The shipping industry is, in its very essence, an international one, and the application to it of principles which may have proved successful in the internal industries of a country may be found to end in very disastrous results.

NOTES ON CURRENT EVENTS.

It happens that Sir Ernest Satow, Dr. Baelz and Mr. Montague Kirkwood are all about to leave Japan for Europe. Marquis Yamagata therefore invited the three gentlemen to a farewell entertainment at his beautiful villa in the Mejiro suburb of Tokyo on the 20th instant—*Chinzan-so*, or *Camellia Villa*, as it is called.

The Japanese Consul in Montreal is said to have addressed to the Government in Tokyo a telegram recommending strongly that some steps should be taken to limit the number of emigrants to Tacoma He says that Japanese subjects are crowding thither in such abundance that public opinion will inevitably become excited unless some restrictive measures be adopted.

The Japanese Consul at Vancouver is said to have addressed a strong caution to the Foreign Office with reference to the recent influx of Japanese labourers at Victoria. No less than 1,542 have landed there, he says, since the middle of January, and one lodging-house-keeper has been fined $25, at the instance of the Sanitary Bureau, for overcrowding his inn with these men. The newspapers have taken up the question vehemently, and the Consul predicts that although the Canadian Parliament has declined to pass restrictive legislation this session, it will probably prove less tolerant by-and-by, unless some limits are set to emigration from Japan.

There have been so many instances lately of thefts committed on the Tokaido Railway that the Authorities have decided to attach a special guard to various trains, whose duty will be to pass from carriage to carriage and watch the doings of suspicious characters. Strange to say, the Tokyo newspapers publish an exact statement of the trains on which this official is to travel. We presume that he has no intention of adhering to any such cut-and-dried programme.

Mr. and Mrs. Sonoda gave a very pleasant garden party at their suburban villa in Tokyo on the 21st instant. The weather was somewhat gloomy, but the extensive and prettily laid-out grounds presented a most attractive appearance, and a great number of guests assembled. Music and legerdemain were the amusements provided, and refreshments were served *al fresco*. It was noteworthy that a number of exceptionally tasteful Japanese costumes brightened the scene.

There is a clever but somewhat sketchy article on the subject of by-products in the columns of the *Shogyo Shimpo*. The writer's contention is that one of the causes which contribute to impede the development of industrial enterprise in Japan is want of due appreciation of the value of by-products. Very likely the suggestion has much importance, but to render it convincing it ought to be accompanied by concrete example, and the only one furnished by our contemporary is that of the waste resulting from the manufacture of *mousseline de laine*.

In 1896 the Japanese Military Authorities decided to organise a railway corps. They selected the material from first-class soldiers of the Guards and the First Division, and they formed apparently, one battalion. The results of the operation have been so satisfactory that a large addition is now about to be made to the corps, so that it shall include balloon companies, telegraph companies, and so forth. Nothing is stated as to the numerical strength contemplated.

Judgment has been given against Mr. Morse in the Yokohama Court of First Instance. The statement of reasons has not yet been published. We are therefore unaware of the grounds upon which the Court based its decision, but the only conceivable explanation is that the Japanese text of the bonds was taken as the original, and that, as it did not contain any engagement with regard to the rate of exchange, Mr. Morse's plea had to be rejected. If that be the basis of the verdict, the letter of the law may perhaps be satisfied, but beyond question a very great and flagrant injustice will be done. It is necessary, however, to reserve any full expression of opinion. We apprehend that this case may do irreparable injury to Japan's credit unless it be settled on an equitable basis.

Among the directions which economical reform ought to take in Japan, according to some critics, the most necessary is the encouragement of a spirit of thrift. In connection with this there is said to be a project on foot for organizing what a called a *Chochiku Shorei Kaisha*, or company for promoting saving. The idea is to receive small sums on deposit and allow 6 per cent. interest on them; 2 per cent. to go to the depositor, 2 per cent. to the company and 2 per cent. to a prize fund. The scheme sounds a little audacious. It seems better calculated to promote the interests of the company than to educate a spirit of effective economy. We are not surprised to learn that the Authorities have pricked up their ears on hearing of the lottery element included in the programme, and that the inadvisability of allowing a private company to take up such an enterprise is freely discussed.

The *Osaka Asahi* is surprised that Germany does not intervene at the present stage and induce England to make peace with the Boers. Our contemporary seems to think that such a course would draw Germany and England closer together, and ensure their cooperation in the Far East, while it would certainly earn the gratitude of Holland, a result that Germany is supposed to be very desirous of achieving. The Osaka journal has apparently failed to observe that England has publicly declared two things; first, that she will not brook interference on the part of any foreign Power, and secondly that she can not possibly consent to recognise the independence of the two Republics. In the face of such declarations there is no room for the friendly intervention of Germany, so far as we can see.

The population of Fukui in Echizen is forty-five thousand. Thus it can not have more than ten thousand dwellings at most. Of that number 1,571 have just been destroyed by fire, or nearly one-sixth of the whole town. In the suburbs 44 houses were burned, and the list is swelled by 20 shrines, 28 temples, 143 fire-proof godowns, 46 goods-stores, 1 school, 1 company's office, and some official buildings. Two persons were burned to death, 3 suffocated, 6 severely hurt, and 67 slightly injured. There was of course, some insurance; chiefly in Osaka, the Tokyo companies not being heavily hit. Nothing is yet known, apparently, as to the origin of the fire, but we trust that it will be strictly investigated, for there is reason to believe that the petroleum of the Echigo wells is exceedingly inflammable and quite unfit for domestic use. Possibly the unusual number of fires that have taken place recently may be attributable to that cause.

A remarkable work has just been published. The title is "*Sciin-sensei Rokujunen-shi*," or "Sixty years history of Mr. Shibusawa," but in the two portly volumes of which it consists, only a small part relates to that well known gentleman's personal career, nearly all the chapters being filled with information about the development of Japanese enterprise, commercial, industrial, railway, shipping, banking and so on, during the past thirty years. The principal author is Mr. Sakatani, of the Finance Department, but he has been assisted by the members of the *Riyomon-sha*, an association of financiers, merchants, and business men in general who seem to sit, figuratively speaking, at the feet of Mr. Shibusawa. The book is a perfect encyclopedia of information, but it will serve for purposes of reference rather than of perusal. No subject connected with Japan's material development during the *Meiji* era appears to be absent from its pages, and all are treated in an exhaustive manner, indicating the fullest and ablest research.

We have noted that there is a movement in the air with reference to some change in the manner of writing the Japanese language, but that it declines to take definite form and

Digitized by Google Original from CORNELL UNIVERSITY

can scarcely yet be said to have entered the region of really practical politics. The *Nippon* is one of the contributors to the permanency of the ideograph by publishing articles that are quite unintelligible phonetically. It now gives us an essay on the necessity of linguistic reform, but truly after perusal of the writer's views we find ourselves more perplexed than ever. He advocates the study of Chinese for philological reasons, and for historical reasons, and for ethnographical reasons, and for international reasons; but whether he really intends to champion the cause of the ideograph or to assail it, we are unable to perceive. Of course very great deliberation must be exercised before meddling with a national script which has been in use since the country's infancy and which informs much of the popular life. It appears certain that there will at all events be no precipitancy on Japan's part.

We observe that a local contemporary in its editorial columns speaks of Japan's "rapid evolution from what was really a barbaric stage to the present intermediate period of semi-civilization." Before admitting the justice of such a statement, one wants to have a definition of "barbaric" and "semi-civilized." Our own memory of Japan in pre-*Meiji* days and our acquaintance with her history render it impossible for us to accept the term "barbaric" as in any sense applicable to her condition before the abolition of feudalism in 1867. Her civilization certainly differed in many respects from the civilization of Europe. It was a civilization *sui generis*. But to speak of it as barbaric is a total misnomer. It presented features of the utmost refinement, and the thoughtful annalist has difficulty in determining whether the Japanese social system of former days did not excel that of Europe on the whole. The serene self-satisfaction which betrays some Occidentals into the use of expressions such as we have quoted above would disappear if they had leisure or materials for studying the subject more closely.

The head of the Yokohama Customs denies that Yokohama harbour is a small port. The part within the breakwater has an area, he says, of 1,570,000 *tsubo* (1,308 acres), which is a figure not surpassed by many of the well known harbours in Europe, where accomodation is afforded to a mass of shipping greatly larger than that frequenting Yokohama. The real troubles are two, in this official's opinion; namely, first, that owing to want of pier facilities, ships are obliged to lie at anchor, thus requiring about fifteen times as much space as they would need if fastened to a wharf; secondly, that considerable portions of the so-called harbour are too shallow to serve for shipping purposes, and, at the same time, cannot be used for building. Deepening and reclamation are the operations most needed so far as the harbour itself is concerned, and no time should be lost in providing additional wharf accommodation. Only 58 ships can now find space within the breakwater unless there is inconvenient crowding, whereas three times 58 could easily find space if the suggested improvements were effected.

It is said that there is much distress in Osaka business circles. The cotton-spinners find themselves with large stocks of yarns which are unsaleable at figures even approximately remunerative. They seem to have laid in stores of cotton anticipating a steady rise in the staple, whereas the price has depreciated of late with disastrous results. To close the mills temporarily, or work short time, would be the best remedy, but the mill-owners can not reconcile themselves to the idea of throwing a large number of operatives out of employment. They are thus in considerable perplexity. Speculators in rice are also threatened with very heavy losses. Seeing that their operations in margins threatened to be disastrous, many of them laid in large stocks of the cereal, hoping for an appreciation. But the market has gone against them steadily ever since. Another class of capitalists appear to have been heavily hit in connexion with railway shares. Believing in the reality of the railway-nationalization scheme, they made big purchases, and are now confronted by the certainty of heavy losses. The well-known capitalist Mr. Washio, who bought up the greater part of the Nishi-nari line's shares, stands to lose about a million *yen*, it is alleged. Osaka is therefore passing through a period of sharp depression.

It is well to be sure of one's own position before appealing to the principle of reciprocity. We observe that a correspondent of one of our Yokohama contemporaries, writing from Vancouver, lays stress on the fact that land-owning and mining privileges are not granted to individual foreigners in Japan, and seems to contend that this want of liberality on the part of the Japanese may justly be met by the imposition of similar restrictions on Japanese immigrants in British Columbia. We have not the least sympathy, of course, with the illiberal policy pursued by Japan in these matters, but it appears to us that any one appealing to the principle of reciprocity invites a very effective rejoinder. For the Japanese may reply that their nationals are subjected to invidious distinctions in Australia and the United States, free ingress being denied to them, and that if reciprocity holds good in one direction, it must be valid in others also. To withhold from the individual foreigner the privilege of working mines or owning land can scarcely be called so illiberal as to shut the door in the face of the foreign labourer altogether.

Certainly they do things in a big way in America. It is asserted by New York journals that a sum of over three million dollars—six million *yen*—is paid annually to the police and certain municipal officials by gambling-house keepers in that city for the purpose of purchasing immunity to ply their trade. This revelation has made a sensation, as is very natural. There has been a spasm of reform, but it is predicted that the city officials and the police authorities who have thus connived at the protection of the law-breakers will escape scot-free, and that the punishment will fall solely on the heads of a few dive-keepers and gamblers. One of the dive-keepers made the following remarkable statement with reference to his refusal to admit a patrolman :—

> Sure, I snapped my fingers in the "copper's" face and sent my regards to Chief Devery. What do I care for him? I'm running inside the law, ain't I? Besides, I pay enough for protection. The men who are behind me are big enough to put Devery and York out of office at the same time. I care for none of them. Men come here to spend their money. If they are robbed they will be ready to go home to their families all the earlier, won't they? So much the better, then. Men should stay at home, where they belong, or not kick if they are robbed.

The Imperial Garden Party took place at the Shiba Detached Palace on the 20th inst. The Emperor and Empress arrived at a little before 3 o'clock and remained until half-past four. His Majesty was accompanied by Marquis Tokudaiji, the Empress by Lady Anegakoji, and their Majesties were received by their Imperial Highnesses Prince and Princes Arisugawa, Prince and Princess Kuji, Princess Kanin, Princess Kacho and Princess Yamashina. All the Ministers of State present in Tokyo attended, as did the Members of the Foreign Corps Diplomatique. To the latter the Emperor addressed some words expressive of the satisfaction it gave him to share with them the pleasures of another spring. The weather was decidedly unfavourable, for though rain held off until nearly 5 o'clock, the wind blew with exceeding violence, enveloping Tokyo in clouds of dust. The total number of invitations issued had been 2,266, but it is estimated that not more than 1,500 were present. Among the guests were the officers commanding the French and American naval squadrons on this station.

Japan is in a position somewhat similar to that occupied by the United States two years ago. The specie reserve is diminishing, and its reduced dimensions begin to cause uneasiness. Last week, the exodus of gold from Japan amounted to 2,310,000 *yen*, and the reserve fell to 94¾ millions. The latter figure has now changed to 91,600,000 *yen*, and will probably be less than 90 millions in a few days. It was when the index pointed to 90 millions of dollars that the American people began to talk of the necessity of selling Treasury Bills or resorting to some other extraordinary measure for swelling the stock of gold.

It is alleged that the marriage of the Prince Imperial is to take place on the 6th of May, as originally intended. We are inclined to doubt the truth of the statement, as only ten days separate the present time from that date, and no public announcement has yet been made. Rumour says that, in connexion with the happy event, a considerable sum of money will be distributed to the relatives of the soldiers who lost their lives in the war with China.

H.I.H. Prince Kanin has left Paris, whither he went for the Exhibition.

A new and most imperative reason for silence has been discovered. Speech means that a multitude of bacteria are ejected in little bubbles of saliva from the mouth of a person in company with his words. They remain suspended in the air for a time and are then scattered through the surrounding atmosphere. This suggests a new fashion. In the ideal world of the coming by-and-by we shall all wear antiseptic masks! One begins to realise that the increase of knowledge does not add to the sum of human happiness.

The people who insisted that, as a matter of course, Formosa came within the purview of the Japanese Constitution from the day of its annexation; that consequently the judicial officials serving there must enjoy all the rights secured in the Constitution, and that the *Japan Mail* was at once ignorant and corrupt because it denied the truth of any such proposition, should be edified by observing the action of the United States towards its new territories. The United States has not brought Cuba within the scope of the Constitution. The United States does not intend to bring the Philippines within the scope of the Constitution. And the United States has incurred the condemnation of its best citizens because it proposed to bring Puerto Rico within the scope of the Constitution. These citizens truly and justly point out that England's colonies are successful because she leaves them to be

Digitized by Google Original from CORNELL UNIVERSITY

managed by the executive under general laws, principles and precedents.

With regard to microbes, the following account of the influenza bacillus is given by a French authority :—

"It is not the microbe itself that does the harm, but a poisonous liquid it excretes. A measure of consolation is afforded by the fact that this poison is even more deleterious to the microbe than to the human being in whom it is deposited, for the microbes end by being destroyed by their own horrible exhalations, whereas their victim, of course, has many chances of recovery. The microbe is an egg-shapped thing, but gifted, in spite of its roundness and smoothness, with an extraordinary capacity both for adhering to any conceivable surface and for passing from one resting-place to another. Its goal is a human nose or mouth, and once in the vicinity of these organs its future is assured, for the mere act of breathing is sufficient to draw it into the system. Arrived there it propagates itself with amazing rapidity. It lengthens out, and, after twenty minutes of this process, it breaks in twain, and there are two fully fledged microbes in the place of one. It twenty-four hours the original invader will, in this way, be surrounded by a progeny of over sixteen millions of his poison-producing kindred. In short, the doctors know almost everything about the influenza microbe except an effective method of exterminating it."

Surely hatred was never blinder than it has shown itself in connection with the present struggle in South Africa. Consider the following extracts, the first from the *St. Petersburg Zeitung*, the second from an essay by the French publicist, M. Pauliott :—

"We are deeply pained by the surrender of General Cronje, for more is at stake than his own fate and the fate of his people. It seemed for a while as though the fiery love of liberty and country, as though firm faith in the ultimate victory of a just cause, would overcome even the most tremendous odds ; for did not an astonished world see the colossus which has grown great by mere robbery tremble before this handful of noble men? . . . The cause of the Boers is not necessarily desperate, but the blow it has suffered is a hard one!"

"Thanks to this war, Germany will have an imposing fleet two or three years hence. Russia has taken hold of Persia, and will next take possession of Afghanistan. In China, in Abyssinia, in the Ottoman empire, in Egypt, troubles will arise which England can not overcome. The sons of the two republics are suffering and shedding their blood for the whole human race."

The trouble is that such writers as these have access to type and a compositor. Vindictive lunatics have never been wanting in the world, but in old times they had no opportunity of finding an audience. Now the press offers itself as a ventilator of all their hatred, malice, and raging jealousy. There is nothing for it but to laugh. Their time will come, and we trust that England will then be magnanimous enough to sympathise with them.

The latest astronomical theory is that Venus, instead of closely resembling the earth and being inhabited by beings like ourselves, was born later than our globe and is now in a condition similar to that of the latter untold millions of years ago. A corollary to this view is that Venus exceeds the earth in comparative density, and therefore contains, in all probability, a greater quantity of the denser elements, as gold, lead, and mercury. Somebody suggests that, under these circumstances, Venus, when she is "good and ready" to be inhabited by folks like ourselves, will be a scene of greater crimes and sorrows, since the yellow metal will exert a larger influence. We should think that things will tend in precisely the other direction. At all events, if the Venusites want to be monometallists, the strain upon gold will not be too severe.

There is some apprehension that one effect of the adoption of the gold standard in the United States may be a large inflation of the currency. The statement sounds paradoxical, but the train of reasoning is simple. The Bill provides that the Government bonds which, under the old system, would have paid in a few years, are to be replaced by new bonds which will run for 30 years, and that national banks depositing the new bonds in the Treasury may issue a greater volume of notes than was permitted on deposit of the old bonds, while, at the same time, an opportunity is given for the establishment of new national banks with small capital and note-issue power. If these privileges are exercised to the full, it is believed that there will be "an inflation of the currency such as has not been witnessed since the Civil War."

A remarkable article on the subject of what the English eat appears in the *Westminster Review*. The gist of the matter is contained in the following extract :—

In 1888 we expended in England £46,000,000 on wheat, £80,000,000 on meat, £31,000,000 on tea and sugar, making a total of £157,000,000, or £4 5s. per inhabitant. In 1887 we expended £189,000,000 on food out of a total of £481,000,000, showing an increase over 1888 (ten years earlier) of £30,000,000, which sum is far in excess of the requirements of the increased population during that period. Value of food, imports, common necessaries of life, such as wheat, sugar, meat, butter, cheese, tea, coffee, rice, eggs and potatoes, fresh fruits, spirits and wine, was in 1860 £69,000,000; 1870, £91,000,000; 1880, £160,000,000; 1889, £153,000,000; 1897, £189,000,000. In tons, the total amount of food per year from 1860 was 3,500,000 tons rising to 19,010,000 in 1889, or 640 pounds of food per inhabitant, and, allowing for a corresponding rise from 1889 to 1899, we should have something like 12,000,000 tons of food for which we are depending on foreigners.

THE GOVERNMENT AND FINANCIAL EMBARRASSMENT.

It is undeniable, says the *Nippon*, that trade and finance have fallen into serious embarrassment. The exodus of specie has not only necessitated the Nippon Ginko's recent raising of interest, but has also brought about a serious depreciation of public bonds and shares. This tightening of the market has crippled enterprises of all descriptions. Indeed, the evil to-day is far more virulent than that by which the country was afflicted two years ago. At that time the failure of the rice crop was the main cause of distress, which could be relieved in a large measure by appropriations from the Indemnity and the introduction of foreign capital. But no hope of the kind can be indulged in at present, the root of the evil being entirely different. The excess of imports since January has already reached 40 millions of *yen*, and this fact alone is sufficient to show the existence of some other and more conspicuous factor in the financial pressure. The abuses arising from the *post bellum* programme and the unnecessary extension by Government of the financial system have to be noted in this context. On the plea of furthering two great principles indispensable for the extension of the empire, namely, armament expansion and the encouragement of practical enterprises, the so-called "ten years programme" was inaugurated in the 29th and 30th fiscal years of *Meiji*. It is to be observed that prior to the war with China, namely in the 26th year of *Meiji*, the annual expenditures of the country did not exceed 64 million *yen* in the ordinary and 20 millions in the extraordinary section, making a total of 84 millions. The figures for the 30th year, however, swelled to 107 and 117 millions respectively, showing an increment in the ordinary section of 43 millions and in the extraordinary section of 97 millions. Of the ordinary expenditures thus increased, those relating to national loans and war expenses of the Army and Navy are to be regarded as the amount absolutely needed for post bellum arrangements. In the 30th year the figures in this respect had reached 64,660,000 *yen*, showing an increase of 28,770,000 *yen* over the amount for the 26th year. Subsequently the amount steadily increased in proportion to the expansion of armaments and the augmentation of national loans, so that it reached 68 millions of *yen* in the 31st year and 82 millions in the 32nd, while a tendency to increase is still noticeable. As to continuing expenses, the amount is still more remarkable. The following table shows the gross total of such expenses from the 29th to the 38th fiscal years of *Meiji* :—

I.—PRODUCTIVE OUTLAYS.

	Yen.
1. Subsidy for water works	3,431,000
2. Subsidies to the Industrial Bank and to the various Agricultural and Industrial Banks	20,600,000
2. Aids to sericultural corporations	420,000
4. Subsidies for steamship service to Yangtze-kiang	1,182.000
5. Outlays for the construction of a new Consulate in China	80,000
6. Tobacco monopoly offices	8,214,000
7. Expenses for periodical inspection of weights and measures	121,000
8, Paris Exposition expenditures	881,000
9. Reconstruction of class rooms for Medical College	560,000
10. Establishment of Iron Foundry	4,096,000
11. Civil engineering expenses	19,736,000
12. Improvement of Government railways	26,553,000
13. Extension of Government railway	79,782,000
14. Extension of telephone exchanges	12,802,000
15. Increase of lighthouses and telegraphs	1,560,000
16. Establishment of Imperial Library	280,000
17. Establishment of Kyoto University	730,000
18. Construction of pier at Kobe	74,000
19. Harbour building	7,869,000
20. Investigation of forests and fields	528,000
21. Inspection of horses	24.000
22. Sericultural Training Institute	49,000
23. Agricultural Experimental Gardens	348,000
Total	190,054,000

II.—OUTLAYS FOR ARMAMENT EXPANSION.

1. Reconstruction of Kure Dockyard	169,000
2. Gunpowder manufactory at Shimose	225,000
3. Shipbuilding materials	1,110,000
4. Hydrographical survey	47,000
5. Saseho Admiralty	488,000
6. War vessels the construction of which was undertaken in the 26th year	11,366,000
7. Expansion of the Navy	213,101,000
8. Military survey	736,000
9. Rewards to the Navy and Army	10,000,000
10. Fortifications	9,408,000
11. Repair of the same	863,000
12. Extension of arsenals	1,249,000
13. Special Military Construction Department	118,000
14. Extension of the Army	78,983,000
Total	327,961,000
Grand Total	518,015,000

Thus, the total outlays for ten years from the 29th year do not fall short of 518 millions of *yen*, which, added to supplementary funds allowed to Formosa, makes a total of 600 millions approximately. The Government being the greatest consumer of commodities, as well as the greatest employer of labour in the empire, is in itself the most powerful factor in bringing about fluctuations in prices and wages. It has already deprived the youths of their productive power by the system of conscription and is now working havoc by its *post-bellum* programme in utter disregard of the interests of the industrial community.

THE RATE OF INTEREST.

According to investigations made by the Finance Department the average rates of interest throughout the empire during the month of February were as follow :—

	Maximum Annual Interest. Per cent.	Minimum. Per cent.	Average.
Fixed loans	18	7	10.7
Fixed deposits	7.5	3.8	6.3
	Daily Interest in Sen.		Sen.
Temporary loans	4.5	2.3	3.1
Temporary deposits.	2.3	0.6	1.4
Discount	6.2	2	3.13

Compared with the corresponding period of last year the figures stand as follows :—

	Loans		Deposits		
February.	Fixed. Per cent.	Temporary. Sen.	Fixed. Per cent.	Temporary. Sen.	Discount. Sen.
This year	10.7	3.1	6.3	1.4	3.3
Last year	11.3	3.37	6.6	1.56	3.4

RUSSIA AND JAPAN.

THERE is a good deal of discussion of a more or less desultory character in Japanese newspapers at present with regard to the relations between Russia and Japan. The usual anonymous statesman makes his appearance in the columns of one journal, and expresses an opinion that Great Britain is so deeply engrossed by affairs relating to India and Africa that anything like a working contract between her and Japan with regard to the Far East in general and Japan in particular, can not be hoped for. The question then arises whether an understanding can be effected between Japan and Russia. The statesman thinks it possible. He does not place much credit in the earnestness of Russia's intentions *vis-à-vis* Japan. He does not believe that she has any mind to draw the sword. The time is most unsuitable for such a step. Her fleet is not strong; the Siberian Railway is not finished; her finances are in disorder; her potential ally, France, is busied with the affairs of the Exhibition; her former confederate, Germany, is not likely to join hands with her again. She would have to enter the lists single-handed, and the task would be very heavy, considering the distance of the battle-field from her base of operations. The inference is that her recent doings at Masampho were not serious. She did not really think of establishing a naval station on the south coast of Korea. What she hoped was to obtain some advantage which might be exchanged for concessions better adapted to her purpose. It is probable, too, that in all these performances M. PABLOV was trying to make a *coup* on his own account. If he succeeded, he would have had the approval and applause of his Government. If he failed, well, it didn't much matter. The outcome of a careful review of the situation is that Japan and Russia could come to a very simple and effectual arrangement, Japan promising to leave Russia a free hand in Manchuria, and Russia similarly pledging herself *vis-à-vis* Japan with regard to Korea.

That is a very brief epitome of the anonymous statesman's views. Unfortunately he does not explain clearly what Russia's real object is—the object which she hoped to further by obtaining a privilege at Masampo and subsequently exchanging it for something else. But we gather that his reference is to complete control of Manchuria. If so it appears to us that under two aspects his argument does not carry conviction. In the first place, Russia probably thinks, and has good reasons for thinking, that her feet are already firmly planted in Manchuria, and that, if she can have a few years peace to consolidate her position, there will be no necessity for her to consult any one's convenience about staying there permanently. In the next place, the question arises, can she, or could she, agree to let Korea fall into Japan's hand? We think not. We think that unless she herself abandon either Vladivostock or Manchuria, she cannot possibly allow Korea to be held by a Power which would thus be in a position to cut her in two. The geographical situation is most unfortunate from the point of view of those that desire to see Japan and Russia remain at peace.

Another and much more singular contribution is made to the discussion by a newspaper which sets out by declaring that the Progressists under Count OKUMA have changed their foreign policy, and that they now advocate an agreement with Russia on the lines of dividing Korea, Russia to have the northern part and Japan the southern. That convenant duly concluded, Japan might reduce her armament and sit down in tranquillity. We need scarcely say that the journal which attributes such a view to the Progressists, condemns them strongly. It justly points out that nothing secures peace now-a-days except strong armaments, and that a country taking off its panoply could not rely for a moment on the forbearance of its neighbours, whatever covenants they had subscribed. In our (*Japan Mail's*) opinion, this new version of the Progressists' policy is entirely mistaken.

ECONOMY AND SAVING.

WE are glad to see that the *Jiji Shimpo* raises its voice in support of the commonsense principle that to preach economy to a nation because its scale of living shows signs of improvement and because it buys from foreign countries more than it sells to them, is a futile performance. A nation consists of individuals, and we must take it for granted that each individual composing it knows his own business a great deal better than any one else knows it. Speeches made by politicians from platforms and articles penned by economists in magazines will never turn a private individual from purchasing sugar for his family or textile fabrics for his household if he can afford to do so. If he cannot afford it, then his own impecuniosity becomes a restraint incomparably more potent than the exhortations of statesmen or the homilies of financiers. Publicists are very apt to be inconsistent in these matters. If they visit a town and observe that its buildings are fine, its citizens well clad, and its general style of living free and open-handed, they stand up and deliver congratulatory speeches, praising these signs of enterprise and prosperity. Presently statistics come into their hands, and they discover that the town is buying a great deal more than it sells, whereat they become alarmed, and talk of the necessity of thrift, the duty of cultivating the efficient spirit of saving, and so on. Doubtless if the Japanese nation could be induced to desist from purchasing foreign sugar, foreign piece-goods, foreign fertilizers and so on, the balance of trade would be speedily redressed. But how can such a mood be educated? The individual wants his sugar, wants his piece-goods, and wants his fertilizers, and since he can afford to pay for them, he is going to have them, whatever effect his determination may produce on the customs returns. It is certainly a fine thing for a country to be self-supporting in every respect; to grow its own food-stuffs, manufacture its own clothing, and construct its own machinery. But there is a proviso, namely, that none of these domestic productions should be more costly than foreign goods of the same quality. If there are in Japan—as we do not doubt there are—undeveloped opportunities for the economical production of many articles now procured from abroad, and if it be true—as we have no doubt it is—that, by coördination of labour and improved organization, energy and capital now absorbed in a comparatively small productive effort could be freed for larger purposes, then the nation is certainly in need of light and leading. But the direct utility of preaching sermons on the virtue of frugality must always be insignificant unless the persons preached to are living beyond their means, which is a kind of recklessness very unlikely to overtake a nation, except in the matter of armaments. It can not be doubted that Marquis ITO and Count INOUYE apprehend all these things quite clearly, and that in putting themselves at the head of a crusade against extravagance in living the real object of their attack is extravagance in manufacturing, agricultural, commercial, and financial methods. When they draw attention to customs' returns, it is not because they hope to induce farmers to desist from importing superphosphates, merchants from buying silk surcoats, or children from eating candies, but because they wish to rouse the nation at large to a sense of the necessity for reform in all matters that pertain to money getting. We ourselves believe that at the root of the habits of present-day Japanese lies the fact that the earning power of labour has enormously increased. History shows that during the Tokugawa Regency labour was assessed at 5 *mon* per day, and 5 *mon* then bought 5 *go* of rice, which was precisely the ration of an able bodied man. At present a labourer's daily wage, taking the lowest figure, is 30 *sen*, which will buy 20 *go* of rice, or four days' rations. That fact is eloquent. The effect of such a change can not but be widely felt. Thus, what may well perturb the economist is the question whether labour does not command a fictitious value—a question which resolves itself into two forms of inquiry; first, whether enterprises creating a demand for labour have not been started in excess; and secondly, whether, while absorbing a large quantity of labour with apparent profit, they are not in reality kept going in defiance of sound economical principles. Count Inouye is evidently directing his attention closely to this problem. He is, perhaps, somewhat pessimistic as a financier. The view he took of his country's finances in 1873, when he retired from office in company with Mr. SHIBUSAWA, was less hopeful than the circumstances seemed to warrant. But we believe that men like him are greatly needed at the present time, and that his crusade will produce most beneficial effects.

BIG BUILDINGS IN TOKYO.

THE most pretentious building erected in Tokyo during the *Meiji* era has now been commenced. It is the new palace for the Prince Imperial. The site chosen is within the grounds of the Akasaka Detached Palace, the old Kiushiu Yashiki, a very beautiful and extensive park which happily escaped the iconoclastic tendency of this era's early days. The edifice is to cover an area of 1,800 *tsubo* (1½ acres). It will have an iron frame weighing some 3,000 tons, by way of protection against earthquakes. There will be an underground storey, which, as well as the second storey, is to be built of Joshiu granite, the upper storey being of fire-bricks, three-and-a-half bricks thick. The roof will probably be sheeted with copper, and the architectural style is to be Italian renaissance. From the *Yomiuri Shimbun*, which publishes these details, we learn that the cost is estimated at from four to five million *yen*, as against two millions spent upon the EMPEROR'S present palace, and 1,800,000 spent upon the buildings for the Bank of Japan, which are generally said to have been extraordinarily costly. A comparison between the new palace and the present palace as to mere figures is, of course, misleading, for the latter is built entirely of wood whereas the former will be of granite and brick. Besides, there is a great difference between the expense of building now and the expense twelve years ago when the present palace was constructed. Mr. KATAYAMA TOYU is the fortunate architect of the important building now commenced. Doubtless the contemplated expenditure is regarded by many Japanese as very large, but the history of this country shows that in mediæval days very much greater sums were devoted to similar purposes. In the second half of the fifteenth century, for example, the Ashikaga *Shogun* YOSHIMASA spent six hundred thousand *kwan* upon the "Flower Palace," and it is recorded that one of the series of sliding doors in the Takakura mansion, which he built for his mother, cost five thousand kwan. The sterling equivalent of six hundred thousand *kwan* is 2½ million pounds, and the sterling equivalent of five thousand *kwan* is twenty thousand pounds; figures which, expressed in the *yen* of our time, are represented by twenty-five million *yen* and two hundred thousand *yen*, respectively. The Flower Palace of the dilettante *Shogun* thus cost five times as much as the sum allotted for the palace of the Prince Imperial, and as to a sliding door upon which two hundred thousand *yen* was lavished, either history exaggerates enormously or they do things on a very small scale, comparatively speaking, now-a-days. We really can not undertake to say how so much money could be spent on a sliding door. Supposing that it were made of pure gold, the weight of the precious metal would be between three and four hundred pounds; and supposing that it were made of the finest gold lacquer, which is a material even more costly than gold, fifty thousand *yen* is about the limit of hypothetical expenditure. Still, it is scarcely possible to accuse history of such hyperbole as to suppose that it does more than treble the actual cost of the Flower Palace, and on that supposition we have still a figure of eight million *yen*. Not a stick or stone of the palace is now in its place. The business of mankind in all ages has alternated between constructing and destroying.

MISCELLANEOUS TOPICS.

The extraordinary changes of temperature which occurred within the past few days, and the general lateness of the season, are causing some uneasiness. Frost is reported to have fallen in the central and northern provinces, but it did no special damage to either the mulberry trees or the tea plants.

A number of assetless cheques—seven or eight it is said—were found among the paper received by the Tokyo Clearing House at its last settlement, and it is anticipated that several more documents of the same nature are in circulation. The *Chuo Shimbun*, in publishing this news, attributes it to the existence of petty banks which do not command confidence, but surely the fault is with the drawers of the cheques, not with the banks on which they are drawn.

Seven of the principal Buddhist Sects have decided to send delegates to receive the Buddhist relics from Siam. We observe that both of the Hongwan temples are now concurring in the movement. It seems to provoke a great deal of ridicule in some circles in Japan, but we foreigners can not afford to laugh at it, and considering that the Japanese Diet never hesitates to vote sums of money for the restoration of shrines or the conservation of edifices commemorating events of the "semi-divine" age, we really fail to see how the Buddhists are out of touch with popular sentiment in this matter.

The final operations in the naval manœuvres will be finished in two or three days, and the inspection of the squadrons engaged will take place on the 28th and 29th. The Emperor will embark in the line-of-battle ship *Fuji*, and will have his shore quarters at Prince Arisugawa's Maiko villa. It is stated that the Foreign naval attachés of Russia, France, Germany, England, America, and Italy will be present at the inspection, as will also some of the officers of the foreign men-of-war now in Yokohama.

Two Ainu delegates have arrived in Tokyo. They represent a community of 300 families in Hokkaido, who complain that they are about to be evicted, or transferred to some other locality, in order to make room for a speculative purchase of 400,000 *tsubo* of land by Messrs. Okura Kihachiro and Yao Shinsuke. The land in question is near Kamikawa, where an Imperial detached palace is likely to be constructed, and where the headquarters of the Seventh Division will also be situated. The Ainu are said to complain bitterly, and we need scarcely say that they have found a Tokyo journal to espouse their cause, without any regard to the other side of the question, whatever that may be.
